Certainly the people of the United States have honored you very highly both at the polls and at the recent inauguration.

Methinks that upon your shoulders, or should we say upon your heart, are very weighty problems that will have to be met by you and your assistants in governmental affairs. The old ship of state will have to be guided properly or it may be wrecked by various enemies of our country.

First, Mr. President, is the communistic element. Certainly, every effort should be put forth to oust this faction in our beloved country.

The Russian problem is still hanging in the balance, and we cannot afford to be caught napping. Preparedness is the word. Old Glory should not be torn down and the Red flag raised. Think deeply, Mr. President, et al.

The labor problem is a harrowing one. The T-H law, you said in the 1948 campaign, should be repealed. Will it be repealed? Don't you think, Mr. President, that the Government has enough chores to take care of without trying to pass laws that will satisfy labor? We tried the NRA, the Wagner wage-and-hour law before the T-H law, and all have been flops. Labor was not satisfied and kept up an uproar. Remember the sit-down strikes in many of the plants in the cities? Strikes abounded throughout our Nation.

Now President Truman your greatest problem, as we see it, is to decide whether you are going to run again for President. Having completed President Roosevelt's unexpired term you might decide to run again, on the pretext of only having served one term. Please Mr. President decide not to run again. Take off your gloves and throw them in the corner and really give the people an honest-to-goodness administration.

Pare down the officeholders, save a little here and a little there, thus in a hundred years we may get out of debt.

Morphine methods cannot continue to exist as they are not the methods that were practiced in building our country. Subsidies for one class and not for another is class legislation.

Bickering around in Washington about how many hours one can work, 75 cents an hour as a minimum wage, whether we can eat oleomargarine are dull-like questions as compared with the cold war problems and hundreds of others.

Possibly you have read in the Bible where Jesus Christ went into the temple and made a scourge and chased out the money-changers. Let's love our country and flag way above peanut politics.

You have the reins, Mr. President, let's not twaddle and let our way of life be changed by some foreign potentate.

F. J. NEELY.

P. S.—I am still a Jeffersonian Democrat.

Reorganization of Executive Departments

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. WOLVERTON. Mr. Speaker, the bill to authorize the President to effect a reorganization of the executive branch of the Government has my full-hearted support.

The need for such is long overdue. There is no excuse for a continuation of the present sprawling system of bureaucracies that now exist. The duplication of activities under numerous and varied departments, divisions, bureaus, and agencies has reached a point that it can aptly be described as a disgrace. It results in waste, extravagance, and increased cost of Government. The taxpayers have to pay the bill. They are already overburdened. They are entitled to relief.

There were only about 350 of these agencies 20 years ago, and that was too many even then. Today there are upward of 1,800 bureaus, commissions, divisions, departments, and administra-

tions. The object of this legislation is to reduce the number and remove the overlapping jurisdictions so that there may be real efficiency and a saving of expense of operation.

For instance, as pointed out by the Committee on Reorganization of the Executive Branch of the Government, there are 30 agencies engaged in lending money, making guaranties or insurance activities. There are 23 agencies engaged in construction activities competing with each other for labor and materials, and scattered over 11 departments or agencies. There are 10 agencies dealing with transportation questions—not including regulatory functions—scattered throughout 8 departments and independent agencies.

A wise reorganization can bring an appreciable decrease in the cost of Government. It can be done without destroying effectiveness and would promote efficiency.

Of course, if the proposed reorganization results only in reshuffling of departments or bureaus without any elimination of useless and wasteful practices and activities, the good that is contemplated will not result. If worth-while results are to be attained it will necessitate an operation of major propositions. The proposed bill will give the President an opportunity to do a real job.

Truman's Fair Deal in Effect

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. CHESNEY. Mr. Speaker, under leave to extend my remarks, I desire to have printed in the Appendix of the RECORD an article entitled "Truman's Fair Deal in Effect." This article was published in the Federation News of the Chicago Federation of Labor on January 29, 1949. The article is an excellent example of harmonious labor-management relationship. It follows:

TRUMAN'S FAIR DEAL IN EFFECT

Memo to Congress, which has before it a Presidential message calling for legislation designed to correct the present wage-price imbalance:

Wages can be increased, and at the same time, prices can be reduced.

How? To get the answer, the Federation News investigated a union-management program which has attained that goal. The keymen in that program are Samuel Laderman, president of Local 241 of the International Chemical Workers' Union, an American Federation of Labor affiliate, and Herbert Buchsbaum, president of S. Buchsbaum & Co., plastic products manufacturers. They revealed that during the last year:

1. Wages, excluding bonuses, were increased 25 percent. Including bonuses, they have gone up 35 percent.
2. Prices on many products were reduced as much as 40 percent.
3. Production expanded, and is continuing to expand, almost daily.
4. The unit labor cost was reduced 50 percent.
5. Sales increased 33 percent.
6. Company profits doubled.

"All this was possible," Laderman pointed out, "because mutual trust and cooperation prevailed between the union and the management."

"Without the union, none of these achievements would have been realized," Buchsbaum declared.

"The union and the management—because of this cooperative spirit—were able to accept discipline as a joint responsibility," Laderman explained. "Usually, this is a problem which rests with management alone. But the dismissal of a worker, whether just or unjust, is a body blow to the working force as a whole, because it represents a decision handed down from on high. Under the system we have been able to develop at Buchsbaum's, disciplinary action is not taken until the union is consulted. This makes whatever action that is taken the joint decision of the employees and the employer alike. It eliminates top-level decisions, and means that the case of the individual worker has been decided by his peers; that justice, as we know it in the United States, has been established. It is at once a boon to the morale of the working force. I am not suggesting joint acceptance of discipline as a responsibility of unions and employers everywhere. Unfortunately, mutual trust and cooperation between unions and management is not yet universal. But I am suggesting it as a goal toward which all labor and all management can work."

Laderman stressed that, while production expanded and prices were lowered, the quality of the merchandise did not suffer.

"The union has established quality merchandise committees, which meet management representatives at regular intervals," he told the Federation News. "These committees suggest improvements and eliminate any imperfections that might develop. While this is a responsibility which also ordinarily rests with management alone, our union is interested in quality merchandise because we know that if quality is maintained and improved, sales likewise will be maintained and improved and our members will, consequently, have greater employed security."

Laderman and Buchsbaum were asked about the wage increase which had taken place.

"I think I can speak for both the union and the management when I say that we did not want the cost of that wage increase to be passed on to the public in the form of higher prices," Laderman answered. "So, our union recommended an industrial engineer to the management. New production techniques were introduced, with the quality merchandise committees being utilized for this purpose also. Changes in operations were suggested which reduced the number of workers required for those operations.

"Incidentally, these changes did not result in any loss of employment," Buchsbaum commented. "In such instances, the workers are shifted to other positions, suitable to them, within the plant."

Production was speeded without any additional burden upon the workers. In fact, it became easier for them to perform their jobs.

A uniform, group bonus plan is being instituted, and is based upon a production standard approved by the union and the management.

"As a rule, bonuses vary," Laderman said. "This has a tendency to breed favoritism and, as a result, worker morale is lowered and production slackens. Under our bonus system, everyone is treated equally. Workers who are not engaged directly in production, such as foremen, and for whom it would otherwise be impossible to establish a bonus, now receive such payments. Instead of vying with each other for higher bonuses, the employees work together to lift plant production as a whole. They know that if one member of the team fails to do his best, the earnings of all will suffer."

The fair employment policy, inaugurated with the advent of the union at Buchsbaums 8 years ago, when Negroes and other minority-group members were hired for the first time, is continuing. No matter what their creed, nationality, or race happens to be, the policy of the union is to accord all workers equal treatment. Employees are judged only according to their ability and skill. Brotherhood has become a reality. Thus, there has been no friction between the various racial, religious, and nationality groups to slow production, and sources of employment which discrimination would leave untapped have become available to the management.

What about the future?

Buchsbaums said that the "company hopes to begin building a new plant this year."

"This will be our fifth plant," he added. "When the employees of Buchsbaums were first unionized we had but one factory, and jewelry was our only product. Today, jewelry is one of many products. We have 750 workers, and expect to employ in the neighborhood of 1,200 workers by the end of this year. With President Truman's 'Fair Deal' already in effect at our factories, we have a waiting list of applicants for employment.

"I repeat, without the union, we would have been lost. With the coming of the union, management's relations with the employees were stabilized. Labor turn-over has been reduced 90 percent. Because we now understand each other, it hasn't been necessary for the union to strike, as it once did to gain recognition.

"I was bitterly opposed to organized labor up until the time the first union agreement was signed. I have since been converted to the union cause. If it were not for the union we would be unable to plan for the future."

Laderman emphasized that "because continued cooperation with management has been possible—despite the Taft-Hartley Act—our organization has been able to go forward."

"The continued success of unions and management in 1949 is contingent upon repeal of the Taft-Hartley Act," he asserted.

"That act would render impossible the cooperation between labor and management which has been developing in industry over the years under the American system of free enterprise. In fact, enactment of the act constitutes a reversal of that trend.

"The full impact of the Taft-Hartley Act has not been felt. That's why its repeal is imperative. Our organization and all of organized labor is desirous of continuing the march of progress which began with the passage of the Wagner Labor Relations Act."

St. Louis Browns

EXTENSION OF REMARKS
OF
HON. RAYMOND W. KARST
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. KARST. Mr. Speaker, in the past few days the citizens of the city of St. Louis, which I am honored to represent in Congress, have witnessed a remarkably pleasing business transaction. Two native-born St. Louis boys, Charlie and Bill De Witt, climaxed long and fruitful careers by jointly purchasing the St.

Louis American League baseball club known as the Browns.

Because of my long personal association and friendship with the De Witt brothers, their purchase of this baseball club has unusual significance to me. It has been some time since a finer example of American business ingenuity and enterprise has been demonstrated. Their move proves once again that America is the land of free enterprise and opportunity for all.

Born in north St. Louis to parents of modest means, circumstances required that the De Witt brothers start earning their living at a very tender age. Charlie was 10 years old and Bill was 8 when they started, almost 40 years ago, selling peanuts in the stands of Sportsman's Park, which they now own.

Bill De Witt has served in many capacities in organized baseball. For many years he was a trusted lieutenant of Branch Rickey, who is one of the finest men that American sports or business have produced. Upon the recommendation of Mr. Rickey, Bill De Witt was appointed vice president and general manager of the Browns ball club in 1938 by Mr. Don Barnes with whom I was associated. He has since progressed in the baseball world to the point where he is now respected as one of the game's shrewdest executives.

Charlie De Witt has had a varied career wherein he has been a baseball scout as well as a successful businessman. Even today he has several independent businesses established which he operates in addition to his duties with the Browns.

The type of enterprise demonstrated by the De Witt brothers in their long struggle to the top reveals the finest characteristics of our American system. I am sure that the Members of the House will join with me in wishing the De Witt brothers God speed in their new enterprise.

The Machine-Tool Industry and National Defense

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Charles O. Herb, from Machinery for January 1949:

THE MACHINE TOOL INDUSTRY AND NATIONAL DEFENSE

That machine tools and other metal-working equipment constitute the first line of national defense on the production front is acknowledged by military men and industrialists alike. Machine tools are necessary to produce ordnance matériel, aircraft, submarines, military tanks, and all other implements of modern warfare. Without a large reservoir of modern machine tools, adequate military defense would be impossible in the event of a national emergency.

To provide against such a contingency, the National Security Resources Board has set up a Production Equipment Division under its Industrial Mobilization Plan. The function of this division is to plan specifically for the prompt supplying of machine tools and other metal-working production equipment by manufacturers in the event a rift in international relations appeared imminent. Phantom orders to a total value of $750,000,000 have been issued to machine tool companies alone, and these companies are supposed to hold themselves in readiness to start volume production of the orders at any moment that industrial mobilization becomes necessary. At such a time, the phantom orders would be translated into "pool" orders, which would be expected to meet both military and civilian needs.

Early completion of the large orders that have been planned would be possible only if the machine-tool industry were operating at a high rate at the time the orders were actually released. As Alexander G. Bryant, former president of the National Machine Tool Builders' Association, recently pointed out, the machine-tool industry has found it necessary to reduce its capacity to one-third of the wartime peak. Machine-tool builders have had to let their working forces dwindle, and there are no available reserves of skilled workmen that could be tapped at a moment's notice for rebuilding working shifts to a high-production level.

The time to make certain that firms are in a position to handle heavy pool orders is before an emergency threatens. It is the well-considered opinion of men who are vitally interested in this matter, from the military and the economic standpoint, that machine-tool plants would soon be operating on a high-production basis if the Government made a single change in our tax laws.

This change would be to permit a more rapid amortization of production equipment. Manufacturers of consumer goods could then be induced to replace obsolete equipment with the latest types of machine tools and other metal-working machinery. Consumers would benefit from the lower commodity prices made possible through more efficient manufacture. But more important from a national-security standpoint, the machine-tool industry would be operated on an active basis, and without any cost to the taxpayers. Even Hitler had the foresight to realize the benefits to German industry of rapid amortization of capital equipment. Only because of complete industrial mobilization was Germany able to fight practically the entire civilized world.

Certainly a democratic nation could afford to tear that one leaf from history.

CHARLES O. HERB,
Editor.

Giver With Gift

EXTENSION OF REMARKS

OF

HON. PETER W. RODINO, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. RODINO. Mr. Speaker, today the people of my State of New Jersey will witness a beautiful sight. New Jersey's car of the Merci Train will be accepted with formal exercises. Though they are humble gifts of gratitude, they are matchless in their eloquence.

The Friendship Train organized by Mr. Drew Pearson last year did more than just bring food from a prosperous to a needy people. It carried a message of warm friendship and won hearts that were still sorrowful from the ravages of war. And it created a greater understanding of the meaning of democracy and the spirit which moves America.

These humble gifts from the people of France should be a source of reassurance to the people of America who have doubted the wisdom of the Marshall plan in its effort to rehabilitate the distressed people of Europe. For in a great sense, this Merci Train with its matchless gifts, says eloquently that the false prophets of Europe are losing ground in their cold war against democracy. We are being rewarded by rebuilding a spirit of gratitude.

And, under leave to extend my remarks, I wish to include herein the following editorial which appeared in the Newark Evening News of February 2, 1949, which is entitled "Giver With Gift."

GIVER WITH GIFT

Merci, America. Those two words bespeak the gratitude of the French people as individuals for the food they received late in 1947 and again last year from the American Friendship Train and the Abraham Lincoln Friendship Train with its more than 220 cars carrying grain and other foods. This food was the gift of Americans, collected from every section of the country. It was a voluntary outpouring in a land of prosperity for the needy abroad. It was a brilliant idea, ably and expeditiously carried out.

Today witnessed the arrival at Weehawken on the cargo ship *Magellan* of the "Thanks, America" train of 49 cars—one for each State in the Union and one for Hawaii—and a reception and parade in New York in its honor. The train brings to the United States, from a people still in distress and eager for rehabilitation under the Marshall plan, luxuries like wines, perfumes, and silks these people are willing to go without, 48 French dolls in latest fashionable attire, and thousands upon thousands of humble gifts, the patient handiwork of men and women whose skies were lightened when American food arrived. They are in the same type of French boxcars—40 hommes, 8 chevaux—that transported American troops in two world wars.

New Jersey's car of the gratitude train will be accepted at Trenton Monday with formal exercises by a committee headed by Leonard Dreyfuss, who was chairman of the State's Freedom Train committee last year.

It is reported that the value of each carload is 3,000,000 debilitated French francs. The gift is fully as welcome as though it represented 100 times that amount. For the "Thanks, America" train exemplifies a full understanding of the bitter lesson Sir Launfal had to learn, that the gift without the giver is bare. About every item, however humble, hovers the gratitude of the giver. It is in recognition of that that each should be prized.

A Great and Able Missourian

EXTENSION OF REMARKS

OF

HON. LEONARD IRVING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. IRVING. Mr. Speaker, so many of us have overlooked the fine and capable chairman of the Committee on Appropriations [Mr. CLARENCE CANNON], my colleague from Missouri, because of the quiet, efficient, and trustworthy manner in which he has discharged the tremen-

dous responsibilities that important committee places on his shoulders, that I am prompted to call your attention to the splendid compliment paid him in the column, These Charming People, which appeared in the Washington Times-Herald on January 27, 1949. The column stated the following about Mr. CANNON:

THESE CHARMING PEOPLE

(By Austine)

Nine out of ten people would say the most important man in Congress is the Speaker of the House, or the President of the Senate. But for my dough it's a quiet, short, little, old—born in 1879—fellow by the name of CLARENCE CANNON.

He certainly should be named among the 10 most powerful men in the world. All his power comes from the word "money." He's chairman of the House Appropriations Committee, and not one buffalo nickel of the $64,000,000,000 spent by the United States Government every year can be handed out without his consent.

Representative CANNON hails from the Ninth District of Missouri (his is the longest term of service of any legislator from that State).

All bills for appropriations must start in the House. The Senate can increase or cut down the amount voted for the Marshall plan, or for building a bridge across the Potomac. After that it goes to a conference of the two Houses and then on to the President.

But the Senate can't do anything till Mr. CLARENCE CANNON gives the nod to get the appropriation bill started in the House.

Incidentally, Representative CANNON is an expert on congressional procedure because he was Parliamentarian of the House 'way back in 1917. Has written Cannon's Procedure in the House of Representatives, one of the "bibles" for legislative conduct. Though he's swamped with invitations to social affairs, and lobbyists chase the coattails off him seeking to wine and dine him, he's very seldom seen at any of the Washington parties.

Mr. Speaker, during my short time as a Member of the House, Congressman CANNON, as dean of the Missouri delegation, has been so helpful to me and other freshmen Members that I am certain they share with me a deep sense of gratitude for his good counsel and guidance during the days we were getting started with our work.

The Stalin Proposal

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Boston Sunday Post, February 6, 1949:

STALIN'S BID FOR TALK WITH TRUMAN SEEN AS MERE POLITICAL MANEUVER—FURTHERMORE, UNITED STATES, AS WELL AS RUSSIA, IS COMMITTED TO PEACE THROUGH UN—AND THE BIG BERLIN AIR LIFT GOES ON

(By John Griffin)

On the day that Stalin suggested President Truman trot over to see him about arranging more peaceful relations between the United States and Russia, American and British flyers set a new record on the Berlin air lift.

They completed the best week since the air lift started last June. For the third straight day American planes flew more than 6,000 tons of material into the blockaded city, which needs 4,500 tons daily. On Thursday they carried 6,543 tons into Berlin.

This was done at a terrific cost in money and materials and in the use of manpower. And it was proof conclusive that Stalin's talk of meeting with President Truman was just talk without sincerity.

All the Russians need to do to prove that they want serious and honest conferences to settle the various problems is to end the blockade in Berlin. The whole thing is phony on the face of it, for it doesn't take a great memory to recall that the Russian excuse for the blockade was "technical difficulties."

That was an untruth, and all that has gone on since has been built on that untruth. And until the lie is absolved there can't be any genuine approach to a satisfactory meeting.

AN INSTRUMENT OF STALIN'S WILL

The suggestion of a meeting is obviously a political maneuver on the part of Stalin, designed to impress people in various parts of the world with the Soviet desire for an understanding, and with no idea that a genuine effort to dissolve differences would be made.

It may be that Stalin thought President Truman would fall for it, or that the desire of the American people for an end to the cold war and for a lasting peace would result in pressure on the Government to accept the proposal.

Perhaps Stalin took special notice of the statement a few months ago of the President which indicated that Mr. Truman thought that Stalin isn't a bad fellow but is hamstrung by the Politburo. Clearly, Stalin is the boss of the Politburo and all Russia. He is a dictator with full power, and has been for several years.

The Politburo, as originally devised by Lenin, may have been an organization of power which could overrule the desires of the person heading the government. But Stalin changed all that and made it an instrument of his will. What he says, goes, and that's that.

Under such factual conditions, it is small wonder that Stalin might have tried to take advantage of any possible feeling in this country that he is a pretty good old guy who is being pushed around by his own Politburo.

IMMORAL FROM ANY VIEWPOINT

It might have appeared to him that the time was ripe for a gesture that could conceivably weaken the unity of the American people who have for many months now been convinced of the necessity of firmness in our dealings with the Soviet.

But Secretary of State Acheson quickly threw the light of logic and common sense on the Stalin proposal and showed it up for what it really is. The main point he made is clear; there are no points at issue between the United States and Russia that cannot be settled through regular diplomatic channels.

Furthermore, the United States could not possibly let down other nations who are vitally affected, by holding two-party conversations with Russia. The other nations are entitled to sit in on any such conference, and to freeze them out would be immoral from any point of view.

The Stalin proposal, which was made through replies to a series of questions submitted by a newspaper correspondent, contained nothing new except an additional condition to lifting the Berlin blockade.

Another reason the United States could not accept any such proposal is that it would be a severe blow at the United Nations. So long as we are committed to sincere participation in the United Nations, we can't be in the position of double-crossing that organization.

The United Nations has certainly not been a potent force to date, and may never be. But it is functioning and we are giving it our support, and we can't very well start circling around it and rob it of its prestige and standing.

SWORN TO PEACE ALREADY

There may have been a sudden surge of hope around the country when the Stalin suggestion of a meeting was made, for everyone is eager to grasp anything that seems to tend toward an end of the present stalemate.

But it was the hope of the heart and not of the head. It was the hope that something valuable would come of a meeting in which the two greatest powers on earth pledged themselves to avoid resorting to war.

But both of them are already sworn to that pledge. And it is a pledge not only to refrain from war against each other, but also a pledge against war with any other nation.

One thing the American people seem in danger of forgetting is that the expenditures of money and material and the imperiling of lives of airmen in the Berlin airlift is not confined to Americans. The British are also flying and risking lives and material in the effort to keep Berlin alive.

Other nations in Europe have a stake. They are just as much at odds with Russia as we are. They are taking the same risks, calculated risks which have as the only alternative a bowing down to the Soviet and a communization of Europe.

They, as well as we, would like an end to the cold war, so that they could get down to the business of recovery and a long era of peace. Their desire for peace, like ours, is intense, and towers over every other consideration, except that of submission.

When Stalin wants to show a genuine desire to end the cold war, he can do it easily through acts rather than tricky words.

America the Profligate

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. REES. Mr. Speaker, under unanimous consent granted by the House, I am including herewith copy of an informative address delivered by Deane W. Malott, chancelor of the University of Kansas, at the Sixth Annual Economic Conference in Chicago January 19.

Chancelor Malott is one of the outstanding educators in this country. I am sure the Members of Congress and the public will be interested in the views set forth therein.

The address, entitled "America the Profligate," follows:

AMERICA THE PROFLIGATE

We in America have inherited a vast land, wealthy beyond any other country on earth. We have a sense of security, an absence of personal fear, deep-rooted in our way of life. We accept the freedom of our democracy with scarcely a thought to the price our forefathers paid in establishing it more than 160 years ago.

This heritage of ours has been so rich, our resources so abundant, our leadership so assured, our problems so simply solved, that we have been lulled into a sense of false security, which has made us careless of the

dangers of tomorrow, extravagant in our actions and indolent in our thought, as we have swirled merrily on in an ever-accelerating world.

WE HAVE BEEN WASTEFUL OF OUR NATURAL RESOURCES

We have been careless with our land, those millions of acres of fertile soil, of water, and of mineral products, for which we stand as current owners and trustees for the future. Every day through carelessness the equivalent of 200 40-acre farms is destroyed in America. We lost 200 of them yesterday; another 200 today; 200 will go tomorrow, washed or mined away or otherwise destroyed by our ignorance or carelessness.

Within 150 years we have lost one-third of the country's top soil. We have lost more than one-half of our high grade timber. Our current timber requirements are running about 54,000,000,000 board feet; our timber growth is adding annually to the resources of the Nation only some 35,000,000,000 board-feet. There is a day of reckoning ahead, in such a trend.

It is a further tragedy that in this land of plenty we have been allowing rodents to eat up more than $200,000,000 worth of grain each year; in some parts of the world loss by rat infestations runs as high as 25 percent. The abundance of these rodents is often the result of man's activities in destroying the wildlife that keeps the animal populations in proper balance.

We have also ruined water supplies, and destroyed aquatic life, by the industrial pollution of thousands of streams and rivers, with the result that millions of dollars are spent each year in making it safe for the population of cities to drink the waste dumped into the rivers upstream. In our water conservation, we have not always placed first things first. It is estimated that water is worth $54 per acre foot for potable and industrial uses, $27 for irrigation purposes, and only 50 cents for hydroelectric power, yet our Federal policies are to emphasize the power rather than other uses, with the result that a large number of Federal power plants, totaling in production over 3¼ million kilowatts across the country, are now under construction.

And while we waste the irreplaceable resources with which we are endowed, the world population mounts ever upward. There were about 1,000,000,000 people in the world in 1849; today there are 2.2 billions. An increase equivalent to a new Boston occurs in the world every 10 months; a new Chicago every year and a half. These represent hundreds of thousands of additional mouths to be fed from the world's shrinking resources.

Man has become a geologic force, little reckoning the effect of his activities on the world of tomorrow. He has created tremendous problems by his enthusiastic and unskilled use of fire, the axe, the plow, and firearms, with which he has devastated great portions of the earth.

Yet no generation can exclusively own the resources by which it lives. We have life tenancy only. The duty of every generation is to apply its full knowledge to protect and increase the capital sum of the world's great resources.

We have not only been wasteful in using the riches nature has given us but equally so in employing the things we have ourselves made and in utilizing our labor. We have been careless in the use of our machinery and equipment. We make wonderful automobiles, and then smash them by the thousands; we produce efficient farm implements, and often ruin them by careless or improvident handling. We race cars over the highways at unnecessary speeds on unessential errands, and deplete our shrinking oil reserves. We fail to insulate our buildings and waste valuable heating fuels. In 1946 we killed 33,700 people in motor vehicle deaths; around 100,000 a year meet accidental death in the United States, most of which accidents are preventable.

Another source of manpower losses lies in the continuing series of industrial strikes. The shipping strike in 1948 alone cost American industry over $500,000,000. In the year 1946, 166,000,000 man-days of idleness were due to strikes, in the first 10 months of 1947, the loss was nearly 32,000,000.

Man has not yet come to know either the value of his environment or how to handle his human relations.

WE HAVE BADLY MANAGED OUR INDUSTRIAL ECONOMY

In our whole economy, we are often unaware of sweeping economic forces at work and unthinking as to the direction of important trends. We are wealthy. There are in the United States 31,000,000 passenger cars, more than three-fourths of all in the world, and 35,000,000 telephones, which is over 57 percent of the world's total. Our current annual production has been running at the unprecedented rate of $250,000,000,000.

In the two and a half years before July 1, 1948, American corporations invested sixty-four billions in plants and equipment. But only about three billions came from new stock issues; the rest was from borrowings and retained earnings.

Hence today in this era of prodigious plenty, it is most difficult for a man or a group of men to start a new enterprise. High taxes and inflationary prices have reduced the accumulation of savings which are the source of venture capital. In 1947 all Federal, State, and municipal tax collections added up to about $50,000,000,000, or 25 percent, of the national income of that year. That means nearly $350 for every one of the 144,000,000 people in the United States. But each person does not pay $350; the individual share of millions is paid by persons who might otherwise have more surplus for investment. So we seem really to be killing the goose that has laid the golden egg of our great industrial system, the free American investor. And in the meantime our internal economy is becoming more and more out of balance.

American industry paid one hundred and twenty-two billions in salaries and wages in 1947, against less than twenty-nine billions in 1935—an increase of 324 percent. During the same period dividends increased only 224 percent. At present, between 60 and 65 percent of industrial profits are retained to finance future business operations, instead of around 35 percent used in the prewar years. It is thus more and more difficult to expand our business enterprises by the starting of new concerns, while more and more of the earnings of existing enterprises must be plowed back into betterment, expansion, and replacement.

In the field of international economics, our trade is also badly out of balance. In 1947 the world bought from us $19,500,000,000 of American goods and services; the world sold to us only eight and one-half billions.

There was an $11,000,000,000 "shortage," made up by four and one-half billions of gold and dollar assets sent in by other countries, and six and one-half billions in loans from us—out of the pocket of the American taxpayer. In 1948, the picture was a little better, with estimated world purchases of seventeen billions, and world sales of ten billions. But a world-trade balance is not in sight, and again the day of reckoning looms ominously ahead.

WE ARE CARELESS OF OUR POLITICAL RESPONSIBILITIES

We are indolent in meeting our responsibilities as citizens of the Republic. In the November general elections 46,000,000 people voted; some 93,000,000 were eligible to do so. The indifference to events thus shown is reflected in steadily mounting costs of Government. In the decade from 1900 to 1910, Federal expenses averaged $500,000,000 a year; in the decade from 1910 to 1920, they averaged $3,800,000,000; between 1920 and 1930, $3,700,000,000; between 1933 and 1940 they mounted to an average of $6,200,000,000; and in the years 1940 to 1948 the Federal expenses averaged $51,700,000,000, over a hundred times as much per year as in the first decade of the century.

In 1945, the Federal expenses reached $100,000,000,000; we spent more for the cost of our Federal Government in that 1 year alone than the Nation had spent during the entire period from the inauguration of President Washington to the inauguration of President Hoover, a period of 140 years burdened with four conflicts—the War of 1812, the Civil War, the Spanish-American War, and the First World War. We face, in this year of 1949, a Federal budget of nearly $42,000,000,000, and the President's budget message is read by most of our citizens with little or no comment, and less concern. Yet remember that Government as such is producing nothing; these fantastic expenses can be paid only by human labor applied to natural resources. Eventually a growing Federal bureaucracy will consume most of the substance of the Nation, our standard of living will go down, and our freedom will be at first choked and then killed.

In 1933, individual and corporate income taxes totaled $750,000,000; in 1949, these taxes will run to an estimated $33,000,000,000 or roughly 40 times as much. And 1933 is just 16 short years ago.

In 1933, our national debt was $22,000,000,000; in 1948, it has swollen to $252,000,000,000, 11 times as great.

In 1933 there were 572,000 Federal civilian employees; in 1948 there were 2,200,000—or four times as many. In 1933, also, these Federal civilian employees were paid $972,000,000; in 1948, they were paid $6,000,000,000, or over six times as much. And in 1948, the Federal Government added an additional civilian employee every 3 minutes—or 513 per working day, or 150,000 for the year.

In 1915, there were 158 Federal bureaus and divisions; in 1932, there were 529; in 1944, 1,141; in 1948, 2,700. Our very laws foster the growth of bureaucracy, because our Civil Service law bases the pay of Federal employees on the number of underlings.

We have taken onto the Federal pay roll 24,288 personnel specialists; there are twenty-odd lending agencies; there are 45 agencies concerned with housing. For some strange reason, there are 400 people in the legal division of the Department of Agriculture. There is one employee in the Bureau of Indian Affairs for every six Indian families in America. Chicago alone has 530 Federal offices.

In a recent year, the Federal Government gave hand-outs to individuals and grants-in-aid to local and State governments totaling $5,500,000,000. One Federal agency spent $100,000,000 to keep prices down; another spent $80,000,000 trying to keep prices up.

And in all this welter of bureaucratic confusion there is no complete accounting system and no complete set of books.

WE HAVE PROCEEDED WITHOUT DIRECTION IN OUR INTERNATIONAL RELATIONS

The war caught us unprepared for combat. But with amazing energy and singleness of purpose, America marshaled her human and material resources and threw herself into the fray. She emerged victorious in arms, but with no policy for the peace. More than 3 years after the end of hostilities we still have not assumed the leadership which somehow, out of the welter of war, has become inevitably ours.

We have no clear objective in China, although we have sent mission after mission on months-long visits to Asia. We have alternately showed strength and urged appeasement. Now as Nationalist China breaks up like ice in the spring, we stand by, indecisive

in attitude and uncertain of the course to take.

We have no policy in regard to Russia, or we could never have been caught in the ridiculous position of justifying traversing Russian territory by flying above the ground, rather than by moving on wheels over the ground, in maintaining our tenuous hold in Berlin. This extravagant rationalization has already cost $85,000,000 out of the pockets of the American taxpayer. On the broader front, the American public today has only the vaguest idea of its leaders' policies in coping with Russia, or the general strategy of our bulwark against the encroachments of communism.

We are fuzzy in our attitude in regard to the United Nations. We talk vaguely of strengthening the United Nations with never a thought of what we mean by the phrase. In the next breath we talk of the necessity of world government as though the United Nations and world government were somehow synonymous. They are, of course, no such thing. The United Nations is a league of sovereign states, which inevitably means a debating society and probably little more. We fret about Russia and the veto power, as though this use of the veto were some peculiar aberration of the Soviets. But America does not now show, and never has shown, her willingness to forego the veto and to enter wholeheartedly into a true world government—with an international executive, judicial, and legislative body. Yet without such an organization and such foregoing of national sovereign rights, the problems of our shrinking world offer little hope of solution.

WE ARE CARELESS IN OUR EDUCATIONAL PLANNING

The greatest national asset this Nation will ever have is her young people. Yet how little are we willing to pay, what little time and attention and money we are willing to devote, to the cause of training and educating these young people, that they may grow in wisdom, understanding, tolerance; that they may have warm sentiments, clear insight, keen analytical ability, a lively curiosity, and a sensitiveness to responsibility.

We underpay our teachers scandalously, and then wonder why they are not all shining examples of devotion to the American way of life. How often do we visit the schools in which our children spend a large proportion of their waking hours? How much do we help in the selection of the teachers? In fostering adequate school budgets?

Today we are spending in this country $2,500,000,000 for elementary and high-school education—less than $20 per capita. Yet we spent four billions for tobacco, fourteen billions for military expenditures, and nine billions for liquor. We spend near four times as much in this country for liquor alone in this great and civilized America, as we are spending for all our public elementary and high-school education.

And we are unsure of the purposes of our educational processes. Some wish to learn how to live; but most, and often under parental prodding, are eager only to learn how to make a living, and in the least possible time. We are too vocationally, too technically minded. Sir Richard Livingstone, the great British educator, defines a technician as "a man who understands everything about his job except its ultimate purpose and its place in the order of the universe." A nation bent only on the pursuit of the immediately practical can scarcely be expected successfully to assume the world leadership that lies within our grasp.

As Gen. Omar Bradley recently put it, "The world has achieved brilliance without wisdom, power without conscience. Ours is a world of nuclear giants, and ethical infants. We know more about war than peace; we know more about killing than we know about living."

We have, however, the preponderance of strength in the ideological struggle which today splits the world. In the great offensive to preserve freedom in the world, the free peoples whom we may lead number twice as many as the Communists; the free people have 75 percent of the world's steel, 85 percent of the world's shipping, most of the world's petroleum, are out ahead in knowledge of atomic energy, and possess the ingenuity and resourcefulness which go only with a free people.

We are slowly learning also, in this turbulent day and age, and by cruel experience, that in nature there are neither rewards nor punishments—only consequences.

The plight of America in this year 1949 is not hopeless; it is, however, so seriously alarming as to cause every citizen to rally to his responsibility. It is possible so to utilize our natural resources as to conserve rather than squander them, even to increase them in the areas of agriculture and timber. There are principles to be learned, fundamental procedures to be followed in human relations. An aroused citizenry can curtail the bureaucracy and extravagance of our Federal machinery, if only we insist on making our feelings known, vocally, vociferously, and constantly. In a democracy we can hold our leaders to account, we can insist upon statements of policy, and check Government policies by the multiple-minded thinking of our people.

We must understand that man is not only a thinking mechanism, but a moral and spiritual being, living in a moral and spiritual world, under moral and spiritual laws as exacting as the laws of gravity or nuclear affinity. Man may violate these laws, but he cannot break them.

A Congressman, WALTER JUDD, of Minnesota, recently said: "When man violates those laws, they break him and his institutions. If we persist in putting our faith in false remedies, and in worshiping the gods we ourselves have created—our mechanical skills, our science, our power, our material success—then we, too, will perish, strutting to our doom like the 20 civilizations before us."

In the last analysis the fate of America is up to you and me, its common citizens. If all of us recognize our responsibilities as citizens, our Nation will grow strong in its leadership, grow in its benefits from generation to generation. If we fail, the future lies dark indeed for the civilization of the world.

Freedom is not bestowed; it is achieved. It is not a gift; but a conquest. It does not abide; but must be preserved.

Frederic W. Cook

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following from the Boston Herald, Wednesday, February 2, 1949:

TRIBUTE PAID BY ARCHBISHOP CUSHING TO SECRETARY F. W. COOK

I would have been not a little unhappy if I had not been asked to come here tonight.

First of all, as a bishop I cannot be identified and I am not identified with partisan politics. My people belong to both the principal political parties in this Commonwealth and I represent all of them here tonight. I think it likely that most of them have voted for Fred Cook at one time or another and I know for certain that all without exception share my own high regard for him. And so I belong here as a representative of my people.

GOOD NEIGHBOR

Then I wanted to come for personal reasons. It is now more than a quarter of a century since I began my priestly work and it was in those first years of my priesthood that I made the acquaintance of Fred Cook. He was a good neighbor then and he has been a good neighbor ever since. When I was installed as Archbishop of Boston it was a very special thrill for me to present myself at Fred Cook's office at the statehouse to fulfill the legal requirements of archbishop of Boston as a corporation sole, operating within the framework of the State law. I felt I was calling on an old and faithful friend and I think it likely that only here in America could formalities touching on relations between church and state be so pleasantly and cordially discharged as they were between Fred Cook and me at the statehouse.

HONORABLE MAN

But most of all I wanted to come here officially. I speak for what is quite probably the largest single group of religious people in the Commonwealth. It is my duty to speak up against violations of God's law if, when, and as they occur. It is no less my duty to bear witness to the good, the true, and the upright. It is sometimes necessary for those who speak for morality to denounce the evil and to call to order the offending. It seems less urgent but it is much more important to proclaim the virtues of the upright and to praise the righteous. It is to do just that that I have wished to take part in this little program in honor of Fred Cook.

Fred Cook has been in public office for a longer period of time than many of those who vote for him have been alive. In all these years, through successive administrations there has never been the slightest of scandal attached to the name or office of the truly honorable Frederic W. Cook. Like most others, so I have heard practically every candidate for public office criticized for something or other at one time or another during a campaign or an administration. I suppose there have been many men aspire to Fred Cook's job and in line with their aspirations they must have campaigned against him. If anyone has ever brought so much as a single word of hostile criticism into a campaign against Fred Cook, I never heard that word and I don't know of anyone else who did. Fred Cook, I repeat, is truly entitled to the designation of honorable and placed before his name that proud word is no perfunctory form or empty title. It is the description of the man himself.

When people want to speak kindly of my racial and national background they call us witty or genial or something of that sort. People of German descent are said to be serious and painstaking and earnest. The French are supposed to be well-mannered; the Italians and other Latins excitable, colorful, and warm-hearted. People of Fred Cook's lineage are usually credited with being shrewd, thrifty, just.

Some of these generalizations are a little too easy and a lot misleading. I know several Irishmen who are not the least bit witty. There are probably any number of light-hearted Germans and frivolous Slavs. I suppose there are a few impolite Frenchmen and a few prosaic Italians. There must be a couple of Yankees who could be taken in and probably a sprinkling of them who are spendthrifts. Not everyone runs true to type.

YANKEE GENTLEMAN

But it is true, nonetheless, that there are types. The best types, however, blend with the virtues of their own stock a bit of the

qualities of the others about them. Fred Cook does. He has the shrewdness, sense of justice, the prudence of the best kind of Yankee. But at least in his eye there's a bit of Celt and in his friendly heart some of our laughter. In his public record there is perseverance and the dogged devotion to duty of the Nordic. In his private friendships you will find the warmth and the exuberance of the Latin. His office has always had in it the courtesy of the Gaul, the efficiency of the German, the friendliness of the southern races, and the routine excellence of those to the north. In one word, Fred Cook is a citizen of the world—the best kind of American—a complete gentleman—an all-round Christian.

That is why he has appealed to so many different kinds and classes in the general community. All of us found a bit of the best of ourselves in Fred. On election day all sorts of people found it easy to vote for him. Now as he retires from public service those same people and thousands more will find it very difficult to forget him. I share their gratitude to him for so many decades of devoted public service. I know they share the prayer I offer for Fred: That God may grant him length of days, health, and happiness abounding, His blessing in whatever form Fred's heart may most desire it. Well done thou good and faithful servant. The Lord keep you.

Tulsa, Okla.: A City With a Future

EXTENSION OF REMARKS
OF
HON. DIXIE GILMER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. GILMER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a brief article from Colliers' magazine, which will appear in the February 5, 1949, issue, and which briefly discusses the part which this city has played in the oil business.

The name Tulsa has become synonymous with growth and civic spirit. Not only is it the "oil capital of the world" but Tulsa has also become the focal point of one of the most promising areas in the entire Nation where new industry can thrive.

Tulsa and the surrounding area is rich in minerals. Labor is available, and there is power of almost every nature, including electricity, coal, and natural gas.

Tulsa is a city which is noted for its metropolitan air, its beauty, its virility, and its fine, friendly people.

The article follows:

Tulsa, Okla., is a man's town, packed solid with clean, fast-moving power. You can feel it on the streets and hear it in the voices of the people. You can see its strength from the air—a neat, wide, busy town, pushing back from the river, reaching out as far as space can go.

If you're looking for a city that says America clear and fast, Tulsa is your town. It's young—67 years ago it was only a trading post. It's rich—last year it chalked up over $1,000,000,000 in bank clearings. It's beautiful—of its 22 square miles nearly 6 are in parks. It's rooted solidly in the twentieth century—oil, the fuel that makes the world go, is Tulsa's No. 1 industry.

Tulsa was built on oil. In 1900 its total population was 1,390. But on June 25, 1901, somebody struck oil across the Arkansas River. It wasn't Tulsa's oil. It wasn't Tulsa's boom. Yet small as it was, Tulsa was power-packed with enterprise. Three of the town's citizens hurriedly threw a bridge over the river and sent an invitation out to oilmen: "Come and make your home in this beautiful little city." The oilmen came; the town trembled with activity. Tulsa was on its way.

In the next 9 years the town's population jumped to almost 20,000. Today the population of Tulsa's metropolitan area is over 256,430, and Tulsa can call itself the "Oil Capital of the World." It's an honest boast based on plain fact.

Tulsa, in 1949, is the primary producing, manufacturing, and distributing center for the Nation's petroleum industry. The Texas Co. is there. Sinclair, Shell, and Gulf are there. On the banks of the Arkansas River, just opposite Tulsa's downtown district, the refineries of the Mid-Continent Petroleum Corp. gleam in the sun, tank after tank brimming with oil, plant after plant turning crude oil into specialized products for uncounted thousands of industrial uses.

Tulsa is an oil town and proud of it, but it's a wise town, too—smart enough not to become stale with specialization. There are more than 600 factories in Tulsa. They make everything from oil field machinery to sulfuric acid, mattresses, prefabricated houses, plastics, and boats. The wealth they produce (upward of $300,000,000 at wholesale in 1948) is reflected in a cluster of skyscrapers in the center of town.

When the airmen, flying for the Air Matériel Command of the Air Force, flew in over Tulsa and got this picture, their mission might have been a problem in photographing an industrial city. They may have been seeking the effect of a sand-bottomed river on color film.

But whatever they were after, they couldn't help seeing Tulsa for what it is: A young and robust city, inseparable from the wealth of oil, growing of its own power, expanding, rising out of the earth like a cameo portrait of America.

Repeal Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. MADDEN. Mr. Speaker, last Thursday evening I made a broadcast over the Mutual network on the legislation now pending before the Senate and House Labor Committees asking for the repeal of the Taft-Hartley Act.

Since making this broadcast I have received a great number of letters throughout the country endorsing the thoughts set out in the following speech:

The Congress of the United States—the Democratic Eighty-first Congress—is moving rapidly ahead to carry out the mandate which you, the American people, presented on November 2, 1948.

The Fair Deal program of President Harry S. Truman is designed to bring a happier, more secure life to all our people. It will maintain the stability of our national economy and strengthen America's hand in our quest for peace in the world.

President Truman wants to assure a fair deal for every American citizen.

Tonight I should like to talk to you about a proposal by which the Democratic administration seeks to restore a fair deal for the millions of working men and women of our Nation, and to secure labor-management harmony.

This proposal is the National Labor Relations Act of 1949, which has been submitted in keeping with the pledges made to the people last year by President Truman and the Democratic Party.

The Wagner Act enacted in 1935 for the first time struck a sound, fair balance between the economic power of labor and management. It permitted labor and management to meet on equal footing and tackle their problems with the friendly assistance of Government. It secured for labor the right of collective bargaining, which is the cornerstone of union organization. Thus working people were able to obtain, in a short time, the highest standard of living in history.

The Truman administration seeks to restore this atmosphere to the field of labor-management relations.

In returning to the philosophy of the Wagner Act in our national labor policy, it will be necessary, of course, to repeal the Taft-Hartley Act. This act was passed in 1947 by a Republican Congress which sought to destroy the bargaining power of labor and to deprive working people of their full economic rights. It interjected the Government into the field of labor relations on an unprecedented scale, and bound negotiations in a maze of red tape and unnecessary litigation. The Taft-Hartley law was not conceived with the view of equalizing and stabilizing the conditions under which labor and management meet. Rather it was a punitive and restrictive measure.

What were some of the unfair and unwholesome effects of this law which we are committed to remove under the administration's new labor bill?

The closed shop was one major victim of the Taft-Hartley law. Closed-shop agreements had provided a satisfactory method for hiring of workers throughout the history of the American labor movement. Outlawing them was a futile action, since the Taft-Hartley law provided that the union shop, on the other hand, was legal. Workers chose the union shop in 97 percent of elections held under the law. If the architects of the Taft-Hartley law believed that a ban on the closed shop was desired by the workers, they were proved to be sadly mistaken.

As another example, the National Labor Relations Board was forced to seek injunctions against unions to prevent secondary boycotts, even those for legitimate objectives, such as the protection of labor standards. Yet there was no rule requiring the NLRB to ask for injunctions against employers who were guilty of unfair labor practices.

Removal of the United States Conciliation Service from the Department of Labor and the creation of a new, independent agency, was completely unjustified. For 34 years before enactment of the Taft-Hartley law, the Conciliation Service of the Labor Department had settled at least 100,000 cases in which there were serious disputes. Immediately before this transfer of functions, the Conciliation Service was settling, without work stoppages, more than 90 percent of cases in which no work stoppage had occurred at the time a conciliator was named.

One of the significant features of the new labor bill is that the service will be restored to the Department of Labor—where it belongs, by all standards of efficiency and coherence in the formulation of national labor policy.

The Taft-Hartley law's establishment of the General Counsel as independent from the National Labor Relations Board itself was contrary to sound administrative policy. As President Truman predicted in his veto message, this caused conflict between the board and its General Counsel. Under the Taft-Hartley law the counsel not the board,

was allowed to decide which charges were to be heard by the NLRB and which orders of the Board were to be referred to the courts. Under the new bill, the NLRB will no longer be the only agency of the Government with this unworkable separation of functions.

Procedure for the numerous elections required by the Taft-Hartley law was apparently designed to keep unsettled the relations between employers and unions. Denial of voting rights to strikers in representation elections, while granting such a vote to strikebreakers, is a discrimination which would permit the employer to hire nonunion replacements—enough of them to eject the union from the plant.

Under the Taft-Hartley law, by the simple expedient of petitioning for a choice of bargaining representatives—even when not faced with conflicting claims for recognition—the employer can win a year's freedom from union organization.

Welfare funds for protecting the health and well-being of employees were made the subject of stringent regulations—and despite the terms of the Norris-LaGuardia Act, injunctions for violations may be sought.

The prohibition of political activity by unions was an undemocratic provision of the Taft-Hartley law. Labor organizations, alone among voluntary associations, are forbidden to participate in political affairs, under that act.

The Federal courts have become burdened with damage suits allowed by the Taft-Hartley Act. Administrative agencies more properly should determine the complicated questions arising from the evils of unjustifiable secondary boycotts and jurisdictional disputes—since Federal court dockets are already overcrowded.

All secondary boycotts, whether justifiable or not, are outlawed by the 1947 act. Many such types of boycotts have long been held reasonable by the courts where the existence of the union itself, or the gains made in genuine collective bargaining were at stake.

The Administration contemplates removal of all these objectional features from the basic national labor policy through repeal of the Taft-Hartley Act.

The proposed law strengthens the provisions of the Wagner Act with the following amendments:

The three-man National Labor Relations Board of the original act will now consist of five members, and this can be divided into three-member panels to expedite work.

Certain types of jurisdictional disputes and secondary boycotts will be termed unfair labor practices, if engaged in by a union. Those prohibited are defined specifically in the administration bill, unlike the Taft-Hartley Act. Failure to file 30 days' notice of proposed contract changes or termination is made an unfair practice on the part of either labor or management.

Employers and unions in interstate commerce may make agreements for the closed shop or other forms of union security, even though State laws are in conflict. Uniform rules on these phases of collective bargaining are thus made applicable.

The bill further provides for settlement of grievance disputes without resort to economic force—and with a minimum of Government intervention. This would be accomplished through the Conciliation Service, which is authorized to assist the parties in formulating arbitration agreements and in selecting arbitrators. Employers and unions are thus encouraged to develop effective arbitration procedures on their own, and the evils of compulsory arbitration are avoided.

How does the administration bill deal with national emergencies caused by a strike in a vital industry? This feature is naturally of wide public interest.

Under the terms of the proposed act, the President is authorized to proclaim a national emergency when he finds that one exists, and to appoint an emergency board to investigate, seek to induce a settlement, and make a report of its recommendations.

Twenty-five days following the President's proclamation is the dead line for this report. During this period and for 5 days after the report is issued, the parties shall continue to operate under conditions of the disputed agreement.

It is anticipated that such disputes can be settled during the waiting period through the affirmative assistance of the emergency board and the operation of public opinion.

This procedure is a simple one—and it is established on the theory that free collective bargaining is to be encouraged, not forced through use of Government injunction.

Senator TAFT has already made known his opposition to this method for dealing with the few cases which involve a serious emergency.

However, the New York Herald-Tribune, whose brand of Republicanism is somewhat less neolithic than that of Senator Taft, concedes that the new bill offers an improvement over the Taft-Hartley provision for similar cases.

It is not by accident that the bill for readjustment of the Nation's labor policy should receive a high priority in the program of the Eighty-first Congress.

In the first place, there was an articulate mandate for repeal of the Taft-Hartley law—a mandate the Democratic administration proposes to carry out.

Republican spokesmen have resorted to all kinds of mathematical juggling to prove there really wasn't any mandate. They say that even though Mr. Truman is President, the people who elected him don't want him to do anything about the Taft-Hartley Law.

These Republican spokesmen haven't talked to the 103 Representatives and 17 Senators who are missing from the Eighty-first Congress because they voted for the Taft-Hartley Act. These defeated Republicans can testify, from bitter experience, what the people think about the Taft-Hartley Act.

A second reason for the importance attached to the Administration labor bill is this: Labor-management peace is essential to a stable, productive economy in the days ahead.

The Administration labor bill will guarantee industrial peace because it assumes that harmonious relations are desired by both labor and management. It will permit them to seek it together without resorting to force by the Government.

Under these conditions from 1935 to 1947, labor and management, working together, pulled the Nation out of a disastrous slump. They molded the mightiest industrial machine in history for the gigantic tasks of a world war. Under the same philosophy they can now work together as we try to win the peace as well. For this reason it is imperative that the administration labor bill gain immediate passage in the Congress.

Commission on Intergovernmental Relations

EXTENSION OF REMARKS
OF
HON. J. CALEB BOGGS
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. BOGGS of Delaware. Mr. Speaker, as the result of nearly a full year of study, in which I had invaluable assistance from interested groups and individuals, I have introduced into the House today a bill providing for the establishment of a high caliber, bipartisan, temporary Commission on Intergovernmental Relations. In presenting this measure I wish to state briefly its purpose and call careful attention to the importance of the subject to which it relates.

At the same time, Mr. Speaker, I wish to emphasize this fact. I will welcome suggestions and help from any of the other Members. In fact, I will be greatly pleased if, after reviewing this matter, Members of this House and of the other body will introduce identical or very similar legislation, so that the very serious problem to which my bill refers will have the sponsorship and the active support of a coordinated and cooperative bipartisan group of the Members of the Congress.

This bill provides for the establishment of a temporary commission to make a thorough investigation of the whole problem of intergovernmental relations in the United States. Little provision for such relations was made originally in our Constitution, and none has been added since. As a result of the constantly increasing demands for more services from all levels of government, there has been developed over the years—as the Members of this body well know—a vast unplanned, patternless network of interrelationships which have produced an existing situation of great confusion.

The simple truth is, Mr. Speaker, that we do not have the facts upon which to work out a solution. We have segments of the facts on particular functions, or in particular areas and jurisdictions. The need is for a comprehensive survey of the entire field for the purpose of determining exactly what the current situation is, what the trends are, and what our future program ought to be.

If this bill is approved, we will have a nonpartisan commission with representatives of all of the parties at interest, public and private, including the various levels of government, and both the executive and legislative branches, entrusted with the responsibility for making a thorough study of the whole problem, and formulating a report for the information and guidance of Congress and of the whole American people. Provision is made for obtaining the services of a professional staff to carry on the research. Sufficient time for the conduct of an inquiry of such far-reaching scope and magnitude has been made.

I would anticipate that this commission would undertake to provide us with answers to such important questions—among others—as the following:

First. What functions are now performed at each of the various levels of government?

Second. What functions should be performed at each of the various levels, and which cooperatively by two or more levels, in order to obtain the most efficient service at the minimum cost?

Third. What patterns have thus far been developed for interlevel and interjurisdictional relations—Federal-State, interstate, State-local, and Federal-local—and where has each proven to be most useful?

Fourth. What are the facts regarding the use of the grant-in-aid system, its purposes, extent, and methods of administration, and how might it be modified the better to achieve the objective of giving aid only to those jurisdictions which actually require it in order to maintain prescribed minimum standards?

Fifth. In the administration of joint programs, such as grant-in-aid, how much of the basic information on State laws must be collected within the administering agency, and how much could be done more effectively in a central clearing house for information on State and local government, law, and administration?

Sixth. What measures may be taken to bring about a greater degree of uniformity in the boundaries of regions, zones, districts, and areas used for administrative purposes by the Federal Government?

Seventh. What functions now performed by the Federal Government can be returned to the States, and what revenue sources now utilized by the Federal Government can be made available to the States to support such services?

Let no one assume that this is merely a quest for theoretical information that can have no practical significance. To me, the practical aspects of this investigation are most important of all. The Congress needs this information in order to pass intelligent judgment on hundreds of proposals that come before us every year.

Yes, Mr. Speaker, I say hundreds of such proposals each year, because I find that in the Eightieth Congress alone there were more than 300 bills introduced providing for various types of grants-in-aid in at least 28 different major categories.

To continue, I may also say that the executive departments need this information as a guide to the development of future policy.

The State and local units have long complained bitterly of the ill treatment which they receive with regard to revenue sources—the States at the hands of the Federal Government, the cities at the hands of the States. Here may be the means of obtaining information for the satisfactory solution of the problem of the allocation of the major sources of revenue, heretofore regarded as more or less impossible of solution.

Duplication of taxation between Federal Government and the States has long been a source of concern. Lately, however, as has been pointed out in many editorials, cities have found their financial situation increasingly difficult. As a result, duplication of taxation has given way to triplication. Last year, for example, the number of cities taxing incomes rose from 3 to 61, and this number appears definitely to continue to be on the increase. Mr. Speaker, we must find a means by which fiscal problems at all levels of the government are solved in a manner which is fair and equitable to the taxpayers, as well as to Federal, State, and local governments.

The Federal grant-in-aid system is another of the major problems with which the survey will be concerned. This system has been studied from various angles, but we have still to grapple with such basic problems as how much is to be spent, both in relation to the amount of total national income and of total Federal expenditure. In the opinion of many persons, the whole grant-in-aid program has gotten out of control with grants being made on a more or less haphazard basis. Many of the purposes sought are good, but are we going about the problem of meeting these needs in the right way?

The system is completely lacking in uniformity, both as to method of allocation, and method of administration, even with regard to grants authorized for the same or similar purposes. Some grants are made in specific amounts, while others are unlimited authorizations. The factors in the allocation formulae are reasonable and proper ones, to be sure, but they are combined into a bewildering variety of nonrelated patterns.

In presenting this proposal, I desire to emphasize the fact that it is not put forward as an economy measure, actually or in disguise—although it is quite conceivable that it should result in economy through a more effective coordination and integration of existing programs. It is not planned as a device for taking from any worthy purpose a single dollar which has been or which in the future may be authorized for its support. Its purpose is solely to bring some semblance of order into a general situation now characterized by chaos and confusion. By so doing, it is expected that the public may achieve greater benefits for the expenditures that are made as well as much-needed tax relief at all levels of government.

The bill I have today introduced is as follows:

A bill to establish a National Commission on Intergovernmental Relations

Be it enacted, etc., That there is hereby established a national bipartisan commission, in which the various levels of government are represented, to be known as the National Commission on Intergovernmental Relations (hereinafter referred to as the "Commission"). In view of the constantly increasing complexity, during the last century and a half, of a vast network of relationships among the Federal State, county, and municipal governments in the United States, this Commission is established for the purpose of studying and making recommendations to the President and the Congress, in an effort to bring about:

(1) The finding of ways and means of establishing a more orderly and less competitive fiscal relationship between the several levels of government. Major aspects of this problem include the overlapping and confused systems of taxation and the increasing demands made upon the Federal Government and the States for tax-sharing and grants-in-aid, without following any consistent over-all pattern.

(2) The elimination of duplication and overlapping services, activities, and functions, and the securing of a better coordination of such services, activities and functions among the several levels of government.

(3) The attainment of such an allocation of governmental functions among the several levels of government as will contribute to economy in governmental administration on the one hand, and maximum service to the public on the other.

(4) A reduction in the total governmental expenditures to the lowest possible level consistent with the efficient performance of essential services, activities, and functions.

(5) The development, within the existing constitutional framework, of a governmental structure, and such cooperative policies and procedures as will tend to overcome existing obstacles to efficient governmental administration, and to lay a sound foundation for future development.

SEC. 2 (a). The Commission shall be composed of 14 members as follows:

(1) Five appointed by the President of the United States, two of whom shall be officers of the executive branch of the Government, and three of whom shall be private citizens, all of whom shall have had experience with or knowledge of major problems in the field of intergovernmental relations;

(2) Two appointed by the President of the Senate, who shall be Members of the Senate;

(3) Two appointed by the Speaker of the House of Representatives, who shall be Members of the House;

(4) Two appointed by the President of the United States, who shall be State officials, from a panel of at least four, submitted by the Council of State Governments;

(5) Two appointed by the President of the United States, who shall be municipal officials, from a panel of at least four, submitted jointly by the American Municipal Association, the International City Managers Association, and the United States Conference of Mayors;

(6) One appointed by the President of the United States, who shall be a county official, from a panel of at least two, submitted by the National Association of County Officials.

(b) Of the members enumerated in paragraph (1) of subsection (a), not more than three members shall be from any one political party; of each class of members enumerated in paragraphs (2), (3), (4), and (5) of subsection (a), not more than one member shall be from any one political party.

(c) Any vacancy in the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

(d) The Commission shall elect a chairman and a vice chairman from among its members.

(e) Seven members of the Commission shall constitute a quorum.

SEC. 3 (a). It shall be the duty of the Commission:

(1) To make a thorough and comprehensive study of the subjects listed below, and of any related subjects, with a view to determining what changes in existing relationships, in its opinion, are necessary to the accomplishment of the purposes set forth in section 1 of this act:

A. The origin and development, and present status, of the relations and interrelations of the Federal, State, and local governments of the United States.

B. The allocation of governmental functions among the Federal, State, and local governments of the United States.

C. The problem of geographical areas as related to governmental functions, field administration, and metropolitan communities.

D. The gradual encroachment upon our Federal system of current and impending developments in the fiscal relations of the Federal Government with the States, and of the States with their political subdivisions.

(2) To submit its final report and recommendations to the President and the Congress on the subjects indicated above, and suggest plans and procedures for carrying these recommendations into effect, not later than February 1, 1952.

SEC. 4 (a) The Commission may, in carrying out this act, hold such hearings and take such testimony, sit and act at such times and places as it deems advisable. Any member of the Commission may administer oaths or affirmations to witnesses appearing before

the Commission. The Commission may delegate the powers conferred by this subsection to any member or to a group of members of the Commission.

(b) The Commission is authorized to secure from any department, agency, or independent instrumentality of the executive branch of the Government any information it deems necessary to carry out its functions under this act; and each such department, agency, or instrumentality is authorized and directed to furnish such information to the Commission, upon request made by the chairman or vice chairman.

(c) The Commission shall have power to appoint and fix the compensation of a director of research and all other necessary personnel without regard to the civil-service laws, and without reference to political affiliations, solely on the ground of fitness to perform the duties of their office.

SEC. 5. (a) Members of the Commission, other than those to whom subsections (b) and (c) of section 2 are applicable, and within the provisions of subsection (c) of section 5, shall receive compensation at the rate of $50 per day for each day they are engaged in the performance of their duties as members of the Commission, and shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of their duties as members of the Commission.

(b) Members of the Commission who are Members of Congress shall serve without compensation in addition to that received for their services as Members of the Congress; but shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of their duties as members of the Commission.

(c) Each member of the Commission from the executive branch of the Government shall receive, in addition to the compensation for duties performed in the executive branch, $50 per day for each day he is engaged in the performance of his duties as a member of the Commission, provided, however, that his total aggregate annual salary shall not exceed $12,500; and shall be reimbursed for travel, subsistence, and other necessary expenses incurred in the performance of his duties as a member of the Commission.

SEC. 6. There are authorized to be appropriated such sums as may be necessary to carry out the provisions of this act.

SEC. 7. The Commission shall cease to exist at the end of the fiscal year during which its final report to the President and the Congress is made.

The Taft-Hartley Law

EXTENSION OF REMARKS
OF

HON. SCOTT W. LUCAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1949

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the Taft-Hartley law, delivered by my colleague [Mr. DOUGLAS] over the CBS network last evening.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The voters in this last election were asked to choose between the principles embodied in the Wagner Act of 1935 and those of the Taft-Hartley law, passed by the Eightieth Congress in 1947. President Truman made that issue clear-cut in his campaign, as did other Democratic candidates, and in virtually every contest in which this was an issue, the voters chose the Wagner Act and rejected the Taft-Hartley law. We who believe in the principles of the Democratic Party as stated in the Philadelphia platform—we who believe that elections represent basic guides on public policies—are trying to carry out the people's will. We are trying to do so in the face of attempts in some quarters to so confuse the voters with fine-spun distinctions that they will be unable to see what is at stake in the present Senate hearings on a new labor bill.

But these issues are, in fact, very simple. The Wagner Act was built upon the thesis that the average workman in the United States could not protect himself as regards wages, hours of work, job security, and other conditions of employment when he dealt individually with large employers. The Wagner Act assumed that men would find greater freedom and security in these matters if they dealt collectively with employers through unions of their own choosing. This concept in the Wagner Act was based on a sober recognition of the fact that the main reason unions were weak in the great mass-production industries of steel, machinery, automobiles, rubber, chemicals, etc., was because most men were afraid to join them, not because they did not want to join them. In industry after industry, laborers saw that men who joined unions or were active in union affairs were fired, hunted down, and blacklisted so that they could not get a job anywhere. In the main, with certain honorable exceptions, men could exercise their legal freedom to join unions only at the expense of losing their jobs. Moreover, for 20 years prior to 1933, laborers saw that it was a common practice for many employers to impose upon their employees the "yellow-dog contract." Under this contract, men were given jobs only on condition that they agreed not to join a union or even to talk with a union organizer. Men signed these contracts not because they wanted to do so, but because they needed money so badly to support their families.

The courts of the pre-Wagner Act era not only enforced these "yellow-dog contracts" but rejected as unconstitutional any State and Federal statute which outlawed them. The courts in fact went even further. They issued injunctions which restrained unions from even approaching a man who had been coerced into signing one of these "yellow-dog contracts." Thus the courts not only permitted employers to bar unions but they put up legal "keep off the grass" signs around the nonunion plants and provided legal bulldogs to see that these areas were kept as nonunion.

The Wagner Act attempted to remedy this. In the first place, it said that it was an unfair labor practice for an employer to discharge or discriminate against a worker because of his membership or activity in a labor union. If workers were found after investigation to have been so discriminated against, they were reinstated on the job and the employers were directed to give them their back pay. Thus freed in part from the fear of discharge, workmen poured into the unions by the millions and set themselves to bargain collectively with their employers.

And here the Wagner Act made its second big contribution to industrial justice. It declared that if a majority of the workers, voting in a free and fair election, chose a given union to represent them, it was then the duty of management to sit down with the chosen representatives of the workmen, to bargain collectively with them, and at least try to reach an agreement. Two things should be noted here. First, that if a majority of the workers did not want to bargain collectively, there was no obligation upon them to do so, and secondly, even if they did bargain collectively, there was no obligation upon the part of the employer to agree to what the union demanded. The employers were left free—and they were entitled to that freedom—to reject any or all of the union's terms. All that was required of them was to sit down together in good faith and at least try to reach an agreement.

The Wagner Act, in other words, did not prescribe what the decisions should be. It merely delayed the use of economic power by the employer long enough to permit the voluntary processes of negotiation to take place.

These were the sound principles of the Wagner Act. Under them union membership has increased to about 15,000,000, though many of these unionists are very weakly organized, and there are many millions more who are still completely unorganized.

Many employers cooperated splendidly in the working out of these principles of collective bargaining and made collective agreements with the union. While abuses did develop here and there, as is true in every set of human relationships, the net effect was to protect workmen against the capricious exercise of power by employers and foremen. It contributed to industrial peace. It enabled employers to lighten their own burden of harassing negotiations with a multitude of separate employees. And it made our labor force a free one—free of the fear of economic reprisals that everywhere menace political liberty.

But, unfortunately, there was a set of employers who never adjusted themselves to the new day. They disliked collective bargaining, and they still wanted to be able to fire men who stood up to them with independence. They fought delaying actions in the courts and they tried to change the law. In 1946 they thought their chance had come. In that year the Republicans won a majority in both Houses of Congress, and they interpreted this as a mandate to gut the labor law of the country. Over the opposition of the northern Democrats and a few splendid Republicans they passed the Taft-Hartley law. Now, what did the Taft-Hartley law do? Instead of trusting to the processes of voluntary collective bargaining, it laid down an elaborate series of detailed rules which encouraged lawsuits and made it more difficult for agreements to be reached.

1. It forbade the so-called closed shop, even though the workers wanted it and the employers were willing to accord it.

2. It prevented the workers from even asking for the union shop unless they had won an election permitting them to do so. In respect to these elections, it tried to stack the cards against the unions by providing that all those who did not vote because of illness, absence, or other reasons were counted as voting "No," even though, if present, they would have voted "Yes." Where the Taft-Hartley law was more severe than a State labor law it was provided that the Taft-Hartley law was to prevail, but when the State acts were more severe than the Taft-Hartley law, and forbade even union shops as well as closed shops, the State laws were to govern labor relations.

3. The Taft-Hartley law made it possible for employers to break unions and destroy collective bargaining. Employers were permitted to ask the Labor Relations Board for a new election upon the statement of organizations or individuals that they were the real representatives of the men. Thus, if a strike occurred the employer could replace the strikers with other men on a permanent basis, petition for an election, and in this election the strikers were expressly forbidden by the Taft-Hartley law to vote. Those who took their places, or what the unionists would term strikebreakers, were, however, permitted to vote. Under these conditions, it would not be difficult to displace the original union as the bargaining unit and to substitute a more or less stooge union. And, now mark this: It now became unlawful for the original union to continue its strike, which was originally legal. The National Labor Relations

Board has been forced by the Taft-Hartley law to indicate in two cases that this result would follow. Should we have a depression and a large amount of unemployment, the way is, therefore, cleared for employers in the big industries to shake themselves free from genuine collective bargaining and to substitute weak groups who would be more or less under their control. This may have been what ex-Congressman Hartley meant when he said, "There is more in this act than meets the eye."

4. The Taft-Hartley law, by outlawing all forms of secondary boycotts, compels members of a union to work on struck goods coming from or destined for another plant where their brothers are on strike. It thus attempts to atomize collective dealings and to say that workers shall only be concerned with what goes on in other parts of their own plant and shall have no concern for general conditions in their industry, even though these may severely undercut their own working conditions. This is in line with the attempt made by Congressman Hartley and others to outlaw industry-wide collective bargaining and to confine the collective agreement to a single plant and a single employer. While this effort failed in 1947 because of the opposition of the northern Democrats and some high-minded Republicans, it would in all probability have been enacted had the Republicans won the election last fall.

5. The Taft-Hartley Act makes it illegal for unions to practice "restraint or coercion" without defining what those terms mean. I want to make it clear that I am opposed to violence in labor disputes and to mass picketing. But those acts are already illegal under the common law, under local police regulations, and under many State statutes. Not only does the Taft-Hartley law nationalize the police regulations of the country and thus take over functions hitherto left to the States and localities, but it also makes it possible for a Labor Relations Board, should that Board become weighted to favor employers, to restrain even peaceful picketing. The Board could, for example, limit pickets to the number suggested by Chief Justice Taft in the American Steel Foundries case, namely, two to a gate—a limit which in modern industry where thousands frequently enter through a single gate, would guarantee its ineffectiveness as a means of peaceful persuasion. This reminds one of the old nursery rhyme:

"Mother, may I go in to swim?
Yes, my darling daughter.
Hang your clothes on a hickory limb
And don't go near the water."

6. The Taft-Hartley law made unions suable financially for the acts of their so-called agents even though a union had never approved or ratified the acts in question. By making such penalties apply to organizations rather than to persons and decertifying them in addition, the way was opened for antiunion employers to smash virtually any union in the land, if they chose to do so.

These are only a few of the crucial weaknesses and injustices in the Taft-Hartley law. In addition, it lays down such a series of legal requirements and prohibitions that it would take a battery of Philadelphia lawyers to determine just what are the legal rights and duties of unions. It has, therefore, largely resulted in turning over the conduct of industrial affairs to the lawyers. This is an unhealthy development. For when friends go to court their friendship flies out of the window. Perhaps the greatest fault in the act is that it shifts the basic relationship between unions and employers from a friendly effort to find common ground to bickering legal proceedings.

In President Truman's proposal, as introduced by Senator THOMAS, we aim to restore the practice of collective bargaining. We want the parties to confer and try to reach an agreement. We think this is better than to prescribe the minute and voluminous rules of an industrial Emily Post and to try to legislate for every conceivable situation under the sun.

And yet our bill does aim to remove some of the weaknesses in the field of collective bargaining. It outlaws jurisdictional strikes and lays down a method for deciding how work is to be assigned. It prevents outside unions from trying by strikes or boycotts to alter the choice of bargaining representatives already made by employees inside a given plan. It declares that once a collective agreement has been signed, the workers should not strike concerning the interpretation of a contract and it provides permanent processes of mediation and arbitration to settle such disputes peacefully.

It prescribes a 30-day cooling-off period for strikes which are threatened in vital industries which threaten the public health and safety. We do not enforce this cooling-off period by injunctions as does the Taft-Hartley law, nor do we compel men to work against their will for the profit of private employers.

The Railway Labor Act does not provide for such injunctions to secure their cooling-off period and yet these waiting periods have always been obtained in that industry. The Taft-Hartley law does use injunctions to get their 80-day waiting period and in a number of cases this has operated to heat the situation up rather than to cool it off.

Under the President's plan, boards of inquiry are set up during this waiting period which are not only to investigate but also to recommend. It is believed that this will lead to agreement between the parties in the vast majority of cases. But should this not occur and a strike break out which would threaten the vital health and safety of the Nation, the President would still have reserve powers to protect the country.

Our aim is to restore the processes of collective bargaining and to encourage the parties to settle disputes by themselves aided by governmental machinery and an informed public opinion. We do not think it wise for the Federal Government to legislate in great detail and to deal with every alleged abuse under the sun. For as Gabriel remarked in the play Green Pastures, "The Lord expects us to figure out some things for ourselves."

We believe the principles for which we stand are correct and we appeal to all citizens regardless of party to inform themselves and then to be governed by their consciences. The sooner we get back to collective bargaining, the better it will be for all.

A Sound Program of Flood Control and River and Harbor Improvements Must Be Maintained

---

EXTENSION OF REMARKS
OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address which I delivered at the thirtieth annual convention of the Mississippi Valley Association, St. Louis, Mo., Monday, February 7, 1949, to wit:

A SOUND PROGRAM OF FLOOD CONTROL AND RIVER AND HARBOR IMPROVEMENTS MUST BE MAINTAINED

The natural resources of the United States have made possible the growth and development of this country as the most powerful nation in human history. Among the most important of these resources are rivers and lands. They will not renew themselves. When they are expended, they are lost forever. The arid lands of the Middle East and China which were once fertile and well watered are a warning that our resources must be preserved. They can be conserved for the benefit of the present and future generations.

The conflict between the use and misuse of land and water is as old as the Biblical contest between light and darkness, and is as new as atomic energy.

We are acutely aware that our natural resources are imperiled. We know that our soils are neglected. We were reminded in the national campaign of 1948 of our failure to utilize the rivers of our country. We must take advantage of the sentiment that now obtains throughout the country for the preservation and conservation of our resources. Probably the most successful appeal in the Presidential campaign was for increased appropriations for flood control and reclamation. We must capitalize upon the prevailing sentiment of the country. We must keep in mind: "There is a tide in the affairs of men which taken at the flood leads on to fortune."

MISSISSIPPI VALLEY

As we assemble today we are reminded that the Mississippi River system is the longest in the world, and that with its tributaries it drains the entire mid-continent lying between the Rockies and the Appalachians including more than 40 percent of the area of the United States. The Mississippi Valley is the most important in the world. Of all rivers the Mississippi is the most marvelous and powerful. Above the mouth of the Missouri its waters are green. There are beautiful palisades and wonderful limestone cliffs that tower far above the green waters. In the upper stretches the Falls of St. Anthony are not only beautiful but they are renowned in song and story. The Indians spoke of the Mississippi as the Big River. Below the Missouri its waters are muddy. South of Cairo it flows into the Gulf of Mexico through the alluvial valley. When we think of the Mississippi River we think of power and glory. It is not only the longest but it is the greatest navigable river in all the world. It loses none of its interest and its fascination as it travels toward the Gulf.

THE FIRST WHITE MAN

The first civilized man ever to behold the Father of Waters saw the mightiest of all rivers at its worst. There was no civilization then. There were no factories to be flooded, cities to be destroyed, or farms to be devastated. Hernando de Soto was thrilled at the majesty of the Father of Waters. The flood of 1541 is the oldest of the recorded floods along the Mississippi River. The next great flood occurred in 1718. Floods have occurred throughout the years at intervals of approximately 15 years. Major floods occur annually along some of the rivers of the United States. The year 1948 was no exception. As long as rains fall and snows melt, and as long as rivers flow there will be floods.

ADOPTED POLICY

The policy of national flood control was first proclaimed by Congress in 1928 and it was finally adopted in 1936. The time for argument and disputation with respect to the methods of solving flood-control problems is passed. All factors of safety have been utilized. The methods have been tested. The policy is sound. The adopted projects along all of the principal river basins in the United States are flexible and capable of being expanded. All works constructed as authorized will be utilized. As new problems arise new solutions will be found.

The policy has been tested and whenever and wherever tested it has been justified. The levees, the revetments, the channeliza-

tions, the cut-offs of the Mississippi River and the flood walls, levees, and dams for flood protection in all of the river basins of the United States are outstanding monuments to the skill and ability of the Corps of Engineers of the United States Army, and are a justification of the flood-control policy adopted by Congress. The bedrock of the declared policy is that in all improvements the benefits must exceed the cost. When we contemplate the waste and futility of war with its cost and destruction, it is a source of satisfaction that every dollar appropriated by Congress and expended in flood-control improvement adds to the value of the assets of the United States. The dams and flood walls, the levees, and the revetments are distinct contributions to the wealth and security of the country. Under the planning and execution of the Corps of Engineers the interests of the people of the United States and the property to be protected are safeguarded. The policy is as sound as the 162-year general-welfare clause of the Constitution of the United States. The policy is based upon sound economics and sound engineering. Formerly we boasted of our skyscrapers. Today we take pride in our dams and in our levees, high and strong, to conserve waters and to protect lands, people, and property.

ANNUAL AUTHORIZATIONS

I believe in the program of annual authorizations. Projects have been approved and partial authorizations made for the accomplishment of the works. These authorizations have been increased from time to time. Further increases should be made. There should be additional authorizations as favorable reports are submitted by the Chief of Engineers. While authorizations may appear large it should be kept in mind that the annual damages from floods in the United States are larger. It is estimated that the annual destruction, without flood-control works, from floods aggregates approximately $809,000,000 and that the protective works already authorized and constructed prevent annual losses of about $343,000,000, of which $212,847,000 are in the Lower Mississippi Valley. It has been demonstrated that while major rivers are among the most destructive of the forces of nature, that while floods cannot be prevented, they can be controlled and put to beneficial use. The problems range from inundations that formerly covered some 25,000 square miles of the alluvial valley of the Mississippi River to the flash type of floods from the bare hillsides of western basins such as of the Los Angeles River which are heavily laden with rocks and debris. Floods are not new. They are as old as the history of lands. They obtained when the native prairie grasses covered the entire Mississippi River Basin and when the primeval forests along the watersheds were still untouched. The settlement and development of river valleys emphasizes not only their destruction but the abuse of lands which has contributed to the magnitude of floods. Each year due to erosion and overuse, 500,000 acres of topsoil are washed away entirely, while many times that acreage is stripped of its productivity. We are exhausting our forests. The cutting is 50 percent greater than the growth. Our minerals are being consumed. Our petroleum reserves are being depleted in excess of new discoveries. The lack of control and the improper utilization of the great river resources result annually in huge flood damages to life and property as well as to transportation and agricultural resources. We must realize that our natural resources were the basis of the unparalleled production that brought victory to the United States in the greatest of all wars. Improvements must continue and annual authorizations should be made in the general welfare of our entire country.

FLOOD CONTROL ACT OF 1948

A few projects were authorized in 1948. They were widely distributed, but there was no general authorization bill. However, there are constructive features in the act. It authorizes the Chief of Engineers to construct small flood-control projects not specifically authorized when the cost does not exceed $100,000. The act of 1946 was amended with respect to emergency repairs and maintenance so as to include extensions or other modifications of existing flood-control works. A third provision is a permanent authorization for emergency flood-control rehabilitation. Floods occur somewhere in the United States every year. Works must be done without delay. Appropriations should be made without awaiting emergency authorizations. I regard the emergency authorization as the most constructive feature of the act of 1948.

APPROPRIATIONS

While authorizations should be made annually as favorable reports are submitted, the great and pressing need now is for adequate appropriations for the orderly construction and completion of authorized improvements. Works were discontinued during World War II and the need, with annually recurring floods, is appropriations. There is work for this organization to do. We must be on guard. While the President has submitted recommendations for appropriations along the lower Mississippi River and tributaries and for general flood control along all of the rivers of the United States and for rivers and harbors in excess of the appropriations made for the current fiscal year by the second session of the Eightieth Congress, the spokesmen for economy in the Committees on Appropriations are most vocal and active when it comes to appropriations for flood control and river and harbor improvements. The members of this organization must take nothing for granted. The spokesmen for these great internal improvements, in and out of Congress, must be active. The Committees on Appropriations must be reminded again and again that the country has been sold upon adequate appropriations for flood control and that the most effective appeal in the recent national election was for increased appropriations for flood control and reclamation. I am delighted that President Harry S. Truman has wisely reversed his policy of 2 years ago. He recommended increased appropriations to the Eightieth Congress, second session, and while the budget recommendations were reduced, I am glad to report that the second session of the Eightieth Congress made the largest appropriations in dollars for flood control, rivers and harbors and reclamation, in the history of the country. This was true not only of the lower Mississippi River and tributaries, but of flood control generally. The total appropriations for flood control amounted to $423,000,000; for rivers and harbors $167,000,000; and for reclamation $246,000,000. It must be remembered, however, that while the appropriations are in excess of previous appropriations in dollars they will not accomplish more improvements, for the cost of construction has increased substantially 100 percent since 1939. Adequate appropriations are more important than ever. We favor the elimination of waste and extravagance. We advocate economy in public expenditures. We favor economy in internal improvements, but that economy, like the policy, should be sound.

PROGRESS

No nation has made more progress in flood control than the United States. The advance has been marvelous since the policy was adopted in 1936. Flood-control improvements really began in 1917 when they were confined to the lower Mississippi River and to the Sacramento River. Following the flood of 1927 progress was made in the passage of the act of 1928. The policy then declared has been adopted and extended to include all of the principal rivers and valleys of the United States. The planning and construction of improvements have been declared in all of the flood-control acts passed since 1928 to be the function of the Corps of Engineers of the United States Army. Flood control has been expanded to include not only protection from overflows, but adequate drainage and channelization, for with the soil-conservation practices, small streams and drainage canals are being filled. Flood control has, therefore, been properly extended to make flood-control improvements more effective by improving channelization in natural streams and by improving drainage. While flood control and river and harbor appropriations, as well as appropriations for reclamation, may be increased during periods of unemployment, they are among the types of public works that must be carried on in the national interest annually. They are necessary to the constantly increasing demands not only of production but of consumption.

PERILS

Progress is always subject to attack. It has opposition and today both the adopted policy of the Congress of the United States and the progress that has been made under that policy are under attack. The Tennessee Valley Authority was established primarily as a power project, but after its establishment and immediately following great floods in river basins, the praises of valley authorities were sung and attempts were made to establish other valley authorities. Efforts were made following the successive floods along the Missouri River and its tributaries to supplant the declared policy of the Congress with respect to flood control and river and harbor improvements and reclamation. Congress again reviewed and carefully considered the proposals. The constructive provisions of the Flood Control Act of 1944 repudiated a Missouri Valley Authority and wisely provided for the reclamation works of the upper Missouri River and its tributaries to be planned and executed by the Bureau of Reclamation and the flood-control improvements in the lower stretches to be planned and executed by the Corps of Engineers.

COLUMBIA RIVER AUTHORITY

But the superficial planners, following the floods along the Columbia River in 1948, are again on the march. They now sound a lesser note respecting the Missouri Valley Authority, but a higher note in behalf of a Columbia River Authority. They would reverse the declared policy of the Congress and cripple the authorizations, appropriations, and construction in the Columbia Basin both by the Corps of Engineers and by the Bureau of Reclamation.

The adopted policy in the Columbia Basin as well as in all other basins provides not only for navigation, for the generation of electric energy, and for furnishing water to arid lands by irrigation, but the policy provides for cooperation with the Department of Agriculture and with the Conservation and Forestry Services. Authorizations have been made and works constructed for conserving the soil, improving the use of land for reforestation, for vegetable covers, for check dams and for farm ponds, and for other means to conserve the soil and the water on the lands of the Columbia River and other basins. Bonneville Dam with its power and Grand Coulee with both power and reclamation have been constructed and other projects are under construction by the Corps of Engineers and by the Bureau of Reclamation. A valley authority that would deprive these established agencies of the Government of their functions in the Columbia River Basin is now proposed by the establishment of a Columbia River Authority. The proposal for other valley authorities has been repeatedly rejected by the Congress, and I believe that it will be rejected again. It is again proposed that bureaucracy shall ride the rivers. Bills for valley authorities in other basins have been offered. Whatever may be said with respect to the Tennessee Valley Authority as a precedent, there

is certainly no reclamation of arid lands in the Tennessee Valley, and the principal flood-control project in that valley, which is to protect the city of Chattanooga, was placed by Congress under the supervision of the Corps of Engineers of the United States Army. The Tennessee Valley Authority for this and other reasons cannot properly be used as a precedent for the Columbia River Authority. There are many reasons why the adopted policy of flood control and reclamation in the Columbia Basin should not be supplanted and replaced by an authority. I mention but a few:

1. I am opposed to the Columbia River Authority because it would not be under the immediate control of Congress and would be responsible directly to no one but itself. The control of Congress would be surrendered.

2. Instead of reducing governmental agencies, an additional and unnecessary agency would be added. Without the control of Congress, the agency would be on its own and irresponsibility would result.

3. I oppose the revolving funds to provide for expenditures by authorities without specific authorizations by Congress. The policy with respect to flood control and reclamation would not only be reversed, but wrecked, inasmuch as under the adopted policy Congress approves, after the most careful scrutiny and investigation, all flood-control and reclamation projects.

4. I believe in definite appropriations for specific purposes. Public projects should be safeguarded. In the case of authorities the selection and approval of projects rests with the authority. I believe that the representatives of the people who levy the taxes should have a voice in the approval of the projects to be constructed.

5. Bills creating authorities are often couched in vague phraseology that can easily be stretched to authorize activities which many patriotic Americans do not consider proper governmental functions.

6. I oppose authorities as they may become a superstate and thus deprive the States of the participation accorded to them under the Flood Control Act of 1944 in all flood-control and reclamation improvements. The sovereignty of the States in the matter of water rights is recognized under existing law, but that sovereignty would be in valley authorities if created. The States would not have, by law, the right they now enjoy under the Flood Control Act to participate in plans for flood control and reclamation.

7. I oppose valley authorities because I believe that their control of the electrical power very largely vests in the authority the control of the economy of the region and further centralizes in a Federal bureaucracy the welfare of the region.

8. I oppose valley authorities because under existing law the Department of the Army, the Secretary of the Interior, the Secretary of Agriculture submit their studies and surveys to Congress for approval. The authorities would be supreme and would not be required to use the existing agencies.

9. I oppose authorities because they are not necessary to coordinate the improvements of the valley. Existing Government departments work together on a single project. One valley is not entitled to priority. If an authority is necessary to coordinate functions we might as well combine the Department of Agriculture and the Department of the Interior. If the departments do not cooperate, the remedy, in my judgment, is not to scrap or duplicate the department, but for Congress to insist upon cooperation.

10. I oppose the valley authorities because of the inherent defects in their organizations. Authorities are managed by three men. A public department or enterprise can better be managed by a single executive. Divided authority can be worse than no authority.

11. Finally, I oppose valley authorities because they would duplicate without improving the works done by experienced existing agencies, in soil conservation, in reclamation, in flood control, and in navigation. Authorities use their own engineers. They have not used the Corps of Engineers in the Tennessee Valley Authority, nor have they utilized either the Reclamation or the Soil Conservation Service.

It doesn't make sense to me that we should not continue to use the Corps of Engineers, with their record of achievement since 1824, and the Bureau of Reclamation with its outstanding record since 1902. They have both demonstrated their worth. Mere change never made progress. It often results in failure. I am for progress, but I want that progress to be constructive, and the best way to promote flood control is to continue the use of the most capable and experienced engineers in this or any other country in the planning and execution of flood control and river and harbor improvements.

THE CORPS OF ENGINEERS AND REORGANIZATION

Bills for the reorganization of the executive departments are under consideration. I favor such legislation, but I must be realistic. For 20 years, under the guise of reorganizing, efforts have been made to strip the Corps of Engineers of their civil functions. President Hoover submitted a reorganization plan to Congress under the Reorganization Act of 1932 just before the expiration of his term. It proposed to change the name of the Department of Interior to convert it into a Department of Public Works, and it proposed to put the Corps of Engineers under the proposed Department and to transfer them from the Department of the Army. It proposed to strip them of their functions. Congress promptly and emphatically rejected the plan. The Reorganization Act of 1932 was extended and limited to two years, but President Roosevelt never undertook to transfer the Corps of Engineers. Congress has rejected all suggestions for placing the Corps of Engineers under any supervision except the Department of the Army. In the Reorganization Acts of 1939 and 1945 the functions of the Corps of Engineers were exempt. Efforts are now being made to authorize legislation that may permit a plan to deprive the Corps of Engineers of their civil functions. Such proposals, whenever and wherever they appear, should be defeated. There are many reasons why the Corps of Engineers should continue to execute flood control and river and harbor improvements under the Department of the Army, and why their functions should not be transferred to another agency. Their record of achievement in flood control and river and harbor improvements is unexcelled. That record is fair and spotless. It has never been tainted by fraud or corruption. Educated by the Government at West Point, where civil engineering was first taught in the United States in 1802, with post-graduate courses in the leading universities of the country, the experience in planning and construction in civil works during peace is of inestimable value to the Corps of Engineers in time of war. To place the civil works in or under another agency, when the Corps of Engineers must be maintained in peace for service in war, is utterly unsound. They not only have the experience, but they have the character and the ability as the impartial agency of the Government to advise the Congress and to plan and execute the works authorized by Congress. In times of peace they should be retained under the jurisdiction of the Department of the Army so that they may be prepared for their functions, by experience, in times of war. War is always costly and the construction of the works that are essential to the advance and victory of our armies in times of war must be done by the Corps of Engineers. No branch of the service contributed more to victory in World War II than the Corps of Engineers.

PUBLIC WORKS

Public works as proper functions of the Government must be carried on in normal times. These works include Federal buildings in all of the States of the Union, and flood control and river and harbor improvements. They include reclamation. Immediate improvements are often necessary, especially where there has been widespread suffering or damages, or where the need is great. Since World War II, full employment has heretofore obtained. There has been a scarcity of both labor and materials. Public works not normally required can often be delayed until the costs of construction are stabilized. Such works, however, should be authorized not only for normal construction but in periods of unemployment to provide for sound economy. Often works authorized may be postponed until reasonable bids can be obtained. We have confidence in the Corps of Engineers and in the Bureau of Reclamation. Construction must be wisely handled so that, except in emergencies, contracts at reasonable prices may be made available. There are signs that labor is becoming more plentiful and that materials are costing less, but the need for stabilization in prices and wages is still acute. The best way to provide for employment is to promote production by a sound program of public works. In the event of widespread unemployment there should be no work relief.

PROJECTS

Congress should continue to provide, after careful study and investigation, a backlog or shelf of sound public works needed for the transaction of the functions of the Government and in the public welfare. We must profit by our experience. During the depression of the 1930's appropriations disbursed to provide employment were often wasted because of the failure of Congress to adopt in advance for periods of unemployment adequate programs for public buildings, for roads, for river and harbor improvements. Employment will be promoted and waste will be eliminated. Temporary works will be avoided and permanent projects for the general welfare will result.

CROSSROAD

The important governments of the earth today, including our own, face grave crises. The people are confused in thought and in deeds. Thinking has been warperd. Fear is widespread.

People have been deprived of their liberty in many nations. Mass guilt has been revived. Government by hatred, by exile, has been reinstated. The destiny of the United States will determine the destiny of the world. We are at the cross roads.

PEACE AND SECURITY

The world needs peace today. The United States has taken the initiative to promote peace since the cessation of hostilities. The door to peace must always be kept open, but that door should be kept open not for communistic propaganda but for peace and good will in all the world. The best way that the United States can promote peace is for the United States to be strong. Security is essential not only to the welfare of the people of the United States but to the restoration of peace in all the world. Unless we are strong, unless we can match our words with our deeds, world peace will be delayed.

We failed to cooperate for a permanent peace following World War I. As a result, with other nations, we definitely traveled

the road that led to World War II. We have determined to profit by the experiences of the past. We claim the right to determine our own Government and we accord to all countries the right that we claim for ourselves. The forces of communism are on the march. To promote our security we have provided for European and Chinese aid.

EUROPEAN RECOVERY PROGRAM

Our allies in Europe and our friends in China must keep in mind that the burdens of recovery abroad may strain if not destroy the economy of the United States. If the burden proves too much the hope of freedom in all the world is lost, for today the United States stands between freedom and totalitarianism. If there is a depression in the United States or if our economy is crippled, Joe Stalin would be the most pleased person in all the world. European relief is a burden. That relief and national defense are costing the taxpayers $22,000,000,000. The Federal budget is approaching $50,000,000,000.

TAXATION

Taxes are at their peak. They can be increased only by reducing standards of living. We are straining our production. We are exporting more than our surplus. We have a great armament program, and an adequate program is essential for national defense. We cannot increase either our relief or our armaments without additional taxes, and additional taxes will retard if not prevent the recovery of peace that should follow the devastation of war.

TWO MORE HORSEMEN

We are familiar with the Four Horsemen of the Apocalypse. These four horsemen are war, conquest, famine, and death. We are in danger of adding two more horsemen. They are just as destructive. We are face to face with high taxes and inflation, and these two additional horsemen may be more destructive than the other four. Our allies in Europe and our friends in China must not expect us to provide more than the necessities for rehabilitation in order that we may maintain our own security. Additional taxes, if possible, should be avoided. Further inflation must be prevented. I am among those who believe that such inflation can be prevented without the control and regimentation that obtained during the war.

LABOR-MANAGEMENT RELATIONS

In addition to taxes there is a domestic question that will vitally affect the economy, if not the security of the United States. The repeal of the Taft-Hartley Act is being advocated. Such a repeal would clog the wheels of progress. That act is not perfect and while it may properly be amended, it should not be repealed. The remedy is not to repeal but to perfect, for there must be no jurisdictional strikes. Employers and employees must have a voice in labor relations and they must both be made accountable for their contracts. Secondary boycotts must continue to be outlawed. Strikes against the public interest must be prevented, and there should be no repeal of the provisions of the Taft-Hartley Act to prevent strikes that would paralyze the transportation or prevent the production of materials in the general public interest.

WORLD TRADE

The nations of the world are in debt to us. We can no longer live unto ourselves. Our tariff system should be revised. Trade and commerce between the United States and the other countries of the world is imperative if there is to be world rehabilitation, and no nation is more interested in the rehabilitation of the war-torn countries of the world today than the United States.

The Marshall plan must be followed by other plans. While it was nebulous, the President's plan or dream in his inaugural address, for aid to undeveloped areas, if realized, may well supplement the Marshall plan, for while ultraconservatives and reactionaries may criticize the President's dream as a world WPA and as an effort to make the United States the Santa Claus to the world, I believe that his proposal can be better interpreted, for he was careful to say that there was a limit to our material aid and that the backward and undeveloped countries of the world could be aided by our "imponderable resources of technical knowledge." The President may have been dreaming, but his proposal does not embody handouts, and it may well imply especially trained and technical aid for the better use of the world's human and natural resources. We are our brothers' keeper and we must continue to be the good neighbor of all the nations of the world.

NEW FRONTIERS

While there may be in the future progress and development of our country no new territorial frontiers to conquer, there are frontiers available to the ambitious Americans today that are probably greater than the physical frontiers that were available to our ancestors. We must use without destroying our lands and our waters. They are essential to our freedom. The frontiers of the future are the frontiers of science and invention. We live in the atomic age. Some scientists believe that as a result of the continued scientific researches in connection with atomic energy discoveries may be made that will enable the oceans and the gulfs to be farmed and food to be produced to provide for the expanding populations not only of the United States but of the world. Scientists are optimistic enough to believe that as a result of an invention whereby distilled waters may be available to the passengers on airplanes that may be stranded on the seas, these inventions for distilling ocean waters may be perfected so that the waters of the ocean may be distilled and made available for irrigating the great western plains to supplement the stored waters of our rivers so that the American desert may blossom as the rose.

BUILDING AMERICA

We are interested in the rehabilitation of other peoples and of other countries, but we are supremely interested in building America. In the Middle Ages, as a result of the gifts of the poor of Europe, great cathedrals were constructed and from their foundations to their spires they were symbolic of the faith and of the hope of the peoples of Europe. As we construct our highways, as we build our dams, as we erect structures to be the monuments of our civilization, as we conserve and protect and rebuild our soils, as we improve our rivers, we are building the cathedral of American freedom not only for ourselves but as the hope of freedom to the oppressed peoples of all the world.

Fifty years ago it was the proud boast of the Englishman that he was a citizen of Great Britain on whose possessions the sun never set. Today, as the United States has reached the highest pinnacle of power of any nation in human history, the proudest boast of any citizen is, "I am an American."

As we build for ourselves and the future we must build wisely and well. Cato, the noblest Roman of them all, never made a speech without concluding "Carthage must be destroyed." As an advocate of the improvement and conservation of our natural resources, including our waters and our lands, I close by saying that the sound policy of flood control and river and harbor improvements, established by Congress and tested by the experience of the years that have followed, must be maintained and supported. Above all America must be preserved.

Loyalty Program

REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. WALTER. Mr. Speaker, I should like to take exception to the slant of various newspaper accounts on the functioning of the loyalty program for employees in the executive branch of the Government.

A number of these accounts appear distorted and some are actually misleading. The loyalty program was designed to protect the United States Government; to assure that Federal workers possess suitable qualifications to merit their salaries being paid by the taxpayers.

Some of these stories have stated that an employee was being denied his rights; that he was being tried without an opportunity to face his accusers in open court. I think that the public is entitled to have it made a matter of record that a trial in the normal use of that word is not contemplated under the loyalty program. I think that the public should know that dismissal under the loyalty program, for which Congress appropriated money, does not accuse a Federal employee of a crime in contemplation of trying him for a violation of law. Rather, it evidences the impropriety of his employment by the Federal Government and of the expenditure of public moneys therefor. It was designed expressly to protect the citizens who supported the Government with their taxes.

Notice must be taken of the difference between right and privilege. No one has an inalienable "right" to employment by the Federal Government. Even those elected by popular vote are subject to impeachment proceedings. Those who are appointed to positions in the Government obligate themselves to the performance of a duty; to the acceptance of certain responsibilities; and to an undivided loyalty to their employer—the Federal Government; in return for which they receive due compensation, liberal privileges, and certain benefits, but no "inherent right" to such employment. They execute an oath of office which is a solemn undertaking to be regarded with sincere convictions and without mental reservations. If, subsequently, it is developed that this oath was taken lightly; that personal factors are brought to light indicating unsuitability for Federal employment, there should be no allegations of deprivation of rights or persecution.

The loyalty program has no counterpart in normal judicial procedure. Loyalty to the Government is the absolute criterion and a fundamental prerequisite to suitability for Federal employment. Any doubts should be resolved in favor of the Government, not the individual. Indeed, if any doubts exist, there should be no doubt as to the action required. Only by a strict application

of this rule can justice be done to the vast majority of loyal employees. Criminal proceedings in the courts, where those found guilty of offenses are penalized personally either by fine, imprisonment, or both, naturally require a preponderance of evidence to be found against the accused before he is punished for the benefit of society as a whole. Denial of employment by the Government is not a punishment, nor does it preclude employment elsewhere.

There has been too much by way of implication and innuendo that a person discharged under the loyalty program has not been given a fair trial. This is incorrect in many ways. Basically, there has been no trial at all. No rights have been infringed because the person concerned cannot claim any right per se to his employment; the Government does not owe him a living. Loyalty hearings are not bound by any rules of evidence. The person concerned can introduce as many witnesses in his behalf as he desires, whether their information is pertinent or not. Also, his case is not being heard by strangers unfamiliar with the problem until presented, but by coworkers who will examine all facts thoroughly before making a decision. Finally, the employee in all cases can appeal to a higher board to assure that there is an impartial review of his case.

Contrariwise, because of the nature of Federal employment, the burden of proof in loyalty cases must rest with the employee, not the employer. It is necessary that an employee establish his suitability in all respects for his position regardless of whether that suitability affects his professional ability or personal characteristics. One would not think of continuing the employment of an individual who demonstrated a lack of professional aptitude for a given job—nor should consideration be given to retaining one who is actually or even only possibly disloyal. Such a person is a risk, present or future, which should not, and cannot, be borne by the Government.

Any individual in public life, no matter what his position, large or small, owes the highest degree of loyalty to his employer—the United States Government. Where doubts arise that this element is lacking in any respect, the integrity of the Government as a whole must be the deciding factor. To put it tritely but practically, we know that a single rotten apple can contaminate a barrel full. An employee of the Government is no different, he can contaminate by attempts to influence his associates and once his insidious campaign begins to bear fruit, an effective infiltration and penetration has been made.

There is a noticeable tendency in press reports and expressions of public opinion to confuse dismissals under the President's loyalty program with removals of individuals from what are known as sensitive positions both within and outside the structure of the Federal Government for reasons of security wholly irrespective of any loyalty considerations. Someone determined to be habitually garrulous; grossly indiscreet; intemperate; as having a notorious criminal record; or associating with questionable characters, is capable of causing as much embarrassment or actual damage as a disloyal person, and hence cannot be employed in sensitive positions or permitted access to classified information without endangering the national security. Denial to such persons of employment or access to classified information does not impugn the person's loyalty nor constitute a charge against him. It is rather the expression of considered opinion that his employment in a particular position is contrary to the best interests of security. It does not deny him employment elsewhere, either within or outside the Government. It is not governed by procedures under the loyalty program. It has not infringed upon nor abridged his rights. Rather it evidences the right of the employer to utilize the services of his employee where and how he sees fit, or not at all if such employment will not serve his best interests.

I should like to urge that each and every Member of this body in his many contacts with the public, take every opportunity to correct any misconception as to the purpose of the loyalty program. Congress in appropriating moneys to the executive departments, looks to those departments to employ 100 percent loyal Americans. It would be wholly incongruous to appropriate public funds, collected through taxes imposed upon the mass of loyal Americans, to employ and pay individuals who are working against the national interest. I want to make it clear that in loyalty cases no rights are being abridged; instead the temporary privilege of a person to work for the Government has been questioned. If the answer to this question indicates reasonable grounds to doubt that the individual is completely loyal, the over-all public interest must control.

National Council, American-Soviet Friendship, Inc.

EXTENSION OF REMARKS
OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. GARMATZ. Mr. Speaker, much publicity has been given to the statement recently made by Premier Stalin, in reply to the questions addressed to him by Kingsbury Smith, of the International Press Service. In this connection, I would like to insert in the RECORD, a letter sent to Mayor Thomas D'Alesandro, Jr., of Baltimore, Md., a former Member of this body, by the National Council of American-Soviet Friendship, Inc., and his reply thereto. I know this is a matter in which all of you are vitally interested:

NATIONAL COUNCIL OF AMERICAN-SOVIET FRIENDSHIP, INC.,
New York, N. Y., February 2, 1949.

DEAR MAYOR D'ALESANDRO: We feel strongly that responsible American leaders should do all in their power to encourage our Government to make a positive response to the propositions put forward by Premier Stalin.

It is difficult for us one by one to give effective voice to our convictions. For not only do we need to communicate with the President and the Department of State, we need to express our views publicly so that people throughout the country may be influenced to take action also.

One way to accomplish this objective is for a large number of us from all walks of life to endorse a statement which can be released to the press as soon as practicable.

The draft of statement enclosed has found acceptance with several friends to whom we submitted it. We offer it now for your endorsement.

This communication is directed to several hundred outstanding and representative Americans. We urgently ask your agreement to join with other signers.

Time is of the essence. We know you will give immediate consideration and make answer on the enclosed card. If you reside at any distance from New York we would appreciate your use of air mail.

Cordially yours,

JOHN A. KINGSBURY.
H. P. FAIRCHILD.
ARTHUR UPHAM POPE.

A STATEMENT ON THE PROPOSALS OF PREMIER STALIN

Premier Stalin's answers to questions put to him by Kingsbury Smith, of the International News Service, constitute an important declaration of the Soviet Government's policy concerning American-Soviet relations and the peace of the world. The Premier's statements furnish a basis for action on the part of both countries to solve major differences and to establish international amity.

Premier Stalin offered the following propositions:

First. The Soviet Union is prepared to consider the issuance with the United States of a joint declaration that the two countries would not go to war against each other.

Second. Premier Stalin indicated that the U. S. S. R. would cooperate with the United States in working out measures to implement such peace pact, particularly the matter of gradual disarmament.

Third. Premier Stalin indicated readiness on the part of the Soviet Union to effect a simultaneous lifting by all four powers of the east-west blockade of Berlin and the elimination of the present transport and trade restrictions, provided that a meeting of the Council of Foreign Ministers of the four powers be called to consider the German problem as a whole. The condition is made that the Western Powers postpone the formation of a separate western German state, pending the meeting of the Council of Foreign Ministers.

Finally, Premier Stalin repeated his willingness to meet with President Truman in a mutually suitable place.

We believe our Government should give favorable consideration to these proposals for the reexamination of American-Soviet relations.

The failure of the Allies to achieve a peace settlement for Germany is the cause of much international tension in Europe and in American-Soviet relations. As one result Germany is split. The Soviet Union offers once more to meet with the Allied Powers to study the whole problem of Germany. The condition set approaches closely the position taken by the United States Government concerning the lifting of the blockade as the prerequisite of further discussion on the German question. American initiative now could bring about this four-power meeting. American interests will be served by taking this opportunity to eliminate a major source of international friction.

The settlement of the German problem would pave the way for an American-Soviet peace pact whose influence in dispelling the fear of war among our own people and the peoples of the world can hardly be exaggerated. This peace pact could be advanced by a meeting of the chiefs of state. Since Premier Stalin, for reasons of health, cannot travel a long distance by sea or air to such a meeting, we believe that some accommodation should be reached on the matter of the meeting place in order that Premier Stalin and President Truman can confer.

This is the way back to the ideal of one world. This is the way by which two great nations can lead the world to peace.

The proponents of the futile and costly cold war will seek to discredit this all-important declaration on the part of Premier Stalin. All people who recognize the creative possibilites for peace-making in these offers must, therefore, urge upon the President and the Secretary of State an equally positive response without delay.

For our part, we promise President Truman our support in all actions aimed at the reestablishment of cooperation between our two countries.

CITY OF BALTIMORE,
February 7, 1949.

Messrs. FAIRCHILD, POPE, and KINGSBURY,
New York, N. Y.

GENTLEMEN: You have done me the honor of including me in a list of several hundred outstanding American representatives, and have invited me to join in a public statement agreeing with Premier Stalin's recent declaration to a newspaperman offering to meet President Truman for the purpose of resolving the differences existing between the Union of Soviet Socialist Republics and the United States.

The matter is, of course, one for the decision by our duly constituted authorities in Washington; but since you solicit my views I avail myself, as an American citizen, of the right to speak my mind freely. I think you will find that the overwhelming majority of thoughtful Americans entertain generally the same views.

In the first place, I do not understand why Marshal Stalin finds it necessary to offer communications of such vital importance unofficially through a newspaperman, as his government has had uninterrupted diplomatic relations with our Government since 1933.

What puzzles me, too, is your readiness to accept at face value Premier Stalin's professions of a peaceful purpose, while shutting your eyes to his acts, which speak in such volume and clarity as to drown out his words.

The timing of Mr. Stalin's newspaper interview and of your letter to me is also interesting. What faith can American citizens put in the Premier's professed good intentions when they read in this morning's paper of the outrageous travesty upon peace, justice, and ordinary human decency which his henchmen are perpetrating in Hungary in the persecution of Cardinal Mindszenty.

For a time the people of this country were disposed to view with indulgence many of the inexplicable actions of the Russian Government. We thought that the strange character of these actions could be attributed to certain differences between eastern and western habits of thought. We dared entertain the hope and wanted to indulge the belief that while Marshal Stalin's way was different than ours, his objective was the same. Recent events have, however, proved very disillusioning. Particularly disheartening to those who love peace and believe in democracy was the taking over of Czechoslovakia a year ago by treachery and threats of force.

Now comes the crowning ignominy in the form of the palpably trumped up charges against Cardinal Mindszenty. The mere pretense of a trial accorded the accused is so abhorrent to our sense of justice that we cannot trust the indirect gestures of Mr. Stalin in the name of peace. And we are at a loss to understand how Americans like yourselves are willing to follow his leadership blindly while you can hardly conceal your suspicion of the good intentions of the officers of our own Government.

You will find that Americans in general are not less eager than your National Council of American Soviet Friendship, Inc., to promote a settlement of the so-called cold war. The chief difference between your organization and the rest of us is that you are ready to accept Stalin's claims without questioning his motives, while you denounce as "proponents of war" those who are inclined to scrutinize his words and to gather their true meaning by comparing them with his deeds.

Since you ask me to endorse by implication the good faith of Mr. Stalin, it is perhaps not out of order for me to ask if you will join me in sponsoring the following declaration:

"As Americans we claim for ourselves the right, which we as freely accord to others, to life and liberty. Foremost among these rights is the freedom to speak, even in criticism of the Government, and to worship God in our own way. We condemn all efforts of any government to suppress these freedoms within its borders or elsewhere, on either side of any curtain, whether it be iron or silken. We particularly denounce the arrest and imprisonment of Cardinal Mindszenty and the infliction of torture upon him to extract a so-called confession."

If you and your associates will make such a declaration your fellow Americans will salute you; and if you can prevail upon Premier Stalin to respect it, I shall gladly join you in any movement for peace predicated upon belief and trust in Mr. Stalin's good faith.

Sincerely,

THOMAS D'ALESANDRO, Jr.,
Mayor.

If You Want a Government Job

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an article from the American magazine of February 1949 written by my colleague the Honorable ED REES, of Kansas:

IF YOU WANT A GOVERNMENT JOB

(By EDWARD H. REES, United States Representative from Kansas)

So you want to work for the United States Government—you want a job in Washington, or in your home State, in which are located hundreds of branches of Federal bureaus and thousands upon thousands of Government employees.

You have heard about the Government's wonderful civil-service system—gilt-edged in security, guaranteeing you a lifetime job as long as you do good work, furnishing good retirement pay. Best of all, you've heard that it is a system in which employment and raises in pay are based entirely on merit. No political pull helps anybody in civil service, you have been told; no favoritism; only the best men and women win.

If you have been disheartened by evidences of favoritism in employment in private business, perhaps you've decided that civil service is the system under which you want to work. You've figured that Government employment promises a first-rate, lifetime career.

If so, you are due for a real awakening. There was a time when most of these things you've heard were true, but no longer.

The shocking fact is that today the civil-service system has broken down. The merit plan is taking a beating in Government offices from Washington to San Francisco. Today, getting a Government job, holding it, obtaining a raise, depends far too often upon knowing the right people.

Most Federal departments, bureaus, and agencies, often evading or actually violating the law, bypass civil service and do their own hiring. Ignoring the rules of the merit system, they retain today hundreds of thousands of favored employees—hired "temporarily" during the war—who should be discharged unless they pass an appropriate civil-service examination.

The Civil Service Commission was set up by law as the central personnel agency, and bureaus are supposed to select most of their employees from the register of those who have qualified in civil-service examinations. Those with top grades, according to theory, are first to be employed.

No longer is the civil service a central agency. No longer is every applicant who passes one examination considered for employment by all bureaus. Today each department has its own personnel bureaus. There are thousands of Government employment

offices throughout the Nation, with no central files. An applicant must go from the office of one department to another as he seeks a job.

Gradually grasping power, the bureau chiefs have practically taken over. In assuming and duplicating many of the functions of civil service, these chiefs and their personnel bureaus not only waste the time of the job seeker and give him an unfair break, but they also waste evey year at least $25,000,000 of the taxpayer's money. In the most flagrant cases, even the personnel bureaus are bypassed. Department chiefs often hand out the best jobs to persons of their own choice.

The Civil Service Commission today places comparatively few men and women except typists, stenographers, and messengers. Ask anybody who works for the Government for advice as to the best method for getting a good job, and he probably will answer:

"Go direct to depeartment personnel offices—if possible, with a letter to a bureau chief from one of his friends. Take a job; get your foot in the door. You need not come to Washington. The same plan works in the thousands of regional offices throughout the United States.

"Once you are in, work fairly hard, play politics, shift from office to office until you find a boss who likes you and your work—a boss who will take care of you. Stick with him and you will prosper as a career employee and eventually retire on nice pay. Don't worry about civil-service rules. Your boss will outwit the Commission."

This is the kind of advice you will get from those who work in government.

Probably the personnel office will give you some type of examination, because to get into Government work you usually do have to qualify for the job. However, thousands of men and women are hired on a temporary basis, which needs no examination or approval from the Commission. You may be a temporary employee for years. Or loaded examinations may be arranged, with questions that you are sure to answer correctly.

Once in, under a boss who is taking care of you, you may be promoted over other employees who are more capable than you are. If you are classed as a secretary and your boss wants to get you a raise, he will reclassify you as administrative assistant; if you are publicity writer, you become an information specialist. If you perform the ordinary functions of interviewing applicants for jobs, you may be startled, but pleased, to get more money because—it says on the record—you devise, collaborate, promulgate, and orientate personnel programs.

If some outsider—operating under civil-service rules—threatens to get your job, your boss may write new qualifications, so the outsider can't displace you. If you are a librarian and are left-handed and know French, and the other fellow isn't and doesn't, it may turn out happily that only a left-handed librarian, who speaks French will do.

One boss, in California, kept a favorite from being displaced by a man with higher rating merely by changing one word in the examination. The applicant wanted to be a training instructor and was well qualified, but when asked, "Have you ever conducted conferences?" he said, "No." So he was rejected. He should have been asked, "Have you ever conducted classes?" The applicant had conducted many classes and would have answered "Yes" to that question. But the $10 word tricked him, and the boss' friend stayed in.

Civil service was devised to destroy political patronage in Government employment, to encourage the career men and women who, before civil service, were likely to lose their jobs whenever a new political party came into power. That it did. Today recommendations from Senators and Congressmen seldom help much.

However, a new system of patronage has developed, a personal-patronage plan. This system is controlled by department heads, administrators, heads of bureaus and agencies, and their assistants and chiefs of personnel divisions. They handle their employees largely as they choose. They even, frequently, deliberately discriminate against veterans.

Among others, these executives control 864,348 employees who, under the Classification Act, are supposed to be employed, promoted, or discharged by civil-service rules. They are spread throughout the United States.

Other groups in Federal employment are the Post Office Department, which employs 517,482 persons where advancements are on a seniority basis. In the post office you start at the bottom and automatically rise as the years pass. Under the wage board are 642,306 employees, mostly "blue-collar workers," as in navy yards and arsenals, whose wages generally are determined by union regulations. These post office and wage board employees are selected through examinations.

There are two groups in the executive branch that legally are exempt from civil service: the Foreign Service of the State Department, with 11,075 employees, and departments that are exempt by Executive order. The latter employ 83,879 and include the FBI, Atomic Energy Commission, Tennessee Valley Authority, and the Reconstruction Finance Corporation. In addition, the thousands of Government lawyers are not under competitive civil service.

The bureau chiefs got their chance to bypass and even scuttle the Civil Service Commission when war came. After Pearl Harbor, bureaus, old and new, began to employ, as fast as they could get them, more than 1,000,000 new workers. Obviously, the Civil Service Commission could not handle the situation, and the bureaus were given the right to employ temporarily all the men and women they needed—sometimes more than they needed. Examinations were abandoned; so great was the need that almost anybody who applied for a Government job, anywhere, got one.

The departments set up, from coast to coast, elaborate personnel divisions to recruit, train, classify, and otherwise handle these workers, and in Government, when you start an operation, it's mighty hard to stop it. These personnel departments still operate.

The temporary war-service workers were employed "for the duration of the war and 6 months." At the end of that period they were to take civil-service examinations and reenter Government work, if they desired, on the merit basis, competing with all others who wanted their jobs.

According to the intent of the law, today there should not be one temporary war-service employee on the Government pay roll—except those known or described as "rare birds," the men and women who are absolutely indispensable. They need not take examinations, because nowhere in the United States can be found persons who can replace them.

Note the strength of the personal-patronage system—how bosses take care of their favorites: Today there are about 400,000 temporary war-service employees from coast to coast still on the pay roll, many of them classified by their bosses as "indispensable." It is hard to believe there are so many men and women in Government service who are so "specialized" they cannot be replaced.

Undoubtedly, most of these favored employees are doing satisfactory work, but many of them hold their jobs because their bosses have made misleading statements about them to the Civil Service Commission. As long as they are not forced to prove their superior worth by taking examinations in competition with all other applicants, the merit system is a joke.

The Civil Service Commission almost invariably takes the word of a bureau chief as to whether a certain man or woman shall be employed, discharged, or promoted. How can such a situation exist? Well, one civil-service official told me, "We have to get along with these fellows. It's almost impossible for us to get evidence that misstatements are being made or rules are being violated, and if we started a battle over every case we'd be in 1,000 wars a day, and would lose 999 of them."

The morale of Government workers is suffering. In bureaus that are being forced to cut their pay rolls, many employees with 15 to 20 years of service, with good or excellent ratings, men and women who expected to spend a lifetime in Government work, have been discharged, while temporary employees—in favor with their bosses—were kept on the pay roll.

Last summer the Committee on Post Office and Civil Service was informed that several thousand displaced career-service employees could not find positions with the Federal Government. The Civil Service Commission instituted six programs designed to find positions for these career employees and had almost no success because, the Commission explained, "We received very little cooperation from the departments and agencies." They ignored the Commission and got away with it.

Naturally, in these circumstances, many competent men and women are now reluctant even to try to make a career out of Government service. They suspect that unless they play politics in their bureau, and become chief's favorites, they cannot get ahead.

Here is the way the merit system is supposed to operate: Throughout the United States, examinations are held by the Civil Service Commission for specified types of jobs. Those who pass with 70 points or better are put on the eligible register, and bureau heads may select the worker they need from the top three. Except in extraordinary circumstances, the applicants with the top grades must be employed first.

The Veterans' Preference Act gives a 10-point preference to veterans with service-connected disability ratings and to wives of such veterans if the husbands cannot qualify for Government civilian service. Widows of veterans and widowed mothers of veterans also receive a 10-point preference. All other veterans receive a 5-point preference. This means that if a disabled veteran gets 60 points in his examination, he rates with the nonveteran who gets 70 points. In such jobs as guard, messenger, elevator operator, and in the railway mail service, only veterans are qualified.

By ignoring civil service, bureau chiefs, some of whom in wartime were classed as essential and were exempted from the draft, can nullify the purposes of the Veterans' Preference Act.

Throughout the United States, a good many veterans are discriminated against in several ways. There surely must be thousands who, in competitive examinations, would rightfully displace some of the 400,000 war-service employees who helped fight the war at a government desk and who have not yet been required to prove their ability in a free-for-all test. Veterans have a difficult time breaking into this group.

Even when there is a job open, and there is available a veteran with equal or better rating than a nonveteran applicant, bureau chiefs often choose the nonveteran. Time and again, also, I have received evidence that bureau chiefs who are cutting their staffs have discharged veterans and continued to employ workers who had lower ratings.

The American Legion declares: "Cases are found wherein veterans who have been employed by departments for years, and who have carried 'excellent' ratings, suddenly

find themselves with unexplained inferior classifications. Thus these veterans are the first to be dismissed from their jobs. The difficulty lies with certain chiefs of Federal agencies, who through wartime decentralization exercise discretionary powers improperly in removing (or failing to install) veterans in civil service positions."

Bureau chiefs contend that they are acting for the best interests of their agencies. They say that a nonveteran with 70 points is a better man than a veteran with the same number of points, because the veteran's score is 60 or 65 made in an examination, plus 10 or 5 given him by the Preference Act. They point out that the war-service employees who were employed as "temporary" have had several years of experience, and they argue that if they are replaced by new people the efficiency of the bureau will suffer.

They usually admit that bosses take care of certain employees, get them raises, keep them on their jobs while others are being discharged, but they contend that these employees are taken care of because of the excellence of their work, not because they are cousins of somebody important in the bureau, or because they dance well or give good parties. They say that through their own personnel bureaus they get better workers than through Civil Service.

In some cases what the chiefs say is true. Department personnel bureaus, such as that of the Bureau of Standards, for instance, should select applicants for technical jobs requiring special knowledge or skills.

However, the law gives preference to veterans, and no bureau has ever submitted evidence that it will suffer if the law is obeyed. Nor will efficiency be destroyed if competitive examinations show that certain temporary war-service employees are not as competent as some applicants and should be replaced.

If you work in the office of a private concern, probably you have seen cases of "teacher's pets" and will doubt that merit is always the only factor that inspires the boss' favor. He may think that he is not influenced by other things, but there are times when the sycophants and the talebearers advance faster than employees of equal merit who don't play office politics.

The plain fact is that the only fair method of handling the great majority of Federal employees is through the civil-service merit system. By enforcing the rules, this can be restored. When employment and promotion are based on merit, Government service is an attractive career. The worker has security, comfort, good working conditions, freedom from labor-management problems, and usually more substantial retirement pay than is given in private industry. Under a personal-privilege system, except for the privileged it will no longer attract and hold the kind of men and women whom Government needs.

Each department must have an efficient personnel department to procure and maintain an efficient work force, but not the pretentious, elaborate, and wasteful bureaus of which we have so many today. On January 1, 1940, it took 6,721 personnel department employees to handle the job in the executive branch. The total now is more than 24,000, and salary cost has increased 6 times. Total Federal employment increased 115.8 percent, but personnel bureau employment went up 261 percent.

In 1940 there was 1 full-time personnel employee for every 139 Federal employees. Today there is 1 for every 83. A representative sampling of industry and commerce shows there is an average of 1 personnel employee to every 226. Business has methods of checking waste that are not to be found in Government.

The salary cost of all personnel agencies in the executive branch totals $78,627,183—an average of $38.98 for every employee on their pay rolls. Consolidation and the elimination of functions that parallel, overlap, and duplicate the functions of the Civil Service Commission would reduce that by at least $25,000,000.

Apparently, there is one department in which economy—perhaps mistakenly—is practiced. After squandering all that money to put an employee on the pay roll, Government departments spend only a shade more than $1 to train him.

Not the least of the evils has been the erection of enormous impediments in the path of the man or woman who is hunting for a Government job. If you live in a city, in your Federal building there are probably from 10 to 20 branches of different agencies that you should visit if you are looking for work. In the Washington area, there are 225 separate personnel offices that do their own hiring for the departments, agencies, or bureaus they represent.

You would think that, at least, each department would have one central personnel office. But in Washington, for instance, if you seek a job in the Army, there are 24 different offices in the area, in which you might find an opening. Seven are in the same building, The Pentagon. None makes its application files available to any other personnel office. The Navy, in that area, has 30 different personnel offices, Agriculture has 27, and the Treasury has 24.

To show how the Civil Service Commission has been relegated to a minor position—two departments and one major agency actually utilize more employees in their individual personnel operations than does the Civil Service Commission. The Commission has 3,350 employees who handle its examining, recruiting, placement, retirement, and loyalty programs. The Army has 6,237, the Navy has 6,282, and the Veterans' Administration has 3,778.

If you seek a job in Washington or in your home city, you may be able to make 5 calls a day. One thing that will slow your progress will be the excellent service you probably will get in every personnel department. First you will be asked by a pleasant receptionist to fill out Form 57, answering 37 questions, some in considerable detail. At every office you fill out the same form.

With your form, you will be sent to an interviewer, who will go over it, question by question, usually reading most of it back to you. When that's over, you may go to a job analyst, a placement officer, a test technician—perhaps to one, perhaps to all. If you are lucky, you will be hired. Usually, however, you will be told that your Form 57 will be filed and you will be notified if anything turns up.

Then you go to another office, perhaps one floor up, and the whole thing is repeated. I know one man who made 31 calls and filled out 31 Form 57's before he got a job.

After you have made 10 calls, have filled out 10 Form 57's, and have been interviewed by many men and women with fancy titles, you will realize that all this service usually is not provided in order to furnish work for you, as much as it is to furnish work for the folks in the personnel offices. The elaborate routine too often is set up to justify all those personnel employees at high salaries—when the head of the department goes to Congress for his appropriation.

As time passes and you become acquainted in Washington, or in your home-town Federal building, you will learn that the wisest job-seekers avoid not only the Civil Service Commission, but also the personnel offices. They get a line direct to the chief personnel officer's boss. If you are lucky enough to do that, you probably get a job.

I have a report on one new bureau that had 126 employees in its personnel department, although the total employment in the bureau was less than 500. The startling fact was that although the personnel bureau had been extremely busy interviewing applicants, many of whom were qualified, it had not placed one applicant in 3 months. The hiring was being done by men in the top jobs, who ignored the bureau.

Let's assume that you get a job on merit. A department needs someone of your qualifications; you pass an examination and are employed. Perhaps the system has operated in your favor. Tramping the streets may be 50 job-seekers whose qualifications are superior to yours, but they didn't happen to call at this particular office. However, on the other hand, there may be an opening at an office at which you didn't call, a job into which you would fit and which would pay $1,000 more a year.

Now, how will you get increases in pay that may or may not be due you?

Whether you work in Seattle, New Orleans, Miami, New York, Washington, or Wichita, Kans., the system is the same. If you aren't seeing eye-to-eye with your boss, after a few months, look for chances to transfer to other sections or departments where you may find a friend. Once set, advancement depends mostly upon classification. Everybody who works under the classification act worries about his rating—even the section chiefs.

There was a time when salaries of many men and women depended to a great degree upon the number of workers they supervised. If a chief could double the size of his department, his salary went up. If he reduced his force, his salary went down. This scheme was responsible for much of the overemployment in government; that was why some departments had dozens of employees who actually worked only a few hours a day.

Congress has recently added to appropriation acts a clause providing that money shall not be available for departments in which the classification grade of an employee is influenced by the number of persons he supervises. However, I have no evidence that in any Government department, bureau chiefs have voluntarily cut their staffs, to help reduce expenses.

Because Government, unlike private industry, can apply no cost systems to its departments, it has no means for encouraging department heads to operate economically. Bureau heads appear before congressional committees which have to take the bureaucrat's word for necessary expenditures. After the chiefs have fought for their appropriations and have won, they generally adopt the viewpoint that Congress gives them specified sums of money to spend as they see fit, and they distribute it as they choose, all of it. It is very rare that a bureau head finishes a fiscal year with a report that he has a lot of money left over because he voluntarily reduced his staff.

Since it is impossible for any outsider to place a correct value upon the services of an employee, the rating of a worker is mostly under the control of his boss. Classification officers in departments are supposed to be impartial, but they are susceptible to influence and pressure from bureau and division chiefs.

Of great importance is the job sheet which is prepared by the personnel technicians and which defines the duties of the worker. These job sheets are marvels of literary composition when efforts are being made to promote a favorite. Dictionary at hand, the author picks big words and produces sonorous sentences worthy of P. T. Barnum describing Jumbo.

A clerk in Illinois who puts labels on magazines, newspapers, and reports, routing them to executives, doesn't do that, according to his job sheet. He receives all publications and reports for the division, reviews these publications for the purpose of determining, on a basis of knowledge of the functions of the various officials of the agency, who would

be interested in a part or whole of such material, and routes the material so flagged to these individuals; maintains a follow-up when necessary, so as to know at all times the location of such material.

One clerk in Pennsylvania operates the office clipping bureau. Here is the description of those simple duties: "To go over daily and weekly newspapers, monthly labor and business magazines, weekly commerce reports, weekly railroad magazines, the Federal Reserve Bulletin, reports of the Interstate Commerce Commission and of the Department of Labor, for the purpose of digesting and compiling material that may directly or indirectly relate to the work of the office." How proud the author of that must have been when he thought up digesting and compiling and directly or indirectly. I don't know how he happened to neglect to say that the man with the shears had to coordinate and evaluate the material.

I have before me a job sheet by means of which an officer in the War Department got his secretary-receptionist a raise from $2,724 a year to $3,351. She is described as chief clerk and supervisor of all civilian personnel of the ——— branch, allotting to such personnel the many duties necessary in carrying out the mission of the branch. That, she says, is news to her, unless it is describing the fact that she routes incoming communication to the desk where they are supposed to be handled.

The job sheet says further that she "reviews all incoming and outgoing mail, supervises the maintenance of files, including a suspense file and follow-up system. Handles secret and confidential correspondence. Meets important industrial representatives and maintains records of such contacts, conferences, and obligations made by branch chief." She says that if all that means that she does what every secretary does, that part is correct. She says, "Isn't most correspondence, in any office, secret and confidential?"

There are many cases in which clerk-typists have advanced from $2,086 a year to $2,724 a year without the slightest change in their work. Usually they stay in the same room, at the same desk.

I have seen a State Department classification sheet which, in the first two lines, describes the actual duties of the employee. Added were 43 lines of description of duties that the employee confesses he has never performed in any way.

To increase the number of employees and to take care of favorites, sometimes jobs are divided. In the Memorial Division of the Army was an employee with an "excellent" rating who had 29 years of Government service and who performed his job well. His superior cut the man's job into seven pieces, furnishing employment for six military and civilian employees.

In their new jobs the military men received increased rank, the civilians went up in grade. But the unfortunate career man, his job sheet rewritten, his duties parceled out, was reduced one grade. Now he works only about 3 hours a day, with 5 hours free to ponder the classification miracle of which he was a victim. His appeals have come to naught. * * *

If the executive branch acts promptly, the civil-service system can be saved, the power of those who operate the personal-patronage systems can be reduced, justice can be dispensed to career workers, and a real merit system provided.

First. The "temporary" war-service employees must be eliminated. The regulations concerning them must be enforced. Those who are competent will pass civil-service examinations in free-for-all competition and will remain in their jobs. The incompetent will go out and be replaced, mostly by veterans who qualify for these jobs.

Second. Department heads must be forced to obey civil-service rules and to make appointments on a competitive basis. Congress can withhold appropriations for departments until they comply. Personnel bureaus must be cut down and duplication of civil-service functions must be eliminated.

Third. The Civil Service Commission should set up a central employment service with a central punch-card file to be used by all departments. Except in unusual circumstances, applicants will need to call at only one office and make out only one form 57. Departments must be forced to select employees from the civil-service register.

Fourth. The classification system must be simplified, job sheets full of flowery and inaccurate phrases must be revised, boards to which employees appeal must be unprejudiced and of higher caliber. The civil-service system and not the bosses must have the last word. An act of Congress can revise the classification system.

Federal employment once more must be made attractive to the conscientious and competent worker who won't stoop to play politics in any respect. We must get back to a genuine civil-service competitive merit system in our Government. Nothing less will do.

Needs of the Indians of the Fort Totten Indian Reservation

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. BURDICK. Mr. Speaker, I have heretofore in a speech in this House referred to the condition of the Indians on the Turtle Mountain Reservation and the Indians on the Fort Totten Reservation. I have just received from the welfare board of Benson County, in which county the Fort Totten Indian Reservation is located, a full report on the needs of those Indians. This report conveys complete information which this House should know and which the country should know. It surely shows that our guardianship over these Indians has been sadly neglected. Having been neglected, there is nothing we can do but appropriate money to take care of them until a self-sustaining program can be inaugurated.

The matter follows:

BENSON COUNTY WELFARE BOARD,
Minnewaukan, N. Dak., February 3, 1949.
Hon. USHER L. BURDICK,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE: We are enclosing a copy of the estimated needs for Indian relief for the Fort Totten Reservation as submitted to the Public Welfare Board of North Dakota.

The county commissioners of this county in their meeting on February 1 suggested to me that a copy of this estimate be sent to you with a letter informing you of the Indian relief situation as it is in this county.

You no doubt know that a request to the Legislature of North Dakota was made by this county requesting that the responsibility be shifted to the State, and the county relieved of such responsibility. The county commissioners also requested that the request for amendment to this bill be presented to the legislature by myself, which I did during the week of January 17. After careful consideration of this amendment in Bismarck, it was ruled that this was not a feasible bill; however it was very agreeable that the county should not be required to carry the load, and that State funds should be forthcoming. Therefore an emergency bill for the balance of this fiscal year in the amount of $75,000 for Indian relief, and a bill for $250,000 for the next biennial, July 1, 1949, to July 1, 1951, was introduced in the Senate.

In December the Public Welfare Board of North Dakota allocated to this county $3,000 for the relief of Indians on the Fort Totten Reservation at which time Federal funds were exhausted.

The county welfare board and the county commissioners are very interested in the welfare of the Indians on the Fort Totten Reservation, and I, as executive secretary of the welfare board, am very interested in having a program worked out whereby there will only be one agency handling relief for the Indians. This will give the Indian a chance to know what type of relief he may expect and also what he is expected to do in return.

It will be noted on the enclosed report that it is estimated that $13,440 is required for the balance of this fiscal year, and $79,760 will be required for the next biennial. If the county would have to carry this, it would be a burden to them.

The Benson County Welfare Board in this county now have a full staff of well qualified employees which consists of two case-workers, two stenographers and bookkeepers, together with myself, the executive secretary, and it is felt with this staff, if money is provided other than from the county funds, that we would be in a position to carry on a sound welfare program. On the staff connected with this office, one case worker and one stenographer is stationed permanently at Fort Totten.

Thanking you for your cooperation in this matter, and trusting that this information will be of some value to you, I am,

Very respectfully,

B. M. HANSON,
Executive Secretary.

Estimated funds needed for Indian relief, Fort Totten Reservation, Feb. 1 to July 1, 1949

Month and year	Number of cases	Average cost per case	Amount
February 1949	45	$104	$4,680
March 1949	45	104	4,680
April 1949	30	104	3,120
May 1949	20	104	2,080
June 1949	20	104	2,080
Medical care other than Indian Service			400
Burials			400
Total need to July 1, 1949			17,440
Cash on hand Benson County welfare fund from PWB			2,000
Cash on hand Turtle Mountain Consolidated Agency allocation to Fort Totten			2,000
Total			4,000
Total estimated need to July 1, 1949			13,440

The case load is based on the number of cases Jan. 1, 1948, to Jan. 1, 1949.

The average cost per case is based on an average family of 4 with a husband and wife, a son aged 8, and a daughter aged 3.

Medical care is for cases requiring the services of a specialist not available through Indian Service. Also transportation, etc., for crippled children.

Burials are based on the number of deaths in which assistance was needed in the past year.

Estimated funds needed for Indian relief, Fort Totten Reservation, July 1, 1949, to July 1, 1951, as of Jan. 26, 1949

Month and year	Number of cases.	Average cost	Total for month
July 1949	20	$104	$2,080
August 1949	20	104	2,080
September 1949	20	104	2,080
October 1949	25	104	2,800
November 1949	35	104	3,640
December 1949	45	104	4,680
January 1950	45	104	4,680
February 1950	45	104	4,680
March 1950	45	104	4,680
April 1950	30	104	3,120
May 1950	20	104	2,080
June 1950	20	104	2,080
Medical care other than Indian Service			1,000
Burials			1,000
Total for year			39,880
Estimate for the year July 1, 1950 to July 1, 1951, the same as above			39,880
Total for biennial			79,760

The average cost per case is based on a State standard, a family of 4 with a child 3 and a child 8.

The case load is based on the number of cases Jan. 1, 1948, to Jan. 1, 1949.

The $1,000 included for medical care is an estimate of cases needing services of a specialist and is for transportation, board, room, etc. This will also be used for crippled children who are receiving care under the crippled children's service when such medical care is paid by that division.

Social security grant, Fort Totten Indians, July 1, 1948, to Jan. 31, 1949

Type of case	Average cases per month	Average payment	Amount
Old-age assistance	54	$33.39	$1,803.43
Aid to blind	3¾	35.39	116.29
Aid to dependent children	33⅓	64.62	2,141.91
Total average security payments per month			4,061.63

Address by Hon. Robert S. Kerr, of Oklahoma, to the Young Democrats of North Carolina

EXTENSION OF REMARKS
OF
HON. CLYDE R. HOEY
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Tuesday, February 8, 1949

Mr. HOEY. Mr. President, I ask unanimous consent to have inserted in the Appendix to the RECORD a very brilliant address delivered by Hon. ROBERT S. KERR, formerly Governor of Oklahoma, and now a distinguished United States Senator from that great State. This address was delivered to the Young Democrats of North Carolina at their State meeting in Southern Pines on Saturday night, February 5, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is an honor and a privilege to speak to the Young Democrats of North Carolina.

It is inspiring to feel the impact of your vigorous spirit of democracy.

It is a pleasure to visit the home State of so many outstanding men and women who have achieved fame for themselves, victories for their party, and luster for their great State.

As a freshman Senator, it has been my privilege for some weeks to be desk-mate to your senior Senator and former Governor, the distinguished CLYDE HOEY.

As Governor of Oklahoma, it was my privilege to be closely associated with your present junior Senator and former Governor, the eminent MELVILLE BROUGHTON, and your illustrious Gregg Cherry, who just recently completed his term as your Governor.

It is a pleasure to be in your State with your present Governor, the Honorable W. Kerr Scott.

I understand that here, as elsewhere east of the Smokies and south of the Mason and Dixon's line, the name K-e-r-r is pronounced "Karr." The pronunciation being of considerable interest to me, I have looked into the matter. I find that north of Dublin and west of the Irish Sea it is called Ker. Out in the Southwest we call it Kerr, and prefer that those using it spell it K-e-r-r. However, in my recent campaign, some of our Republican brethren insisted on spelling it C-u-r.

I am happy to be here in the district of your great Congressman, CHARLES B. DEANE, who very graciously called me on the phone before I left Washington to send his greetings to the Young Democrats of this district and of the State.

I am glad to be in Southern Pines. I have long had a curiosity about Pinehurst. It's fame has spread abroad and I have wanted to get full information about it. I understand that nowhere can that be done with more accuracy than here in Southern Pines. Of course, some day I hope to go to Pinehurst, because I understand that there, better than anywhere else, the low-down is available on Southern Pines.

When your distinguished State president first invited me to come to your meeting I was quite anxious to accept, but I demurred. In fact, I wouldn't agree to come until he had postponed the meeting from rather early in January until thus late in February. I felt that no Oklahoman had any business in North Carolina until at least this long a cooling-off period, following the recent battle at New Orleans on New Year's Day.

Naturally, we in Oklahoma were happy when our team won, but, seriously, we are quite aware of the fact that it could have been much different if Charlie Justice hadn't been weakened by illness.

It is always most gratifying to meet with young Democrats. There has never been a political party in any age in which young men and women are so welcome, or in which they can feel so much at home, as the Democratic Party. Nor has there ever been a political party in which young men and women can have such influence and be so effective as in this great Democratic Party.

I want to urge the Young Democrats of North Carolina to become more active in the affairs of their Government. Let me invite you to set the pattern for the young men and women of the Nation. Nothing can give your Government greater strength than for its young people to become more and more a part of it.

National strength does not flow from the seat of government down to the people. Our Nation is impregnable because of the strength of the people flowing up to, and becoming a part of, it.

The other day I read this story of one of the conferences between Roosevelt, Churchill, and Stalin. In the course of the conversation Roosevelt showed them a gold cigarette case which had engraved upon it these words: "From a grateful people to their beloved President." He was naturally quite proud of it. Then Churchill exhibited a gold cigar case upon which was inscribed these words: "From the people of the British Empire to their greatest hero." Tears dimmed the eyes of the indomitable Churchill as he displayed this evidence of the devotion of his nation. Then Stalin pulled out a gold cigarette case which carried this inscription: "Presented by the grateful people of a Finnish community to a devoted Red Cross doctor"—who had been shot.

No government can fail that has the support and strength of the combined will and purpose of a patriotic people, nor can any government stand which is built alone upon physical might and the strength of a people held together only through fear.

You do not need to think of your Government as being "away off yonder in Raleigh," or "away off yonder in Washington," or as being something anywhere that you need to fear.

The seat of any government is wherever the sovereignty is. And in our country the citizens alone are sovereign. Therefore, where the people are the government is, and their government will be as strong and powerful as they will it to be.

The Democratic Party is the party of youth. It is the symbol of hope for each succeeding generation, and, as each succeeding generation of youth have made it their party, they have renewed the vitality and vigor which have been the characteristics of this party since it was founded by the great Thomas Jefferson. He saw a new day for a new generation. He visualized a new freedom for a new world of men, and he brought into being a new instrumentality through which the brave new dreams of a great young nation might become realities.

Our party is just as vigorous and vital today as it was in Jefferson's day because now, as then, it is dedicated to building for the future.

I think November 2, last, witnessed the most significant political victory in the Nation's history.

The Republican leaders were certain of success. They were so confident that they had already begun to ignore the people's welfare and had started serving notice of their purpose to lead the country back to what they called the "good old days."

The Republican press, which includes most of the magazines and big newspapers in the country, were already referring to the Governor of New York as "Mr. President." But then the people spoke, and the situation recalled the year of 1916, when we went to bed on election night with heavy hearts, thinking that Mr. Hughes had defeated the great Woodrow Wilson.

But sometime after midnight the telegraph wires began to hum—and the Nation was electrified with the information that the final returns showed Wilson had carried California instead of Hughes, and had been reelected.

The newsmen went to Mr. Hughes' room about 5 o'clock the next morning and knocked on his door. After much difficulty they finally aroused one of his servants, who came to the door and angrily demanded to know why all the noise so long before daylight. The newsmen replied they wanted to see Mr. Hughes. Whereupon the servant said: "The President is asleep and cannot be disturbed." "Is that so?" the newsmen asked. "Well, when he wakes up tell him he ain't President."

When Mr. Dewey "woke" up on the morning of November 3 he learned that the people had told him he wasn't President.

Of course, a lot of the Republican leaders haven't "woke" up yet.

I haven't been able to determine whether they are suffering from the shock of the election or whether they are still in the political somnambulism in which they have been wandering so long.

Truly it has been said of the Republican Party that their old men live in the shadows of the past, and that their young men live in the shadows of their old men.

Let the Republicans fight to preserve the gains the people have made under Democratic administrations. Let them sit in the shadows and write the history of the past.

The people, especially young people, are interested in tomorrow, and this party—the Democratic Party—is determined to continue developing leaders who will be the architects of a brighter future.

Ah, we wouldn't depart from the basic principles of our party, but in preserving them we will not be satisfied to merely hoard them. In the immortal Declaration of Independence Jefferson declared that "all men are created equal"; that they are endowed by the Creator with certain "inalienable rights," among which are "life, liberty and the pursuit of happiness."

He gave that as an ideal to be achieved, not as a reality already accomplished, and men and women today throughout the length and breadth of the land—and in fact, around the world, above all else, still are working, yes, and fighting, to achieve the blessed reality of equality of opportunity as among all men, and in vitalizing life, liberty, and the pursuit of happiness.

We are proud of the progress we have made. My heart thrilled as I sat on the platform a little while ago and saw the inauguration of that great American, President Harry Truman. I was imbued with the essence of his dynamic spirit as he said: "I am happy to report to this Eighty-first Congress that the state of the Union is good. Our Nation is better able than ever before to meet the needs of the American people and to give them their fair chance in the pursuit of happiness. It is foremost among the nations of the world in the search for peace."

As I listened my mind went back to that January day in 1943 when I heard another state of the Union message by the greatest President of all time, Franklin Roosevelt. I heard him say: "A tremendous, costly, long-enduring task in peace as well as in war is still ahead of us But, as we face that continuing task, we may know that the state of this Nation is good—the heart of this Nation is sound—the spirit of this Nation is strong—the faith of this Nation is eternal."

In the midst of the most awful war in history, and today in the midst of the most intense effort to win a lasting peace, we are told—and we believe—that the state of this Nation is good, because its leadership symbolizes a program of progress and prosperity and peace.

I thank God for a leadership emblematic of the undying hope and unconquerable spirit of youth and for the party that seeks to lead the people into ever finer fields of progress and security.

We are grateful for a leadership that is aware that we live today in a new America in a new world. We know that America has come of age in this new world. We know that destiny has flung about her shoulders the mantle of world leadership, and we are thankful for the faith and the courage that will enable us to meet that challenge.

You and I know that here in this wonderful land of ours, this giant of the Western World, the light of freedom burns with the fiercest flame mankind has ever seen. Here is the strongest pillar of strength for liberty and justice in all the world.

It is the only one of sufficient strength to guarantee the security of its own people, and to provide the forceful and effective leadership required to enable the rest of the world to find similar blessings.

The light that shines here in America has cast its rays around the world. It is the symbol of hope in the hearts of hundreds of millions of people who are able to continue their struggle in the midst of fearful hardships because of that hope.

In our generation the tides of aggression and conquest have overrun many lands and subdued many people. America has been the Rock of Gibralter against which those tides have beaten in vain. We have seen them hurled against us with all of the fury of hatred, greed and selfish ambition. We have seen them driven back in failure and futility. We have seen our Nation emerge stronger from each impact, stronger by reason of a more vital spirit and greater vigilance in the hearts and minds of our people. We see our Nation today in the words of the poet who said:

"Like some tall cliff that lifts its awful form,
Swells from the vale and rides above the storm;
Though round its breast the rolling clouds are spread,
Eternal sunshine settles on its head."

But my friends, we cannot rest nor falter here. We face an even sterner task today than those which have already tried us so sorely. Tides of evil propaganda roll against the bulwark of our citadel of freedom today.

The tides of aggression we knew in yesteryears were physical and they sought to subdue only our physical strength. Today's aggressors would use their tides of false propaganda to kill the very spirit of our people and enslave their minds.

They also will fail. It was the spirit of America, the love of freedom, that gave us the unity and the strength and the perseverance to emerge victorious from World Wars I and II. That same spirit will not fail us now.

The sunlight of knowledge and enlightened public consciousness have dispelled the darkness and have settled the gloom which threatened us. The glorious dawn of an even brighter day of freedom in America reveals to the men in the Kremlin that their days of being a threat to the world are most surely numbered; discloses to our own citizens, young and old alike, that the spirit of America in the hearts of a vigorous people, can safeguard their blessings of liberty and freedom; and proclaims to the downtrodden millions in those lands behind the iron curtain that even they may hope for a brighter and better tomorrow.

Nothing worth while was ever easy. Ours is the greatest heritage ever known by any race. It is the result of sacrifice and devotion. It has been preserved through courage and fidelity. It can be kept—and it shall be extended—by a united people and a great democratic leadership.

Why the Taft-Hartley Act Must Be Repealed

EXTENSION OF REMARKS

OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1949

Mr. MYERS. Mr. President, there is a great deal of controversy over the form which new labor legislation to supplant the punitive Taft-Hartley Act should take. Friday night, over the National Broadcasting Co.'s Nation-wide network, I made an address on this issue on the program Pro and Con. In it, I made this comment:

The theory of the Wagner Act was that strong labor unions represent one of the greatest bulwarks of democracy. The theory of the Taft-Hartley Act is that strong labor unions threaten America's economy and safety.

Mr. President, I think that sums up the essence of this entire issue. I ask unanimous consent that the text of my address on the subject Why the Taft-Hartley Act Must Be Repealed be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

The Democratic Eighty-first Congress, one month after it convened for the first time, is now organized, and ready to go to work in earnest. The committees have been established. They are holding hearings and preparing to report vital legislation in the national interest.

The Congress has some solemn obligations to the American people. It is pledged by our 1948 Democratic platform to do certain things—things the people indicated in November they want done.

One of the most important things the Eighty-first Congress must do and must do promptly but carefully, is to repeal the Taft-Hartley Act and to replace it with legislation on labor-management relations in the spirit of the old Wagner Act which the Republican Eightieth Congress distorted into a vicious and punitive antilabor legislative monstrosity.

The Democratic Party is pledged in its platform to enact such legislation as is desirable "to establish a just body of rules to assure free and effective collective bargaining, to determine, in the public interest, the rights of employees and employers to reduce to a minimum their conflict of interests, and to enable unions to keep their membership free from communistic influences."

That is what we are pledged to do and that is what we are going to do.

As chairman of the convention committee at Philadelphia which drafted the Democratic platform which contained that specific pledge, along with many other specific pledges of Democratic intention, I will say to you that we did not assume any of these obligations lightly or with our fingers crossed. We fought out these issues in the platform committee and when we were finished, there was no doubt in anyone's mind where the Democratic Party, as a party, stands on any of the issues mentioned in our platform.

I am very proud of that. At the same time, however, I recognize that it is no easy matter to write into workable law broad general statements of position no matter how desirable those positions might be. The laws resulting from those pledges must work, must do what they are intended to do, or they are a fraud on the people and a mockery of democracy.

Right now, both the Senate Labor Committee and the House Labor Committee are engaged in hearings on new labor legislation to replace the Taft-Hartley Act. The administration has sent to the Congress a carefully drafted and carefully thought-out bill representing the views of President Truman and of his advisers on labor legislation as to what a good bill, a workable bill, an effective bill to establish "a just body of rules to assure free and effective collective bargaining" should contain. This bill is not sacred. It might be changed, either in committee or on the floor of either House. It represents, however, an informed, enlightened, sympathetic, and fair-minded approach to the problem and

as such is entitled to very careful consideration.

I am not a member of the Senate Labor Committee and I am not in a position to predict what that committee will recommend when it completes its deliberations and its hearings. I think, however, that this committee will give us a good bill and one which those of us who believe in fair management-labor relations can support in good conscience.

This bill will probably not satisfy those who wrote the Taft-Hartley Act. This is understandable. The Taft-Hartley Act represented to certain elements in this country the ultimate in desirable regulation of—meaning handcuffing of—organized labor in the United States. There were a few anti-labor fanatics who wanted to go even further than the Taft-Hartley Act in 1947, but the Taft-Hartley Act represented, on the whole, the full desires of those who wanted to beat labor down and keep it under rigid restrictions.

The issue before the Congress today, however, is no longer whether or not the Taft-Hartley Act should be repealed. That issue was settled by the voters in November when they elected a Congress committed to repeal the Taft-Hartley Act. The time for debate on whether the Taft-Hartley Act should or should not be repealed and replaced is over.

But there is a tremendously important debate shaping up now over the sort of legislation we should have to replace and supplant the punitive Taft-Hartley Act. This debate will occur not only in the Congress, but in every union local, in every management board of directors, in every industry trade association, in forums and discussion meetings all over America. And that's fine. That's exactly the sort of Nation-wide attention a problem like this deserves.

Much of the opposition to the President's proposed changes in labor legislation comes from those who contend that much if not all of the Taft-Hartley Act should be incorporated in disguise into the new act. They contend that although the Taft-Hartley Act may, as they put it, have a few minor faults—a grudging admission at that—that, on the whole, it is a fair, just body of rules for management-labor relations.

Let us examine that premise for a few minutes.

The theory of the Wagner Act was that strong labor unions represent one of the greatest bulwarks of democracy. The theory of the Taft-Hartley Act is that strong labor unions threaten America's economy and safety. In a nutshell, that's the difference between the two.

The Wagner Act was designed to help labor to organize into strong, effective unions, to help labor achieve a status of equality in dealing with management. That was the idea, and the idea was realized in nearly all of the basic industries in America.

The Taft-Hartley Act was designed to put obstacles in the way of union organization, to hobble labor's effectiveness in dealing with management. That goal, thank heaven, has not been realized, because in a boom economy, we have had a tight labor market, full employment, and strong competition between industries for skilled workers. Even so, however, this insidious antilabor law has disrupted peaceful labor-management relations in numerous industries, has unfairly caused great expense and untold difficulties to many unions without improving labor-management relations in any way whatsoever.

I do not intend to make a step-by-step analysis of the Taft-Hartley Act in this short period of time—the Nation's highest-priced corporation lawyers are still arguing among themselves as to what the law actually means in many controversial respects—but I think I can safely say this:

That the Taft-Hartley Act has failed—if its purpose was to improve management-labor relations in the United States; the Taft-Hartley Act has failed—if its purpose was to establish a fair body of rules, just to both management and labor. That, ostensibly, was its purpose, but the proof of the pudding is in the eating.

Under the Taft-Hartley Act, as it now appears on the statute books, the labor-union movement in America could be destroyed. It could be destroyed if we had a few million unemployed in America. The labor movement could be wrecked under those circumstances.

When I say that, am I merely mouthing so-called labor propaganda? Am I solemnly echoing the thoughts of the CIO or the A. F. of L. or some other labor group?

My friends, I am quoting not from the CIO News and not from the A. F. of L. Federationist or any such publication—although they have all said similar things—but in this instance I am quoting from Business Week magazine, published by McGraw-Hill Publishing Co., and written for businessmen and generally reflecting business views on controversial issues. It is certainly not a labor propaganda organ.

In an editorial in its issue of December 18, 1948, Business Week says flatly that the Taft-Hartley Act has failed for a number of important reasons, one of them being that it went too far. It crossed the narrow line separating a law which aims only to regulate from one which could destroy. That's what Business Week said in its editorial of December 18, an editorial incidentally, which was entitled "Why the Taft-Hartley Act Failed."

I suggest that all those who believe the Taft-Hartley Act was a just body of rules for management and labor obtain a copy of that magazine for December 18 and read that editorial.

It says further:

"Given a few million unemployed in America, given an administration in Washington which was not prounion—and the Taft-Hartley Act conceivably could wreck the labor movement.

"These are the provisions that could do it," the magazine continues:

"(1) Picketing can be restrained by injunction; (2) employers can petition for collective bargaining elections; (3) strikers can be held ineligible to vote—while the strike replacements"—the magazine means strike breakers—"while the strike replacements cast the only ballots; and (4) if the outcome of this is a no-union vote, the Government must certify and enforce it."

Business Week continued in that editorial with this thought:

"Any time there is a surplus labor pool from which an employer can hire at least token strike replacements, these four provisions, linked together, presumably can destroy a union."

Business Week, of course, warned in its editorial that if the pendulum—which swung too far in the antilabor direction in the Taft-Hartley Act—is swung too far the other way in the repeal and replacement of the Taft-Hartley Act, we will again be in difficulties. The President and the Democratic leadership of the Congress realize that and are intent on replacing the Taft-Hartley Act with fair legislation, fair to all. There will undoubtedly be some changes made from the old Wagner Act in order to achieve that goal.

But the essential philosophy of the Wagner Act will remain. It will not be distorted. That philosophy is fundamental to the future of the American free-enterprise system in a world in which freedom can exist. That philosophy is that in a democracy such as ours, the rank and file of the American people must have the opportunity to influence their own destinies, to influence their own economic status, to influence their children's future opportunities. Strong labor unions, dedicated to American freedom and to the American free-enterprise system, are among our best guaranties of a solid, firm, free, decent, prosperous America. That must not be lost sight of, particularly now when we are trying to influence the whole world against totalitarian Communist, economic slavery, and political bondage.

The Taft-Hartley Act was passed in the middle of a crisis period in the American economy and was spurred to passage by fear and hysteria over the rash of postwar strikes. What the Congress neglected to take into account at that time was the fact that the big strikes were nearly all bread and butter strikes stemming from the disastrous inflation which had been let loose on this country through the premature murder of price control. Labor demands for modest wage increases in line with the price of living rise in many cases were denied and labor struck. The Eightieth Congress neglected entirely the cause of those strikes and bent its efforts toward merely making it more difficult for labor to strike even in behalf of just demands.

The worst strikes since passage of Taft-Hartley—particularly the coal strikes—were strikes growing out of the provisions of the Taft-Hartley Act itself outlawing the closed shop, health and welfare funds, and so on. The fact that the Taft-Hartley Act provided some machinery for delaying certain of these strikes or for ending some of them at gun point is secondary to the fact that they would never have occurred in the first instance had the Taft-Hartley Act itself not been enacted.

A half century of peaceful relations in the newspaper composing rooms of America was disrupted overnight by a Taft-Hartley provision outlawing the International Typographical Union's traditional closed-shop contract. This union has had to spend $8,000,000 in strike benefits and legal defenses, submit to nine Labor Board complaints, and four extensive hearings before trial examiners, all within the first year of the Taft-Hartley Act. Most newspapers are still operating with what amounts to a closed shop in their composing rooms, meanwhile, fighting out the issue in a city-wide strike in Chicago newspapers. This whole situation has been senseless. I checked today just to make sure of my recollection that not a single word of testimony was taken in the hearings on labor legislation prior to the Taft-Hartley Act on the closed-shop contracts of American newspapers with the union printers, and yet these contracts were outlawed overnight.

The health and welfare fund of America's coal miners has run the most rocky kind of road because of Taft-Hartley provisions, yet, everyone in the coal fields of Pennsylvania recognizes what a great humanitarian and decent thing this fund has been for crippled, disabled, worn-out coal miners.

We are going to restore the closed shop where management and labor in free collective bargaining mutually agree upon it; we are going to repeal the archaic antilabor injunction feature of Taft-Hartley and put labor and management relations back on a level of real collective bargaining between equals; we are going to take out of labor legislation all the provisions of Taft-Hartley insulting the patriotism, honesty and integrity of the whole labor movement; we are going to put decency back into the American collective-bargaining system.

Does that mean we are going to turn the country over to the unions? Does that mean that the Government is going to abdicate to the A. F. of L. and the CIO and other labor organizations?

It does not.

We are going to write sensible restrictions into law against certain types of unfair labor practices, such as jurisdictional disputes and boycotts against Labor Board certifications; we are going to curb strikes in violation of contracts, and we are going to keep firm control over our economy by protecting the public against national emergency strikes. We are going to encourage arbitration of contract disputes.

But above all, we are going to insist on a well-rounded economic program to curb inflation and to insure at least minimum standards for all of our people in this great and rich country. And if we can put our economy in balance and keep it in balance, we are going to find far less industrial strife than we have ever known.

Labor and management relations do not exist in a vacuum. Labor and management can get along best when both sides recognize that their Government is striving to help both by keeping our country free and prosperous and fully employed. Taken in that light, our new labor legislation will be but a part of a better America.

Agricultural Act of 1948

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1949

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Mr. E. H. Agnew, president of the South Carolina Farm Bureau, with respect to the Agricultural Act of 1948. I think it is very appropriate to have this statement published in the RECORD at this time. It points out a great many respects in which the 1948 act is wrong.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

It has been my privilege for the past 3 days to sit in as an observer at a meeting of the board of directors of the American Farm Bureau Federation.

Naturally, it is not incumbent upon me to make any public statement of acts or policies of the American Farm Bureau coming out of this board meeting, but it is my privilege, and I consider it my duty, to give the result of some of the actions as viewed in the light of South Carolina farmer opinion.

There are a good many points that I would like to make, but I shall be relatively brief in this summary for the reason that a short statement for your consideration and future reference would likely be better than any lengthy one. From time to time I shall be pleased to keep you informd as to the thinking of South Carolina farmers on the various points as they come up for consideration.

The provisions of the Aiken bill as incorporated in the Agricultural Act of 1948 seemed to please a majority of the American Farm Bureau board of directors. Those provisions in effect constitute minimum insurance for farmers in the Corn Belt particularly and constitute for cotton farmers, as an example, maximum price. This differential is in reality the basis for South Carolina farmers failing to agree that the Aiken provisions of the Agricultural Act of 1948 constitute any worth-while long-range farm legislation.

I was most favorably impressed with the persistent effort on the part of southern members of the board in trying to honestly arrive at some satisfactory compromise whereby producers of each farm commodity should have the privilege of formulating and operating a program according to their best combined judgment and experience. It is regrettable that no such compromise could be effected.

The Aiken provisions to become effective under the law on January 1, 1950, promise to reduce the income of southern farmers in two ways: First, by reducing acreage under a quota and acreage allotment program which is generally conceded to be in prospect; and, secondly, by a rather drastic reduction in the price of cotton because of the fact that the support-price level will no doubt continue to largely reflect the sales price from 90 percent down to 72 percent in 1950.

Farmers in other sections than the South are completely averse to controls while southern farmers welcome controls as the only possible means of making adequate adjustments to bring supplies in line with demand. It is our contention that our willingness to adjust supply to demand entitles us to a continued 90 percent of parity support price program. We are entirely willing to support a program that gives farmers in other regions the kind of program they want and we strongly feel that they should concede to us a comparable privilege.

If the Aiken provisions meet the approval of producers of some of the basic commodities, those producers should have the privilege of operating under such provisions. The Aiken provisions do not suit cotton farmers and they should be privileged to have a quota and acreage allotment program along with a 90 percent of parity support price program according to their desire as it would be expressed in a referendum.

Proponents of the Aiken provisions argue that quota and acreage allotment programs tend to bring about a regimentation, centralization, and government control leading toward a socialistic program comparable to England today. We do not concede that such is the case so long as farmers themselves express their wishes through referendums which must accompany the proclaiming of such quota and acreage allotment programs by the Secretary of Agriculture.

Farm Bureau leaders continue to hold up the 78-3 favorable vote in the Senate on the Aiken bill as evidence of almost complete harmony with respect to accepting such provisions. The Secretary of Agriculture, in a speech at the Atlantic City annual meeting of American Farm Bureau Federation, said that the passage of the Agricultural Act of 1948 was "a political expedient". His statement was correct. After defeat of the Russell amendment, passage of the Aiken bill by the Senate was accomplished as a last resort in making possible the continuation of any kind of farm program for 1949.

Passage of the Agricultural Act of 1948, including the Hope provision for 1949 and the Aiken provisions for subsequent years, was accomplished in order to continue the farm program through 1949 and with the full understanding that the Eighty-first Congress would have ample opportunity to amend the Aiken provisions before their effective date.

It is now incumbent upon Congress to do a job not in conformity to recommendations that may be expected from the American Farm Bureau Federation.

There was much disagreement at the Atlantic City annual meeting of the American Farm Bureau and, in order to keep down an open fight on the floor of the convention, a resolution was adopted giving the board of directors of the American Farm Bureau authority to establish a policy after giving serious consideration to recommending that a 90 percent of parity support price level be provided for crops being produced under quota and acreage allotment program.

During the past three days, this consideration has been given and the result is that American Farm Bureau policy is to continue to recommend, without material change, that the Aiken provisions be applied according to present law. (This statement has been publicized.)

Farmers of South Carolina are confident that our Senators and Representatives will exert their full influence to amend the law to provide that crops, particularly cotton and peanuts, shall be supported at 90 percent of parity so long as these crops are being produced under quota and acreage allotment programs. (Used specifically for the purpose of making the needed adjustments between supply and demand.)

It is not only necessary that you vote right when these matters are presented on the floor of the Senate and the House, but it is quite necessary that you take the time and trouble to completely inform yourselves as to the facts and the implications involved and that you exert strong influence upon your associates to obtain the desired action.

As applied to cotton for instance, the effect of the Aiken provisions are comparable to reducing production by cutting the time for employment to four days per week while at the same time cutting wages by 30 percent. The restrictive acreage allotment program would be comparable to a four-day week and a reduction from a 90 percent of parity support price program to a 72 percent of parity support price program would be comparable to reducing wages for producers of cotton by 30 percent.

I shall be very pleased to continue to inform the farmers of South Carolina that they may be confident of your support and your influence in their behalf.

The Marshall Plan

EXTENSION OF REMARKS

OF

HON. H. ALEXANDER SMITH

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1949

Mr. SMITH of New Jersey. Mr. President, I ask unanimous consent to make an insertion in the Appendix of the RECORD and a brief word of explanation. We are now engaged in important hearings on the extension of the ECA program. Those of us who are on the Foreign Relations Committee of the Senate and the Foreign Affairs Committee of the House heard this morning a very splendid presentation by Mr. Paul Hoffman, which I hope all my colleagues may find time to read.

The point I now wish to make is this: The Philadelphia Bulletin has, at its own expense, rendered an important service in this connection. Last year the Bulletin sent to Europe a member of its staff named Morley Cassidy. He took a trip all over Europe, and he made his reports, which appeared in consecutive issues of the Bulletin, and gave a running story of what he, as an objective observer, saw there. I have asked the staff of the Foreign Relations Committee to examine these reports, and, based on the

data we have, the staff has given a very favorable expression as to the contents of Mr. Cassidy's articles and as to their accuracy. I feel that it would be of great aid to every Member of the Senate if the articles could be published in the Appendix of the RECORD in connection with our consideration of this important matter, which will come before the Senate shortly for consideration, since we would have the benefit of the findings of an objective observer.

Mr. President, an estimate I have from the Government Printing Office indicates that the articles will make 5 pages of the RECORD and will cost $355. Notwithstanding this, I consider the articles to have so much value and to contain so much information that I request their printing.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

THE MARSHALL PLAN—HOW IT HELPS—FIRST YEAR OF UNITED STATES AID PUTS WEST EUROPE ON THE ROAD BACK

(By Morley Cassidy)

PARIS, January 1.—There is a new Europe in the world today, and every American can claim about $35 worth of credit for the way it looks.

Most of them, seeing the results close-up, would probably think it an impressive $35 worth.

With American help in the past year, Europe has suddenly come alive. The stumbling, bewildered, sickly Europe that cringed with fear at every Communist frown—even as recently as last April—is gone.

In its place is a Europe that feels blood in its veins again.

THEY DON'T CRINGE BEFORE REDS NOW

Its people are better fed and better dressed. Their houses are warmer. They are working harder, with better tools, and producing more of everything from electric power and coal to wheat, butter, and baby buggies.

They are still far from happy, but they are acting like people who see daylight ahead, and have the strength to walk toward it.

Because they are stronger, they get angry instead of cringing when Communists try to smash their efforts to rebuild. They have begun to fight back.

For the first time since the war, communism is on the defensive in every country in western Europe.

These are some of the visible results, to date, of an experiment without precedent in history.

They represent the more obvious first fruits of the Marshall plan, by which one nation has undertaken to lift a whole continent out of chaos.

They are impressive, and in some ways spectacular. But the Marshall plan, now known as the European recovery program or ERP, is facing question day.

It needs more billions. Before it gets them, it will have to satisfy Congress that ERP billions are doing their job.

ERP HAS TURNED COMMUNIST TIDE

It is easy enough for anyone who is footloose in Europe to reach some general conclusions.

Hardly anyone who had seen Europe emerge from its violent war despondency of 1947, for instance, would question two statements:

First, that American Marshall plan aid has turned the tide against communism, at least temporarily, throughout western Europe.

Second, that without it, France, Italy, and much of western Europe would be living today under the dictatorship of a Communist minority; and Russia, for all practical purposes, would be on the English Channel.

Many an American might say that in stopping communism, even temporarily, the Marshall plan has been worth whatever it cost.

Maybe that's true. But the Marshall plan is trying to do something much bigger than stopping communism. It was conceived as a plan to help create a free, orderly, healthy Europe.

The big question now is: What progress can Europe make toward rebuilding itself, with American help, in the face of Russian communistic imperialism?

And it is here that any observer—in Congress or out—begins to find that the answers are not so easy.

One look at the cost sheet—roughly $5,000,000,000 spent on Europe in 1948—is enough to dampen any impulse to give a snap "good" or "bad" verdict.

SOME RESULTS OF ERP DISHEARTENING

There is much to be seen in the plan's workings in Europe that is disheartening. Its progress is spotty and erratic. There is growing reason to suspect that it will never succeed in delivering, by its target date of 1952, a neatly wrapped up good as new Europe, completely free of the need for extraordinary outside assistance, which is diplomatic jargon for United States dollars.

But, as a personal reaction, after watching the plan at work in 10 of the Marshall plan countries and occupied areas, and after talking to representatives big and little from all of the 19, I find myself unimpressed by the failures or setbacks.

I find myself, instead, awed by the sweep and boldness of what the United States is doing in Europe. It all seemed fairly simple, I remember, when the plan was first suggested.

Europe would draw up its own neat shopping list of its 4-year needs for setting up housekeeping, the United States would send the needed cement, tractors, threshing machines, and ballbearings, and the job would be done.

OBSTACLES TO RECOVERY ARE IMMENSE

It's not so simple. Some of us forget, for the moment, that we would be dealing with a Europe that had sold or lost all the foreign investments that brought it in $1,500,000,000 a year; a Europe whose empires and colonies were dissolving and rebelling; a Europe that had 30,000,000 more mouths to feed and bodies to clothe than it had in 1938.

We didn't know, either, that we would be dealing with a Europe split down the middle by an iron curtain clamped across many of the normal routes of trade; a Europe torn by an undeclared war within nearly every country, where miners would wreck their own mines to block recovery.

We are discovering now, on the spot, what all these things imply.

What we have undertaken, it is now clear, is nothing short of peaceful revolution. We have undertaken to reshape western Europe; to sweep away the habits of centuries.

Meeting these problems, we're finding ourselves facing 19 separate sets of problems, each of which has to be meshed somehow with the other 18.

MILLION AND ONE PROBLEMS

We are finding ourselves helping France to fight inflation, and political instability, and Communist sabotage. Helping England to modernize archaic industries, and whittle down its national debt, and find markets to compensate for a lost empire. Helping Italy to fight an inflation that went into a deflationary tailspin, to find work for 1,500,000 jobless, to grow more food on parched hillsides to feed 4,000,000 extra mouths. Helping Greece to fight a civil war with one hand, rebuild a war-smashed land with the other, and still find homes for about 700,000 victims of Communist house-burnings. Helping Germany to turn peaceful, and cooperative, and productive. Helping—but the list is endless.

When Congress sits down to study the problem, it will face calculations that would baffle a battery of Eniacs.

It will be called on to strike a balance of judgment between honest cooperative efforts and hang-overs of selfish nationalism.

On the tangible side it will find both good news and bad, and some of the bad news will look very discouraging indeed.

COST IS SHOCKING

First of all, the cost:

Since December 17, 1947, Congress has appropriated $5,452,000,000 for aid to Europe—two items of interim aid totaling $577,000,000 for aid to France, Italy, and Austria, and $4,845,000 for Marshall-plan aid (exclusive of China's) to 19 countries and occupied areas. Of this, $536,000,000 is earmarked for the first quarter of 1949.

That leaves the net cost for 1948 about $4,886,000,000—or about $35 for each of America's one-hundred-and-forty-odd million men, women, and babes in arms.

The original idea was that the European nations should draw up their own long-term plan for cooperation that would make them independent of American aid by 1952; and that they should plan on sharp yearly reductions in the amount of aid needed.

On both counts there is bad news.

The 19 nations and areas have recently drawn up their separate lists or irreducible needs for the second year of the program.

ASKING FIGURE PROBABLY HIGH

Their original list totaled $4,636,000,000, which after much wrangling was cut to $4,333,000 in the list just sent to Washington. This represents an unimpressive decline from the $4,845,000 granted them for the first year.

That is disturbing enough as evidence that progress is hardly breath taking; although realists might suspect that it conceals more progress than it reveals, since each nation has doubtless asked more than it expects to get.

But there is more disturbing news. The 19 beneficiaries were asked to have their long-term, 4-year plan ready by November 15. They now report that they have been unable to prepare an agreed plan.

The reason is simple. Their 19 separate plans are, in some of the key points, mutually exclusive.

All of them see one clear answer to their own problem: to sell more to other countries, and buy less. But if no one wants to be a customer—then what?

But Congress will find other news more encouraging.

It will find that Europe's factories and mines in September were producing 28 percent more than their 1947 average, and that first figures for October—apart from the Communist sabotage of France's coal production—looked like the beginning of a great winter upswing.

It will find Europe's electric power production 40 percent above 1938; its steel production 30 percent higher than in 1947; its pig-iron output outstripping 1947 by 34 percent.

EVEN DIETS ARE BETTER

It will find that Marshall plan aid has boosted the daily diet of the average western European to 2,650 calories—halfway between the 2,500 of 1947 and the 2,800 of prewar days.

And it will recall, of course, that Marshall plan aid and its predecessor, "interim aid," played a decisive role in defeating the Communist strikes in France and Italy in December 1947, in the Communist disaster in Italy's elections last April, and in the smashing of Communist efforts to take over the French steel and coal strikes of October and convert them into political wars.

It is the intangible results, however, that any observer will have most difficulty in

weighing. But many Europeans think they are more important than any statistics on production.

One that is most often mentioned, and most visible, is the changed European morale—the belief that Europe can, after all, be put together. Another is the development of a new "cooperative mentality."

Most important of all, they point to the Western European Union and its mutual defense pact, and the likelihood that it may be expanded into a North Atlantic pact.

On this showing, Europeans are convinced, they have done better than most of them had hoped for with their first year of American aid.

WHERE ERP FUNDS GO IS PUZZLE TO EUROPE'S MAN-IN-THE-STREET

(By Morley Cassidy)

PARIS, January 3.—When the last Marshall plan dollar has been spent and the last economist has rolled up his charts, many a European still will be trying to figure out its greatest mystery.

That is: "What becomes of all that money?"

It is a mystery that grows out of a paradox. The strange fact is that the Marshall plan, or European recovery program, is so vast in its scope, and benefits every European in so many ways, that it is almost invisible.

It is this mystery that lies at the root of much of the coolness that the Marshall plan has encountered in Europe, and presents ERP administrators with one of their most irksome problems.

Take for instance, the case of Marcel Pelletier.

Marcel is a welder, a genial chap of no great intellect, who was sipping a small beer at a cafe near the huge electric plant where he works when I asked him what he thought of the Marshall plan.

MARCEL IS SKEPTICAL

He shrugged his shoulders. "I guess it's all right," he said. "But I don't like Americans telling our government what to do. And I don't see myself getting any of that money."

Marcel could hardly have been more wrong.

In a few minutes' talk, it was easy to see that he was benefiting in a dozen important ways from Marshall plan aid.

His breakfast had consisted of a roll and coffee. About 30 percent of the wheat for his roll was Marshall plan wheat.

He had come to work by train. The new Diesel locomotive that pulled it was a Marshall-plan locomotive. Its fuel was 80-percent Marshall-plan oil.

He was wearing a new pair of corduroy trousers. The cotton in them was 100-percent Marshall-plan cotton.

His home was heated—not too well—by coal that was x percent Marshall plan coal; even an electronic brain couldn't figure out the percentage. His house was lighted by electricity produced by the same proportion of Marshall plan coal.

JOB DEPENDS ON ERP

He works for the huge Compagnie Francaise Thompson-Houston, which employs 6,330 workers making radios, electric refrigerators, high-frequency apparatus, broadcasting equipment, X-ray machines, and a great variety of similar products.

Its raw materials are largely Marshall plan copper, Marshall plan rubber, Marshall plan lead, Marshall plan cotton for insulation. If Marshall plan aid were cut out, its management says, it would have to slash its operations and release at least 3,230 of its workers.

So Marcel, most likely, owes his job to the Marshall plan.

Finally—although the list could go on and on—the 5,280 francs that Marcel takes home on Saturday night has a buying power of about $12 or $13 only because the Marshall plan helps stave off a runaway inflation. Without it, his francs today might be worth $10, or $5, or less.

But don't blame Marcel if he doesn't see how much he owes to Marshall plan aid.

His own employers, the managers of the Thompson-Houston Co.—passionately devoted as they are to the Marshall plan—couldn't tell you precisely how much of their copper, cotton, and lead comes from Marshall plan aid. They only know that without it, they could barely operate at half-rate.

And even when all the benefits are pointed out to him, Marcel—an honest man and no Communist—is still puzzled.

"But nobody gives me anything," he says. "I pay for my flour; I pay for my overalls; my coal costs me dear—1,000 francs for 100 pounds."

HOW TO WIN FRIENDS FOR UNITED STATES

He's absolutely right. And anybody who can find a way to explain the mystery to Marcel, simply and clearly, will win millions of new friends for the United States.

For there is nothing simple about the Marshall plan. It is not a glorified UNRRA, nor a procession of Friendship Trains, delivering a red-white-and-blue sack of flour on every doorstep and calling it a day.

Its task is more complex, and the fact that the Marshall plan, or ERP, is elastic enough to meet the varying needs of 19 different countries is both its strength and a weakness.

Its elasticity is enough to confuse Marcel, or any other average citizen. But there is more, for the Marshall-plan dollars do double duty—when they become "counterpart funds," as we shall see later.

A CASE IN POINT

To watch the system at work, take the case of a friend of mine, who makes washing machines. He uses a lot of copper, and he almost weeps with gratitude when he talks of what the Marshall plan is doing for him. But he hasn't the slightest idea exactly how much copper he owes to the Marshall plan.

He figures, let's say, that he will need 11 tons of copper for his 1949 output. He has the francs to pay for it, but not dollars, of course. And copper nowadays must be bought with dollars.

So, like every other industrial user of copper, he applies for an import license to the Non-Ferrous Metals Syndicate, a trade association.

The syndicate pools his with all the thousands of other applications, balances their relative importance in the national economy, arrives at tentative quotas for each and submits the total to an interministerial council of the Government.

MUST USE UNITED STATES DOLLARS

The council, meanwhile, has been getting similar lists from millers who want wheat, implement dealers wanting to buy tractors and road scrapers, steel makers, paint makers, textile factories, and a hundred other categories wanting materials that cannot be purchased in France.

But all this must be bought with foreign exchange—meaning mostly United States dollars—and the interministerial council knows that its foreign exchange will be highly problematical, consisting of x dollars derived from French imports and y dollars coming from the Marshall plan.

Making a shrewd guess at x and y, the council estimates how much should go to copper, how much to flour, and so on, and the copper quotas are cut accordingly.

The list for all France's needs goes then to the OEEC—Organization for European Economic Cooperation—which balances France's needs against those of 18 other countries and draws up its own list by countries.

The OEEC list goes to ECA, the Marshall plan administrating agency, where, we'll say, it is approved.

WHERE IS THE GIFT?

It comes back finally, and my friend finds that he is now authorized to buy 7.9 tons of copper.

Nobody, however, is giving him anything that can be seen with the naked eye. He takes his import license, goes to whatever dealer he used to buy from in the United States, makes the best deal he can, and pays for it—in francs—through the Bank of France.

And where is the gift in that? asks Marcel, the welder.

The gift lies in the fact that the Marshall plan pays the American seller for the copper and then turns the copper over to the French Government. My friend, in turn, pays the French Government for the copper in francs. Those francs are held in the Bank of France, subject to United States direction. They're called counterpart funds.

But does this mean that my friend owes 100 percent of his copper to the Marshall plan?

Not at all. For if there were no Marshall plan, France would still have some foreign exchange for American copper, and would have some more from Belgium, and a little more that it produces itself.

So not even a Government statistician could tell my friend whether he would have 10 or 30 or 60 percent of his copper if there were no Marshall plan. He only knows that the total—of copper, lead, zince, wheat, tractors, and all the other American gifts—is keeping France on the road to recovery.

If Marcel, the welder, has grasped all this, he will understand that much of his bread and coal is a gift, even though he pays the baker and coal dealer.

THE HEART OF THE SCHEME

But he still won't understand counterpart, which is really the heart of the scheme.

It is counterpart that gives the Marshall plan its double-barreled effect.

The francs that the washing-machine manufacturer paid for his copper go into this special counterpart fund, along with all the billions of francs that are paid by Frenchmen importing flour, machinery, or what-not.

Even the French Government must pay an equivalent value in francs for any imports it makes on its own account for such things as railroad construction, public housing, and so on.

Marcel, it is clear, is never going to understand all this—especially when the communistic press is screaming that the whole thing is an imperialist plot and huffy nationalists are complaining that national sovereignty has been trampled because counterpart cannot be scattered about in pay raises.

ECA WINS BATTLE ON HUNGER, NOW IT FIGHTS FOR PRODUCTION

(By Morley Cassidy)

PARIS, January 4.—The most beautiful words in the English language, according to one American in Paris, are these: nonferrous metals, raw petroleum, machine spare parts, steel products, zinc ore, and fertilizer.

The ugliest, says the same man, are: wheat, fats and oils, meat.

"Of course," he adds, "their beauty or ugliness depends on the import tonnage figures that go with them."

This American, an official of the Economic Cooperation Administration (ECA), which runs the Marshall plan, was being slightly whimsical and at the same time deadly serious, for the words—beautiful and ugly alike—are a measure of the progress Europe is making toward feeding 270,000,000 mouths.

"And Europe's basic hunger," he explains, "will never be satisfied with imports of wheat, fats, and meat. Its food must come from shipments of machine tools, raw materials, farm implements, and fertilizer."

On this basis, he finds one of the most inspiring poems ever written in a table of figures sent to ECA headquarters here the other day, showing the list of imports unloaded in France in one recent 20-day period.

It lists 22 main groups—coal, petroleum, machine spare parts, nickel, cotton, molybdenum ore, and so on—totaling 681,925 tons.

A BEACHHEAD WON

Only one line of the table—20,564 tons of fats and oils—is a food import.

All this represents, to this ECA official, a beachhead won in the new battle of Europe.

It is evidence, as he sees it, that the Marshall plan has almost licked its first big problem—the problem of an emergency food shortage (growing out of the crop failures of 1947) that turned ECA, temporarily, into a relief agency.

With this problem licked the Marshall plan is now beginning to throw its greater strength into expanding the beachheads it has won in the real battle; the battle of European production.

The ECA men who speak of the "battle of production" are not unduly imaginative. In fighting its way towards recovery and the conditions that make for peace and stability, Europe (with American help) is fighting a war on many fronts.

It is fighting battles against political unrest, against inflation, against hunger and cold, against the despair of 10 years of war and near war.

But the key battle—the one that must be won before any of the others can be won—is the battle of production. All the other battles might be fought with more gifts of food, clothes, or money. But none of them will be won, and stay won, until Europe itself can produce more wheat and coal and clothing, and more goods that can be sold to buy what it cannot produce.

SOME OF THE DIFFICULTIES

It is a battle almost as challenging, to the Americans who run the Marshall plan, as that other invasion of Europe that started on the Normandy beaches.

Consider some of the difficulties:

Europe in 1938 was living partly "on its fat." It did not produce enough food for the 240,000,000 people living in the 19 Marshall plan countries and occupied areas, nor enough other products to pay for food it bought. It settled its debt, in part, with $1,500,000,000 to $2,000,000,000 in returns from foreign investments.

Now the 240,000,000 people have grown to 270,000,000. The war smashed much of the machinery that was inadequate even for the smaller job in 1938. The war wiped out the foreign income that paid for extra food from abroad.

So Europe—inspired by American courage and money—is starting now to rebuild a producing machinery that will feed, clothe, and house 12 percent more people than it had before, and to do it without the benefit of that billion-and-a-half of fat that used to square accounts.

Can it be done? Americans helping with the job say Yes, provided—— and their provided rests largely on the condition that production can gain a momentum that will overcome all the handicaps of fear, despair, and unrest born of hunger and cold, and ultimately remove their cause.

This view of the Marshall plan as a war waged on many fronts makes the jagged lines on economists' charts take on something of the look of a general's campaign map.

GERMAN OUTPUT ZOOMS

They are lines that show enormous peaks and valleys, and nobody is wholly satisfied with the way they look.

In Germany, total output is zooming—39 percent higher than in the month before the Marshall plan began. In France, coal miners dug 1,000,000 more tons of coal in September than in March, but let 3,000,000 tons stay undug while they struck in October.

In England, Sir Stafford Cripps is expressing fears that the production curve is flattening out; British coal miners are digging only 1,470 tons per man per month, against 1,530 in 1938. Italy is producing 1,717,000,000 kilowatt hours of electric power a month against a bare 1,095,000,000 in 1938; but its steel production is wavering on a level with 1938's, or below it.

All these statistics, however, probably mean less at the moment than the evasive wartime announcements that our troops landed and met strong resistance.

They have to be measured by the fact that the Marshall plan, as originally conceived, has barely begun. The first half-billion of interim aid went principally to meet immediate relief needs; from April (when the European Recovery Act was passed) until November, more than 50 percent of the shipments went to the same vital but nonproductive use.

The program, therefore, is entering in these months on its major test—the task of expanding the beachheads it has won in the field of production, and establishing new ones.

EFFECTS ARE HEARTENING

It is in visiting these beacheads of recovery, and talking to the people who have helped to win them, that one begins to appreciate the staggering scope of the Marshall plan, and its effect on the production of everything from children's sweaters to electric power; and to appreciate, too, the zeal that most Europeans are putting into it.

Here, at random, are a few of these beachhead reports:

I traveled recently to Bordeaux, on a train as fast and comfortable (well, nearly) as any in the United States.

"You should know what our railroads looked like in 1946," said the conductor, and brought me pictures of the Gordian's knot of tangled rails that were the Bordeaux yards after the war.

Then he brought from a cubby-hole a list of new equipment the French railways would soon have—1,000 steam locomotives, 600 electric locomotives, 150 Diesel locomotives, 700 passenger cars, 89,000 freight cars—all to be paid for with French "counterpart" funds created through the sale of the Marshall plan gifts.

"You'll see," he boasted. "In 3 years, our railroads will be the best in Europe!"

At Nantes and St. Nazaire, the latter once a German submarine base, I watched shipyards almost as big as Philadelphia's swinging back into the production of new ships to replace France's vanished merchant marine.

SHIPYARDS CLOGGED

One yard was putting the final touches on the remodeling of the giant Ile de France. Another was launching, that day, an 8,000-ton dredge for the Suez Canal. Another was choked with work on 7 cargo vessels and smaller craft.

"About $15,000,000 of the cost," said an official, "comes from the Marshall plan 'counterpart' funds, but I couldn't even guess at the total of Marshall plan aid in steel, copper, lead, and all the rest. I only know we would be practically out of business without it."

There are hundreds of other beachheads in France. Some are big, as in electric power, with $116,000,000 worth of work on hydroelectric and steam plants; in the coal mines and coke plants, now getting $24,600,000 worth of new modern equipment; in nitrate plants, to provide fertilizer for French farms, being built at a cost of $1,000,000—all paid for with the "counterpart" funds created by the French Government through the sale of Marshall plan gifts.

Some are little, by comparison; like that in the village of Bohars, near Brest, where Americans a few years ago smashed 100 of the town's 156 homes as they drove out the Germans.

"In 9 months," says Marcel Salaun, owner of the village's 4 flour mills, "we have received 800 tons of wheat and flour—enough for 900,000 loaves of bread."

And the village priest, Abbe Le Guen, adds: "That's the village's only source of income. Without it, we'd have to move."

In every country in western Europe, the stories from the beachheads are much the same. In all of them, American machines and American raw materials, or equipment provided by American money, are modernizing industry, building the plants that will provide power or fertilizer or more machinery.

Much of this work is, up to now, in the "build-up" stage. It will be a year, at least, before its full effects will begin to show themselves in actual production.

When that happens, ECA people are convinced, the world will be astounded by western Europe's recovery.

And the most astounded people of all, they feel sure, will be the countries of eastern Europe who are invited to share in this program and—willingly or unwillingly—turned down their opportunity.

AMERICAN DOLLARS ARE TEACHING EUROPE HOW TO COOPERATE

(By Morley Cassidy)

PARIS, January 5.—One of Europe's most venerable men of finance was telling me the other day how it feels to cooperate with his European neighbors in the way the Marshall plan demands.

"Sometimes I get gooseflesh," he said, "when I hear myself talking at the council meetings of OEEC (the Organization for European Economic Cooperation).

"I hear myself telling the council—my country's competitors—what new industries we intend to develop, where we expect to get the scarce raw materials, what new markets we want to exploit, the weak spots of our banking system.

"I wonder if I am hearing right. Ten years ago, even 2 years ago, those were secrets that we locked up in our strongest vaults. It is dismaying."

His gooseflesh and dismay are shared by a lot of Europeans, and are something of a measure of progress in the Marshall plan's toughest job—the fostering of the cooperation of all western Europe in a common recovery program.

This effort at cooperation has crashed spectacularly against one great rock—the basic contradictions of some of the separate ideas of a joint recovery program.

This has been vividly high-lighted by the wrangling preceding the drafting of their "progress report," announcing that they had not yet been able to agree on a full 4-year program for making the best use of Marshall plan aid. This conflict deserves a chapter of its own.

It is a difficulty, however, that was not unexpected, and does not alter the fact that the 19 benefiting nations and occupied areas have taken many steps of cooperation that seem to them, if not to us, revolutionary.

WRANGLES NOT SURPRISING

Most of them happen behind the closed doors of meeting rooms in a big yellow stone building on the Quai d'Orsay which houses the OEEC, the all-European organization created to plan for the best joint use of Marshall plan aid.

The wrangles that go in these sessions were described to me a little bitterly by the representative of one small country who had been accused of "dragging his feet" on an agreement for the division of raw materials for textile mills.

"Suppose you had a meeting of one representative from each of your States, and suppose it had power to cut off raw materials from one industry and give them to another, to give one State the capital for developing a new industry, and withhold it from another.

"You would find Pennsylvania saying to California and Alabama, 'Your steel mills are not efficient. The country does not need them. We will take all the ore.'

"You would find the South telling New England, 'Your textile mills are out of date. Ours are newer. And our people need work. So give us the wool.'"

CAN COOPERATE—IN TIME

"Could you settle a thousand such problems without fighting and wrangling? Neither can we. * * * But America is an example to the world in cooperation. We can be too, but not overnight."

It is exactly this sort of discussion that precedes every action taken by OEEC, and many of the decisions it is called on to make are as vital to the countries represented as a decision to divert 20 percent of Pittsburgh's iron ore needs to Birmingham, or to tell Philadelphia that it can build no new automobile-body plants to compete with Detroit's.

OEEC has thus become in effect the economic parliament of a loose European federation. Its council's decisions—which must be agreed to unanimously—have the binding force of treaties between the governments. Its chiefs of delegations are of cabinet rank.

The first job it tackled offers a sample of the difficulties it faces. This was the job of whacking up the first year's slice of American aid—$4,845,000,000.

It settled that by appointing a committee of four which heard witnesses from every country, telling of their needs and defending their plans. The committee drew up a list dividing the billions, the council wrangled over them—and agreed.

CURRENCY PROBLEM OVERCOME

It has developed, since then, a remarkable device for overcoming temporarily one of the greatest stumbling blocks to a revival of trade within Europe.

This stumbling block has been the complete break-down in the convertibility of currencies—a break-down which began as far back as 1931, with England's abandonment of the gold standard, and continued with the steady growth of special barter arrangements.

Realists, both Americans and Europeans, have recognized that when most European currencies are worth only half their official value on the other side of any border, trade can hardly thrive.

But the same realists recognize that full convertibility, giving each currency a fixed value with its many neighbors, is not likely to be achieved even in the 4-year life of the Marshall plan.

Sound currency, they point out, is a currency that will buy goods that are in general demand; and convertibility will come only when each nation has raised its production enough to have enough goods that other nations want.

In this bottleneck, the OEEC has worked out an expedient which promises to help greatly to get trade moving again.

This program, the "Intra-European Payments Plan," established an elaborate set of "drawing rights"—in effect, 78 separate trade agreements—by which nearly every country grants credits to others which are heavy purchasers from it, and receives similar credits from certain of its own suppliers.

DOLLARS MAKE IT ALL POSSIBLE

Some, like England and Belgium, advance much more than they receive. Final deficits, at the year's end, will be settled with Marshall-plan funds.

The arrangement, a sort of gigantic clearing house, is frankly labeled an experiment and is made possible, of course, only by the fact that final settlement is assured with American dollars.

Marshall plan administrators, however, who had a hand in its development, regard it as a major achievement in advancing the recovery program.

The OEEC officially estimates that it will add $800,000,000 in this fiscal year to Europe's international trade within its own shores—and this $800,000,000 worth of goods, which would not otherwise have crossed national boundaries, means that much less required from the United States or other dollar areas.

Its defects are plain enough, but one specialist calls it an iron lung.

"And when a man needs an iron lung," he said, "you don't argue about whether iron lungs are a good thing. You put him in one."

UNITED STATES AID AND TRADE PRESSURES ARE PULLING DOWN IRON CURTAIN

(By Morley Cassidy)

PARIS, January 6.—Gen. Lucius D. Clay, commander of United States forces in Germany, was asked recently by this correspondent whether western Germany could establish a healthy economy if it were permanently deprived of its traditional markets and sources of raw materials in eastern Europe.

General Clay replied:

"The question of such a permanent separation will not arise.

"The normal and traditional channels of European trade are the natural and inevitable result of each area's resources and needs. They cannot be altered fundamentally, because they are created by geography.

"The question, therefor, is not how long any area can endure a blocking of its normal trade. The question is how long it will take for trade pressures to raise the iron curtain."

His answer is being backed up almost daily by a growing mound of evidence that the satellite nations of eastern Europe, forbidden by Russia to accept the invitation to join in the Marshall plan, are beginning to lick their chops hungrily for the industrial products of a reviving western Europe.

TRADE PACTS A SIGN

Their anxiety to fill their needs by selling and buying once more in their traditional market areas has already borne fruit in a number of trade pacts between eastern and western nations.

Others are in the discussion stage. And many more are being gingerly proposed with discreet attention to Russia's feelings.

"You'd be surprised, and so would Russia," said one American with unusual opportunities to know, "if you knew of the many and devious approaches that have been made to Marshall plan countries.

"The countries of eastern Europe are so hungry for all the things that western Europe can supply that most of them are ready to make agreements whenever they can find a way to do it in a way that won't attract attention."

The growing number of agreements and negotiations offers a convincing answer to fears which had been held in some quarters that the Marshall plan would split Europe.

Although it was seized upon by Russia as doing exactly that, and made the excuse for declaring the Cominform's cold war, the recovery which it is bringing about seems to be proving General Clay's thesis that trade pressures are irresistible.

RUSSIA NOT IMMUNE

Russia itself is not immune to these pressures.

The Soviet Government has just concluded a 3-year trade agreement with Italy by which they will exchange $150,000,000 worth of goods in the next 3 years, Russia exchanging its wheat, oats, and other raw materials for Italy's fruit and industrial products.

Russia and England are engaged in negotiations by which both countries hope to extend and enlarge their trade agreement of a year ago. Russia concluded new agreements last summer with both the Netherlands and Switzerland.

From Norway, under an agreement just signed, Russia will get herring, whale fats, and aluminum in exchange for grain.

The most conspicuous evidence was contained in the announcement on Christmas Day of an agreement between Yugoslavia and Great Britain, for the exchange of $120,000,000 worth of goods in 1 year.

This agreement was especially noteworthy for its political implications, since Marshal Tito turned to England for two items which the Cominform lands would no longer supply—gasoline and textiles. They will be paid for with Yugoslavian timber and food products.

SECOND DEAL FOR TITO

Tito had closed a deal a few weeks earlier with an independent British firm for drafting a 5-year plan to modernize and expand Yugoslav industry.

It is expected—since Britain and Yugoslavia are to start negotiations soon on a long-term agreement—that England will have an inside track for equipping this industrial revolution. But Switzerland is in the running, with its own $56,000,000 pact with Tito.

Hungary, meanwhile, has concluded a $35,000,000 agreement with Italy, to provide coal, butter, oil seeds, and raw materials in exchange for machinery, automobiles, and agricultural products.

Poland and France have just completed new trade agreements calling for the exchange of $20,000,000 in products the coming year. An Iceland delegation has arrived in Prague to talk of exchanges of fish for machinery. Czechoslovakia has been sounding out Sweden and Switzerland as sources for replacing machinery on order in the United States, but withheld after the Communist coup because it represented "war potential" goods.

ECA IN FAVOR OF PACTS

The efforts of countries on both sides of the iron curtain to break through this trade barrier are viewed with favor by Marshall plan administrators.

It is recognized that the nations of eastern and western Europe are in many ways complementary, and that the flow of agricultural products and raw materials from the east, and finished industrial products from the west, is normal and healthy for Europe's economy.

More of such trade would vastly relieve the burden of American relief, whether in goods from America replacing those from eastern Europe, or in dollars to pay for purchases elsewhere of meat, wheat, and other products that eastern Europe normally supplies.

This eastern trade was formerly worth about $1,500,000,000 yearly to western Europe.

This, some people are pointing out, is close to the dollar deficit which western Europe seems likely to be facing even at the end of the Marshall plan.

EUROPE WONDERS IF IT MUST PLAN ITSELF RIGHT INTO A STRAIT JACKET

(By Morley Cassidy)

PARIS, January 7.—If Congress runs short of questions when it begins squinting closely at the Marshal plan, Europe can supply them.

Europe, in fact, is already asking these questions. And since Europe's interest in the Marshall plan is highly personal, its questions go deeper in some respects than those likely to be asked by any Congressman.

Some of the questions are clearly stated in the progress reports now in the hands of the Economic Cooperation Administration.

Others are carefully concealed. The nineteen benefiting nations spent many weeks cudgeling their best brains to find the pleasantest way of disguising them for congressional palates.

HARD TO PLAN IN A DREAM

Still others are never even whispered within 100 yards of any man who looks as if he might be American.

Most of them grow out of a difficulty plaintively pointed out by one European economist, who happens to be one of the most prayerful workers for European cooperation.

We are trying to plan in a dream, he said. It is difficult.

Some of the questions cannot be answered because they depend on Moscow, or the unguessable turns that world events may take. Some cannot be answered because they depend on the American people and Congress. Some others depend on the European people themselves, facing historic decisions.

Near the top of any informed European's list of questions are at least five of major importance, all affecting their efforts to make the Marshall plan work.

HOW CLOSE IS WAR?

Most of them overlap on one corner or another. But roughly they might be stated thus:

1. What are the chances of war? But more particularly, what does the United States think of the chances? Will the United States undertake a program of rearming Europe for defense, and if it does will it have to reduce the Marshall plan's economic aid?

2. What changes in American policy must be reckoned with? How will Congress feel about continuing aid if it finds reviving European industry shouldering American goods out of foreign markets? And will the United States tariff policy encourage or discourage a market for European goods?

3. How far will the United States go in insisting on "planism" as the basis of aid to Europe? Is the United States determined that cooperation must be carried to the point of requiring European nations to surrender economic sovereignty, and what will this do to countries fighting to preserve free enterprise?

REGIMENTATION OR FREEDOM?

4. Shall Europe aim at "austerity" and risk the freezing of its living standards at a lower level, or stake its future on free enterprise and its promise of a life better than anything regimentation can offer?

5. Can the Marshall plan, whatever decisions are made, achieve its objectives within the time and money limits originally scheduled?

Each of these questions is involved in the reasons for the failure of the 19 benefiting countries to agree, up to now, on the general framework of the 4-year plan requested by the ECA.

The long wrangle which has gone into preparation of the organization for European Economic Cooperation's progress report—submitted in lieu of the missing 4-year plan—has made it plain that the most immediate concern is with questions 3 and 4.

MEANING OF COOPERATION

Europeans think that Americans did not realize (any better than they did themselves) all the implications of a paragraph in the Foreign Assistance Act of 1948, setting up the Marshall plan.

That paragraph stated that its purpose was "to sustain and strengthen principles of individual liberty, free institutions, and genuine independence through assistance . . . in a joint recovery program based upon self-help and mutual cooperation."

After 8 months' effort, Europeans think they have an honest question to ask: How far should cooperation go?

They think the United States, when it stops to look at the question, will have some questions itself.

They find themselves faced, for instance, with ECA's request for a 4-year plan—certainly a reasonable request from a nation that is giving some $15,000,000,000 to help Europe to rebuild itself.

WARY ABOUT STRICT PLANNING

But Europeans, after months of trying to shape one, are beginning to realize that any hard-and-fast plan would involve a regimentation of Europe's economy and the strangulation of competition. The United States knows that, too. So any planning is being approached gingerly. Strict planning could mean, for instance, that Italy would agree to give up its ambitious plans for developing its ceramics industry, lest it compete with France; that France would no longer strive to outdo Belgium in finished steel products; that England would pledge itself not to grow too much food, lest France lose a market.

The more complete the plan, they are finding, the more rigid it would become. The end of planning, it seems, would be a straitjacket as binding as that of fascism or communism.

They wonder if the United States would want this, even if it could be done; and how a strait-jacketed Europe would deal with a free-wheeling America.

BRITAIN TAKES AUSTERITY

Then there is question No. 4, the issue of austerity versus free enterprise and a higher standard of living.

In this connection, the British have informed the French tartly that Britain is now a workingman's land, and will be no market for champagne and cologne. French have retorted that Britain plans to use the Marshall plan to make the pound sterling a luxury currency in the money markets.

It is the view of Britain and Norway—stout believers in government planning and the drab, copybook rules of success—that any realistic look at Europe's economy proves that in 1952, when the Marshall plan is supposed to end, Europe will still be from $1,500,000,000 to $3,000,000,000 in the red each year for imports from other shores.

England and Norway argue that the Marshall plan nations must begin now to prepare for the day when Marshall plan aid stops.

THE THRIFTY WAY

England's way—already in practice—is to behave like any thrifty man, by cutting down its purchases, putting 20 percent of its national income into new money-producing factories and machinery, and finding new markets that will balance accounts.

To do this, its people are doing without butter (to Denmark's regret), without tobacco (to Turkey's anguish), without champagne and potatoes (to France's distress), and without many other things Englishmen would like, and Europe could sell.

All very fine and noble, say the other European countries; but is this mutual cooperation for the recovery of Europe?

It has several defects, as they see it, as the basis of an all-European program.

First, it represents nationalistic planning. If all European nations did likewise, each would do its best to become self-sufficient and buy as little as possible from its neighbors.

The result would be the strangulation of trade between these neighbors.

LIVING STANDARD RESTRICTED

Second, it is based on controlling the living standard of the whole population, to cut down imports and prepare for the day of reckoning when American aid stops.

English workers are accepting this. Other nations are not so sure that their workers would.

Third, they say, the English program involves a high degree of regimentation and government planning of a semitotalitarian order.

It is an issue with a hundred facets, and the foregoing is an oversimplification. Between the extremes are various shades, as in France, which is trying desperately to find a middle-way through adherence to the Monnet plan, which has mapped out a program for rebuilding key industries without imposing the rigid pattern that England has adopted.

WILL STILL BE IN RED

One difficulty faces both sides in this issue—the virtual certainty that Europe will still be in the red, under either program, in 1952.

England answers that Europe will be buttoned-up to meet the chill wind, and with a rebuilt machine to help it work painfully toward better days. The others say that blossoming trade, assisted by all-around improvement in living standards, will attract foreign investment capital—to say nothing of a $1,000,000,000-a-year tourist trade—to make up the difference.

But both sides still have disturbing questions to ask themselves.

There is, first, the question of war. That is one possibility before which Europe's planners simply close their eyes and hope. There can be no planning to met a war.

But there must be planning to meet war preparations. So Europe wonders how much money the United States may feel compelled to spend for rearming Europe—and how much this may cut down the appropriations for Marshall plan economic aid.

UNITED STATES BUSINESS MAY OBJECT

The same troublesome thought runs through their minds as they consider another possibility: That the day might not be far off when European industrial recovery would begin to worry American businessmen and workers.

They are pleased, at first, to note that Britain's sales to six South American countries are up from 10 to 65 percent over 1947; that the Benelux countries' sales in the same area are up from 26 to 90 percent.

But then they note that United States sales in the same countries (outside of Argentina) are from 7 to 32 percent lower.

So they ask themselves what pressures will be put on Congress, this year or next, to stop rebuilding industries that offer this competition.

Here again (talking strictly among ourselves) they wonder if they should trim sail, and plan on finding Marshall plan money dwindling to a trickle in 1950 or 1951.

All of the questions, unfortunately, depend on each other. Congress and Europe, looking at each other, will find that neither of them has all the answers.

Republican Salesmanship

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, February 8, 1949

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Hot Tip From CAPEHART,"

published in the Washington Times-Herald of January 28, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOT TIP FROM CAPEHART

The Republican national committee has been grunting and groaning at Omaha, Nebr., this week over the question: Why didn't we win in '48, and what can we do in '50 and '52?

The best and smartest remarks yet to erupt from the clambake have come, so far as we know, from Senator HOMER E. CAPEHART, Republican, of Indiana, retiring chairman of the GOP campaign committee. Said Senator CAPEHART Wednesday to his presumably crimson-countenanced cronies:

SALESMANSHIP AND SUCCESS

"I don't care how good our program is, or how good our record in Congress is, until this party learns how to sell itself, it will never win another election. I've been in business 25 years, and I wouldn't hire one of you as a salesman. If I wanted a sales manager, I'd hire Harry Truman."

The best salesman in today's world, added Mr. CAPEHART, is that same Mr. Truman, who got his foot in the voter-housewife's door during the 1948 campaign and battered her over the head till she bought his line of goods. Further, the Republicans showed themselves to be the world's worst salesmen. Most of them were in some tony saloon down the street, telling one another how wonderful they were, while Harry was working on the voters.

To which we can only add: Senator, you said it. Times have changed since Emerson made the crack about the world beating a path to the door of the man who can make a better mousetrap, without any invitation from that man. Or maybe the revered Emerson was wrong to begin with. Anyway, the Republicans had better heed the Capehart hint, and get busy on a high-octane self-selling, self-advertising job if they want to win any more big fights.

Josef Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Tuesday, February 8, 1949

Mr. O'CONOR. Mr. President, one of the most consistent opponents of communism and of all subversive groups is William Randolph Hearst and the group of newspapers in which his writings and editorial views appear.

Recently there was published certain selections from his writings and speeches, in which there are some 16 forthright articles dealing with all phases of communism, plus an almost equal number on democracy, as a defense against disloyal activities. I cite this compilation because the many articles and editorials contained therein offer much food for thoughtful consideration by students of American life and of our own times particularly.

Consistent with Mr. Hearst's long policy of opposition to communism and to the injustices which dictatorship breeds is the editorial in the Baltimore News-Post of Monday, February 7, entitled "Senatorial Duty." This editorial presents succinctly the world-wide implications of the Cardinal Mindszenty case, and I ask unanimous consent that it be published in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATORIAL DUTY

Josef Cardinal Mindszenty, the Roman Catholic prince-primate of Hungary, may take his place this month among the martyrs.

The prelate's "trial" on Communist "charges" of "treason, espionage and black-marketing transactions" is under way in Budapest.

These are not accusations that could be regarded seriously, even by Communists.

They are so alien to the cardinal's consecrated calling, and to his known character as a moralist and humanitarian, as to be utterly preposterous.

And the motive for them needs hardly to be stated.

They are a part of the Communist war on religion—a war that is being waged with savage severity against Catholics because their church, under the inspired leadership of Pope Pius XII, has been the most effective opponent of world communism and its diabolical evils of Marxian atheism and economic enslavement.

For Cardinal Mindszenty has not suffered persecution alone.

In his own country—where 60 percent of the people are Catholics—more than 600 priests and "religious" have been imprisoned, Catholic schools have been forcibly secularized, and church properties have been confiscated.

In Yugoslavia the eminent Archbishop Stepinac lies immured in a Communist prison, and hundreds of Franciscans and other members of holy orders have been slaughtered, jailed, or driven into exile.

In Poland and neighboring Catholic nations similar outrages have been perpetrated behind the iron curtain.

Nor is it only Roman Catholics who have endured these immolations.

Months ago Bishop Ordass, the Lutheran primate of Hungary, and a group of lesser Lutheran dignitaries were arrested.

In Romania all Protestant sects have been put under restraints amounting to proscription.

And on behalf of Hungarian Jews have come pathetic protests that their people are listed by the Communists as "class enemies"—protests sponsored by Dr. Bela Fabian, former member of the Hungarian Parliament and of the Board of the Jewish Community in Budapest, and by Dr. Bela Varga, canon of the Roman Catholic Church, former president of the Hungarian National Assembly, and president of the National Hungarian Committee in Exile.

The "arrest" of Cardinal Mindszenty, under circumstances as brutal as these, evoked horror and indignation.

Mr. Robert Lovett, the American Under Secretary of State, denounced the "charges" against the primate as "patently false" and his imprisonment, with thirteen alleged "accomplices," as a "sickening sham."

Representations have been made to Hungary by the Governments of Eire, Belgium, Australia, and Canada, and at a recent meeting of the British Labor Party Mr. Herbert S. Morrison, the Lord President of the British Council, spoke in terms of abhorrence.

"The arrest," he said, "during the Christmas holiday, of all times, of Mindszenty, prince-primate of the Catholic Church in Hungary, has shocked the whole free world. * * *

"It is further inescapable evidence that the Communists do not intend to rest until they have liquidated every vestige of freedom in the countries under their control."

What the British Labor Party leader said is incontestably true. It expresses an issue which our Government, as the patron of non-Communist peoples, cannot ignore.

The White House and the State Department may be deficient in courage or enterprise.

But they are not the whole Government.

And on January 10, in a statement published in the CONGRESSIONAL RECORD, Senator HERBERT R. O'CONOR, of Maryland, suggested an appropriate course.

Referring to the arrest of Cardinal Mindszenty, and presenting other particulars of the Communist persecution of religion, he said:

"I respectfully suggest that the Senate Foreign Relations Committee investigate this serious situation and report upon its findings for the information of the United States Senate and of the entire Nation."

Obviously, the Senate should—without hesitation and without delay—proceed according to Senator O'CONOR's appeal.

By no choice of our own, we are inextricably engaged in a global and costly struggle with communism—a struggle that involves our own survival as a free people.

In so desperate a contest it well behooves us, in the manner of our devout forefathers, to seek the help of God—and, by our own actions, to deserve it.

Need for Production—Questions on the Taft-Hartley Law

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, February 8, 1949

Mr. WILEY. Mr. President, the Nation is following with deep interest the hearings being held in the Senate Labor Committee on the Taft-Hartley law. It is the hope and prayer of our country that during these hearings careful consideration will be given to all phases of this subject, and that neither the committee nor the Congress will rush with undue haste into ill-thought-out legislation.

In this connection, Mr. President, the Arcadia News-Leader, published in my State, had a very interesting little editorial on the need for more productivity in our country. I ask unanimous consent that it be printed in the Appendix of the CONGRESSIONAL RECORD, along with a pointed editorial recently published in the Washington Post and other newspapers by the National Small Businessmen's Association citing the provisions of the Taft-Hartley law and asking labor leaders for their reactions to these provisions.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

[From the Arcadia (Wis.) News-Leader]

THIRTY-HOUR WEEK

Now comes one of the A. F. of L. executives and says his organization will push for congressional legislation for a 30-hour week. There is supposed to be a shortage of labor already in this country and a shortage of many staple goods. The only thing which

will bring down the cost of living is more production, and not less. The old basic law of supply and demand is still in operation and is the only permanent cure for short supply and high prices. This condition cannot be cured by writing a law. Every round of increased wages inevitably calls for another round of price increases.

[From the Washington Post of February 2, 1949]

ATTENTION, MR. GREEN AND MR. MURRAY

You, Mr. Green, speaking as the head of the A. F. of L., and you, Mr. Murray, speaking as the head of the CIO, have both on numerous occasions called the Taft-Hartley Act a slave labor law. Why?

Is the Taft-Hartley Act a slave labor law—

Because it prevents a union member from being fired from his job and kicked out of the union at the whim of a union official?

Because under this law union officials cannot force union members to pay exorbitant dues and are unable to collect unreasonably large initiation fees from new members?

Because this law rules out violence, coercion, and intimidation as a means of securing union members?

Because this law outlaws the compulsory check-off? It isn't enslavement, is it, for the union to have to get the consent of the union member before dipping into his pay envelope?

Because this law protects the right of union members to a secret ballot when voting on such important matters as the election of officers, a union shop or acceptance of an offer to settle a strike?

Because money paid by union members and employers into union, health, welfare, and vacation funds cannot be diverted by union officials to other uses?

Because this law gives each union member the right to decide whether he shall take a grievance up through union channels or direct with his employer with a representative of the union present?

Because this law requires an itemized accounting by the union to its members of all receipts and disbursements?

Because union members now have the right to ask the National Labor Relations Board for a hearing on changing unions or not having any union, the issue being decided by secret ballot?

Because under this law union members can, if they choose, go directly to the National Labor Relations Board for relief from any unfair labor practice by either the union or their employer?

Because it is no longer possible for the union to keep an individual worker from getting a job because he does not belong to the union?

Because this law makes unions financially responsible for living up to their contracts and protects union members from being thrown out of work by jurisdictional strikes and secondary boycotts?

Because this law guarantees the same freedom of speech to employers the unions have always had?

Because this law outlaws the closed shop and requires both unions and employers to bargain in good faith?

Because under this law employers are not required to pay for work not performed?

Because public welfare and safety are protected by machinery set up in this law to reduce the possibility of industry-wide strikes?

Because under this law the public is assured that its interests must be considered in labor disputes and at the bargaining table?

We believe, gentlemen, that these questions cover the main or principal provisions of the Taft-Hartley Act and eagerly await your answers, which should be quite helpful in clearing up the confusion which still exists in public thinking concerning this law. Also, if what you call the slave labor sections of this law are not covered by our questions, we'll be glad to have you tell us what those sections are and to explain the provisions in each, which give it the slave labor characteristics you attribute to it.

National Small Business Men's Association, Inc., DeWitt Emery, president. Executive offices, 39 South LaSalle Street, Chicago, Ill. National headquarters, 163 North Union Street, Akron, Ohio. Washington office, 1737 DeSales Street NW., Washington, D. C.

Shortening the Odds

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Tuesday, February 8, 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very splendid editorial entitled "Shortening the Odds," from The Progressive for February 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHORTENING THE ODDS

President Truman bombarded Congress and the country in January with four messages totaling 50,000 words. Together they added up to a pattern of planning which evoked a great diversity of labels. The President himself called it a Fair Deal. The New York Times thought it added up to a welfare state. The Chicago Tribune was sure it was socialism. Its tabloid cousin, the New York Daily News, was equally positive it was galloping communism. The Soviet press used its standing head: "Capitalist imperialism."

Of all the attempts to capture the scope and direction of the administration's course we liked best the Manchester Guardian's. Mr. Truman's program, said that celebrated British daily, is an indication that "socialism is not the only path to the left. Its goal might be called the insurance state, its method the deliberate shortening of odds against the weak, but without abandoning the basically individualist way of life accepted as characteristically American."

That's pretty much it, we think. If the President means business this time and if the Congress dominated by his party responds to his leadership, we shall have taken a hopeful stride toward equalizing opportunity by shortening the odds against the less blessed, building up a system of national insurance against economic reverses beyond the individual's control, and maintaining undisturbed the basic liberties of the individual.

It's rubbish to call this socialism. There's nothing new or radical in the program. It's as revolutionary as the 162-year-old general-welfare clause of the Constitution. Many of the provisions were proposed and passed by Lloyd George's regime in Britain nearly four decades ago. More than three-quarters of the program has been endorsed by the Republican Party in its platform. All of it was proposed to the people by Mr. Truman as a candidate; none of it represents any basic break with the principles of the American enterprise system.

The nearest thing to something new was the President's mild suggestion that if the steel industry isn't able or willing to expand to meet the Nation's demands, the Government would try to help it enlarge its capacity, and failing that, might build its own plants to be integrated with private industry. This, of course, was done on a great scale during the war, especially in so critical a field as aluminum, without impairing the country, the Constitution, capitalism, profits, or dividends. Actually, the aluminum industry benefited greatly, the Government got desperately needed aluminum for war planes, and the productive capacity of the Nation was increased.

No; what troubles us is not the scope of Mr. Truman's program or the names they're calling it; what keeps us in a restive mood are the recurring queries: Does the President intend to make a fight for his program? Is he equipped to lead his own forces in Congress? How serious is the Democratic Party in its claims to progressivism?

Last year and the year before Mr. Truman dumped scores of proposals on Congress without bothering to classify their relative importance or urgency and without putting up any kind of scrap to get action on them. It was not until the Presidential campaign, during which he made brilliant use of congressional inaction, that Mr. Truman seemed to feel badly about the neglect of his program.

The 1949 program is very much like its predecessors. Perhaps the major difference is the treatment of the Missouri Valley Authority issue; this year Mr. Truman is more evasive and vacillating than he was last year, ostensibly because somebody told him that 9 of the 10 States involved opposed the plan—a claim which seems to have no basis in fact. In most other aspects, the President's Fair Deal is a familiar and acceptable script for progressives. They know and like the lines; they will judge the performance on the basis of the conviction and fidelity with which the principal actors play their parts.

President of Seattle Apartment Operators Association Against Mass Evictions

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. MITCHELL. Mr. Speaker, the attempt by certain landlords to protest rent control through mass eviction of tenants does not meet with the approval of Mr. Donald C. Haas, president of the Seattle Apartment Operators Association. In considering rent control legislation, we are trying to be fair to landlords without sacrificing the protection that mus be given to tenants. It is my sincere hope that landlord groups, following Mr. Haas' lead, will offer their cooperation to the congressional committees studying rent control instead of resorting to housing strikes. Under leave to extend my remarks, I include Mr. Haas' letter in connection with these remarks:

WASHINGTON, D. C., *February 4, 1949.*
Hon. HUGH MITCHELL,
House Office Building,
Washington, D. C.

DEAR MR. MITCHELL: I would like to let you know for the record that I am opposed to the attempt of mass eviction by landlords

in certain areas, as a protest against Federal rent control. I feel that this method of protest against rent control retaliates against an innocent third party, our tenants, and does not affect the Office of the Housing Expeditor, who has created these regulations under which we must operate our properties.

While I feel many of the regulations of the Office of Housing Expeditor are equally unfair to both tenant and landlord, action of this type accomplishes nothing constructive. These property owners, in my opinion, would be far wiser to take up their grievances with their Members of Congress. In this way a constructive effort will result in a more equitable rent-control law.

I am sure that Congressmen, such as yourself on receiving from property owners a truthful showing that adjustments need to be made will give full consideration to these showings in writing a new law.

Hoping that this makes my position clear.

Very truly yours,

DONALD C. HAAS,
President, Apartment Operators Association of Seattle, Wash.

Philip Murray Is a Reticent Gentleman

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, more than 20 years ago, John L. Lewis released a report made by his United Mine Workers, which, among other things, charged that the Communists were trying to take over organized labor in America. John himself later headed the CIO, which used Communists in its raids on the A. F. of L.

For more than 15 years, it has been apparent to inquiring and observant citizens that Communists were a dominating force in many CIO locals, the parent organization of which was headed by Philip Murray.

In the organizing campaigns of the CIO and in the methods it used to obtain the results it demanded in labor disputes, many CIO unions followed the Communist line of coercion, intimidation, violence, destruction of property, and rioting.

Not so long ago and within the year and after an aroused public sentiment demanded that a fight be made against the Communists, Philip Murray, at a national convention of his organization, denounced the Communists in his organization. But there are still international representatives in good standing who refuse to sign an affidavit stating that they are not, never have been, Communists or members of any organization which advocates the overthrow of our Government by force.

And the intimidation, the violence, the beatings, the destruction of property and the rioting by local CIO unions still goes on.

One of the latest most vicious and inexcusable goon-squad raids was the predawn one which men wearing CIO buttons and under the direction of international CIO representatives, Thomas Shane and Glen Sigman, staged on December 1, 1948, at Kalamazoo, Mich.

A few days following that raid, a House labor subcommittee subpenaed Philip Murray, president of the CIO, for the purpose of asking him whether he approved or disapproved of that raid. Philip Murray declined to appear, stating that the committee had no authority and, worse yet, he has made, so far as I know, no public statement condemning that kind of mob violence.

By his silence, by his refusal to appear and publicly condemn beatings of defenseless women and men, bloodshed, malicious destruction of property, mob violence, Philip Murray gives tacit encouragement to activities of that nature.

How long will the gentleman remain silent and by his silence fail to give support to a movement designed to end such unlawful activities?

A clear, vigorous denunciation of mob violence, Mr. Murray, will immeasurably help the labor movement.

A piece in the morning paper by Westbrook Pegler is illuminating:

FAIR ENOUGH

(By Westbrook Pegler)

The defeat of the Communists within the CIO by a few suddenly sanctimonious old Reds and fellow travelers leaves that unregenerate klux no better than it ever was.

The fact that the veritable Muscovite bolos were betrayed by a small set of double-crossers who heard the whish of angels' wings and got afraid of dying unshriven, only proves again that this monstrous power has neither principles nor conscience.

It is to the good that the Communists are made confused and weak. But it is to the bad that men who played with them for years, and then suddenly ratted on their trusting comrades, are now put forth as virtuous leaders of labor, deserving all trust.

Not one of them has made confession and recantation to the public. Any private arrangements they may have made with religious authorities are only hearsay and would be valueless if not cause for further suspicion.

The public is composed of people of all communions, most of them competitive and inherently antagonistic, plus a very large law-abiding body of unreligious citizens who never concede any impairment of their rights on that account.

And the people are the high public authority in the case of these backsliders.

It is for the whole public to hear what they have to say and to turn thumbs up or down. But up to now, these old miscreants are not even avowed backsliders.

In the past, they lacked the manhood to say, "Yes, we are Communists or fellow travelers and we warn you not to trust us." When they changed, they still hadn't the guts to say to the millions whom they had tormented and oppressed, physically and spiritually, that they had seen their error, and ask forgiveness.

Therefore, although we may enjoy the defeat of the Communists, we owe not even amnesty, much less rehabilitation, to the men who got up in the night and let in the law.

The CIO came into the world with the stigma of many original sins—vandalism, anarchy, bloodshed, and false witness.

The bosses of the A. F. of L. howled for years that the Labor Relations Board was an organizing bureau for this lawless system of Communist mobs.

No better proof that it was a Communist front is needed than the recent refusal by Nathan Witt, who held the dominant office of the board, to answer on oath whether or not he ever was a member of the Communist Party.

John L. Lewis, who commanded the CIO in those riotous years of mass lynching, finally wrote that we had no labor movement at all in the United States but only a turmoil of sordid rivalries.

There are clergy who presently take honor because they were influential in the apostasy of our queasy quasi-Bolsheviki. They are welcome to the satisfaction, but other citizens of whatever faith are not obliged to waive their basic objections to the CIO merely because one particular set of enemies of freedom has been frustrated.

The Communist terror and the corruption of society and government were made possible by evil peculiarities of its constitution and character.

Those inequities still exist and the next gang of manipulators wil not necessarily abstain from equally dirty work for some ambitious purpose of their own.

Those who argue, even undertake to order, that American citizens must join unions express only an opinion. To such a counselor I would say, "Show me first that you have done your duty to provide decent conditions for me within that union.

"Show me what you have done to protect me from betrayal by men who first betrayed their subjects to the Communists, and then betrayed the Communists to you.

"Show me what you ever did to reform racketeers who are sensitive to your authority and put them to the penitential task of making restitution according to the duties of your own office.

"Show me this first and then we will argue whether I have a duty to my fellowman to join a union. And let me remind you of your duty to do all you can to make the unions good, first. You seem to have forgotten."

Granting that he never was a Communist, I would never trust Philip Murray, the president of the CIO, with any power over me.

He collaborated with Communists for years to build his CIO into a political edifice. In all his previous years amid the rotten criminality of the A. F. of L. he never said a syllable against the crooks, as any honest man selected as trustee should do.

During his years with John L. Lewis he gave Lewis docile service in a dictatorship of outrageous arrogance and never cried out. I have no evidence that his scale of values ever has changed.

Never try to tell me, as a citizen, that I must join a union and entrust my personality and the livelihood of my family to Murray, Mike Quill, Joe Curran, or any other who recently threw the Communists out of power. I was fighting Communists—"red-baiting" they called it—15 years ago. These men who had the power to drive them out used their power to hurt me instead.

When you try to make me yield and trust these men, whether by abusive language or sacerdotal authority, I don't trust you.

Columbia Valley Authority Memorial Passed by the House of Representatives of the State of Washington

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. MITCHELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a memorial which passed

the House of Representatives of the State of Washington by a vote of 71 to 26 urging enactment of legislation for a Columbia Valley Authority.

This vote by the lower house of the Washington Legislature speaks for itself. The overwhelming majority of the people in my State support a Columbia Valley Authority. The State action of the newly elected house reflects the desire of our people to have a more effective and greatly enlarged program of Columbia River Basin development.

House Joint Memorial 18

Relating to the creating of the Columbia Valley Authority

To the Honorable Harry S. Truman, President of the United States, and to the Senate and House of Representatives of the United States of America in Congress assembled:

We, your memorialists, the Senate and the House of Representatives of the State of Washington, in legislative session assembled, most respectfully represent and petition Your Excellency and honorable bodies as follows:

Whereas a bill has been introduced before your honorable bodies proposing the creation of a Columbia Valley Authority; and

Whereas Your Excellency has publicly stated your approbation of such legislation and has only recently ordered certain Federal agencies to coordinate their efforts to this end; and

Whereas many publicly spirited groups and organizations in the Pacific Northwest, including the Washington State Grange, Washington State Federation of Labor, the regional Congress of Industrial Organizations, and the Washington Public Utilities Commissioners' Association have long favored creation of an integrated Columbia River agency which would promote and manage the orderly development of the natural resources of this region; and

Whereas the construction of multiple-purpose projects encompassing reclamation, irrigation, flood control, navigation, production and transmission of electric energy, conservation of soil, fish, wildlife, and tourist resources can best be accomplished by the subsidy afforded by the sale of low-cost public power generated by such projects in the Columbia Basin region; and

Whereas the public bodies which have expressed their approval of a Columbia Valley Authority have declared it to be their desire that any measure adopted provide for a maximum of regional control and management;

Now, therefore, your memorialists respectfully commend Your Excellency for your courageous and forthright approach to the problems of proper development of the Columbia Basin watershed; and

We respectfully petition your honorable bodies to speedily enact legislation which will establish a Columbia Valley Authority in accordance with the desires and aspirations of the people of the Pacific Northwest.

Who Are Republicans?

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from The Oregonian for February 2, 1949:

WHO ARE REPUBLICANS?

A lot of persons have telephoned asking for a reprinting of the Omaha World-Herald's editorial, God Hates a Coward, which appeared during the Omaha meeting of the Republican National Committee and which had considerable attention on the radio. So we are providing what the radio cannot provide—a chance to study and restudy. In such publication there will be no confusion of voice and context, and the thought can be analyzed at leisure.

At leisure, so far as we are concerned, the editorial appears a brilliant presentation of a point of view but no blueprint for the Republican Party.

Harvey E. Newbranch, editor in chief of the World-Herald, who wrote the editorial, assumes to know what the rank and file of Republican voters believe. As we understand it, the rank and file are opposed to any and all interference by the Federal Government in the lives of the people. "It (the Government) is converting freemen into vassals and dependents." The implication of the heading, God Hates a Coward, and of the editorial as a whole, is that Mr. Newbranch knows the thinking of the Republican voters; that this thinking amounts to absolute opposition to the Federal Government; that any party leader failing to take this view is a coward.

Mr. Newbranch is more dramatic than right. There is, to begin with, no fixed positions as between the parties in regard to Federal intervention in the common affairs of the country. Throughout most of the Nation's history, the Republicans have been more inclined than the Democrats to meet developing problems and involve the Federal Government in proper solutions. More recently, through Woodrow Wilson and Franklin D. Roosevelt, the Democratic Party has tended to take over. And now President Truman is holding along the Roosevelt line. But the assumption of Mr. Newbranch that the Republican Party is and should represent implacable opposition to the Federal Government in all its forms has no historical basis. So far as that is concerned, Nebraska itself is largely a creation of two Federal activities—one, the homestead law, by Republicans, and the other, the rural-electrification program, fathered by Senator Norris, Republican, and taken up by the Democrats.

It is unrealistic in the extreme to assume that the Republicans of Nebraska are opposed to well-calculated activities of the Federal Government—let alone the Republicans of the more industrialized and confused areas of the country. What the editorial amounts to is a demand that at the present moment the Republican Party should take the position that affairs be frozen. That perhaps would only suit Nebraska, as Nebraska stands at the moment.

Actually, of course, if it is true that the positions of the parties are not fixed historically, then Mr. Newbranch's arbitrary assignment of the Republican Party to a State's rights view is entirely his own idea, coinciding with the present mood of his State and the present accidental alinement of the parties. Anyhow, he is going quite a way when he declares that those who do not take his position are cowards. Possibly they do not take his position because they do not believe in it.

In our view, adoption by the Republican Party of what Mr. Newbranch proposed would be disaster. Under modern technology there are increasing numbers of activities which ignore State lines. If the Republican Party, having the majority business brains of the country, cannot offer superior management as between the Federal Government and the State governments, then that party is in tough straits.

In Oregon, the Republicans have offered better management under the stresses of the times. In the Nation they have failed to establish themselves.

And when we look into the future, the party division is no such simple thing as Mr. Newbranch envisages, with the Republican Party merely opposing the federalism. That is what his idea amounts to and that is silly. Neither is it a question of encouraging the Republican Party to outbid the Democrats in regard to the handling of the Federal Government. There is such a thing as producing leaders who offer to maintain the balance in accordance with the needs and developments of the day. We may have a desperate need for such balance in view of the extreme paternalism which President Truman seems to be sponsoring. But the wholesale reaction advocated in the editorial, if it prevailed, would probably prevent the people from ever entrusting the Republican Party with any attempt at reasonable administration.

Missouri River Basin

EXTENSION OF REMARKS

OF

HON. ALBERT M. COLE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. COLE of Kansas. Mr. Speaker, today, I introduced a resolution, calling for a complete study of all of the projects—past, pending, and proposed—which affect the great area in the Middle West known as the Missouri River Basin.

Since the early days when Congress first authorized studies and projects relating to navigation on the Missouri River, the need for development of additional programs, such as flood control, irrigation, reclamation, soil conservation, power, forestry, wildlife conservation, and other related subjects has been necessary.

This need has been recognized by Congress through the adoption of many unrelated statutes authorizing the construction and implementation of many of these programs. The laws authorized and directed the various agencies of the Government to perform their duties to this end.

As a result, no comprehensive, over-all plan has either been studied or adopted which attempts to determine prior needs of these programs or settle disputes between Government agencies as to the jurisdiction over the various projects.

The Flood Control Act of 1944 attempted to meet this problem. In my judgment, it has failed to do so because various agencies were not consulted, nor was any final authority placed in any agency to resolve their differences.

As an example of the unrelated activities of the agencies, the Pick-Sloan plan which was the result of the 1944 act, has been practically completed. Many of its projects are constructed, are under construction, or being proposed to Congress for authorization.

The Department of Agriculture has not yet submitted its report from its far-reaching proposal for soil conservation and its impact upon flood control, irrigation, navigation, power, and the other related subjects.

It is for this reason that I have introduced this resolution. I believe the proper solution of the tremendous problems relating to the Missouri Basin is, perhaps, the most important order of the day for the people of the Midwest.

The resolution is as follows:

Whereas the Missouri River Basin has heretofore been the subject of investigation and study with reference to flood control, irrigation, reclamation, soil conservation, forestry, navigation, power, wildlife protection, and laws have been enacted by Congress at various times without respect to these subjects; and

Whereas the studies and laws have not been correlated in an effort to determine the impact of one program upon the other, or to determine the total effect of all the programs upon the economy and social welfare of the region; and

Whereas jurisdiction of all of the varied problems involved is vested in numerous committees of the House of Representatives; and

Whereas a unified study of the total needs of the basin is necessary: Now, therefore, be it

Resolved, That there is hereby created a select committee to be composed of 27 Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman; six of said Members shall be appointed from the House at large and three of said Members from each of the following committees: Public Works; Public Lands; Agriculture; Armed Services; Appropriations; Merchant Marine and Fisheries; and Interstate and Foreign Commerce. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the original appointment was made.

The committee is authorized and directed to conduct a full and complete investigation and study of all the problems of flood control, irrigation, reclamation, soil conservation, forestry, navigation, power and wildlife protection, to determine the total need of the Misscuri Basin; the impact of one program upon the other, and to make recommendations to the Congress with respect to the implementation of such program.

The committee shall report to the House (or to the Clerk of the House if the House is not in session) on or before December 31, 1951, the results of its investigation and study, together with such recommendations as it deems advisable.

For the purpose of carrying out this resolution the committee, or any subcommittee thereof authorized by the committee may employ such experts in all of the abovenamed related fields as may be necessary and to hold hearings, is authorized to sit and act during the present Congress at such times and places within the United States, whether the House is in session, has recessed, or has adjourned, and to hold such hearings, as it deems necessary.

The Inauguration

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the following article by Felix Morley, which appeared in Human Events on January 26, 1949:

What did it portend—that great inaugural parade which for over 3 hours streamed its 7-mile length through the heart of the National Capital on January 20, 1949? What, if anything, was the historical significance of this undoubtedly impressive combination of pomp and pleasantry?

Quite a few spectators—though the crowd was smaller than was expected—must have asked themselves those questions. Even in Washington there are a number of mature people. Not all who lined Pennsylvania Avenue went like children to witness a Roman triumph, or the spectacle of a coronation. Nearly everybody likes a parade. But there are always some who like to know what is being paraded.

Actually there were two parades, uneasily blended into one, when Harry Truman was initiated into his first elected term as President. One of these demonstrations was traditionally American. It found place in the homely pageantry of the floats; in the obvious local pride and the appealing native whimsy of the various State delegations.

Regardless of age or circumstance, everybody laughed at the tobacco auctioneer, rattling his seeming gibberish into a microphone on the Kentucky float. Everybody applauded the trained Dalmatian dog, who tumbled and begged his way from Capitol to White House. Equally appealing was the little boy who proudly rode his Shetland pony in the midst of the Southern Maryland Riding Club, complete to stagecoach.

There were merry shouts and squeaks when pretty girls threw oranges to the spectators from the gleaming Florida float. There was great glee when, through some happy blunder, a big limousine labeled "Supreme Court" crawled by, completely empty except for chauffeur. There were gasps of sympathy for the bosomy young lady in chilly decollete evening dress on the Illinois float. And none except the marshals missed the frosty point when, a minute later, she was followed by a car with a banner announcing "Lieutenant Governor Shivers."

But over all this home-brewed circus streamed an unending armada of perfectly alined airplanes. The roar of the huge bombers drowned out the efforts of the gay-colored Danbury Hatters Band. There were no eyes for the pathetic trio of three forlornly feathered Indians when a formation of 50 or more jet fighters streaked wing-to-wing overhead. At these implications others than lieutenant governors shivered.

And always, to stop the frivolity, came the interpolations of the military note; the tramping troops; the federalized college units, doing their best to look like soldiers; the sadly mechanized cavalry, filling the streets with fumes of gas; the jeeps, the tanks, the halftracks, the motorized artillery, and other samples of that appalling weight of armor which the income tax so groaningly supports.

II

At the head of the parade, right after the motorcycle police who struggled manfully to preserve an H and T alinement, rode the courageous captain who has those rectilinear initials. Applause was generous, and at least equally so for the old-time circus calliope which closed the procession with a weary tootling of I'm Just Wild About Harry. The louder that lyric is blared the more inappropriate it becomes. For the one emotion this President does not arouse, does not seek to arouse, and never could arouse, is wild enthusiasm.

As the calliope mechanically brayed this synthetic praise the mind of at least one spectator groped back in Roman history to that strange interlude when the republic was dead, although the outward forms of representative government were still for a time preserved. It was the great Augustus, grandnephew of Julius Caesar, one recalls, who worked out the formula. He refused the title of emperor but ruled autocratically under the title of princeps, or leader. As Gibbon put it:

"Caesar had provoked his fate as much by the ostentation of his power as by his power itself. * * * The title of king had armed the Romans against his life. Augustus was sensible that mankind is governed by names; nor was he deceived in his expectation that the senate and people would submit to slavery, provided they were respectfully assured that they still enjoyed their ancient freedom. A feeble senate and enervated people cheerfully acquiesced in the pleasing illusion, as long as it was supported by the virtue, or even by the prudence, of the successors of Augustus."

The Roman ruler whom the calliope somehow brought to mind was, of course, Marcus Cocceius Nerva, who as a young man for a time commanded a cavalry squadron, perhaps designated by the letter "D," and who then served in the Senate before his election as Princeps after Domitian's death. Of Nerva, who was inaugurated in A. D. 96, one historian (H. W. Household) has written:

"There was nothing great about Nerva. He was mild and inoffensive; his intentions were excellent and he did not lack good sense; but he was weak. The transition from a Domitian to a Nerva was too abrupt."

Or, in the words of another scholar (Cyril E. Robinson):

"Nerva—already past sixty at the time of his accession—was essentially a gentleman * * * by character courteous, conscientious and self-effacing, but scarcely a strong personality * * * Nerva was not without courage * * *. Yet the liberty of which he boasted was no better than a sham. * * * He and his successors were as thoroughgoing autocrats as ever Domitian had been, and the truth is that the artistocracy, at least inwardly convinced that the Principate was inevitable, were prepared to offer their cooperation as a graceful return for being let down so lightly."

III

President Truman's inaugural parade, with its uncoalesced manifestations of homespun pageantry and imperial power, recalled the time of Nerva, the last Roman ruler to whom the adjective "elected" is at all applicable. There is much the same sense of transition in Washington now as was presumably present in Rome then. And there are many other striking parallels.

For instance, Mr. Truman's inaugural address, with its virtual declaration of war against the barbarian empire which challenges the might of modern Rome. This speech showed how far the transition has already gone; how difficult will be the task of saving the Republic which, when abandoned in Rome, was in that case lost without recourse.

What Mr. Truman promised, doubtless sincerely, at his inauguration, is contradictory and confusing. How, for instance, can we "give unfaltering support to the United Nations" by forming within it a military alliance openly directed against a fellow-member of UN? By its initial catering to communism, the United Nations was doomed to failure from the start. Human Events morosely said so when the Dumbarton Oaks draft charter made the eventual outcome obvious. But the fatal blunder is not rectified by the present pretense that a war-breeding alliance within UN will somehow mysteriously support UN.

It makes equally little sense to say unctuously that "we should foster capital investment" abroad at a moment when capital investment in areas needing development is being officially discouraged at home. This is not an auspicious moment to talk lightly about guaranties to the investor who sends his money to China or Peru. What guaranties is the Eighty-first Congress going to offer to venture capital within the Union?

The President further assures the American people that the old imperialism, which he defines as "exploitation for foreign profit," has no place in his 4-point program. Again he is mistaken. The program outlined on inauguration day, starting with an old-fashioned military alliance against Russia, is essentially imperialistic. It alters nothing to add, with a note unusually off key for Mr. Truman, that: "our allies are the millions who hunger and thirst after righteousness."

IV

One value in history is that it penetrates the pathetic pretenses with which those in authority seek to justify the abuse of power mistakenly surrendered to them by the people. Thus history calls Marcus Cocceius Nerva an emperor, although he carefully refused to describe himself as Imperator.

And history is justified in giving Nerva the imperial title which he eschewed, because after Nerva's brief reign there was never again an opportunity to restore the Roman Republic. Not that the period of personal rule which ensued was unhappy for the common man. He enjoyed a full century of bread and circuses—for change was slower in those days—before enlightened autocracy degenerated into the military dictatorships which in turn preceded the complete collapse of Rome.

But the period from the death of Domitian to the accession of Commodus—a period ushered in by Nerva's election to the purple, is seen in retrospect as one of deepening twilight. The power of the State was steadily increased; the virtue of the citizens as steadily declined. And, as Warde Fowler sums up this prelude to disaster:

"From Marcus Aurelius onward the strain of self-defense was too great to allow of progress in any social or political sense. The monarchy became more absolute, the machinery of Government more complicated; the masses were overtaxed, and the middle classes ruined."

The parade up Pennsylvania Avenue last week was really two parades: One Republican, the other imperial. But the imperial dominated. About midway, sandwiched pathetically between some regiments, there walked a figure of the traditional Uncle Sam. He looked bewildered, and no wonder. One felt of him as of a veteran of the Civil War—yet another inauguration and his place will see him no more. Like the disappearing Indians, Uncle Sam too will be elbowed out. And that will be sad.

For Uncle Sam, that droll and homely symbol of the old Republic, is too individualistic for a Caesarian triumph. The old gentleman does not take kindly to mass production and his shambling gait cannot goose-step with marching men and prancing girls. If disciplined, concentrated power is what we seek, then the old Uncle should doff his foolish clothing, don uniform and hide his lanky body within a tank. The national archetype must change his character to conform to changing national purpose. It has been said that the cross of Christ would have been disagreeably out of place in this parade. Uncle Sam, as we used to know him, was almost equally discordant.

Cardinal Mindszenty

EXTENSION OF REMARKS

OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. GREEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from America for December 11, 1948:

THE MEANING OF MINDSZENTY

The General Assembly of UN is authorized to "make recommendations" for the purpose of "assisting in the realization of human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion." Religious persecution clearly falls within its scope. There is persecution of religion going on behind the iron curtain which merits the immediate attention of UN.

Take the case of Cardinal Mindszenty. Some weeks ago America protested the imprisonment of the head of the Lutheran Church in Hungary, Bishop Louis Ordass, on a trumped-up currency charge. We then observed that the sentence was obviously an ominous warning given Joseph Cardinal Mindszenty, archbishop of Budapest. Undaunted by threats from the Communist-dominated Cabinet, the heroic primate has watched the storm gather about him. His arrest as an agent of "foreign imperialism" or his expulsion as "a traitor to his country" may be expected any day.

Both of the above-mentioned accusations, it should be remembered, were made in telegrams dispatched to the Communist-controlled government by Communist-promoted protest meetings held recently in nine Hungarian cities. The arrest of the Cardinal's secretary, Dr. Louis Zackar, will probably produce a confession, extorted under torture, implicating the Cardinal. It is a successful technique. The arrest of the secretary of Premier Ferenc Nàgy was similarly used as an excuse to overthrow the democratically elected majority party and install the present Communist regime.

The Cardinal cannot complain that he has not been given ample notice. Erno Geroe, generally believed to be the strong man of the party, gave the signal. "The liquidation of clerical reaction is now the order of the day," he declared in a speech that termed the Cardinal "the head of reaction." The Budapest Communist daily, Szabad Nep, called the statement of solidarity of the Catholic hierarchy most inopportune, coming "at the very moment when the government, a few days ago, declared irrevocably that the glass was going to run over. . . This answer will be given soon." Matyras Rakosi, who returned from Moscow to become Deputy Premier and general secretary of the party, assured the central committee of the Communist Workers Party in a broadcast: "We have come to the end of our policy of toleration. We must settle once and for all with this band, and above all with their chiefs."

Six hundred Catholic and Protestant clergymen are now in Hungarian prisons. The Cardinal primate seems destined to follow soon. Protests from the World Council of Churches against the imprisonment of Bishop Ordass won scarcely the attention of an acknowledgment from the Hungarian Government.

The persecution in Hungary is exceeded in violence by the persecution in Bulgaria and Rumania, where the Holy See has granted the extraordinary privilege of allowing mass to be offered by a priest in street clothes, using a common drinking-glass for a chalice. It anticipates the persecution getting under way in Czechoslovakia in accordance with the lines laid down in secret official instructions sent to district action committees last July, published in the Episcopal weekly, the Living Church, for November 21.

Religion is persecuted everywhere behind the iron curtain because religion engenders resistance to tyranny. Persecution is directed chiefly against Catholicism in Hungary and is currently centered on the figure of Cardinal Mindszenty, because defense of the sanctity of the things that are not Caesar's must be crushed if tyranny is to prevail.

Returning from the Nuremberg trials, Justice Robert H. Jackson declared that the "disruptive effect on the international order" of the persecution of minorities "is so direct that tyranny on a sizable scale anywhere is a matter of international concern."

The persecution of religion in Hungary—to name one country—is on a larger than "sizable scale." The UN was created to cope with matters "of international concern." Well, isn't this such?

The South's Political and Industrial Isolation

EXTENSION OF REMARKS

OF

HON. BROOKS HAYS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. HAYS of Arkansas. Mr. Speaker, Hon. Chauncey Sparks, former Governor of Alabama, recently delivered a significant address in Alexander City, Ala., entitled "The South's Political and Industrial Isolation." Mr. Sparks is an outstanding student of the problems of our region and his views regarding the interrelationships that bind us to the Nation's economic and political life carry unusual weight. His address is timely and forceful and, under leave to extend my remarks, I include the full text:

THE SOUTH'S POLITICAL AND INDUSTRIAL ISOLATION

In the matter of adherence to fundamentals, and to the early construction of the Federal Constitution, perhaps the South has been the most consistent section of our country. She has and still holds to the principle of local sovereignty. This is both basic and traditional. It involves the determination of much of her economic practices and of her political beliefs. I do not think it has arisen from any desire to be different or stubborn in adjusting itself to a new order following the War Between the States. It is based upon necessity as we see it, and in fulfillment of the pronounced purposes of the Constitution.

We can, perhaps, say that the South has been rather slow in adjusting itself to changes. In the long run she has lost by this. This loss has arisen from a peculiar provincialism which has followed the South's conduct. We have been slow to adapt government to political changes.

In the matter of politics we have held to the old, and tried to make it apply under the new. We have believed the Constitution has not been changed, either by amendment of construction since the first ten amendments.

The last of these amendments states that all powers not delegated "are reserved to the States respectively, or to the people." I wonder if that phrase, "or to the people," has any peculiar significance. Of course, our Government is founded upon the will of the people, and derives its power from them.

With the advent of the twentieth century and its more complex economy, I wonder if the form of administration does not have considerable to do with the happiness and prosperity of our people. If so, then they are much less concerned with metaphysical distinction of political philosophies than they are with a government which furnishes them the best method of enjoying the prosperity of the machine age.

Economic change has brought about governmental change. One hundred years ago we needed local administration of most all

our laws because transportation and communication were slow; our life was simple; each community was almost an entity within itself. Today it is quite different. Government has ceased to be a political theory, but has become a great servant in the matter of production and distribution of the many products of an intricate and interwoven economy. We are looking to the Federal Government to furnish us a great deal of the money necessary to achieve a modern state.

Many of our modern problems must be solved at the national level. The States can no longer perform at this or that point. Our agricultural program must be national. Our financial and investment regulations must be national. Much of our economic legislation, such as wages and hours, old-age retirement, must be national. This country, more than ever before, has become united in its economic and political dependence.

Has the South read these signs, or interpreted the trends accurately? Or has it stood beside the road, hugging a dream which only an earlier economy makes possible? While the South, through its political leaders, gave a measure of support to the changes transpiring the last several decades, there has been a holding back on the part of many in fear of the results, and the alleged departure from the old order of things. Has it been that the South has neglected to integrate change with its practices and beliefs, preferring to believe we could have all the new things which changes have made possible under the old regime?

The result of all our neglect is an isolation, nationally, that has retarded the progress of the South. An approach to our national regulations with a chip on our shoulder has kept us from occupying our rightful place in the councils of the Nation and in the councils of the Democratic Party. Commercial and industrial provincialism has followed.

The South has too long remained isolated. It has complained, not about its own shortcomings, but because others have pointed them out. It has refused to get in step with a new era and a new economy. It has held back in fear of a tragedy it imagines will befall it. We tremble from fear of an unforeseen disaster to our way of life.

This isolation has recently been carried into the field of politics. The South is a part of this Nation, and an important part. We do not propose to pull out, nor produce any kind of disunion. Our duty and our hope lie in some national political party with which we can have congenial relations. Splinter parties, so called, offer little hope. If ever we needed proof of this, we have it at hand just now when we in Alabama have become political pariahs. One danger in such a situation is that it offers opportunity for further splitting us up and further neutralizing our influence.

Let us ask ourselves the question, To what party, nationally, do we belong? When we have determined that, then we should be an active part of that party, in its councils and in its legislature. It would have been easy for the South to have established a satisfactory position in the Democratic Party at Philadelphia but for the attitude of some of her representatives in the convention.

Certainly we do not want a regimented society, one that forces association upon any individual against his will. I verily believe our Constitution protects us from that. We want no touch of communism nor the emblem of the hammer and sickle on the flag of our great country. Nor do we want a police state, nor a gestapo, telling us how to live our daily lives. But let's not make these things, nor the prevention of these things, the only subject of all our endeavors.

This all, then, poses the question, What are you going to do with so-called civil rights? We should have no objection to an antilynch law if the Federal Government can do a better job than the States, and that without persecution of officers of the law, or units of government, rather than prosecution of the offenders. And while the Federal Government is in the business, let it pass an antirape law. An anti-poll-tax law cannot be constitutionally enacted by the Congress. At any rate, that is our view. Then let us test it, not only in the Congress but also in the courts, if we desire to keep a poll tax. After all, we are fast coming to the view that a poll tax as a condition precedent to voting cannot be sustained under any definition of the right to vote. It is not a qualification but only a condition precedent to voting after qualification. So far as FEPC is concerned, it is a passing fancy on the part of a few zealous crusaders for a more radical "new deal." It will pass away. If not, and it becomes necessary, we can have our own at the State level and demonstrate to the Nation that such things are best handled by the people involved.

For have we talked too much and done too little? Are we trying to solve our problems by talking about them and not doing something about them? Are we content to announce platitudes and epigrams rather than demonstrate by action that our theory is just as workable as the other fellow's?

It is time, perhaps, that we put to work our theory of States' rights. It is not enough to say we stand for States' rights and then do nothing about solving our problems through State action. We should put our beliefs to work in a way that guarantees justice, equality before the law, and freedom. We can do it within the framework of our theory of segregation and at the State level.

The South has, also, had commercial and industrial isolation. How much of national advertising comes from the South? The smallness of this and the absence of factory smoke stacks indicate what small part of the nation's industrial wealth the South is getting. Since 1865, this Nation has been developing industrially. This has taken the form of production of consumer goods in such varieties and quantities as the world has never before seen. During most of that time the South has been healing its wounds, and building its economy on a special structure which prevented the full and complete use of its resources. For instance, from 1900 to this date the South has lost many millions of unskilled laborers to the industrial North because the South did not devise ways and means of utilizing this labor. The North could and did use it, retaining much of the segregation which the Negro left behind him in the South. In the exchange the South lost a resource, and further became the slave of a northern economy.

Are we permitting this same lack of courage, foresight, genius, or whatever it is to prevent us from now doing what we had neglected to do for 75 years? The South is today, perhaps, the greatest undeveloped section of our country. It, perhaps, offers the greatest opportunity for the development of an industry that will manufacture our resources into usable goods and at the same time take advantage of the great purchaser need and ability of the South.

The South has been low in wealth and income these decades since the War Between the States because it has bought and not produced. We have watched others produce the comforts and necessities of a modern civilization and sell them to us. We have lacked the initiative or something to do what our opportunities and resources invited. Look at South America, Iran, Iraq, Egypt, and Mexico. No country has grown rich by leasing its resources, or letting someone else develop them.

There must be some reason behind all this slow progress on our part. Is it political? Is it social? Is it economic? Perhaps all combined. We have trembled at the thought of force bills, reprisals, and the overturn of a social order that most nearly meets our requirements. We have feared social revolution. We have not known how to use our free and unskilled labor to mutual advantage. We have followed political leadership that sprang from our timidity and fear. We have not been bold to take our place in line with our neighbors.

All of this causes us to live and debate apart from the world of reality. Old shibboleths and outmoded slogans become our refuge. We repel advances and progress because of an imaginary disaster which we expect may follow. We preach constitutional principles and expect them to cure all our ills, and that without action.

The recent action of the Southern Governors Conference is to be commended. It has begun a program of regional education in furtherance of a movement started by me in the conference 4 years ago.

This is a demonstration of our effort to solve our problems fairly and in accordance with long established customs.

Another movement by the Governors is the establishment of a southern foundation for spreading information about the South. Long have we needed some counter movement to that created by northern philanthropists through such organizations as the NAACP. In the long run, the South must make itself understood, and must demonstrate its desire to progress toward the solution of its peculiar problems in accordance with a fair and just plan. We have the problem of demonstrating to the world that diverse races can live together in peace and in large numbers, without undertaking to enslave, in any way, the other. This may be a strain on democracy. It is something the world has never seen on so large a scale. But I am sure we have the genius and ability to demonstrate its practicability without compromising either democracy or an established way of life.

Segregation is essential and desirable. I am constrained to believe both races desire it. This Nation, from its very beginning, has demonstrated that all kinds of people can live side by side, and equally enjoy democracy and its blessings. Our difficulty is the size of our problem. At no other time have so large numbers of two races been placed side by side. There is always danger of conflicting social ideas, political power, and the ambition to exercise it. These things but intensify the problem, but do not make it altogether different from the past, nor impossible of solution. The honest intelligence of the South must tackle it. I have no fear it can be worked out.

Let us shake off our fear, and announce our position whenever and wherever we have an opportunity. Stand for something positive, and stand by it. Don't flee. Choose which way you intend to go, and go. Do not hesitate to turn back. There should be no delicacy in discussing our race problem, our belief in segregation, our political hopes and aspirations. The more we tell the world, the more understanding and cooperation we shall receive.

Rider Haggard, in his book She, tells of the finding, in the lost city of Thor, of a statue of Justice in the form of a woman blindfolded and with outstretched hands, pleading to the world to remove the veil from her eyes. May I liken the South to this illustration? We perhaps, in much, are blinded by our apprehensions, with the result that a goodly number cloak their conception of needed action behind the hood of the Ku Klux Klan. We are stumbling along in uncertainty and fear. Our economy lags behind the Nation as a whole. Our political life is lived from day to day in anticipation of contrary action by the Congress in matters affecting our local issues. We brag of our constitutional rights as a child whistling in the dark. We recognize issues affecting our political, educational,

and economic life, and make no effort to meet them. We content ourselves with proclaiming and in not doing.

Lift the veil from the eyes of the South. Proclaim to her the need for local action, and encourage her to undertake the necessary movements in boldness and that without bluff. She has strength in manhood and in character; she is and can continue to be one of the great sections of our country; she needs but to open her eyes and pursue a firm course, taking the consequences of each day's progress for weal or woe, and moving on to better days. In politics stand by our principles within the party of our choice. In industry and commerce, develop our own resources to the extent of our consumer needs, and export any surplus to other sections. Proclaim our beliefs, demand justice, take action on local problems, recognize that the "world do move," and resolve that we shall not be left behind.

H. R. 2379 Is a Compromise Pension Bill for Veterans of World War I and World War II

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. VAN ZANDT. Mr. Speaker, this morning I appeared before the House Committee on Veterans' Affairs and made the following statement in behalf of H. R. 2379, a bill designed to pay a service pension to veterans of World War I and World War II based on non-service-connected disability and attained age.

The statement is as follows:

Mr. Chairman and members of the committee, I am grateful for this opportunity to lend my voice to the cause of service pension legislation for veterans of World War I and World War II.

You are all aware, I am sure, that the service pension proposed is by no means a novel one. The veterans of every war in which this Nation has been engaged down through the Spanish-American War, have been rewarded in their ailing and aging years by a grateful Congress with a service pension based on certain degrees of disability or certain attained ages.

This committee has many bills pending before it which relate to service pensions. Although all are directed to the same purpose, they nevertheless vary in their provisions so much that I am sure it must be difficult to point at any particular bill and say that that is a service pension bill to the exclusion of the others.

I have given this matter considerable thought for many years and more recently have analyzed the arguments advanced by the two major veterans' organizations in support of their pension proposals. I have also given considerable thought to the arguments which have already risen in the President's budget message and which are likely to arise as a service pension bill progresses through the Congress.

Several weeks ago I introduced at the request of the Veterans of Foreign Wars the bill, H. R. 8, and at the request of the American Legion, H. R. 2068, both providing for a uniform service pension. H. R. 8 of this Congress is identical to my bill, H. R. 5213, Eightieth Congress, which was pending before this committee when the Eightieth Congress adjourned.

However, in realization of the difficulties we inevitably encounter in seeking a broad objective, I introduced yesterday, February 7, 1949, at the request of the VFW, the bill H. R. 8, which I sincerely believe represents a realistic compromise service pension bill.

The views I am about to present are embodied in this compromise bill.

First, a service pension bill for World War I and World War II veterans should be geared to the financial need of the veteran. Let us pause for one moment and reflect on the traditional basis for the service pensions of the past. Why did the Sixteenth Congress enact a service pension for veterans of the Revolutionary War some 30 years after the completion of that war? Or the Fiftieth Congress over 20 years following the close of the Civil War? Or in 1921 when the Sixty-seventh Congress unanimously voted a service pension for the disabled and aged veterans of the Spanish-American War? Because the people of this Nation decreed that a man who once donned the uniform to defend his country should not and ought not in his declining years to suffer want and privation. There is no question but that a service pension which does not consider need as a factor of eligibility is departing from the traditional basis for the service pension.

I have accordingly set forth as a factor of service-pension eligibility an income limitation of $2,000 per year for a veteran without dependents, and an income limitation of $3,000 per year for a veteran with dependents.

Secondly, the bill would provide monthly pensions for non-service-connected disability as follows: (1) For 50-percent disability, $50; (2) for 75-percent disability, $75; (3) for 100-percent disability, $90; (4) where an aid or attendant is required, $120.

Also when the veteran reaches the age of 65 years he would be presumed totally disabled and be awarded a monthly pension of $90.

Third, a provision in the bill would prevent any pyramiding of service pension with any other veterans' pension or compensation to which a veteran might be entitled through the operation of any law administered by the Veterans' Administration. In other words, no veteran could receive benefits under this bill and at the same time receive monetary benefits under the laws of the Veterans' Administration. He would be forced to elect to take one or the other.

A significant factor that must be considered in connection with this compromise bill is its relatively low cost in comparison with the astronomical sums mentioned in the press and in the report of the Veterans' Administration on a bill which I believe went beyond the scope of an equitable realistic service pension.

In my opinion, a service-pension bill embodying an income limitation, commencing the pension at 50-percent disability, and barring any pyramiding of pensions would cost considerably less than $1,000,000,000; and very likely in the neighborhood of $500,000,000—not too high a price to pay for the extension of this traditional service pension to our disabled and aged veterans of World War I and World War II.

It has been advanced by those opposed to the service-pension idea that veterans of World War I in their declining years may enjoy the benefits of our social-security system which veterans of previous wars did not enjoy. There are two answers to this argument.

First, you are all aware that only a minority of the working people today share in the benefits of old-age insurance, and it must follow that only a minority of veterans participate in that system. The present agitation for wide extension of the social-security system has little if any bearing on welfare of this group of veterans.

Second, and more important, is the fact that in the United States the veterans represent the only class of citizens under our Constitution which may be the beneficiaries of class legislation. There is a reason for this, and it runs part and parcel with the war-making powers of the Congress. We are a Nation of volunteer fighting men when trouble starts. Regardless of the degree of perfection which might be attained in manpower-mobilization planning, universal-training or selective-service systems, and the like—keep forever in your vision the volunteers, the men who first man the guns—the men who become the nucleus for the kind of land forces which stormed the beaches of Normandy and invaded France in 1944. We must keep faith with this spirit.

Members of the committee, all the veterans' benefits which have been adopted since 1921 represent compensation—represent something for services rendered—but in all this legislation, and, indeed, it has all been worthy and meritorious, we have never touched on the wholly and purely American ideology manifested by the service pension. For it, by and of itself, is the people's one steadfast bond with its fighting men. It is as though we said as we did in past years of great crisis, "Go, young man, a grateful Nation will remember you—when you are disabled, when you are aged, you shall never be in want."

This then is the criterion of the service pension.

Your decision to approve such a bill as I present today will clearly indicate that you are tempering tradition with realism, and for this you will earn the gratitude of the people as well as our great veteran population.

Retain the Curb on Paralyzing Strikes

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the February 7 issue of the Philadelphia Inquirer:

RETAIN THE CURBS ON PARALYZING STRIKES

As the struggle in the Senate Labor Committee to reach agreement on a new labor-management law rises in intensity the glaring weaknesses of the position of the Truman administration becomes more apparent.

Why should Administration supporters bitterly fight against inclusion in the measure of specific authorization for the President to seek injunctions in national labor disputes?

Attorney General Clark has issued an opinion—promptly challenged by a number of other legal experts—that the power of the President to petition for court injunctions under such circumstances is implicit and need not be spelled out in the law. President Truman himself has said that, although the step is unnecessary, he "would have no objection" to writing such a provision in the bill.

The reluctance of the majority party leadership to accept this revision of their bill can be explained only by the fact that a similar provision was contained in the Taft-Hartley Act, passed by the Republican-controlled Eightieth Congress, repeal of which was promised repeatedly during the Democratic campaign of 1948.

Instead of agreeing to a simple amendment that would remove the issue from the realm of doubt and uncertainty, they are willing to gamble that the Attorney General's view—completely untested—is correct. They are willing to risk leaving the Government without this major preventive weapon when the Nation is next threatened with a paralyzing strike which might affect public health, cripple industry, or weaken national defenses.

Such a course is not only evasive—it's dangerous. Several times in the past Mr. Truman has resorted to court injunctions to end labor disputes. He has indicated, despite the confused testimony of Secretary of Labor Tobin, that he intends to follow this procedure again if circumstances demand. As a matter of prudence he should make certain now, by insisting that his powers be specified in the pending bill, that he will not be caught empty-handed while the public looks to him for protection in a future crisis.

The question whether the Attorney General is correct in saying the President has the power to seek injunctions regardless of whether such authority is written into the labor law, or whether Senator TAFT and others are justified in their flat contradiction of this viewpoint, is immaterial. The important point is that the matter is in doubt and that the doubt must be removed before there can be any clear understanding of the law.

Actually, there is good reason to believe Mr. Clark may be in error. It will be recalled that in 1943, when President Roosevelt was armed with unprecedented war powers, he had no power to compel John L. Lewis to comply with an order of the National Labor Relations Board that the United Mine Workers sign a wage agreement and resume the mining of bituminous coal. All he was authorized to do, Mr. Roosevelt implied, was send Mr. Lewis a note on pink paper and say, "Dear Mr. Lewis, I hope you will sign the contract."

In the administration's squirmings to avoid even the appearance of affronting organized labor, Secretary Tobin, admittedly cast in a difficult role, has displayed an ineptness which may well militate against increasing the powers of the Labor Department when that proposal reaches the floor of the Senate.

By his insistence that the pressure of public opinion could be depended upon to avert disputes and that injunctions were unnecessary, he has revealed a degree of confusion among administration leaders themselves which, in view of the vital importance of this legislation, is far from reassuring.

The issue now in dispute lies at the very heart of the labor bill. In the interest of frankness and clarity the injunctive powers should be written into the measure and the consideration of the public welfare given precedence over political advantage.

The Unfair Deal

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. SHAFER. Mr. Speaker, those people who wonder why men with money to invest—whether it is $1,000 or $1,000,000—hesitate to put it into American industry have only to consider the capricious and unwarranted actions of our bureaucrats.

It is a fact, hardly open to serious doubt or to intelligent contradiction, that fewer and fewer persons with money are investing it, voluntarily, in American industry, although private industry needs such venture capital if it is to expand to meet the needs of this Nation. The stock market reflects the opinion of millions of investors, or potential investors, that this Nation's affairs are in the hands of men who do not know anything about the real, basic needs of our capitalistic economy, or, if they know, do not care about the future of a private-enterprise economy.

We are in the midst of one of the greatest inflationary periods in American history, but the stock market is far under what it was a year ago, even farther under what it was 2 years ago and terrifically low judged by its postwar high in 1945 and 1946. What is the trouble? We are sick—economically sick—because of the constant tinkering of Government with the business system.

I hold in my hand a letter from a constituent of mine. He has expressed himself so vehemently I hesitate to ask that this letter be carried in the CONGRESSIONAL RECORD. But I should like to read salient passages so that my colleagues will get in a clear manner some of the problems facing small manufacturers.

He points out, first, that through Government intervention, flat galvanized steel sheets, used in his business, are being shipped from the steel mills to make grain bins.

We, being for years in the drainage culvert pipe business to furnish drainage pipe for cities and farm drains, again are on the short end of the list—

He points out.

Because of the famous Supreme Court decision and the Federal Trade Commission stand on basing-point pricing, this manufacturer tells me, and I quote:

Plants are moving out of Michigan to Pittsburgh to be near a steel source. We cannot all do it. If so, there will be no people left here.

The throwing out of basing-point pricing on steel has also lost a lot of business for us. We cannot pay $20 per ton more for steel than some people next door to a steel mill and be competitive * * *

I know there is not much you can do about it, but you should know facts as they concern people in your district, so we tell you how lousy we think the set-up is for us and there must be many others.

We have just cut our force and shortened the hours per week for others because we cannot get galvanized corrugated metal sheets for culvert pipe, and the mills tell us it will get no better for us.

We are now in the process of passing a drainage job, 6,500 lineal feet of 48-inch diameter pipe, because of no sheets being available for us, from our sources—the Inland Steel Co. and the Continental Steel Corp.

Come and see us when in Charlotte. Sorry to tell you everyone says business is rotten, lots of help out of work, and it will not improve as we see it. No reason at all except too many taxes and too much Government control.

Mr. Speaker, there you have the picture facing small manufacturers in America. They cannot plan on a long-range basis, because they have to take into account the activities of a capricious Government. How can we have stability in business if we do not have stability in government? How can businessmen plan on their expenditures if the Government's own expenditures are going up and up and up, thus raising taxes and throwing business calculations out of line? The answer is, of course, that no one can plan intelligently for anything when we have New Deal planned chaos facing us all over the place. If ever there was an unfair deal, this is it.

Support of Immediate Statehood by Leaders in Business and Industry in Hawaii Strongly Reaffirmed

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. FARRINGTON. Mr. Speaker, Hawaii's request for immediate statehood is supported by every organization of any consequence in the Territory today, including those representing the commercial, industrial, labor, professional, cultural, educational, religious, and patriotic interests of our people.

The most impressive demonstration of this fact in recent weeks was the adoption by the Business Committee for Progressive Legislation in Honolulu of a resolution reaffirming its belief in immediate statehood for Hawaii.

The resolution constitutes also a reaffirmation of the stand taken by the Chamber of Commerce of Honolulu, the Realty Board of Honolulu, and the Hawaiian Sugar Planters Association in support of immediate statehood for Hawaii.

The committee adopting this resolution is representative of the leaders in the management of the sugar and pineapple industries, utilities, banking, and the wholesale and retail trade of the Territory.

The resolution is as follows:

Whereas the Business Committee for Progressive Legislation has been formed to give active and constructive support to measures which contribute to the community welfare, and to advocate those steps which represent true progress for Hawaii; and

Whereas the Business Committee for Progressive Legislation believes it speaks for the people of the Hawaiian Islands in recognizing the many outstanding advantages that would accrue to our island community as a sister in the Union of States, and in welcoming the opportunity for increased responsibilities and services to the Nation which statehood would bring; and

Whereas the Business Committee for Progressive Legislation believes it of paramount importance that all possible attention be focused upon the need for and the reasons for immediate statehood for Hawaii; and

Whereas the Business Committee for Progressive Legislation sincerely believes that the case for immediate statehood has been amply demonstrated—

By more than 50 years of loyalty and service on the part of the Territory of Hawaii to the Nation since annexation by the United States in 1898;

By the wealth of factual material available which proves beyond all reasonable doubt that the Territory of Hawaii is entitled to, and can ably assume its full responsibilities as a State of the United States;

By the splendid record of the people of the Territory of Hawaii in exemplifying the democratic principles of tolerance and progress among minority groups;

By virtually unanimous support given to statehood by civic, educational, social, economic, and other community organizations in the Territory of Hawaii;

By the inclusion in the current platforms of both the Republican and the Democratic political parties of the Territory of planks for the seeking of immediate statehood for Hawaii;

By the overwhelming public support of statehood shown by a plebiscite vote in the Territory of Hawaii;

By the widespread favorable public opinion for immediate statehood for Hawaii in evidence throughout mainland United States;

By the passage of legislation by the House of Representatives of the Eightieth Congress of the United States granting statehood to Hawaii;

By the wholehearted endorsement of immediate statehood for Hawaii as expressed on numerous occasions by President Truman: Now, therefore, be it

Resolved, That the Business Committe for Progressive Legislation respectfully and earnestly urge the senate and the house of representatives of the twenty-fifth session of the Territorial legislature to draft and adopt a resolution memorializing the Eighty-first Congress of the United States to grant immediate statehood to the Territory of Hawaii.

Adopted this 1st day of February 1949.

BUSINESS COMMITTEE FOR PROGRESSIVE LEGISLATION,
HENRY A. WHITE, *Chairman*.
WILLIAM J. GASKILL,
Executive Secretary.

Protesting the Trial of Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. BARING. Mr. Speaker, in view of the deplorable activities that have taken place during the past few days at the anti-Christian trials in Hungary, as well as in response to large gatherings of members of Catholic organizations and other Christian-minded people of the State of Nevada, I wish to enter a protest against the arrest and trial of the cardinal primate of Hungary. Anything which tends to allow the communistic influences to spread or to gain in power, whether it is by an indifference to the power of right, or the ignoring of certain principles of justice, is a blight upon our civilization, as a whole. Acts of injustice belong to the dark ages. Most of us are trying, through word and deed, to usher into existence a new world of united nations, free from the ravages of religious prejudices, social intolerances, and racial discrimination, wherein the democratic principles which respect the rights of every living individual must be upheld. We have come to the cross-roads of civilization's ongoing, and it is up to every one of us to decide which side we are going to be on—the side that recognizes human rights, human justice, and the dignity of man, or the side which is poisoned with a deadly and pernicious doctrine which recognizes only power, lust, and greed. The one leads to progress; the other to complete destruction. This present trial is a challenge to all persons who believe in Christian ideals, to realize sharply the need for a coming together of all people who believe in the principles of honesty, truthfulness, justice, freedom, and peace, to take up their places in this eleventh-hour crusade against the forces of the anti-Christ. Civilization must be preserved for the world.

The Republic of Ireland

EXTENSION OF REMARKS
OF
HON. WALTER A. LYNCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. LYNCH. Mr. Speaker, I wish to bring to the attention of the Members an event of international significance, which occurred during the period when the Congress was not in session, and which was only briefly noted in the press. The Irish Dail—Parliament—meeting in mid-November in Dublin, brought up for consideration the Republic of Ireland bill, which was given unanimous approval on its second reading.

The Republic of Ireland bill proposes by its terms to bring to an end the External Relations Act, under which the King of England signs the credentials of Ireland's envoys to foreign countries and all trade pacts are entered into in his name. When this bill is finally enacted the President of Ireland will assume these duties, which are a proper adjunct of his office. By terminating the External Relations Act, which has been in effect since 1926, Ireland has brought to an end the final link of control which Great Britain has maintained over Irish affairs.

The passage of this act has been hailed throughout the 26 counties of Ireland, which today constitute the Republic of Ireland, as one more step in the centuries long battle for freedom which the Irish have been waging, ever since the British first made conquest on Irish soil. It is interesting to note that with each step that has been taken in the process of obtaining full freedom for Ireland, the deep and often bitter antagonism toward Great Britain has grown less, and a closer feeling of friendship has developed as Irish liberty has grown.

When the proposal to end the External Relations Act was first presented, many feared that such dire results as British reprisals, loss of trade, and general disaster would be Ireland's lot. On the contrary, the trade-preference rights amongst the members of the British Commonwealth of Nations will be continued insofar as Ireland is concerned. I might add that these trade-preference rights are of mutual benefit to the British nations as well as to Ireland. Likewise the citizenship rights which are mutually enjoyed by all persons residing in the British Commonwealth will undoubtedly be continued insofar as Irish citizens are concerned, so that the Irish in England and other commonwealth countries will continue to enjoy the same rights as citizens of those countries, while the citizens of the other countries will be accorded the same privileges in Ireland. These matters may require some additional legislation apart from the recently enacted nationality act, but this act will assure the 2,000,000 Irish residing in Great Britain that their citizenship status will not be affected. Already Canada, Australia, and South Africa have indicated that there would be no alteration of the relations between these countries and Ireland, but that Ireland would be considered as one of the members of the commonwealth and existing trade and other agreements continued in full force.

In commenting upon the repeal of the External Relations Act, the Irish Prime Minister, John A. Costello, made this statement: "I want to make this observation: As realists we have to face the facts of the situation and we have to keep in mind, first and foremost, the peace and unity of our country. For over 25 years successive Irish Governments have successively and genuinely sought to reconcile the historic desire of the Irish people for complete independence and sovereignty with the requirements of British policy by means of different formulae. As the result, the country, throughout this entire period, has been in a constant state of turmoil, with bitterness arising between various sections of our own people. We are determined to end that bitterness among our own people and this is a necessary step to do so. The aim of my government in this connection and by this means is to put an end to that position, and also, insofar as our own country is concerned, to place the question of Irish sovereignty and status beyond dispute or guesswork."

In the course of the debate in the Irish Dail, Mr. Sean McBride, Minister for External Affairs—the equivalent of our Secretary of State—made the following significant statement:

Broadly speaking, the passage of the bill would achieve four main purposes. In the first place, it would place the question of our status and sovereignty completely above dispute. The second purpose of the bill is to try to remove from the body politic the acrimony of the last few years which had obstructed the political life of the country. The third purpose which we hope to achieve is that we have not had normal relations with Great Britain over the last quarter of a century or more because of the unhappy history of our nation, and normal friendly political developments have not been easy, and this we hope to end. Finally, there are now only two points of friction left between our two countries—partition and the constitutional forms maintained by the External Relations Act—that were repugnant to Irish sentiment and unrelated to the facts of Irish history. We are not in a position to remove partition by our own unilateral action, but we are in a position to remove the

other point of friction, and that is what we are doing now. We believe that by removing this point of friction Anglo-Irish relationships can be improved.

Putting into effect the Republic of Ireland bill will begin a new era in Irish history and international affairs. The sovereignty of Ireland is no longer a fiction, but a reality. Ireland can now take her proper place as a free and independent people amongst the nations of the world, and can hopefully look forward to that day, not far distant, when the six counties in the north will be reunited with the rest of Ireland and, the last trace of British domination being removed, all Ireland, united and free, can move forward her program of peace and greater prosperity for all the Irish people.

The Need for a Single Supply Catalog for the Armed Services

EXTENSION OF REMARKS

OF

HON. JACK Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. ANDERSON of California. Mr. Speaker, in order to provide information on the importance of my bill, H. R. 321, entitled "The National Defense Catalog Act," I include with my remarks an article written at the close of the war by a citizen who served as a supply officer in the armed forces, as follows:

CONGRESS ATTACKS THE UNKNOWN FOE

When and if this Nation is again attacked by an enemy attempting to destroy us, the ramparts of our defense will be composed, as they have been in the past, of our manpower strength, our resources of raw materials, and our productive facilities and the way we use them. The main object of an attacking force is to destroy or dissipate these three things; if this can be accomplished on any one of the three, the defeat and enslavement of this Nation is a certainty.

It is inconceivable that we should not take every step to protect these precious defenses. Yet during the last war and in every previous war, we ourselves have permitted the waste and destruction of a large part of our materials and facilities and the dispersal of our manpower. This was accomplished by a foe so insidious, so subtle, and so complex that not only was it not understood, it was barely recognized. So widespread is its influence that it spread throughout this Nation and into every theater of war; it played a major role in every battle and campaign; rode in every ship and tank and plane; sat at every council table where war plans were made; determined whether the sick and wounded would have proper and adequate care and how much material could be spared to civilian supply; made necessary the construction of extra additional huge plants to provide war supplies; commanded the services of thousands of men who were needed for the war effort; dissipated the Nation's resources of raw materials; and cast its baleful influence over every home.

It has been estimated that this foe during the last war cost us many billions of dollars in addition to canceled or delayed campaigns and the loss of many lives. The money involved is hitting our pocketbooks in the way of high taxes now; but during the war it was not so much the money as end products of steel and rubber and tin that could not be replaced.

How could such a foe be permitted to attack from within and seemingly carry on its destruction unmolested? Let us break it into its various parts and attempt to follow them in all their interweavings.

First, let us take a look at standardization. We can assume that it has been determined that an early warning radar set was needed to protect our coast lines and that it would be needed in every theater. The set is large, costing $250,000 and consisting of 5,600 different items. The contracts are given to 10 different manufacturers. Now each of these manufacturers is interested in securing the orders for the replacement and maintenance parts; so each part is designed so that it is a little different from that supplied by other manufacturers. Tubes may be used to show what happens.

The tubes may be designed to be slightly different, even if it is only in the number or position of the prongs that are used to carry the current and hold the tube in position. The estimate of the number of tubes required on the contract, including the spares, is then prepared by the manufacturer of the radar set and submitted to the supplier of the tubes. These suppliers are already making thousands of different types of tubes that vary but slightly. The new tubes, however, are designed to be slightly different from any types previously produced. Because of these changes new production lines and new facilities are required.

There were examples where unscrupulous manufacturers, few in number, fortunately, grasped at the opportunity to have a new plant built at Government expense with a reasonable assurance it could be purchased at the end of the war at a fraction of its cost.

So pressure is put on the War Production Board to grant the priorities for the material for the new plant and the machinery by using the urgency of the radar set. The priorities are granted; architects and contracts are put to work; scarce building materials are collected and men are taken from other important work to build the plant; orders are placed for machine tools, adding a burden on an industry already breaking. At the plant making the machine tools more scarce materials and men are allocated to the construction of the machine tools. Orders are placed for the steel at the steel mill, where again men and critical materials are allocated to the making of the steel. To produce the steel, it was necessary to open high-cost marginal iron ore mines, using more men to supply the ore to make the steel to go into the machine tools to produce the unnecessary new types of tubes. Thus, lack of standardization wasted our resources. We had over 3,500 different types of tubes during the war; the Germans 57.

One evening in the spring of 1942 a colonel having an office in the Pentagon walked into the office adjoining and said to his fellow officer there, "I have just placed the largest order for tubes ever placed—$30,000,000 worth, enough money to pay for all the tubes we should need for 10 years if the war lasts that long. But next week I am to place another order for 60 millions." Because of the lack of standardization the result was that at the end of the war Army warehouses overflowed with tubes that varied slightly from each other, each one containing critical materials that could have been used to make some badly needed equipment that perhaps could have shortened the war. Each one represented the work of men who might well have been used to bolster some weak points in our defenses. War Assets Administration today are attempting, not very successfully, to recover the money that was squandered.

Remember that this was the story of but one of the items used by one manufacturer in one piece of equipment. It could be multiplied by the number of manufacturers and by the number of items. Crystals were another item. We used 1,350 types of crystals; today this has been reduced to 7. The lack of standardization made tremendous inroads on our resources. So the unknown foe in the guise of a lack of standardization gets in its work.

Now let us consider duplication of numbers—perhaps the most vicious of all in its waste of materials. In the spring of 1943 an attack on the Panama Canal was momentarily expected. Powerful radar sets swept the skies, keeping constant watch for enemy planes. Suddenly one of these guardians broke down. The set was inspected and the broken part discovered. To the horror of everyone it was found that the replacement part was not in stock. A hurried telephone call to Washington was made, requesting that the replacement part be obtained at once from the manufacturer and flown to Panama. Meanwhile that part of the sky assigned that radar set was unguarded, an open path for any attacker.

The officer charged with the stockroom, stung with remorse at his dereliction of duty, desperately searched through his warehouses for something, anything that would put the radar back into service. To his amazement he found eight other bins full of the exact article, but stocked under a different number. The radar was immediately repaired and put into operation long before the replacement part arrived by plane.

The commanding general of the Panama Canal realized that in this case eight times as many parts had been manufactured and were taking up warehouse space; yet in spite of the abundance, only a fraction was available at a time due to the assignment of duplicate numbers. The general was sufficiently interested to send an officer to Washington to discuss this with the agency that assigned the number.

This officer was advised that the condition he described was caused because the function of a stock number was never understood and no proper system had been devised to assign the numbers. As a result all types of numbers had been assigned to the same item. The most generally accepted method was to use the manufacturer's number: the result was that if there were 20 different manufacturers there would be 20 different numbers. Each duplicate number added that many times the load on the production facilities, diverted that many times the critical material, made necessary that many times the number of stock bins, and used the services of that many times the personnel. So the vicious circle of wasting our resources was repeated as in the case of lack of standardization, and the unseen foe in this work.

Each technical service in the armed forces was assigned money, personnel, buildings, critical material, and storage space roughly in proportion to the number and type of items of supply assigned to it for design, procurement, and distribution. Because of the lack of standardization and duplicate number assignment, the number of items could be multiplied to astronomical proportions.

For example, the Army Signal Corps, inspired by the Panama Canal case, made a 3-month analysis, using 400 technical personnel, that eliminated 63,000 duplicate or nonstandard items out of 220,000—a reduction of almost 30 percent. When the results were published all the technical services of the armed forces instituted the same analysis, called the reduction of items program. The results were astounding. For example, bearings were probably the most critical single item in the war on both sides. Remember the Allied mission to bomb the bearing plant Schweinfurt that cost us so many B-29's? As a result of the reduction

of items program it was found that there were 264,000 different types of bearings procured, stored, and issued during the war by the Navy. Yet, analysis of this 264,000 disclosed that there were actually only 8,500 different items and the assignment of duplicate numbers had magnified this 30 times. Had this been known during the war, it is conceivable that there would have been no shortage of bearings. So duplication of stock numbers was another of the elements of the unknown foe.

Descriptions and specifications seem to be so fundamental to a supply system that it is almost unthinkable to attempt to procure, store, and issue materials and equipment without them. Can you imagine Sears, Roebuck and Montgomery Ward starting their business without a catalog containing such data? Yet, although the armed forces carried on a supply business that was so huge that it dwarfed such commercial firms, the war was two-thirds over before some of the technical services published their data; and even then in many cases it was inadequate and inaccurate. As a result, items of supply were poured into the supply line in a huge flood to become a trickle at the distribution end.

An order would be placed for a thousand of a desired items of equipment and the order would include a given number of spare parts to be issued with each unit. Due to lack of proper descriptions and identification, the boxes containing the spares would be stored separately from the set. The set would be issued on requisitions but the spares would remain in the depot unknown and unidentified for years, taking valuable storage space and requiring costly maintenance. These items are a major part of the $29,000,000,000 declared to War Assets for disposal at a fraction of their cost. One technical service desirous of reducing the storage space and maintenance cost during the war cleared their depots of these unidentified items. The cost of the items scrapped or salvaged because of lack of identification was estimated at over $100,000,000.

While the depots were filled with items unidentified and consequently unusable, requisitions for needed parts were going unfilled because of inadequate descriptions. In one technical service in February 1944, 44 percent of the requisitions received by the Supply Control Agency could not be filled; in March this rose to 47 percent—almost half of all the items requisitioned. The commanding general of the Technical Service on a tour of the European theater of operations was told by maintenance people it was easier to throw away a costly piece of equipment out of service because of a broken part and get a complete new set than it was to obtain the relatively inexpensive replacement part. The general, on his return to Washington, arranged for the publication and distribution of the necessary data; by the end of the year the percent of requisitions in his technical service unfilled because of lack of information had dropped so low it was not worth the cost of maintaining the record. And another tentacle of the unknown foe had been cut off.

Now suppose that we look at the least understood of all the elements of "the unknown foe"—the units of supply. In many supply publications appears a column with a heading "Unit of measure"; but after most of the items is shown merely the word "each." In 80 percent of the cases this means practically nothing and is only wasted space. The same designation is used for equipment costing a half million dollars as for replacement items costing a few cents. Because the subjects of units of supply was not understood, supplies were delayed, paper work was multiplied and thousands of people were assigned to operate and maintain the supply records.

Let us see how a supply system operated without proper units of supply. Contracts for supplying the same items would be placed with a number of contractors. Every contractor had his own method of packing so that when the boxes arrived at the armed service depots the only marking on the box would give the purchase order number. In order to determine which of the items on the purchase order was in the box and the quantity, it was necessary to break the seals, open the box and inspect the contents. As many as 100 technical personnel would be needed in each depot for this inspection work. There was no uniformity in the quantity that would be packed. One manufacturer would pack 10 items per package and 50 packages per box; another would pack the same item 100 items per package and 5 packages per box; another 20 and 25 and so on. This made it extremely difficult or impossible to have the stock record properly reflect the actual quantity in stock. Many technical services maintained a large staff of personnel working night and day checking the stocks on a "cycle inventory basis"—a monumental job if done accurately by opening every box and checking each package, and never 100 percent accurate.

But that is only half of the story; the movement from the warehouses on requisitions to distribution points was even more difficult. Warehouses in the United States were filling requisitions for small quantities that had been started by regimental supply troops far up front in the theater of war and passed back through all the supply echelons in the theater, through the port of embarkation and through the supply echelons here in the States instead of consolidating a large number of small requisitions into a few large ones.

Two actual examples show the foolishness and the waste of this system. One manufacturer supplied fine wire on reels of 5,000 feet for 58 cents a reel. Many requisitions were received for fractional reel lengths. For example, 19 requisitions were counted calling for 1,000-foot lengths. When the requisitions were received in the warehouse, personnel opened a box containing 50 reels, removed a reel of 5,000 feet and broke the wrapping; then exactly 1,000 feet was unwound and wound on another reel. Then a special wooden box was made in the carpenter shop, packing inserted and the wire was duly sent, having cost $4.58 to supply less than 12 cents of wire.

Washers were shipped by manufacturers in all different quantities up to the hundreds. One manufacturer was discovered packing a one-half-inch washer made of fiber costing one-tenth of a cent in individual cellophane envelopes.

Actually the subject called unit of measure in some services should be called units of supply throughout the National Military Establishment, and be allied with the specifications for packing and packaging. One unit is the unit of pack which is the quantity contained in a retail package that will be protected while in storage at advanced supply points. It will also be determined by the least procurable quantity for which a contractor will accept an order. The second unit of supply will be the unit of container. This is the number of packages contained in a shipping box.

With the description in the catalog would be shown a packing specification number, a unit of pack (U/P) and a unit of container (U/C). Requisitions and records would all be in multiples of U/P. Shipments to the depots by contractors and from the wholesale warehouses would always be in multiples of U/C; from the retail warehouses it could be either. For a large item there could be one item per unit of pack and one item per unit of container; for replacement parts such as washers, it could be 500 U/P and 10 U/C. This would eliminate all the paper work for retail business in the rear areas and the tremendous waste of packaging and packing material; also it would relieve for another duty personnel assigned to identify shipments and for packing.

These activities, consisting of establishing item identification, description patterns, item descriptions, specifications, standardization, packaging specifications, units of supply, type numbers, stock numbers, supply catalogs, technical manuals, and parts-control lists, may be grouped together in the loose term "cataloging"—the foe that we actually knew so little about that we could not attack it. During the war it was discovered more by inference than by actual knowledge. Mr. Forrestal, then Secretary of the Navy, realized that something was going wrong with Navy supply. He called in some civilian friends, told them they were a committee to find the reason, and gave them carte blanche to go anywhere in the world to discover the facts. They reported back that Navy supply was breaking down because there was not a central supply control agency. "Well," said Mr. Forrestal, "let us have a central supply control system." "Very good," said his committee, "but that is not possible without a single catalog for all the Navy bureaus." So Mr. Forrestal created the Navy Catalog Office, with instructions to create one catalog for all Navy bureaus and, if possible, one catalog for the Navy and Army.

Long before World War II other Government agencies had struggled with the problem. However, their problem was to develop a classification system for budget purposes, not to design a system of assigning identification symbols used to operate a complex, far-flung supply system. Classification is only part of our integrated catalog system. Consequently, when World War II was thrust upon us existing systems were inadequate to stand the strain. Each technical service charged with designing, procuring, storing, and issuing items of supply was forced to develop and operate its own system. There was no central coordination and some services advanced further with a result that their supply system increased in efficiency; others lagged behind, and a poor, inefficient supply system resulted.

The magnitude and importance of the problem became apparent to all Government leaders, even to the President of the United States, and in January 1945 he directed that a single catalog system be developed for all the Federal agencies—"both for the effective prosecution of the war and for the more orderly conduct of peacetime affairs." Since that time little has been done.

Members of Congress have been studying this problem since the early days of the war. Further many Members while serving in the armed forces have obtained first-hand knowledge of the waste and confusion resulting from the lack of systematic procedures.

The present bill, entitled "The National Defense Catalog Act," or H. R. 321, is the result of these studies. Its passage would be of great assistance to the armed forces and undoubtedly can result in enormous savings in money and resources.

The Republican Role

EXTENSION OF REMARKS

OF

HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. DAGUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a letter addressed to the

editors of Time by Mr. Roy A. Wiley, of Santa Rosa, N. Mex., which appeared in the February 7 issue of that news magazine and which I heartily commend to my Republican colleagues as a concise but forthright creed for our party:

FOR THE OPPOSITION

SIR: Many commentators on the political scene are taking the stand that the GOP needs to liberalize. I demur. What the country really needs is an honest-to-goodness opposition party.

The rank and file of the Republican Party is essentially rightist, conservative, believes in State rights and the responsibility of the individual; decries New Dealism in all its forms; looks with dismay on the growing interference of the Federal Government in business, and with foreboding on the pandering of the Government to the labor unions.

The GOP will never win by becoming imitation New Dealers, but whether it ever wins is a minor consideration. What is important is that the Nation have a genuine opposition party, a conscientious, hard-slugging, conservative party whose leaders are not afraid to explain to the voters the very real dangers to democracy that the so-called liberal policies are breeding.

Would Churchill be a greater statesman if he embraced socialism just because socialism now has the upper hand in Britain?

ROY A. WILEY.

SANTA ROSA, N. MEX.

Tobacco Seed Embargo

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

TOBACCO SEED EMBARGO

DEPARTMENT OF AGRICULTURE,
Washington, January 22, 1945.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in reply to your letter of January 2, inquiring about the act of Congress prohibiting the exportation of tobacco seed and live plants. This law was enacted to protect the foreign market for American tobacco growers. It was felt that the large quantities of tobacco seeding being exported annually to China and other countries which normally imported large quantities of tobacco from flue-cured districts were contributing to the decrease in these tobacco exports.

The act forbids the exportation of tobacco seed except for experimental purposes, and the officials of the Department concerned with plant breeding stated that one-half ounce of seed is more than ample for planting a regulation size experimental plot. This, therefore, was adopted as the maximum quantity of seed that could be exported for any one variety. However, under an approved application, a permit may be issued to cover several varieties. Permits are issued only for seed to be used in the course of scientific experiments as conducted by governmental agencies. During the past 4 years, the total quantity of seed authorized to be exported has been slightly under 11 pounds. A copy of the regulations governing the administration of this act is enclosed.

Congressman KERR, of North Carolina, was instrumental in securing the enactment of this law, and you may wish to discuss it further with him.

Sincerely yours,

CHARLES F. BRANNAN,
Assistant Secretary.

"Nuts" Is Appropriate Reply to Russian Peace Talk

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. SHAFER. Mr. Speaker, various news items that have been published recently about Russia's immediate and long-range aims are both pernicious and misleading, insofar as they delude any American into thinking that it is possible for us to make friends with the Soviet rulers.

President Truman himself has added to the confusion, at times, by hinting that there is a "division" in thinking in the politbureau and that some Russian leaders would like to change their ways and make up with us.

This is absurd, and every American ought to realize that it is absurd and why it is absurd. A bare outline of the recent actions of Russia give the lie to any person who claims that the rulers of that vast barbaric nation want to do anything except destroy every non-Communist government.

Keep these facts in mind:

First under Roosevelt and later under Truman the Soviet leaders have swallowed up Poland, Rumania, Hungary, Estonia, Latvia, Lithuania, most of Finland, and virtually all of China, plus extraneous other territories.

Consistently, and with never a let-up, this Soviet government's underlings and fifth columnists in Italy, France, Germany, England, Canada, and the United States, not to overlook all of South America, have created strife and fomented trouble and frequently have resorted to sabotage in attempts to overthrow the legal, elected governments of those lands.

We in this country have chosen some strange leaders to deal with such a threat. We have elevated to power the very men who were last to see the threat of Communism. Many of our leaders—in high, strategic posts today—were bedfellows with Communist agencies as recently as 5 years ago. Yet, we expect them to deal competently with men who have tricked them again and again and again.

For more than 9 months, the Soviet leaders have caused our Nation uncounted expense and the lives of many of our fliers by causing us to feed Berlin by airlift. They still keep the German capital isolated and refuse to cooperate in any way with us on any important score. Without a let-up, Radio Moscow, Pravda, and every other Soviet organ of opinion consistently have misrepresented our aims and have misled millions of gullible persons in and out of Russia.

But in the face of these facts, the slow-minded administrators who never knew a Communist when they saw one several years ago, now actually seriously discuss a newspaper report that Stalin would like to talk peace. Secretary of State Acheson issued a lengthy statement, that nobody read, discussing in a lofty, comic-serious manner this petty Stalin propaganda trick that should have been dismissed with one word: "Nuts."

It seems elementary to Congressmen that when Stalin wants to make a peaceful gesture, all he has to do is act. We have had Russian words for years, but their actions continue to speak louder than their words. And their actions indicate conquest, confusion, violent revolution wherever and whenever possible. It is stupid to discuss settling anything with Russia as long as the Soviet leaders continue to press for every acre of ground they can gain by hook or crook. It is criminally stupid to talk of having Stalin as a guest in Washington when American airmen are sweating their hearts out, yes, dying, on the run to Berlin because of his trickery and his duplicity.

If your next-door neighbor came over to your house, forcibly captured your living room, held your children captive, bullied you with a gun, and, seeing the police approaching, offered to make friends if you would just let him keep what he had captured, how long would it take for you to make up your mind?

Yet, our State Department, with the supine approval of the President, continues to recognize the Soviet Government and to do business with it and actually issues long statements to justify its own position. If this is not absurdity personified, what is it?

Boy Scouts of America Campaign for Citizenship Training

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. HAYS of Arkansas. Mr. Speaker, as many of the Members are aware, this is Boy Scout Week. The Boy Scouts of America, which operates under a Federal charter, was founded 39 years ago. Since that date over 15,500,000 Americans have been on its roll, and the present membership is some 2,200,000, which makes it one of America's great organizations.

This week the Boy Scouts are inaugurating a 2-year campaign to promote a vigorous program of citizen training and to stimulate among their members a realization that liberty is not only an inheritance, it is a fresh conquest for each generation.

They have chosen as their symbol Bartholdi's great Statue of Liberty in New York harbor and their slogan is, Strengthen the Arm of Liberty, to up-

hold the torch which enlightens the world. They propose by the end of 1950 to present to the American people in honor of their 40th anniversary a Scout movement surpassing in program and membership anything previously accomplished.

I am sure that the Congress will view the Boy Scout campaign with favor since it has as its objective the stimulation of patriotism and the American way of life.

A Bill To Enable the Secretary of Agriculture To Extend Financial Assistance to Homestead Entrymen, and for Other Purposes

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. SANBORN. Mr. Speaker, today I introduced a bill to enable the Secretary of Agriculture to extend financial assistance to homestead entrymen which will make it much easier for veterans who are settling on the new unit in western reclamation projects to get their work soundly established in a comparatively short time.

New settlers on reclamation projects ordinarily do not have enough money to carry on farming and at the same time make the necessary improvements to the land. When they are unable to borrow from banks or other regular credit sources, they turn to the Farmers Home Administration for aid. The Farmers Home Administration under authority of title I of the Bankhead-Jones Farm Tenant Act, as amended, is authorized to make loans to persons receiving the majority of their income from farming operations and who cannot get credit elsewhere at reasonable terms for the acquisition, improvement, and enlargement of farms. Such loans may be made up to the reasonable value of the farm, as certified by the county committee, based on the earning capacity of the farm. The loans are repayable in not to exceed 40 years at 4 percent interest.

The Farmers Home Administration also extends credit under the Water Facilities Act of 1937 for the purpose of constructing water facilities on farms in the arid and semiarid areas. Borrowers may have up to 20 years in which to repay these loans and the interest rate is 3 percent. Real estate is the usual type of security taken.

But at present the Farmers Home Administration is prevented from making farm-development loans, under the Bankhead-Jones Farm Tenant Act, or water-facilities loans, to veterans at the time they are settling on reclamation project farms because the title, for the most part, to such lands remains in the Government until certain homesteading and reclamation requirements have been met. If the veteran does not succeed in meeting these requirements, the Secretary of the Interior, under the homestead laws, can cancel his entry and open the tract to another settler, who is not required to pay for the improvements made by the original entryman.

This bill will solve the problem by allowing the Farmers Home Administration to make farm-development or water-facilities loans to settlers on reclamation projects or other public lands before title has passed from the Government to the settler. This bill would also permit the Farmers Home Administration to acquire a lien on the settler's tract of land.

If an entry on which such a lien has been created is later canceled, the land can be opened only to a settler who is eligible for an original entry and an original loan from the Farmers Home Administration, and the second settler will assume the responsibility for paying any balance due to the Government on loans made to the first settler.

Thus the present obstacles in the path of the veteran pioneering new land in the West will be removed. The bill will aid veterans to settle successfully on projects which have been, or will be, opened to them in Washington, Idaho, Wyoming, Oregon, California, and Arizona. On one undertaking alone, the Gooding division of the Minidoka project in Idaho, 43 units were opened last year and 46 more will be opened this year. These farms are available only to veterans, but most of the veterans who hope to create homes on them will not have sufficient cash to develop them properly and get them into full operation unless they can get credit as provided in this bill.

Lack of funds has always been a major problem for a large number of settlers on reclamation projects. In 1939 the Wheeler-O'Connor Act was passed to enable the Department of Agriculture to extend credit to settlers for farm and home improvements, and take liens on the real estate as security. That authority, however, was not permanent. The present bill will have the effect of reviving the authority contained in the earlier legislation and placing it on a permanent basis.

My bill will enable hundreds of young farmers to develop their farms and make a decent living—something they are unable to do at the present time.

A Cardinal on Trial

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of February 4, 1949:

A CARDINAL ON "TRIAL"

The strangulation of liberty that is being perpetrated in eastern Europe after a war fought in the name of freedom is illustrated again by the "trial" of Cardinal Mindszenty, which began in Budapest yesterday. The cardinal is accused of treason, espionage, and—in line with the methods introduced by Hitler to discredit the churches—with the nonpolitical crime of black-market operations. But his real crime, as detailed in the communique of the so-called Hungarian Government, is his opposition to the Communist dictatorship and its measures. To that crime the cardinal pleads "partly guilty," while repudiating any charge that he plotted to overthrow the existing regime.

Actually, of course, it is not the cardinal but the Hungarian Government that is on trial. That Government represents a Communist usurpation of power achieved by violence and fraud and resting on the bayonets of the Russian occupation armies. It is run by a Soviet proconsul named Rakosi, who acts under orders of the Soviet military commander and is backed by a small minority which in the last free election in Hungary polled just 17 percent of the vote. But this minority, with the aid of the Russian Army, seized the Hungarian state in a coup d'etat which President Truman denounced at the time as an outrage. Subsequently, this same minority has further entrenched itself by a fraudulent election and by liquidating all political opposition. It has consistently violated the peace treaty which obligates it to respect fundamental political, human, and religious freedoms. It is proceeding either to crush the churches or to make them subservient instruments of its own tyranny.

For the moment, there is little that the democratic world can do about it. Cardinal Mindszenty faces the fate already suffered by many thousands of other martyrs to the cause of freedom. But the world will carefully note and long remember what is happening in Budapest.

Changes in the Displaced-Persons Law

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. KEATING. Mr. Speaker, Rabbi Philip S. Bernstein, a distinguished clergyman of Rochester, N. Y., and former adviser on Jewish affairs to General Clay, has sent me a copy of a recent letter to him from Senator ALEXANDER WILEY, of Wisconsin. Under leave to extend my remarks, I include this letter dealing with possible amendments to the displaced-persons law.

It is my understanding that hearings on this matter are shortly to commence before both Senate and House Committees on the Judiciary. The suggestion of the Senator from Wisconsin that the leaders of the three great religious faiths endeavor to present a united front in the forthcoming hearings certainly merits most careful consideration.

The need for one change in the existing law has clearly been demonstrated. This is the change in date of eligibility from December 22, 1945, the date specified in the existing legislation, to at least April 21, 1947, the date contained in the original House bill passed last year, which was changed in conference to conform to the Senate bill.

To effect this much needed change, I introduced a bill last year on August 4

and again this year on the opening day of the Eighty-first Congress.

The first reason for this change is purely administrative. April 21, 1947, was the date selected by General Clay for the closing of the displaced persons camps in Germany to further entry. A careful catalog of the names of and data concerning those who entered prior to that date was prepared and turned over to the International Refugee Organization at the time that body was created. There are many thousands who fled from persecution and entered these camps between December 1945 and April 1947. By enactment of the Displaced Persons Act our country has assumed its share of the international obligation to find a home for these unfortunate victims of war and religious or political persecution. To divide the present occupants of these camps into two categories; one, those who arrived before December 22, 1945, and the other, those arriving after that date, raises obvious administrative difficulties of great complexity and leaves completely undischarged our obligation, equally strong, to those who sought asylum after December 1945, from the cruelties of persecution.

In other words, to leave the date as it is, is to make two packages out of what should be one, to leave the job only partially accomplished.

There is, however, a further and more compelling reason for this suggested change in date. No doubt, unwittingly, but nonetheless effectively, the selection of the arbitrary date, December 22, 1945, has resulted in effecting a discrimination against religious and racial groups which is foreign to the finest American traditions and should never find a place in legislation. The Jews, those who suffered most from the outrages of their torturers, fled in large numbers from Poland, the Ukraine, and elsewhere following the war, to seek refuge in these camps. Likewise, those professing the Catholic faith fled before the prospective horrors and tortures of Communist oppressors. To mark these groups as ineligible for entry into this country under the displaced-persons program seems to me extremely unfair and unfortunate. Certainly these victims of totalitarianism, whether nazism or communism, may reasonably be expected to appreciate the blessings of American freedom at least equally with the victims of the actual conduct of the war itself who for the most part comprise those already within the camps by December 1945.

In fairness it should be pointed out that the Right Reverend E. E. Swanstrom, of New York, chairman of the National Catholic Resettlement Council, has disavowed any claim that the existing bill is discriminatory. Nevertheless, the council at its meeting in St. Paul, Minn., on June 4, 1948, adopted a resolution urging that April 21, 1947, be selected as the determinative date in this legislation in order to prevent injustice to many good European citizens who fled from Communist-dominated areas after the end of the war.

The simple amendment here suggested, of course, in no way increases the number of displaced persons to be admitted to this country. That is not changed in any way. It merely makes eligible for consideration for admission not only those forcibly displaced during the conduct of the war, but also those equally effectively displaced by conditions resulting from the war.

Senator WILEY's letter to Rabbi Bernstein follows:

DEAR RABBI BERNSTEIN: I am glad to reduce to writing my own ideas as to how I feel the present DP law should be amended to iron out its inequities and get rid of some of the administrative obstacles. In so doing, I would like to get the benefit of your reactions (as former adviser on Jewish affairs to General Clay and General McNarney) and those of your associates who have worked closely on the humanitarian DP problem.

Our principal aim in perfecting the DP law should be, as I am sure you will agree, to remove once and for all from the minds of all observers, any doubts or fears that members of the Senate or House are motivated in any way by religious or racial prejudice, which prejudice is, of course, completely un-American and unthinkable here in the Congress or anywhere else.

Summarizing, therefore, my own opinion based in turn upon my contacts and correspondence with leaders of all faiths and nationalities, the points are:

(1) The so-called cut-off date of eligibility should be revised from the December 22, 1945 date specified in the DP law to a later date, either April 21, 1947 or later date best calculated to include 150,000 or so individuals heretofore excluded from the law.

(2) The present provision of the law requiring that a specific job and specific housing be assured in advance for each DP should be replaced by a provision as follows: a validated commitment by the sponsoring individual, church or other organization that the DP will not become a public charge on the people of the United States. In so doing, we will bring the provisions of the DP law into line with the provisions of the general immigration law which prevents admission of those who would become public charges.

(3) By all means a third revision should be an elimination of that provision which mortgages future quotas. This provision, as you so well recall, was brought over from the House bill and was never suggested originally by the Senate.

These three revisions by no means are all of the revisions that may ultimately have to be made. They are the minimum revisions but undoubtedly there may be others which will merit the close consideration of all members of the Congress.

I should like to emphasize this point: that if it is at all possible, outstanding leaders of America's three great religious faiths, representing in turn all of the nationality groups involved, if possible, might get together around a conference table and agree upon minimum points such as the above for submission to the Judiciary Committees of the Senate and House. Thus, instead of having the Judiciary Committees of both Chambers confronted by divergence of opinion on every count, perhaps we could secure a maximum of unity on as many issues as possible. This will simplify the problem of the Congress; it will simplify and speed revision of the law; and it will be in fullest keeping with the American tradition of unity and brotherhood.

In closing, I want to express my thanks to you for your kind cooperation and your sympathetic understanding of the multiplicity of problems with which the Congress is confronted. I will appreciate any aid or assistance you can give in ironing out much of this misunderstood problem. In so doing, we will be removing from the field of partisan politics a humanitarian issue which should be considered on a high plane, irrespective of political party or any other irrelevant factor.

Sincerely yours,

ALEXANDER WILEY.

Labor Legislation

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. ADDONIZIO. Mr. Speaker, the questionnaire on labor legislation sent out by the General Electric Co. has aroused widespread interest, and I am sure that all the Members have received some of them from constituents who are sincerely concerned with improved labor-management relations.

I know that the thoughtful citizens who have completed this questionnaire will be interested in the comments of a leading labor representative on the 18 points posed by the General Electric Co. Following is a letter received from Vincent J. Murphy, secretary-treasurer, New Jersey State Federation of Labor:

NEW JERSEY STATE FEDERATION
OF LABOR,
Newark, N. J., January 29, 1949.

HON. HUGH J. ADDONIZIO,
Congressional Office Building,
Washington, D. C.

DEAR CONGRESSMAN: In a recent issue of the Newark Evening News there appeared a large advertisement of the General Electric Co., entitled "How Would You Revise Our Labor Laws?" While I was disturbed by its contents, I felt that it was not likely to have much effect, and so did not take action upon it.

However, more recently, I and a large number of others to my knowledge received a copy of this advertisement, in printed brochure form, through the mails, with a request that the 18 questions stated therein be answered and mailed to my Congressman.

I can no longer quietly allow this activity of the General Electric Co. to pass unnoticed. The 18 questions which it asks are snide, tricky, and deceptive, deliberately calculated to deceive for the purpose of industry an apparent support of the provisions of the Taft-Hartley law.

It is impossible at this juncture, or in this manner, to explain adequately the deceptive character of these questions, since each of them requires that kind of explanation which only a fairly ample brief can encompass.

Merely as an example, however, let us consider the deceptive quality of question No. 10, which can readily and in very short form be exposed. It asks:

"Do you believe labor laws should require unions to make appropriate reports to members and Government as to handling of funds—just as companies are required to make appropriate reports to owners and Government?"

The following deceptions are to be noted in this question:

1. Companies are not required to make reports to Government unless they attempt to sell their stock on the open market. This is to prevent fraud upon the public. Unions have no stock to sell.

2. Companies are not prevented from doing business if they fail to make reports to Government. They are merely prevented from selling their stock on the open market. Stockholders have the right to demand financial reports and can secure court orders to that effect. So can union members. However, under the Taft-Hartley law, unions which fail to make reports to the Government are prevented from doing business—are, in fact, put out of business, even though the Government has no need to prevent fraud

against the general public with respect to union finances.

3. There is an implication that unions do not make financial reports to their members. This is utterly untrue. Union constitutions invariably require such reports, and they can be compelled by court order.

4. Public knowledge of the state of the local unions' treasuries can often be detrimental to their interests, for an employer will then be able to judge the strength or weakness of a union in case of an impending strike or lockout. Since only the members of a local union have any rightful interest in its financial status, it is therefore unjust to require public accounting of the union's resources.

You will readily observe how impossible it would be in this letter to expose fully the duplicity and chicanery incorporated in each of the 18 questions.

I am taking this opportunity of cautioning you against being misled by the receipt of answers to this questionnaire of the General Electric Co. from any perfectly innocent and well-meaning but misguided persons. May I respectfully request that if you should feel inclined to place any weight at all upon your receipt of any such answers, you be kind and considerate enough to give me, with other representatives of labor, an opportunity to confer with you personally to explain in detail the questionnaire's insidious quality.

Very truly yours,

NEW JERSEY STATE FEDERATION OF LABOR,
By VINCENT J. MURPHY,
Secretary-Treasurer.

Oleomargarine Legislation

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and statement:

IOWA CREAMERIES ASSOCIATION,
Ames, Iowa, January 31, 1949.

Hon. BEN F. JENSEN,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN JENSEN: I am enclosing a statement relative to a number of legislative issues before Congress which we are very much concerned with.

While I do not know what action will be taken on some of these issues, we are anxious to have our Iowa Congressmen and Senators know our viewpoints.

Extending our best wishes, I am

Sincerely yours,

J. S. QUIST.

EXPRESSIONS OF THE IOWA CREAMERIES ASSOCIATION

Iowa Senators and Congressmen:

The Iowa Creameries Association is vitally concerned with a number of isues reportedly before Congress or reported soon to be introduced. We are herewith presenting our position on these issues and our reasons.

I. Oleomargarine legislation: The Iowa Creameries Association as a member of the National Creameries Association supports the stand taken by the three dairy groups, namely, the National Creameries Association, the American Butter Institute, and the National Cooperative Milk Producers Association. This was the banning of the manufacturing and sale of margarine colored in the semblance of butter.

II. The need of a parity price of manufacturing milk and its products: Iowa ranks fourth as a dairy State—Iowa's geographical location is rather distant from our large consuming centers. The total farm income for dairy products for 1947 in Iowa was $176,734,000. In addition the farmers received approximately $33,000,000 from dairy cattle sold for slaughter.

The 1947 creamery-butter production was 209,145,000 pounds. Approximately 75 percent of the butter production was sold outside Iowa.

Most of the prices paid for Iowa's butter is based on either the New York or Chicago mercantile exchanges prices even though the butter is delivered to other points.

Relative small volumes of butter traded on the exchanges sets the price for the vast amount of butter which bypasses the two exchanges. Also many other dairy products are based on butter prices.

Under marketing agreements and orders, fluid milk in some areas is established at prices out of line with other areas. When surplus milk occurs in these higher-priced areas, the butterfat from the surplus milk is made into butter.

The impact of this situation on the dairy industry of Iowa is this: A relative small increasing amount of butter offered on the exchanges reflects in a depressed market and lower prices. Consequently, the large butter-producing areas of the Midwest are handicapped by a price-supporting system that works to the advantage of one area and disadvantage of another. Any Federal assistance to a marketing or price support based on a parity should give the same relative values to all areas.

III. Tariff reductions on butter imports: Tariff reductions on butter under the Reciprocal Trade Agreements Act will have a depressing influence on the Midwest butter industry. This is largely because any arrival of relatively small shipments creates lower prices on the mercantile exchanges.

Also butter imports should be required to meet the same high production and manufacturing standards as those required for domestic production. During 1948 Iowa creameries spent from three to five hundred thousand dollars for greater dairy quality improvements.

The Federal Food and Drug Administration demands rigid and exacting standards for all dairy products shipped interstate. Imported dairy products should be required to meet the same inspections and exacting standards.

IV. Wage and Hour: Evidence appears that the Administrator of the Wage and Hour Division is to recommend a minimum wage of 70 cents per hour and the removal of overtime exemptions of workers engaged in the first processing of farm products.

The Iowa Creameries Association is strongly opposed to the removal of overtime exemptions for workers engaged in the first processing of agricultural products. Local creamery operations are far different than those of the assembly line. For example, unfavorable road conditions can delay the cream and milk haulers many hours. Oftentimes, creamery employees are required to work late at night to handle the late cream arrivals for the cream must be cared for on arrival. Adjustments are made by the creamery management for these irregular hours. Under wage-and-hour liability, and with regulations that only few can decipher, the creameries will be at the mercy of inspectors if exemptions are lifted.

Under the existing regulations, there are changes that should be made. A number of our creameries have milk-drying units. If skimmilk is dried, the operator is exempt, for that is construed as first processing. If buttermilk is dried, the operators are not exempt and must be paid extra for overtime over 40 hours worked per week. Drying buttermilk is not construed as first processing.

The Iowa Creameries Association urges you to do all in your power to prevent the removal of overtime exemptions for agricultural workers and those engaged in the first processing of agricultural products. In fact, the interpretation of first processing should be more liberal and clarified.

Senate bill 546, introduced by Senator CABOT LODGE, proposing mandatory payments of not less than minimum wage for not less than 40 workweeks of not less than 30 hours per week by all concerns selling $10,000 of goods, material, etc., to the Government would be a hardship to a number of Iowa creameries. It would mean that oftentimes a creamery would be unable to meet the annual-employment requirement and thereby lose the opportunity of making a sale to the Government.

IOWA CREAMERY ASSOCIATION,
JULIUS BRUNNER, *President.*
J. S. QUIST, *Executive Secretary.*

Federal Contributions to State and Local Governments

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. KEATING. Mr. Speaker, that the Federal Government should contribute a sum in lieu of taxes on property which it owns in the various States is generally conceded. The difficulty lies in devising an acceptable formula for computation of the fair and equitable amount in each case. As a result, to date no action has been taken.

Whether the approach to this problem be the one embodied in my bill, H. R. 445, should only be determined after full hearings. It seems clear, however, that we should grapple with this important issue at an early date in order to relieve the present intolerable and unfair situation.

It is gratifying that the Washington Post has indicated its support for some legislation to meet this problem in editorial comment, which follows:

FEDERAL CONTRIBUTIONS

If the Federal Government paid taxes at prevailing rates on its property holdings in the District, as Representative KEATING suggests, the District would receive an estimated $16,000,000 from this source. That is five million more than the present Federal contribution to the District's running expenses. While the loss of potential revenue resulting from the tax-exempt status of local Federal holdings provides a strong argument in favor of increasing the size of the Federal contribution, there is little likelihood that Congress would agree to any proposal entailing taxation of Federal property on the same basis as privately owned property. Direct taxation of federally owned property here would establish a precedent for similar taxation of Federal holdings by States and municipalities in all parts of the country. As a matter of fact, Representative KEATING urged abolition of tax exemption for all Federal properties wherever located.

The problem is undoubtedly one of Nation-wide concern that led the American Municipal Association to go on record recently in favor of Federal legislation authorizing local taxation of Federal property or, as an alternative, payment to the municipalities by the Federal Government of annual sums in lieu of full taxes. Various Federal agencies are already empowered to make payments to local government, but, as we pointed out some time ago, these payments are haphazard and often inequitable because of their special character. Consequently, there is pressing need for a change of policy to relieve local governments of the burdens thrust upon them by the withdrawal of Federal land from taxation. In the case of the District, more than 40 percent of the land area is tax-exempt because of Federal ownership.

There are certain types of Federal holdings, such as post office, jails, and hospitals, that ought not to be taxed in any circumstances. There are also undeveloped landholdings in some States whose taxable value would be hard to assess and whose possession by the Federal Government probably yields indirect dividends to local communities that largely offset loss of taxable revenue. For such reasons it would be unwise to give local governments carte blanche authority to tax federally owned property of all kinds at prevailing local rates. But it is both feasible and essential to work out a plan that would insure adequate compensatory Federal payments and compel the Federal Government to pay its fair share of the cost of local governmental services that benefit all property holders—public as well as private. In most cases the size of these payments should, with certain exceptions such as those previously mentioned, be roughly equivalent to the amount of revenue that would be collected if Federal property were fully taxable.

Mobile's Foreign Trade Zone

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a talk on foreign-trade zones which was made by Mr. A. S. Brueggemann, vice president, First National Bank of Mobile, before the Civitan Club of Mobile on December 14, 1948. Mr. Brueggemann, whose knowledge of foreign trade and banking is well recognized, ruefully concedes that the Mobile foreign-trade zone, second to open in the United States, closed down before it had an opportunity to demonstrate its value to the port. He then pointed out that three other ports, one of which is on the Gulf of Mexico, are now enjoying increased foreign trade and prestige through the facilities offered by foreign-trade zones. As the original sponsor of the Mobile zone, I worked unceasingly to obtain the charter from the Federal Government, and, naturally, I was disappointed when it was decided that the zone was to be closed. However, whenever Mobile foreign-trade and shipping interests decide that a zone should be reestablished to meet ever-changing world conditions, I will be happy to work with them.

Mr. Brueggemann's remarks follow:

MOBILE FOREIGN-TRADE ZONE

As you know, Mobile was the second city in the Nation to operate a foreign-trade zone. A foreign-trade zone affords a limited area, perhaps a single large warehcuse, where goods from a foreign country may enter without payment of duty. Goods can be stored, assembled, partly processed, or repacked, and then resold and shipped free of United States duty to a foreign country, or placed in domestic commerce upon payment of appropriate customs duty.

Such foreign-trade zones had their origin in Europe and reached their most advanced stage in Germany, where in the ports of Hamburg and Bremen factories were erected in the free trade zones for the manufacture of various kinds of goods, and the finished product was then exported without payment of duty, also at a considerable saving in freight charges.

With the passage by Congress of the Celler Act in 1934, which authorized the establishment, within the territorial borders of the United States of these foreign-trade zones, the Port of New York was the first to take advantage thereof and obtained permission to set up zone No. 1 in 1937.

Mobile had excellent facilities to offer and foreign-trade zone No. 2 was g anted an application and was formally opened here on July 21, 1938, about a year after zone No. 1 in New York. The primary purpose of zone No. 2 was to attract new business from the countries to the south of us. Despite the extensive campaign on the part of the Pan American Committee of the Mobile Chamber of Commerce, the contemplated increase in business with Latin America did not materialize. Therefore, after about 6 or 7 months of operation at a considerable deficit, the venture was abandoned early in 1939. It was felt that the type of commerce moving through Mobile was clearly not of the kind that would find the privileges of a foreign-trade zone to be advantageous.

I hesitate to venture an opinion as to how our port would rank today compared with other leading seaports, had it been possible somehow to make up this deficit and continue operations of the foreign-trade zone, because in the recent past two other cities have established such zones.

It appears that Mobile was born 30 years too soon because New Orleans, our stanchest competitor on the Gulf, now boasts of foreign trade zone No. 2, abandoned by us early in February 1939, and last June San Francisco's application to operate zone No. 3 was favorably acted upon. Rumors persist that Los Angeles is very much interested and will probably set up zone No. 4 very shortly.

Because of the growth of air express and the future prospects for transportation of goods by air in large volume, directly from and to important interior cities without the planes first stopping at border points, prominent industrial centers in the Midwest are giving much thought to foreign trade zones, and in the press two Sundays ago you no doubt read that Chicago, situated nearly 1,000 miles from any seacoast, is the first interior capital to give serious consideration to such a zone. In addition to air express, advocates call attention to Great Lakes shipping from Canada, the splendid barge service opening up Latin America and the Far Eastern areas by way of the Gulf and Panama Canal, also the proposed St. Lawrence seaway, which will make Chicago an unquestioned ocean port, accessible to virtually all Atlantic Ocean traffic.

(Earlier in the talk Mr. Brueggemann had pointed out how the new, modern facilities of the Alabama State docks and terminals attracted new business to the port.)

Just the same as the new and modern State docks attracted an increasing volume of tonnage and shipping service, which I am sure all of you agree would have moved by other channels if the State's facilities had not been in existence, is it not reasonable to assume that if the foreign trade zone operations could have been continued, and some way found to meet the deficit, it would have attracted business to our port—a more diversified, that is a greater revenue-producing cargo, which is just the type of tonnage we need in Mobile at the moment.

The Need for Health Insurance

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. BIEMILLER. Mr. Speaker, this afternoon I had the honor of addressing the conference on unfinished business in social legislation on the subject, The Need for Health Insurance. This conference, composed of splendid American men and women who are dedicated to the improvement of social legislation, has the following membership: National Board of the Young Women's Christian Association, National Federation of Settlements, American Association of Social Workers, National Council of Jewish Women, Department of Christian Social Relations of the United Council of Church Women, Woman's Division of Christian Service of the Methodist Church, National Association for the Advancement of Colored People, Consumers Union, National Consumers League, National Association of Consumers, Women's Trade Union League of America, National Council of Negro Women, Division of Social Education and Action of the Presbyterian Churches in the United States of America.

Under leave to extend my remarks, I am placing my speech in the RECORD:

THE NEED FOR HEALTH INSURANCE

Members of the Conference on Unfinished Business in Social Legislation—a most appropriate title—it bespeaks a serious and realistic approach to issues which so deeply affect the health, welfare, and security of all of us.

It is in this same thoughtful vein that I should like to discuss with you how to improve the Nation's health. Stated more explicitly, the problem is how best to enable every wage earner to secure adequate medical care for himself and his family.

Here are a few figures to make the problem more graphic: We could save each year some 120,000 who die from communicable diseases; some 115,000 who die from cancer and heart disease; 40,000 from accidents; 30,000 infant and maternal deaths, and 20,000 who die from other miscellaneous causes.

You have invited me here, knowing full well, I am certain, that this issue will be before both Houses of Congress. You know the definition of a Congressman: "If he agrees with you, he is an able statesman; if he disagrees, he is a cheap politician."

Though proud of my membership in the Democratic Party, it is not in any partisan spirit that I wish to discuss the question of needed social legislation. Rather, with your permission, I should like to examine the status of our national health as revealed by our leading medical economists. Then, having ascertained our health needs, and the existing or contemplated medical and professional resources, we can shape effective solutions so that they will square with our best democratic principles.

This sober approach, I might add parenthetically, has been used with rare effectiveness by you people. Its increasing popularity is testimony to your achievements in behalf of developing and shaping an informed public opinion.

Now let us examine, first in broad perspective and then in detail, the question of America's health needs.

You and I know that the spectacular successes of the medical laboratory have not been matched by corresponding advances in treating the sick people of our workaday world. The full measure of advancing medical knowledge, particularly in preventive medicine, comes haltingly at best for most of our people. Between the many who need medical care and the few who can afford it, there is a distressing gap. This gap is the fault neither of our doctors nor of our people. American medicine is admittedly the finest in the world. And our people are thoroughly desirous of benefiting from the miracles of modern medicine.

I have dealt so far in general terms. You have a right now to ask for supporting data in proof of these statements. The data are there, and in shocking abundance. As Al Smith used to say, "Let's look at the record." What would Uncle Sam's health chart reveal if he were given an extensive national check-up? How many people forego needed medical care?

Consider these figures:

One mother out of every two who dies in childbirth dies needlessly. Her life could be saved if known measures were fully applied. One-third of the infant deaths could similarly be prevented.

In any 24-hour period, illness or other disability incapacitates 7,000,000 people.

Chronic disease or physical impairment blights 23,000,000 lives annually.

Four million Americans were rejected for military service because of physical disability.

Many of you are familiar with these figures. You have studied the evidence compiled by the Federal Security Agency. You also know that through illness this Nation loses annually some 600,000,000 man-days. In a world desperately starved for necessities, where hunger and need are totalitarianism's strongest allies, this annual loss in productivity endangers our own security at home and freedom's chances abroad.

The full impact of our disturbing national health picture is not realized until we examine State and regional figures—until we analyze how people fare by income groups.

A direct connection exists between ability to pay for medical care and the chance for health. In low-income-level States, such as Alabama, Georgia, Mississippi, the death rate among women in childbirth is three times as high as in wealthier States like Connecticut, Minnesota, or Rhode Island. Infant mortality rates tell the same story. In the 4 worst States, 50 to 100 infants died in their first year as compared with 28 to 30 babies per 1,000 live births in our Nation's 4 best States.

After a careful examination of the health records of the 48 States by income levels, Federal Security Administrator Oscar Ewing made this succinct observation. From his report to President Truman on The Nation's Health—A 10-Year Program, I quote:

"The conclusion is inescapable that, as among States, there is a direct relationship between the comparative wealth of a given State and the health services available; that this, in turn, has a direct bearing on the health record of the State."

A similar distressing picture emerges from a study of the health of America's 13,000,000 citizens of Negro ancestry.

Consider these facts:

The Negro mortality rate is 60 percent higher than for whites.

Two Negro mothers die in pregnancy and childbirth for every white mother who dies. Two Negro babies die for every white baby who dies.

Three Negroes die of tuberculosis for each white person who dies of tuberculosis.

Would you like to look more closely at a particular State? Reports Mr. Ewing:

"In South Carolina the mortality rate for white mothers was 1.3 per 1,000 live births; for Negro mothers it was 3.6 per 1,000 live births. This 170-percent higher mortality rate among Negro mothers can be related to the fact that a scant 14 percent of Negro births occurred in hospitals and 65.9 percent were attended merely by a midwife or other unspecified person. By contrast, only 2.5 percent of white births were in this latter class."

No matter how the picture is viewed, we are faced with the dismal economic fact that the price of medicine in the market place is beyond the reach of most Americans. This is no startlingly new thought. We have known this for more than a decade. Far back in 1939, the Bureau of Economics of the American Medical Association published a study showing that families with incomes less than $3,000 could not afford adequate medical care for serious illness. With today's greatly increased living costs, it is perhaps a conservative estimate which states that 100,000,000 Americans need help in paying sickness bills.

These facts, buttressed as they are by myriad others, lead us to two inescapable conclusions:

First, here is a national problem—national rather than private or local—since it concerns the great majority of our people.

The second conclusion is that we must devote our energies toward an immediate solution of the problem of improving the Nation's health.

I stress the need for immediate improvement. For so long as we temporize, or delay, or compromise, we shall be condemning to death each day some 900 persons whom modern medicine has the service, the skill, but not the economic power to save under our present system of distributing medical care. Again, I should like to direct your attention to Mr. Ewing's words: "Every year 325,000 people die whom we have the knowledge and the skills to save." Think of that. Each year we lose a Rochester, N. Y.; a Denver, Colo.; a Louisville, Ky. What a frightening and needless waste of human life.

Do you want a break-down of these figures? Here they are, again; I gave them to you at the beginning of this speech. They bear frequent repeating.

We could save each year some 120,000 who die from communicable diseases, some 115,000 who die from cancer and heart disease, 40,000 from accidents, 30,000 infant and maternal deaths, and 20,000 miscellaneous.

Now that we have surveyed our problem, what hope is there for a solution? And what is the best solution to provide this needed purchasing power? How can we break existing bottlenecks in professional manpower, hospital and laboratory facilities so as to give all our people an equal chance for health?

A searching examination of various answers to these questions was made last spring at the National Health Assembly in Washington, D. C. No doubt some of you here today were among the more than 800 delegates from the American Medical Association and allied professions, from cooperative, rural, labor, veteran, church, women, and welfare organizations.

You will recall that the subject of charity medicine versus national health insurance was debated with vigor. Treated with equal incisiveness were such thorny issues as discrimination against Negroes in county medical societies and hospitals; the need for gaining health parity for our rural population; the role of local, State, and Federal Government, as well as private agencies, in health.

Out of the free exchange of ideas among the experts, lay and professional alike, came unanimous agreement on the basic prescription for a sounder, healthier America. "Adequate medical service * * * should be available to all without regard to race, color, creed, residence, or economic status.

"The principle of contributory health insurance should be the basic method of financing medical care for the large majority of the American people in order to remove the burden of unpredictable sickness costs, and avoid the indignities of a 'means test'."

There was also unanimous agreement among the delegates on these four subsequent points:

1. Voluntary health insurance programs must be encouraged particularly in rural areas.

2. Medical and popular groups should work together to repeal restrictive State legislation against voluntary plans, originally passed at the mistaken insistence of State medical societies.

3. Medical care services should be coordinated. Doctors and laymen should cooperate on professional standards and administrative procedures.

4. Tax funds should be used wherever necessary to supplement health insurance in bringing medical assistance to everyone.

As experts, however, you will recognize the fact that the virtue of the term "contributory health insurance" lies in its broad meaning. It covers a basic cleavage as to whether insurance should be compulsory or voluntary.

Again, a long clear look at the record affords us an answer. Voluntary health insurance, excellent aid though it is, affords comprehensive medical care to not more than 4,000,000 persons. I should like to emphasize that figure—only 4,000,000 are covered by comprehensive voluntary medical care programs.

The great clamor about how 45,000,000 are covered by some plan or other and, therefore, there is no need for any further concern is definitely misleading. Twenty-five millions of these forty-five millions have insurance for hospitalization only. Others have even less adequate protection.

The most cogent analysis of why we cannot rely wholly on voluntary health-insurance plans to do the job was stated by Dr. Michael M. Davis, chairman of the Committee on Research in Medical Economics:

"Voluntary plans do not offer broad enough coverage, at low enough rates, to a large enough portion of our people, to justify serious consideration as a national solution to our national health problem."

Furthermore, many voluntary plans, including those operated by State and county medical societies, have contracts full of jokers. When you need to claim benefits you find that you are so beset with ifs, ors, and whereases, that you end up owing the doctor and the hospital a lot more than you bargained for when you signed up.

In fact, I once went so far as to say that your chance of getting your money back under the State Medical Society plan in Wisconsin was so slight that the plan might well be barred under the antigambling ordinance.

Since sickness respects neither pocketbook nor State lines, the problem of meeting our national sickness bill can be solved by nothing less than an over-all approach which coordinates the best effort of Federal, State, and local governments.

Speaking to this proposition, Bernard Baruch—America's elder statesman—told the medical profession a little more than a year ago:

"Nothing has been suggested so far, which promises success, other than some form of insurance covering the people by law and

financed by the Government * * * what some would call 'compulsory health insurance.' It can be devised, adequately safeguarded, without involving what is termed 'socialized medicine.' I do not fear Government's taking its legitimate part in medicine, any more than I fear it in education or housing."

There is now before Congress a national health-insurance bill which embodies the safeguards necessary for the preservation of both American medicine and the doctor-patient relationship. That bill is S. 5 (H. R. 783), sponsored by Senators MURRAY, WAGNER, MCGRATH, PEPPER, CHAVEZ, and TAYLOR, and in the House by Congressman DINGELL.

Briefly, the bill provides:

1. A system of health insurance, national in scope, and covering approximately 85 percent of the population. This includes employees, self-employed persons in business for themselves, and their dependents.

2. Insured persons eligible for benefits would be entitled to medical and dental service from general practitioners and specialists, home nursing care, hospital care, laboratory service, X-rays, expensive prescribed medicines, eyeglasses, and special appliances.

3. Free choice of doctor and dentist by the patient is guaranteed. The right to change one's choice is assured.

4. Every qualified doctor, dentist, nurse, and hospital is guaranteed the right to participate or not, and to accept or reject patients. These guaranties apply to organized groups of practitioners, clinics, consumer cooperatives, and similar health-service plans, as well as to individuals. Every hospital that participates is guaranteed freedom from Government control.

5. Payments for services would be made from the insurance fund instead of the patients having to pay the costs directly. The method of payment is to be decided by the practitioners who furnish the service. The legislation contains guaranties that the amount of payment will be fair and adequate to physicians and hospitals.

6. Provision is made for grass-roots administration of the program. In each local area, administration would be carried out with the help and participation of local citizens, including members of the medical profession. East State is given the right to administer the system through its own State agency, and to divide the State into local areas. The State plan must meet certain general requirements stated in the bill. At the Federal level, administration is under a five-man board, assisted by an advisory council of lay and professional people.

I have explained the bill in this detail because it is essential for all of us to realize the sincerity of its purpose and its straightforward, sensible provisions. Above all, it represents the sound and tested American principle of insurance—a principle that dates back to the days of John Paul Jones and *Old Ironsides*. In 1798 Congress established a compulsory health-insurance plan for its new-born merchant marine. Industrial and fraternal health-insurance plans, organized more than a half century ago, are still going strong. They are proof, if such is needed, that national health insurance is as American as apple pie and as sound economically as the word insurance implies.

But we need not take national health insurance on faith. We can observe its operation abroad in other English-speaking countries like Canada, New Zealand, and England. In Great Britain, for example, national health insurance was first introduced in 1911 over the opposition of the British Medical Association. After working with it for a number of years, the British Medical Association reversed its stand and in 1928 recommended that it be greatly extended.

The recently inaugurated British National Health Act was first proposed by the Conservative Party. Said Winston Churchill in his wonderful style: "Insurance is employing the magic of averages for the benefit of the individual."

Now, after several months of operation, a favorable verdict is being returned by the people who pay for the services and by the doctors and hospitals which render them in England. A survey conducted by the British Institute of Public Opinion revealed in December that the national health program was by far the most popular achievement of Attlee's labor government. This poll, I hasten to add, forecast the election of the labor government in 1945 with an error of only one percentage point. Similar commendation comes from the Lancet, long-established independent British medical publication, and from conservative publications like the Spectator. And, finally, there is this direct quotation from the British Medical Association:

"The doctors want a comprehensive service. Doctors are not against a national health service. They approve of the bulk of the present act. Doctors have been fighting for years to get their patients better medical service."

I could lay no claim to being fair or frank with you if I attempted to gloss over the stubborn opposition of the American Medical Association to all proposals involving the principle of national health insurance. Unlike either the Canadian Medical Association or the British Medical Association, the American Medical Association has rejected all such proposals, lock, stock, and barrel.

Most of you are too familiar with the AMA's objections for me to elaborate upon them. However, I would like to call your attention to the peculiar composition of the House of Delegates. A study of its composition reveals that it does not represent the rank and file of American physicians. A check for age, residence, and type of practice of the 155 delegates (elected by the State medical societies) shows:

1. While nearly 50 percent of all practicing physicians in the United States are less than 45 years of age, 95 percent of the delegates are over 45 years of age. Seventy percent are over 55 and nearly 30 percent are 65 years or older.

2. Half of the country's physicians are general practitioners. But there are only 15 general practitioners among the 155 delegates. Ninety percent are full or part-time specialists.

3. As would be expected from the above, most delegates come from large cities, few are from rural areas. While 30 percent of all doctors live and practice in communities with less than 5,000 population, only 8 percent of the delegates are from such communities.

Perhaps you will agree with me that there is good reason to believe that not all of our doctors wear AMA blinkers. The magazine, Medical Economics (distributed free of charge to all physicians), recently printed the following results in answer to the question: "Would you participate in the Wagner-Murray-Dingell program if it became law?"

	Percent
Yes	15
No	61
Undecided	24
Total	100

Break-down by States and large cities showed wide variations. In New England and the Middle Atlantic States, almost half of the doctors said "Yes" or were undecided. In some eastern cities, one doctor out of three said he would participate in a national health insurance program. A substantial number of others are undecided.

Considering the stream of condemnation and misinformation regarding national health insurance which the AMA has poured out to physicians over the years, instead of an anticipated 85–90 percent opposition, only 61 percent of all doctors would record themselves against participation. Four out of ten are either open-minded on the subject or ready to participate. Five out of ten eastern doctors feel this way.

The impartial observer who surveys the record of the AMA on legislative proposals to help make adequate medical care available to all, will read therein a record largely of negativism, obstructionism and of do-nothingism if you will permit the word. Time and again, the AMA has been called upon by those in Congress and by representatives of public interest organizations for a legislative program to help secure a more equitable distribution of medical care. I should like to echo that call again, but I do so with little hope of receiving any constructive reply.

But in addition to this, I would like to address a request publicly to Dr. Morris Fishbein, editor of the Journal of the American Medical Association, and often regarded as the spokesman of organized medicine. I ask him in the public interest and in fairness to an ever-growing number of responsible members of the American Medical Association who favor national health insurance to open the pages of the Journal to a fair presentation of both sides of that issue.

The standards of fair journalism and public interest require at the least that the existing iron curtain of censorship be lifted from the pages of the Journal of the American Medical Association, so that the American doctor may find full and fair discussion of the pros nd cons of this significant issue.

And now in closing, may I return to the theme of this meeting—the unfinished business on social legislation.

We have made great strides in recent years in protecting the people of this country against the four great hazards of our industrial world. Through Federal and State action we have achieved an ever-growing measure of security against industrial accidents, old age, and unemployment. Our success in using the principle of social insurance to combat the hazards affords every reasonable proof that it can be successfully employed to overcome the fourth great hazard that faces all of us—paying for sickness cost.

The individual who is laid off today receives compensation. The individual who is injured on the job today receives compensation. But the individual who is ill and, hence, unemployed, with extra costs to meet, receives no compensation. It is unreasonable and unfair.

Certainly it will take courage and imagination, borne of experienced social planning, to develop a working national health-insurance program. But we have these qualities and we shall be secure in the knowledge that however much vision it takes to achieve, the program itself is not visionary.

Here is where your organizations play their vital role as catalysts of public opinion. As spokesman for the welfare of all groups, you can develop informed public opinion which will be more persuasive with the Eighty-first Congress than the multimillion dollar lobby of organized medicine and the large patent drug corporations.

This Congress, I need hardly say, will be responsive to your call.

The recent election has seen to that.

Out of the wealth of statistics, the testimony of medical economists, and the day-to-day experiences of millions of Americans, comes the certain knowledge that national health insurance is the solution to our health needs. It will remove the burden of sickness bills, making adequate medical care available to all Americans, regardless of race, color, creed, or economic circumstances.

But securing this much-needed legislation will take the thoughtful efforts of all us doctors and patients, professionals and laymen. We must all join in a lobby for a stronger and healthier America—a lobby for lives.

The Reciprocal Trade Act

EXTENSION OF REMARKS
OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, my concept of reciprocity is wherein countries exchange goods of which they produce in abundance for goods that they need.

I feel that the present formula used by the Tariff Commission to secure export and import facts by holding hearings should be continued. The reciprocal trade treaties of the New Deal were honeycombed with deceit. Why do I say this? Well, there have been more trade barriers erected since 1934 than existed before in the history of this country. The proof of this statement is (1) the near embargo on short staple cotton which restricts cotton imports to 135,000 bales. The quota on long staple cotton imports as put into effect by President Truman is less of an embargo approach; (2) the near embargo on wheat and flour which restricts wheat imports to 800,000 bushels; (3) the embargo on the export of tobacco seed is the most vicious and severe trade barrier ever erected. This latter legislation, according to the Secretary of Agriculture, was enacted to prevent China and other countries from raising United States types of tobacco for competition on the United States market. Why such hypocrisy?

Before the Fair Deal makes much of an impression on any thinking person in connection with reciprocity speeches, it should first repeal the Tobacco Seed Act. The only similar trade barriers were erected by Russia to restrict the export of sables, and by Australia to restrict the export of a certain type of sheep.

Many things have happened since 1933 that make the Reciprocal Trade Treaty approach really obsolete: (1) The individual agricultural producer and manufacturer in the United States is faced with the State trading. Peron, for example, could put any beef producer of this country into bankruptcy. This was demonstrated by the demoralization of the United States fur farming industry by Russian fur imports in 1946; (2) the FAO is now very much in the picture. This organization, a part of the UN, is trying to divert food products from the surplus producing areas of the world to the food deficient areas of the world. The world wheat conference is a part of this program; (3) a minimum wage may become effective soon, and if we fail to consider the effects of competitive commodity imports additional millions of Americans will find themselves without jobs; (4) the present world prices on most agricultural products, plus present duties, is less than the United States support price; that is, the prices of agricultural products of this country are not only supported under the program, but the agricultural products of the rest of the world as well.

Did not the United States support the Canadian potato prices? Does the wool-support program not only support the 300,000,000 pounds produced in this country, but also include the 600,000,000 pounds we import from Australia, South Africa, and Uruguay? How can we expect to see a normal granary when our abnormal granary is filled with our production plus the competitive imports?

The facts are, (1) that in quantity, volume, and pounds, we have been on an agricultural import basis since 1925 (except during the short period following World War II), (2) that we imported the greatest amount of agricultural products in our history during the 1933–39 period, (3) that we imported twice the amount of competitive agricultural products, during the 5 years preceding the war, than were our total agricultural exports, (4) that at the present time we are not giving away agricultural products as rapidly as our markets are attracting the foreign agricultural products, (5) that the countries receiving feed from us for their cows are now asking us to further reduce the import duty so that they can send more of their dairy products to us, (6) that the United States per capita production of milk is now the lowest since records have been compiled and that some people propose to subsidize these foreign dairymen, (7) that the European countries should reduce their own duties and eliminate trade barriers between themselves before asking us to reduce our import duties while they are increasing their duties. Benelux is a start, and they should use their products to help their own people first before attempting to place their subsidized products in competition with ours in this country, (8) that under the Marshall plan billions of dollars in goods and services are being sent to Europe, and a large share is being used to rehabilitate business and agriculture. This is a direct subsidy to the European producer. Do you think it is wise to subsidize a foreign industry, such as rayon, with Marshall plan money and then turn around and lower the duty on rayon imports to this country? Do you think it makes good sense to use Marshall plan money to feed dairy cattle in European countries and then turn around and lower the duty on butter and cheese imports? This very hour this proposal is being considered, and hearings are being held before the United States Tariff Commission. Anyone who is not balmy should realize that this proposal just does not make good sense, either economically or common.

Many of the dreamers in the State Department have had very little experience in anything other than conversation, and the present law should be continued to eliminate the dream factor. The National Grange desires the present legislation being continued unless some more acceptable form of program is offered. The Farm Bureau is for the reciprocal trade program, evidently desiring to preserve the provisions of section 22 of the AAA Act which has been used to place embargoes on cotton and wheat imports to the exclusion of other agricultural products produced above the Mason and Dixon's line. The Farmers Union, by its testimony, is in favor of going backward, by allowing a further reduction of duties on agricultural imports and not voicing any objection to the proposals for lowering the import duties on butter and cheese.

Perhaps it would be wonderful in the eyes of some people if Australia, South Africa, and Uruguay would furnish all of the wool needed in this country; if Switzerland would furnish all the watches; if India would furnish all of the textiles; if Argentina would furnish all of the meat and dairy products; if Canada would furnish all of the paper; if Czechoslovakia would furnish all of the glass; if Japan would furnish all of the pottery, and if Russia would furnish all of the furs. Most thinking people realize it is high time that we take steps to keep our country economically strong and solvent by showing more respect for the United States Treasury.

Surely, I realize that the President desires the power rather than having it placed in the capable hands of the Tariff Commission. The Secretary of Agriculture desires the power to say just how many acres of cotton a farmer can grow. Power grabbing seems to be the order of the day, and I believe that if Thomas Jefferson were to come back to life he would not feel at home among the power-hungry officers of this administration. The only color of ink that the New Deal knew was red, and from all appearances the Fair Deal will place us further in the red.

Perhaps the unemployed are already aware of the fact that the Eightieth Congress was not as bad as pictured. The farmers also, when they compare their farm incomes for January 1947 and January 1948 with January 1949, will realize that the Eightieth Congress, who for the first time in 20 years kept the country solvent, was a pretty good Congress.

Let us not forget that in August 1939, the seventh year of the more abundant life, the farmer received 5 cents plus per pound for his hogs, 8 cents plus per pound for his cotton, 54 cents per bushel for his wheat, and that most of his milk brought less than 3 cents per quart. And do not forget that we had 10,000,000 people unemployed.

Neither the domestic nor the foreign agricultural programs have accomplished much for agriculture. Today we are faced with a further weakening of the economic structure of this country through the disastrously low farm prices, ever-decreasing pay rolls, and ever-increasing bankruptcies. Why add millions more to the list of unemployed?

I hope that this committee will remember some of these things that you have given me the privilege of presenting to you.

A Great Southerner Speaks on Segregation in the South and How It Works—Joe Louis Declares "While It's True I Was Born in Alabama, I Never Even Heard of 'Segregation,' 'Discrimination,' and 'Jim Crowism' Until My Family Moved Up North, Into Detroit"

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. BOYKIN. Mr. Speaker, the Commonwealth of Virginia, nor do these United States, have any finer nor higher type of citizen than Mr. C. C. Carlin, Jr., president and editor of the Alexandria (Va.) Gazette. Of old Virginian forebears, there is none more eminent, more scholarly, studious or better acquainted with the social and economic problems of our great Southland—than is that distinguished son of Virginia.

Mr. Speaker, may I point out to my colleagues that on February 5 in the year of 1784—more than 3 years before the Constitution of these United States was ratified and yes—more than 7 years before the adoption of the Bill of Rights—the Alexandria Gazette was recognized as "the voice of the people," "the news organ" of the cotton-, the corn-, and tobacco-producing Southern Colonies, which were destined to later become members of the Federal States.

Then, as now, that publication stood as the champion of a democratic form of government at a time and in a world in which the word "democracy" was little known and infrequently used.

Mr. Speaker, contemplate with me a hand-printed newspaper, the existence of which more than spans the life of this Nation. Then, as now, it was published in the little town of Alexandria, and at a time when Alexandria, Va.—located on the Potomac River at the head of Chesapeake Bay—was considered a great inland maritime port—serving an English colony in the New World across the seas from the mother country.

The District of Columbia had not been blueprinted. The city of Washington as we know it today was not in existence. The building of the Capitol of the United States—on the banks of the Potomac—was not then even a dream of our founding fathers.

What still remains of old Georgetown—named after the British monarch—its shops, its docks, flour mills, mill streams, houses, cobblestone streets—comprehended all of the improvements that had been wrought in the shape of a city development on the Maryland bank of the Potomac River.

From the day of its inception, the Alexandria Gazette, southern in its every sentiment, bridged the difficulties then existent between the northern and southern colonies. From the time it was established, in 1784, and for the duration of the century that followed, it did much to compromise the economic differences which existed between the States in the early years of this Nation. Even though its type, its presses, and all other equipment was destroyed and its building burned to the ground in the subsequent War Between the States, the steadfast family who published the Gazette returned to the old site and built upon the ashes that were left a new, bolder, and ever more steadfast Alexandria Gazette.

There they fought the good fight of our southern people, not alone during the dark days of reconstruction but in all the days up to and including the new era of the twentieth century.

The Honorable C. C. Carlin, Sr., was born in Alexandria, Va., April 8, 1866. He attended the public schools of that little cosmopolitan city as well as the Alexandria Academy. He studied law and graduated from National University Law School, Washington, D. C.; was admitted to the bar in 1891 and began the practice of law in his home city. He was postmaster at Alexandria from 1893 to 1897 and was elected as a Member of this House to fill the vacancy caused by the death of John F. Rixey in the second session of the Sixtieth Congress.

He was reelected to the Sixty-first, Sixty-second, Sixty-third, Sixty-fourth, Sixty-fifth, and Sixty-sixth Congresses wherein he served with honor and distinction to himself, his constituency and our country. He resigned the Sixty-sixth Congress to resume the practice of law.

Our distinguished colleague—one of the most able men ever to have served in this body—your good friend and my good friend—the Honorable Judge HOWARD W. SMITH, has long and capably served his people from the very district that was formerly represented by Mr. Carlin.

Several years prior to his death—agreeable to his meticulous methods of planning ahead to meet every foreseeable emergency—the Honorable C. C. Carlin, Sr., transferred the control and management of his newspaper to his son, Charles C. Carlin, Jr. The younger Mr. Carlin is today the editor of that historic publication.

Mr. Speaker, as I said before, Mr. C. C. Carlin, Jr., not unlike his father is a man of great vision, great understanding and mental capabilities. He is wise in the wisdom of his distinguished forbears as well as in the wisdom that comes with years, and above all else—he is a true southerner.

He has observed—over the years—every concept of progress of both the white and colored races of the great Commonwealth of Virginia.

Likewise, he has studied the advance made by all the other States of our great South. Desirous of informing his mind still further with respect to the current relations existing between the white and colored, Mr. Carlin recently completed a trip which brought him into every State below the Mason and Dixon's line. I feel that I was fortunate in coming upon an editorial written by him. That article, though brief, is so full of truth, so replete with knowledge, written by one possessed of such an understanding mind and with such a full and complete grasp of the problems involved, that I want to direct it to the attention of my every colleague here in this House.

Mr. Speaker, we have so many members who have not had an opportunity of probing deeply into the question of the so-called civil-rights bill, that I am persuaded it would be helpful for all—and especially to all new Members—if they had an opportunity to read this editorial written by a great southerner.

Mr. Speaker, agreeable to that thought, I, therefore, ask the unanimous consent of this House to insert this editorial in the RECORD of our proceedings and as part of my remarks.

I present it together with another equally enlightening article written by the distinguished Mr. Davis Lee, the respected Negro publisher and associate editor of the Newark (N. J.) Telegram, and some excerpts from an article written by Mr. George S. Schuyler, associate editor of the Pittsburgh Courier, another of the large Negro newspapers in these United States.

I wish all would read what these distinguished savants say apropos of a highly controversial question which I fear will shortly be brought before this body for discussion and debate.

The articles referred to are as follows:

HOW IS SEGREGATION WORKING IN THE SOUTH?

The recent political campaign and President Truman's support of the so-called civil-rights proposals plus the fact that these bills will meet with strong opposition in the next Congress has focused the spotlight on the important question, How is segregation working in the South?

Your editor, who was born and has spent his entire life in Virginia, has observed the progress of both races under our State laws. Likewise, he has observed the progress in other States of the deep South. This writer, seeking first-hand information, recently visited North Carolina, South Carolina, Kentucky, Georgia, Alabama, Tennessee, Mississippi, and Louisiana, where he had an opportunity to study and observe existing conditions as well as the relationship between the two races.

We have never believed that any laws were perfect because they are laws but we feel that southern segregation laws, based on mutual understanding, provide the best possible approach toward the solution of the controversial race relationship.

In these days of abundant transportation, high wages, and full employment, it is self-evident that the majority of our American Negroes have chosen the South as a good place in which to live or 11,000,000 of the 14,000,000 in the United States would not reside here.

In each State we found the friendliest relationship between the two races. All busy, working together for their joint benefit and for the most part law abiding and contented.

In the cotton States, where the dollar goes further, we were astonished to find that a cotton picker was paid $4 per 100 pounds and that an expert could pick four to five hundred pounds per day. In most places the picking season lasts 6 months. In fact, during the picking season it is extremely difficult for others to obtain help because of the high earnings available in the fields.

Many of these Negro workers own their own homes, farms, profitable shops of all kinds, banks, newspapers, taxicab companies, as well as every conceivable kind of a business.

To top it all, we discovered the town of Mound Bayou, Miss., with a population of approximately 3,000 entirely colored, where

white people come to trade but it is said that the sun never sets on a white person in that community. This is truly segregation in reverse.

In New Orleans, and other large southern cities, there are numerous Negro night spots and clubs and we have yet to find the first white man who was ever entertained in any of them. We know of a prominent white theatrical agent who tried every means to obtain admission to the Negro clubs, but who was politely told "this is a Negroes' club, white folks are not admitted."

Many of the well-to-do Negro merchants will tell you that they prefer segregation and credit it largely for their success. They contend that if segregation were abolished that they would lose most of their trade to white competitors.

There are a few lower class whites, usually newcomers to that locality, who are antagonistic to the Negro and who say they should all be sent back to Africa. Some Negroes are irked by segregation but their main complaint seems to be leveled at the school system where they say the white children have the best of it but most of these freely admit that colored schools in the South have greatly improved during the past 10 years and are still improving.

Very few Negroes are disturbed by the poll tax and those who want to vote are able to do so without difficulty.

We did not find any Negroes who were afraid of lynching, in fact we could not find a single Negro who had ever seen a lynching, or had a friend or acquaintance lynched. All told us that they believed the police officers treated them fairly and that when there was trouble with the law it was invariably the fault of the violator.

In the light of our recent experience in the South, we sincerely wish that President Truman and the others who are urging the passage of the force bills which in our opinion would put an end to the progress being made between the races in the South—would make a personal survey on race relations in the Southern States. If the sponsors are sincere when they say that the purpose of these bills is to aid the Negro race, they should welcome the facts.

The December 1948 issue of the American magazine carries a lead story, which every American should read, written by a Negro executive, son of a slave, entitled "What America Means to Me."

The author, Charles C. Spaulding, is president of the $131,000,000 North Carolina Mutual Insurance Co. and is also the president of a bank which has $5,000,000 in resources.

In this article, he states in part:

"Some of the northern newspapers report only episodes of violence and bitterness of the South but the great news in the South today is that increasing number of men of good will of all complexions are working together amicably for the greater prosperity and well-being of all.

"They are successful in a spectacular way. Anyone who still thinks of people of my race as Uncle Remuses will be startled to learn that last year they had a total income of $10,000,000,000 which I will wager would rival the entire income of the people of any one of several countries in Europe today."

Elsewhere on this page we are reproducing two articles which were written by George Schuyler, associate editor of the Pittsburgh Courier, one of the largest Negro newspapers in the country, who visited the South to secure first-hand information on conditions pertaining to the races. We are also reproducing a recent editorial dealing with the racial problem by Editor Davis Lee, publisher of the Newark (N. J.) Telegram, another Negro publication with a large circulation.

We believe these articles are unbiased and ably present the viewpoint of the well-informed Negroes of good will of our Nation.

(EDITOR'S NOTE: The following article was written by Davis Lee, Negro publisher of the Newark (N. J.) Telegram, one of the large Negro publications in the United States.)

President Harry S. Truman returned to Washington this week from a much deserved vacation at Key West, Fla. However, during his southern sojourn, our Chief Executive held many conferences with important national figures, and during one of his confabs he announced that he intends to push his civil-rights program.

This causes one to question Mr. Truman's knowledge of the race situation in these United States. Again one wonders if the President hasn't misconstrued the victory which he received November 2. He says that his election was a mandate from the people to carry out the platform of the Democratic Party. Of course, every right-thinking person knows that Mr. Truman was elected because the Republican Party's record was so rotten that the masses feared another depression if Dewey had gotten in. Many southerners who opposed most of the party's platform voted for Mr. Truman because they felt that the Democratic Party would do more for the people—the common man.

One is inclined to wonder if the President is sincere in his declaration of intention, or is he vindictive or just plain bullheaded? If he is sincere then he should familiarize himself with the facts. He should read Joe Louis' life story which has been running in Life magazine.

Joe made a very significant statement which all advocates of civil rights should read. He declared that even though he was born in Alabama, he had never heard about segregation, discrimination, and Jim Crowism until his family moved to Detroit.

Does Mr. Truman and the advocates of civil rights know that millions of Negroes in the South are not affected by segregation and discrimination? Does he realize that by custom and choice the Negroes stay with their own and the whites do likewise? The southern white man has forced the southern Negro to do business with his own to the extent that in Georgia, Negroes own $61,000,000 worth of business. This is not true in any northern or eastern State.

Does Mr. Truman know that Negroes in 15 Southern States own and control more cash and real property than the Negroes in the rest of the Nation?

And despite this glowing picture of Negro success and achievement, the South has many shortcomings—it still perpetrates many injustices upon the Negro, but a Federal civil-rights law will not correct these evils and cure its racial ills.

The South is still the poorest section of our Nation, and it is only human that southern whites will provide better schools, hospitals, etc., for their own than for Negroes. After all, they carry the bulk of the tax load.

If Mr. Truman would foster a program of financial aid to the South like he has to Europe, and with no more strings attached, in a decade it would become a paradise, the land of milk and honey. Ever since the War Between the States the rest of the Nation has criticized, condemned, and taken unfair advantage of the South. Northern agitators who have never been south, and who know absolutely nothing about the fine race relations which exist between the two races, persist in spreading false propaganda.

Mr. Truman's civil-rights program calls for a Federal FEPC, antilynch law, and the repeal of the poll tax. No Federal law is necessary to force southern whites to employ Negroes. They employ more Negroes than are employed by northern whites. In fact you can't find one creditable business in the South which does not employ Negroes.

Last week I was in North and South Caroline where I saw thousands of buildings going up and I saw more Negro carpenters on the buildings than whites. This is true throughout the South, but it is not true in the North. It is hard for a Negro to get a job above that of a hod carrier in these parts.

Last week in the Tidewater area of Virginia I saw more Negroes at work on the ferries than whites. The ferries from Cape Charles to Little Creek are without question the largest in the world, and the entire stewards department is manned by Negroes. These Negroes are so completely in charge that they decide what the white people must eat.

A few weeks ago when I was in Mississippi several white businessmen told me that they employ more Negroes than whites. Then what is the purpose of Mr. Truman's FEPC bill? Such a bill would no doubt anger the South to such an extent that millions of Negroes now employed would be thrown out of work.

As for the antilynch bill, it appears that we are getting ready to lock the barn door after the horse has been stolen. There are no lynchings now, and why pass a law to antagonize a people who seem to have the situation well in hand?

I don't believe that Mr. Truman is more interested in the repeal of the poll tax than the Governors and many of the Representatives of the poll tax States. Practically every newspaper in the South is for repeal of the poll tax, but all resent outside interference and northern pressure. The poll tax in the several Southern States does not deny unqualified Negroes the use of the ballot any more than it does whites who cannot qualify. Even southerners feel that while many ignorant Negroes and whites cannot use the franchise intelligently, that the law nevertheless should be repealed. And it will be repealed, but not by force.

Before attempting to force through a Federal civil rights law to change the customs of the South, Mr. Truman should straighten out the liberal North. If he wants to end segregation and discrimination, why not start with the YMCA and YWCA and the Christian church?

Notre Dame is a religious university, but it will not accept Negro students. There are few summer resorts in the East or North that do not advertise that their places are restricted, which means no Jews are allowed.

Does Mr. Truman know that New Jersey has an FEPC and a civil rights law, and that both are a joke. Hundreds of big companies still refuse to employ Negroes; that no white hotels in south Jersey will even permit a Negro to drink a Coca-Cola much less spend the night.

Not long ago the New Jersey State Elks held their annual convention in Salem, N. J., and every white restaurant in town closed up during the 3-day confab to keep from serving Negroes.

Someone should remind our Chief Executive of the existence of our Constitution and the Bill of Rights. The complete enforcement of existing laws will give every one of us, little and big, full protection of our rights as American citizens.

If our President and the advocates of civil rights are in favor of changing the customs of this Nation, they will have to use a different approach. Congress can't do it. However, a well rounded program of education will remove all racial barriers in about 200 years from now.

(EDITOR'S NOTE.—The following are excerpts from an article written by Associate Editor George S. Schuyler, of the Pittsburgh Courier, one of the largest Negro newspapers in the United States:)

Now that we are through with the election, I think we should begin to give more attention to the South and the changes taking place there which are all for the better from the viewpoint of the nearly 11,000,000 Negroes who call it home. We should consider what

are the opportunities for our people there and how they can be utilized to the best advantage, since over three-quarters of the Negroes live there and, from all appearances, always will.

Certainly our people are not taking advantage of the available opportunities in that area where the majority of them elect to live. For all of its faults, it is a good country in which to live, and is getting better. After a recent turn through 14 States of the South (an area with which I have been familiar since 1926) it strikes me that, as elsewhere, the biggest handicap Negroes are encountering is themselves.

Most of what is said and written about the South is untrue. Today it is not a place of terror and persecution, nor has it been in many decades. I am always amused when friends express fear and sympathy because I am going South, assuming wrongly that I am endangering my life. Actually I think no more of visiting the heart of Mississippi or Texas or South Carolina than I do about visiting Minnesota, Maine, or New Mexico.

Contrasted with the rock-ribbed prejudices and persecutions in comparable areas elsewhere, the tolerance on display in the South today is little short of amazing. Moreover, most southern white people of prominence in every State are apologetic about these shortcomings and the less timid are sincerely trying to better conditions. For this they should get far more credit than professional propagandists are wont to give them.

There is little or no evidence that the Negroes anywhere in the South are terrorized and none that I have talked with say so. They don't like to be barred from public places or public activities, and there is deep resentment against color discrimination. But they are not hopeless and despairing, any more than the Negroes in most of the areas outside the South who are subjected to racial proscription. Southern schools for Negroes are not up to the local white standards and certainly not up to the national standards, but any honest observer who has visited Dixie periodically can see and must admit that there have been vast improvements in physical plants and teachers' quality and pay. Swarms of Negroes are graduating from high schools and colleges.

It is my sincere opinion that the more widely southern Negroes apply themselves to these economic fundamentals and become more firmly rooted in the southern economy the easier will the sociopolitical problems be solved. I find no unanimity among southern whites on what should be done about these problems. In some areas I do not think it would be difficult even to get repeals of the Jim Crow laws regarding transportation—if the campaign were intelligently directed by Negroes in the areas concerned, with outside Negroes and whites staying far in the background.

Other (and most) areas would be tougher to crack, but it is sounder strategy to work on the more tolerant areas first and win over some than to antagonize the whole South by loud, mud-slinging campaigns directed from the East and North which accomplish nothing.

United Farmers of America

EXTENSION OF REMARKS
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 31, 1949

Mr. AUGUST H. ANDRESEN. Mr. Speaker, Congress will shortly give consideration to the matter of enacting a long-range farm program for American agriculture. This legislation will be of vital importance to the future economy of our country, and therefore, we must be placed in a position to secure the best available thought as to the needs and desires of American farmers.

A few years ago a group of farmers in the Middle West organized the United Farmers of America. One of the sponsors of the organization was Martin B. Tongen, of Zumbrota, Minn., now president of the organization in my home State. Mr. Tongen is a dirt farmer. He knows what it means to till the soil and produce the food.

The United Farmers of Minnesota held its annual meeting last November, and for the benefit of my colleagues in both House and Senate I am including, as a part of these remarks, the address made by Mr. Tongen at the annual meeting. I am convinced that the members of the Committee on Agriculture and other Members of the House will welcome the opportunity of reading Mr. Tongen's speech, and also of noting with particular care the resolutions passed at the annual meeting.

ADDRESS OF MARTIN B. TONGEN, PRESIDENT, UNITED FARMERS OF MINNESOTA, INC., AT ZUMBROTA, MINN.

I feel honored in being the first State president to welcome you to a Minnesota State meeting of the United Farmers Organization.

Our Goodhue County unit being the largest local in this State, decided at our last annual meeting to become incorporated as the United Farmers of Minnesota. A State constitution was drawn up by your board of directors who were authorized to do this work. This constitution was drawn up in accordance with the national constitution adopted at our first annual meeting in January 1947. The constitution and bylaws were left with Attorney Melroy Rockne, who began the procedure of setting up our articles of incorporation and was to procure our incorporation papers for the organization.

There are few, if any, of us who realize the importance and influence of our organization and the importance of the words spoken and the ideas brought forth here today and the resolutions to be adopted.

There are a great many true friends of the farmers in Congress and in our legislature. These men are looking to organizations such as ours, because ideas born here and action taken here truly reflect the thinking and wishes of the grass-roots foundation of our country from the great dirt farmer of America.

As national vice president of the United Farmers of America for 1948, I have been surprised again and again by the importance of this organization, although we are comparatively small. We are considered as truly representative of the farmer, since we are a nonprofit, nonpolitical organization with no class, race, or religious prejudice, and probably most important—no commercial activities or entanglements.

I have received letters from individuals and organizations in several States who are interested and in favor of our organizations. For example, I will read you a letter from E. E. Gelhaus, Webster, S. Dak.

Before I read the letter I want to read a write-up from the Minneapolis Tribune that Mr. Gelhaus wrote:

"FARMER WON'T ACCEPT CUT ON HIS PRODUCTS FIRST

"Your editorial of Sunday, August 29, dealing with agricultural support is very convincing on one point, namely, the Minneapolis Tribune or Star hasn't changed a bit since World War I, and even though it is entirely dependent upon its agricultural environment it continues to select agriculture as the one which it believes can offer least resistance and upon whom it may lay the burden of feeding and clothing a nation at a price to the farmer far below cost of production and below the parity production and below cost of production and below the parity of price paid other industries.

"In other words you still think you can find someone so dumb, ignorant, and disorganized as to be willing to take the short end in the economic struggle and you think agriculture should be the victim so that all other factions may be appeased.

"Farmers assure the Nation full production at 90 percent parity (the equivalent of 10 percent less than other industry) but you suggest it should be lowered at once to a possible 60 percent.

"For your information, farmers will yield on prices only when others do likewise. Your paper quotes its subscription 40 cents a week, daily and Sunday. You may cut this 40 percent and then you may come back and talk to us.

"Yes, we know print paper was raised three times in less than a year. So have there been continuous price raises on the items a farmer must purchase and use in production of a crop; you are no exception.

"And since we live in the same world it would be senseless and needless for you to say 'you don't have to buy a Tribune if you don't want to.' We might answer you, 'you don't need to eat our bread or meat (until you understand hunger)' if that is what you have in mind.

"My observation causes me to say that it would be very wise for some people to quickly learn that it is going to be dangerous to hit the farmer below the belt a second time and that goes for any party or any group.

"ERNEST E. GELHAUS,
"Webster, S. Dak."

I wrote Mr. Gelhaus and complimented him on this write-up, and he answered me with the following letter:

SEPTEMBER 17, 1948.

DEAR MR. TONGEN: Please accept my thanks for your kind letter of September 13. Naturally I do like to learn how others think and your applause was much appreciated. You guessed right. My son and I farm about 1,000 acres of South Dakota land. We grow grains, flax, wheat, barley, oats, corn, etc., hogs, cattle, beef and dairy, so we do know a bit about farming. On top of that I am chairman of Day County AAA and have been for about 15 years. Personally know every farmer in my country, some 2,500. I belong to numerous farm organizations, Farm Bureau and Farmers Union, but often disagree with both. I'm an independent Republican, a Methodist, and a Gideon, and my hobby is fighting the wrong and supporting what is right, let the chips fall where they may. Also have appeared at numerous Senate and House hearings. Most of them do as they please after the hearings. My opinion of the Aiken bill is that its a left-handed way of making certain that the farmer is supported at no more than 60 percent of parity when he needs it most. If there are only 100 apples for a crowd of 100 men you don't need supports, it will take care of itself; if there are only 90 apples for the same crowd there is a grand scramble for apples and its resultant price upswing, but when there are 125 apples, that's when we need the support.

From what you tell me your gang seems to see the picture as I do; however, I don't know how I can intelligently belong to it.

I'm going to send you copies of advertisements that I've been running the past 6 weeks. Educating the public and putting would-be candidates on the spot so that if they open their mouths about agriculture they'd better be right.

Thanking you sincerely.

ERNEST E. GELHAUS.

Here is another letter I received through the organization of the State commissioners of agriculture of which R. A. Trovalten, our commissioner of agriculture in this State, is a member.

Mr. Richard G. Hedges, chairman of the agriculture committee of the Washington State Grange is a column writer for the Grange News, published in Seattle, Wash.

I am going to reproduce here Mr. Hodge's column in said News of March 20 as a worthwhile illustration of how he handles his subject matters; it follows:

"WORTHY PATRONS: I wish it were possible for me to impress upon the farmers the important position they hold in our national economy. It was the farmers of America who wrote the Constitution of the United States, of which we are all so proud. If they are capable of such an accomplishment, surely they should be able to manage their own affairs without too much governmental interference.

"Without a stable and prosperous American Agriculture our Nation cannot prosper. If agricultural income drops, our national income goes down proportionately. Past records prove without a doubt that the direct ratio of farm income to national income is 1 to 7. It also proves that factory pay roll increases or lowers in almost exact proportion to farm income.

"The reason for this is that the factory pay roll is dependent upon the marketing and processing of agricultural production, and agriculture still produces 65 percent of the value of all raw materials. Instead of trying to solve our problems from the top down, we should start at the bottom or foundation (which is agriculture) and work up. This would permit our natural economic laws to function. A depression in the United States is nothing more than too low a price to agriculture, which in turn depresses or lowers the income of all other groups.

"Farm income in 1932 amounted to $5,300,000,000 which was a drop of $6,000,000,000 below the 1928 income. Factory pay roll dropped over $5,000,000,000 during the same period and national income dropped just seven times as much as the farm income, or $42,000,000,000.

"National income and factory pay rolls always drop about 6 months after farm income drops, which shows how important it is to industry and labor that farm income should never fall below the average cost of production. Artificial Government price control is not the answer; the consumer must pay the price for the commodity at the market place.

"With an abundant production of farm commodities at prices which are fair to both producer and consumer (average cost of production) as a floor price, we cannot have a depression. The farmers have a right, and should exert that right if they want national prosperity, to establish a floor price for their production which is sold on the domestic market and based upon the average cost. They should sell their surplus on the world markets at world prices, which is all the world markets can afford to pay.

"With a stop-loss price on the domestic portion of our production and an increase of production at that level, our national prosperity would be assured."

I wish to say that the Commissioners of Agriculture with headquarters in Washington, D. C., have been very helpful to our organization in supplying us with information about national affairs, and such men as Commissioner Tom Linder, of Georgia, and Commissioner MacDonald, of Texas, have put up such a good fight for the cause of the farmer that they have been unjustly attacked by our Government because of pressure exerted on some Government officials by international traders who have a great influence on our Government policies.

William L. Clayton, former Under Secretary of State and now adviser to Secretary of State Marshall, and former Secretary of Agriculture Clinton Anderson, former stockholders and directors of the Anderson, Clayton & Co., have had and still have a great personal interest in international trading. I wish to read an item from the Washington Post dated October 22, 1948:

"CLAYTON FIRM TOPS ALL IN ECA TRANSACTIONS

"(By the United Press)

"ECA disclosed yesterday that the cotton firm of Anderson, Clayton & Co. sold more than $28,000,000 worth of recovery cotton to China and France during August.

"The firm engaged in 360 deals for cottonseed cake and Brazilian peanut cake to lead all companies in the number of transactions financed by ECA during August.

"William L. Clayton, former Under Secretary of State and now an adviser to Secretary of State Marshall, once was board chairman of the company, the largest cotton merchants' outfit in the country.

"He reiterated that his present position with the firm is strictly that of a stockholder. He repeated that he resigned as board chairman in August 1940, when he first went to work for the State Department.

"Clayton disclosed he is leaving the Department in a few days to go back to the company. He added, however that he did not know whether he would resume his former post of board chairman.

"The Clayton family reportedly owns more than 40 percent of the stock of the company.

"ECA's statement listed some 350 companies which have received ERP business. Most of them were American firms but a number were foreign competitors."

Will Clayton also represented this country at the International Trade Organization meeting at Geneva, Switzerland. It is plain to see he has a personal interest in these international agreements such as the reciprocal trade agreement, the European recovery plan, and the international wheat agreement. We have other internationalists with great influence in Congress and our State Department who also would like to reduce our farm prices to a world level and also our standard of living to a world standard.

Some of the principal accomplishments of our United Farmers Organization, State and National, were aimed squarely against these traders.

1. We had a hand in influencing Congress to pass a law limiting the power of the President in making treaties, which power he received during wartime under the reciprocal trade agreements. Under the new law, he can only make a treaty for 1 year's duration and that is subject to the Senate's approval. Formerly he had power to make a treaty for a 3-year period.

By passing a resolution at the national convention at Oelwein, Iowa, last December from each organized State we accomplished our purpose as I just explained.

2. We were the major influence in convincing Congress to reject the international wheat agreement. The information concerning this you can read on the paper we will pass out to you.

Here we find the three largest farm organizations testifying in favor of the international wheat agreement. They were the Farmers Union, the Farm Bureau, and the National Grange.

But our comparatively small organization sent five men to Washington to testify against this proposed treaty, and consequently the treaty was rejected because it was found the farmers were not in favor of this agreement.

Results such as this give us faith in our organization and its members. However, it is understood this matter will come up again before the next Congress, and probably we will have the fight all over again.

Here are some proposed resolutions that are to be acted upon at this meeting. I think it best to act on them again, the afternoon session also to pass on them before they are adopted.

"PROPOSED RESOLUTIONS FOR MINNESOTA UNITED FARMERS FIRST STATE CONVENTION

"To the Congress of the United States and the State Department we submit the following resolutions adopted at the first State convention of the United Farmers of Minnesota held at Wanamingo, Goodhue County, Minn., November 13, 1948.

"We resolve that—

"1. The Department of Agriculture be made entirely independent from any single farm organization both through its Extension Bureau and through its Government policies.

"2. The cost of producing any agricultural product must be the primary basis for determining the support price for that product and that a cost of production floor price for agricultural products will support the national welfare, by encouraging full production, and by providing a demand for this full production.

"3. Family labor be given the same consideration as hired labor in determining the cost of labor under any price support program for agricultural products, and that farm labor shall have a minimum weekly wage scale equal to that of any other worker's minimum-wage scale for productive labor.

"This action will favor the family-sized farm in opposition to the corporation farm where hired help is recognized.

"4. Our Government must reject the proposed international wheat agreement, since it will force prices far below cost of production and greatly lower the standard of living in this country.

"5. The Federal tax on oleomargarine, colored to imitate butter, be continued at the present rate.

"6. A sufficiently high tariff be levied on competing imported agricultural products to raise their price to a level equal to the cost of production floor price of agricultural products raised in this country, and that this extra revenue be used to help support the cost of production floor price here in this country. This action will help to eliminate surpluses caused by importing foreign raised agricultural products at lower prices than they can be raised here.

"7. Purchase must stop of agricultural products raised in foreign countries to be given away under the European recovery plan, when the same products constitute a surplus in our country.

"8. The proposed plan of socialized medicine is undemocratic, unworkable, and will continue to increase regimentation in this country.

"9. The Aiken long-range farm program be repealed since it makes certain that the farmer's prices are supported at no more than 60 percent of parity when he needs it the most. Surpluses are not made by too great production but by Government action."

(All unanimously adopted.)

Hall Survey Shows Lack of Enthusiasm for Farm Price Supports When Our Dairymen Are Left Out in the Cold

EXTENSION OF REMARKS

OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, as I said previously in discussing the Hall survey of New York's Thirty-seventh Congressional District,

an honest poll is the only kind to conduct. What I want is the truth in finding out how people feel. What good would anything less be?

During the Eightieth Congress, I was set upon by vociferous newspapers because I voted for price supports for our farmers. They took up the cudgel for the consuming public in the Triple Cities and attempted to put me in the middle.

At the time it was well known that the policy of the country was to encourage excess production to supply Europe with all the food and necessities of life for which her population was so sorely pressed.

Knowing that our farmers could not possibly meet these accelerated demands without the utmost of encouragement from the Government, I went along with the price-support program. I did so even in the face of condemnation from the consumers who were told that the price-support program was the main reason for high food prices.

Today, I am submitting the results of the Hall survey for the third question I asked the voters of my district, namely, "Do you want me to vote for or against price support for the farmers?"

Percentages

	For	Against
Triple Cities area	44.8	55.2
Rural	56.5	43.5
Broome	47.3	52.7
City, Norwich	49.6	50.4
Rural	54.6	45.4
Chenango	52.6	47.4
City, Oneida and Canastota	29.9	70.1
Rural	67.6	32.4
Madison	52.4	47.6
Over-all district	48.5	51.5

You will be interested in learning that opinions seem pretty evenly divided in both the city and rural sections. It is obvious that no hard and fast trend can be discerned from these percentages. To me the answer is not clear-cut by any means. The task, therefore, which remains for me is to sift the pros and cons, to draw conclusions that will serve the best interest of all the people.

When I voted for price supports last year, I was accused of being subservient to the midwest and western farm bloc, and not representing northeastern agriculture at all. Be that as it may, there was little incentive to subscribe to the price-support program so far as my own dairymen went. I never was enthusiastic about it on that score.

Whether the bureaucrats here in Washington know it or not, our dairy people are being threatened by the dairy products of the Middle West. I have talked with several men close to our Northeast farmers who predict a considerable falling off of our milk prices in the near future.

If that prediction should come true, it can only mean one thing. Our dairy industry in the Northeast is going to be seriously jeopardized. I cannot stand idly by if such is to be the case.

The big cities of America cannot exist without our dairy farmers. Their populations must be sustained by the dairy industry. Nor can the food program under the Marshall plan be carried out on a full scale. There can be no Army or Navy either without the products of the cow to supply our armed forces.

If prices of milk and other dairy items which are today keeping the farmer in business continue to go down, dairymen ought to be included in any new farm-support-price program. Why should the most important part of agriculture be excluded from participation in something as basic and fundamental as an over-all system of paying support prices, if such is the policy of the land?

In view of the Hall survey which shows a slight margin in favor of opponents to the price-support program, I conclude there is no set issue as yet crystallized in our section on this subject. I am, therefore, all the more free to vote as I please.

My inclination at this time is to vote against the whole price-support program. Unless our Northeast dairy people are allowed to participate in such a plan in the event a possible collapse of eastern dairy prices may be in the offing, I refuse to go along.

My position, in this event, would be no different than on prior occasions. I never could see where the big butter and egg men of the West ever realized the dairymen in up-State New York existed. I have yet to be shown how we have been helped by any of the grandiose schemes the Department of Agriculture hatches up for agriculture in general.

Ours are the family size dairy farms and we have to compete against mass production, giant farm combines, and heavy farm machinery. My attitude toward the whole agricultural picture is wait and see what they offer the Northeast. Call this sectionalism if you like, but I am down here in Congress to fight for the fellows who support me and who need assistance if winter comes.

Address of Lt. Gen. R. A. Wheeler, Chief of Engineers, at Thirtieth Annual Meeting, Mississippi Valley Association, February 7, 1949

EXTENSION OF REMARKS

OF

HON. WILLIAM M. WHITTINGTON

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. WHITTINGTON. Mr. Speaker, under leave to extend my remarks, I include an address delivered by Lt. Gen. R. A. Wheeler, Chief of Engineers, before the thirtieth annual meeting of the Mississippi Valley Association, St. Louis, Mo., February 7, 1949, to wit:

During my tour of duty as Chief of Engineers, it has been my great pleasure—and privilege—to address each annual convention of the Mississippi Valley Association. However, with my term of office now rapidly drawing to a close, today probably will be my last official appearance before you. It is an appropriate occasion, therefore, to glance back upon the road we have traveled—to survey the progress we are making today—and to renew our faith and confidence in the principles by which we work.

Much could be said of the aspirations, the struggles, and achievements we have experienced in the past. You have worked tirelessly for a greater development, conservation, and utilization of the water resources of this great valley and of the Nation. Yet it is the present that holds the tangibles which confront us today. Consequently, we should—we must—be concerned primarily with what is happening today, and with what is likely to be tomorrow.

When I first had the pleasure of addressing the Mississippi Valley Association as Chief of Engineers—in March 1946—the demobilization of our wartime military forces was rapidly being completed. We were taking a firm grip on the reins of normal peacetime living—reins which we had so quickly and so eagerly picked up following the successful conclusion of our part in the biggest and most devastating of all wars. We had hoped—and sincerely we expected—there would be a long, sunny period of peace, not only in our own land but throughout the world. Today, however, our hope has been overshadowed by unexpected difficulties—problems have arisen from the clash of world attitudes and ideologies. Our national safety has dictated a quick rebuilding of a part of our former combat strength, so that we, as a nation, will be prepared adequately to defend this country and preserve our way of life.

Yet, in the realm of civil works—works in which you are particularly interested—gratifying progress has been achieved. The development of our rivers and other water resources in the interests of navigation and allied benefits—and in the provision of greater flood control for the people of America—have been effectively resumed. Each succeeding postwar year has witnessed an acceleration of these programs.

Recently, announcement was made of the funds recommended to the Congress by the President for fiscal year 1950. I am sure that you are as pleased as I am with the requested increase in appropriations—though the current funds have been an all-time high. If the Congress should pass the 1950 budget as requested by the President, the most important advance in flood control and river and harbor works yet achieved will be made during the 1950 fiscal year.

For the coming fiscal year, the President has requested $734,000,000, to be expended on river and harbor and flood-control work by the Corps of Engineers. This figure compares favorably with current year appropriations of $580,000,000. A total of $430,000,000 is asked for general flood-control work. An additional $70,000,000 is requested for the lower Mississippi River and tributaries flood-control project. A total of $229,000,000 is asked for river and harbor work. Of the over-all total of $734,000,000, approximately $620,000,000 would be for new construction—with practically all of it for projects already under way. About $280,000,000 of this new construction money would be earmarked for the Mississippi River Basin, a proportion not out of line, due to the basin's vast geographic area and pressing needs.

I will not take your time to recite more civil-works figures in the 1950 budget now before the Congress. Any particular item you may be interested in individually may be readily obtained from the engineer officers attending this convention, or from my office. I will, however, sketch briefly some of the projects that are now under way, or which will be made possible during the next fiscal year, provided funds are made available.

On the lower Mississippi River—where no major flood has blighted the valley since initiation of the present Federal project in 1928—further important work is scheduled, including the armoring of main-stem banks to hold the unruly waters in their place. Progress in flood control also will be made

within the alluvial valley's tributary side basins.

On the upper Mississippi, substantial work will be possible on such projects as the Chain of Rocks Canal, which is located almost directly across the river from St. Louis. Construction is already well under way on this splendid engineering solution for a channel condition that has interfered to varying degrees with traffijc on the Mississippi from the earliest days of navigation. The project is scheduled to be pushed vigorously in 1950. It includes the first twelve-hundred-foot lock for the Mississippi River—a modern length lock which will permit passage without break-up of the longest tows now in service.

In the Missouri River Valley, the engineers are well along in the third year of construction on multiple-purpose projects for flood control, irrigation, navigation, hydroelectric development, and other desired public benefits. Further acceleration of work is planned for the construction of the key initial units in the basin-wide comprehensive plan. One of these units—Garrison Reservoir—will continue as our leading individual flood-control reservior, in point of funds expended in 1 year, if the 1950 appropriation is in line with the requested amount. Expenditures at Fort Randall Reservoir will be only slightly less.

In the Ohio River Basin, significant work is planned regarding the replacement of obsolete structures in the canalized waterways. We propose to continue—and expand—construction of the new locks on the Monongahela River at Pittsburgh and Morgantown. We also propose to initiate construction on the Cheatham lock and dam, on the Cumberland River near Nashville, Tenn. This project will replace three locks almost 50 years old.

In addition to actual construction, considerable advance planning is also underway on projects authorized for the Mississippi River Basin. This planning includes such important projects as the comprehensive development of the Arkansas River Basin. Planning is also being continued on reservoir units of the Red River below Denison Dam project.

Our completed reports on proposed new projects includes Mississippi River Basin improvements that have received widespread attention. One such proposed improvement is the construction of a tidewater seaway from the Gulf of Mexico to New Orleans.

Another investigation recently completed involves flood control, drainage, and water supply for the rice-producing Bayou Meto-Grand Prairie region in Arkansas. This proposed improvement contemplates using the augmented flow of the White River—made possible by authorized flood-control reservoirs on that stream—to replenish the diminishing water supplies of a unique agricultural region. It is an excellent example of flood control, drainage, and water supply improvements being combined to effect the full conservation and development of the water resources of an area. My report on this proposed project has been completed, and is now before the Bureau of the Budget, prior to going to Congress.

Of the many investigations which the Corps of Engineers is currently undertaking in the Mississippi River Basin, there is wide interest in the proposed Lake Erie and Ohio River Canal, and the proposed improved Illinois and Mississippi Canal. Both of these important projects have been recommended by our division engineers, and are now before the Board of Engineers for Rivers and Harbors.

Progress continues to be made also in bringing to the service of the Nation the added, or secondary, benefits that result from our multiple-purpose projects. Hydroelectric power is perhaps the most important incidental benefit from such projects. In December last, the Dale Hollow project in the Cumberland River Basin began to develop and deliver hydroelectric power. It became the fifth of our multiple-purpose projects with electric power units to reach the production stage. And in the 1950 budget, special consideration has been given to those multiple-purpose projects whose benefits include power production for areas now deficient in power facilities.

From what I have said, you will understand, not only that we are making progress, but that we also may find satisfaction in the realization that our projects are steadily being completed—are bringing their benefits to the people of this generation, as well as to those who will come after us. With the funds requested for 1950, the Engineers will be able to complete 59 flood-control projects. Moreover, an analysis of the 157 general flood-control projects in the 1950 budget will show that the benefits to the Nation during the projects' assumed life will exceed their cost by more than $5,000,000,000. That is a good investment.

Navigation, too, is benefiting from the steady improvement being brought to our waterways. In the calendar year 1947 the total water-borne commerce of the United States reached an all-time record of 760,000,000 tons. This is an increase of more than 100,000,000 tons above the previous high, reached in 1941. And advance figures indicate that 1948 surpassed even 1947's record total. On the inland waterways of the United States—excluding the Great Lakes—the 1947 traffic aggregated 34,000,000,000 ton-miles—also a new all-time record. Of this record total, the Mississippi River system provided the major share, contributing 23,000,000,000 ton-miles. Volume on the Great Lakes in 1947 totaled 112,000,000,000 ton-miles—just a share under the all-time high recorded in 1941.

These are encouraging figures. Moreover, additional statistics—which I shall not recite—are indicative of the fruitful benefits resulting from other phases of our comprehensive programs, both here in the Mississippi River Basin and throughout the Nation. It should be remembered that in all our planning there is sought a balanced utilization of all the benefits and resources within a river's basin. Under this type of full utilization individual uses often can be achieved at far less cost than if each purpose were developed independently.

It is justly the province of Congress to make all decisions regarding the agencies, the methods, and procedures to be used and followed in developing our great river basins. However, it is my considered opinion that if full consideration is given to the democratic procedures and basin-wide methods, now being followed, there shall be no hasty, future discarding of a system which has served us exceedingly well in the past and which is continuing to provide rich benefits today.

I should like to underline the reference to democratic procedures. You are all well versed in the Corps of Engineers' present—and historical—policy of working closely with the people in the initiation, investigation, and construction of your Federal Government's projects for navigation, flood-control, and allied purposes. But let me remind you of the democratic method which we continue to follow in the working out of our major basin-wide plans.

An example is the Missouri River Basin, for which Congress has authorized a comprehensive plan of development. The plan includes flood control, navigation, drainage, irrigation, hydroelectric power, soil conservation, improved land-use, forestry, recreation, fish and wildlife, industrial expansion, public health, and other conservation and development measures. To coordinate the work of the various agencies involved in the plan of development, the Missouri Basin Interagency Committee was established. It is composed of five Governors and five Federal representatives from the Departments of Army, Agriculture, Interior, and Commerce, and from the Federal Power Commission.

Through this interagency committee, which meets once a month, the 10 States included in the Missouri River Basin and the Federal agencies involved have demonstrated that real cooperation can be achieved in the development of the resources of a great region. These problems of conserving our natural resources are being solved. The physical structures needed are being brought into existence by agencies whose superior engineering ability, efficient methods, and economy of operation have been proved over many years. Differences and conflicting interests are being resolved in a democratic manner. There is no domination by any one Federal or State agency, or a combination of agencies. There never has been, and—if we are permitted to continue our present cooperative procedure—I am confident there never will be, any domination by special interests.

Such interagency committees are operating in other major basins, and they can be established in still other basins when Congress so decrees. For the development work must—and will—continue. It must go on to help in the maintenance and progressive development of our harbors and navigable waterways, so that these arteries of commerce and sinews of defense may be of maximum value to the Nation. It is needed to help save the homes and property of our great valley areas from destructive floods. It is required to provide incentives for new industries to spring up, and for established industries to continue and to expand. It is urgently needed to increase the Nation's available supply of power for industry, and for lighting the homes of our people in every section of the land. It is needed to help maintain our tremendous agricultural production and even extend it further. It is essential, if we are to keep America strong and invincible.

This is an arresting responsibility. To meet this responsibility adequately, the cooperation of every Government agency, every association such as your own, and every citizen is needed. A method of solving basin-wide water-resources problems is already in use. Its soundness has been proven by many years of successful application. Accordingly, I believe the proper course of action is clearly indicated. Let us employ the lessons of the past in the solution of the problems of the present and of the future. Properly coordinated under the over-all authorization of the Congress of the United States, the agencies of Federal, State, and local governments can continue to provide the best engineering solutions for our water-resource problems in the future, with ever-increasing success.

I have referred to the great need of cooperation on the part of every citizen in the successful continuation of our river basins development and improvement. Particularly does this great program need the active—working—cooperation of each member of associations and other public-spirited groups, such as the Mississippi Valley Association. It is not enough to lend one's spirit, and one's moral support—though I do not undervalue this fine type of support—to such work. But it is the responsibility, and duty, of each member to express his will actively, day by day. And it is this thought, perhaps more than any other, that I should like to leave with you: The development of our rivers and harbors and of our national water resources is an individual responsibility of each of us, as citizens of a Nation whose established procedures are today the world's outstanding example of a free people living, working, and progressing together.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. DEAN P. TAYLOR
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. TAYLOR. Mr. Speaker, behind the iron curtain religion is vigorously persecuted because religion is the strongest bulwark for resistance to tyranny. To destroy religion, therefore, is the primary objective of the Communists.

In Hungary we observe concrete evidence of this evil intent in the persecution of Josef Cardinal Mindszenty. The injustices which he suffered should serve to put the world on notice that more of such dastardly procedure will follow unless we take stern steps now to stop such practices.

We are the most representative legislative body in the entire world. It follows, therefore, that we can be an effective instrument to combat the engulfment of justice.

The Cardinal Mindszenty incident is a matter of international concern, and should be promptly dealt with by the United Nations.

I believe that body, and indeed the whole world, should know the attitude of Congress on this very serious matter. Therefore, I have today introduced a resolution which, if adopted, would in understandable terms make known our unalterable position wherever and whenever the rights of man are violated.

Mindszenty's Trial

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial entitled "Mindszenty's Trial," which appeared in the Manchester Evening Leader, Monday, February 7, 1949. The Manchester Evening Leader is published in Manchester, N. H.

The editorial follows:

MINDSZENTY'S TRIAL

In the trial of Cardinal Mindszenty, Catholic primate of Hungary, the world has another opportunity to examine the quality of Communist justice. The Catholic leader is charged with plotting against the present Red regime.

That any religious person should be opposed to the Communist policies is scarcely surprising. It would have been far more startling—and shocking—if any such spokesman favored an administration that by its very nature is hostile to religion and degrading to the dignity of man.

Cardinal Mindszenty is claimed to have confessed, because he acknowledged discussing the possibility that a new regime might emerge in Hungary should a war between Russia and the United States ever take place. If that is a crime, then even the rulers of the Kremlin must be guilty, for beyond any doubt they must have had occasion to reflect similarly.

Another terrible act admitted was the cardinal's attempt to influence the 1947 general elections in Hungary. The Communists' view that such expression is crime convicts them, not the prelate, of political sabotage. They are, in effect, declaring openly that political freedom is a farce, that under their rule Hungarians may vote only the Communist ticket—even as the tyrannized subjects of Hitler were allowed only to vote "Ja" to Nazi proposals.

One of Cardinal Mindszenty's horrible faults was the desire to flee Hungary. Most of his fellow-countrymen will understand exactly how he felt.

No liberty-loving man will be critical of another who is anxious to trade the mental and spiritual enslavement of communism for a new land where he can be free to think and vote and worship, accountable only to his own conscience.

This trial contrasted with that of the Communists in New York is a striking commentary on the difference between justice as observed in a dictatorship and in a democracy. Here, they are granted a fair trial by jury, are allowed their own attorneys, and are given every protection of the law. Such a judicial philosophy is nearly incomprehensible to Communists.

In Hungary, Cardinal Mindszenty is accused of resisting a system which devours the independence of its citizens upon the greedy altar of the state. In the United States, the Communists are on trial for seeking to destroy a form of government which is dedicated to the preservation of the sanctity of the individual.

In both cases, the fundamental issue is between despotism and humanity. In one instance, the Communists are the accusers; in the other, the accused—but always they are on the side of the forces trying to destroy man's progress on the long road to civilization.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the Cleveland News of February 8, 1949, entitled "Soviet Hand, Like a Shadow, Moves To Crush a Brave Resistant":

SOVIET HAND, LIKE A SHADOW, MOVES TO CRUSH A BRAVE RESISTANT

The so-called trial at Budapest of Cardinal Mindszenty draws to the tragic farce of an outcome which was predicted for it when the cardinal was arrested.

We say farce because the forms of free trial in Hungary under its Red administration are postured and mocked. No jury weighs the evidence. No evidence is introduced except weird documents and hearsay witness.

Back of the grisly pageantry in the courtroom remains a stark suspicion of drug injections inside prison cells, of exquisite twentieth century physical torture against which human flesh has no recourse. That the cardinal, worn and despairing, who took the witness box was a different individual than the ruling prelate of a once great Catholic dominion can be doubted by none who have seen his courtroom photographs or read his minor-key words to his implacable judges.

The novels of ex-Communist Arthur Koestler serve as a key to what may have been the cardinal's imprisoned fate.

The Red court was unwilling to admit objective reporters or correspondents to the scene of the grim farce. Only registered Hungarian journalists—which is to say, reporters licensed by the Red regime—were allowed to send news of the proceedings to the world. No observers were permitted to be on hand who knew anything of the tradition and the theory of fair trial by courts.

And when the rest of the world raised a question as to the impartiality and dignity of the trial, the controlled Red press and politicians burst into almost an obscene reply that gave away the hysteria and torment of the occasion.

As far as trustworthy fact can be adduced, Cardinal Mindszenty was tried on a charge of treason to Hungary, and a death penalty demanded for him, on the basis of his and others' dealing in other than Hungarian currency, for the possible protection of the church's establishment in that forlorn land.

In any civilized land, courts might have tried him for black market dealings, not for a crime called treason, with death penalty demanded. He has admitted the dealings; it is not clear that he has admitted anything else except a love for his church and his country.

The distortions of statements have been so profuse as to cloud the record while the trial was going on. The actual facts, the outside world may not know for a long time.

But the world knows the reality: That Cardinal Mindszenty was brave enough to stand his ground as leader of a state which was crumbling into communism, and to risk the penalty which Soviet lands and law decree for such resistance.

Too cowardly to brazen out the charge of mere independence by a courageous leader, the Hungarian state proceeded to dress up its punishing with phony charges in which words have been used loosely in the hope they would provoke acceptance. The Reds, in short, swore to get the cardinal for his independence. They may even have been willing to connive at his flight; but he did not flee.

The hand of the Kremlin moves down over him like a shadow. It cannot excuse itself to the world, however much it has pretended. It cannot convince fair-thinking Americans of any fairness of trial or procedure. It only appears to all of us outside Hungary like the stealthy, vindictive tyranny we know it to be from past performance.

Oleomargarine Taxes

REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. GATHINGS. Mr. Speaker, for years Congress has been the battleground over a law passed 63 years ago. I hardly need explain that I refer to the law taxing and restricting oleomargarine.

Today it seems we are very near a solution. A solution is in my opinion extremely important. Oleomargarine, or margarine, is now an accepted article of diet. It is recognized by a standard of identity of the Pure Food and Drug Ad-

ministration. One survey reported in this Congress a year ago said 84 percent of families used margarine. There is no question as to its status as a nutritious pure food; has not been for many years.

Last year the House passed a bill repealing the margarine taxes and license fees. The bill would have passed the Senate had it not been for lack of time. This year more bills than ever before have been introduced to repeal the law. In addition, the butter industry has come forth with a proposal. I have studied both the new bills and the butter proposal to repeal the Federal taxes on margarine but to prohibit the manufacture and sale of yellow margarine.

The only issue that remains is the question of the sale of margarine as butter in public eating places. There is no danger of deception in store sales or in sales to bakers and the like.

I do not believe I oversimplify the issues at stake. The butter people, by and large, no longer claim that margarine is not a nutritious pure food. They no longer make various claims. Further, they have even abandoned their old, long support of restrictive taxes and license fees on margarine. This has been a rapid turn-about, and of course raises a serious question as to why they fought so hard for so long not only to keep those taxes but to increase them. Their answer to that question, apparently, is embodied in their accompanying proposal—that yellow margarine be prohibited. This, they say, would protect the consumer; and we are led to believe that they supported those taxes and fees all these years, and especially last spring, simply as a means of protection of the consumer. Now, they seem to say, it would be better consumer protection to ban yellow margarine altogether.

I disagree completely with their view. If margarine is indeed a pure food, as much as butter, why can it not be allowed to use yellow coloring under the supervision of the Food and Drug Administration, as well as butter? Many foods use artificial coloring, including butter itself. I need not go into this point now. Today a great deal of yellow margarine is being sold. Since 1940, 11 States have abolished their bans against it. At this time bills in several State legislatures contemplate the same action. Why is it good policy for the Federal Government to reverse this trend? Why is it protection to prohibit? Who is being protected, the consumer or the butter maker?

Last year the repeal bill for margarine was amended to provide that the Pure Food and Drug Administration should have surveillance over margarine being served in public eating places. This idea has been developed more fully in some of the bills before the Congress. One of them, H. R. 3, goes far indeed to protect the consumer in public eating places. It would require the identification of each separate serving of margarine in a public eating place, and a placard, or other sign, posted prominently in a public eating place serving margarine, or a printed notice on the menu stating the establishment serves margarine. Enforcement would be in the hands of the Food and Drug Administration.

I can see nothing wrong or unworkable with this proposal. It has been carefully thought out. It would give consumers yellow margarine under protection of pure-food laws; actually it completes pure-food legislation with respect to the proper identification of margarine.

Now to contrast the two proposals. Our object, please bear in mind, is to protect the consumer in public eating places. It is figured that approximately 3½ percent of margarine consumption is in public eating places. This is the gap that must be given full protection. This is the narrow piece of controversial ground between butter and margarine so far as the consumer is concerned; and all will agree that in this controversy the consumer is our first concern.

The butter proposal is to bar yellow margarine. That means that, to protect the 3½ percent, the 96½ percent must suffer this prohibition. To insure safety through prohibition, not only the relatively tiny restaurant outlet, but the millions of margarine consumers, must be barred from yellow margarine, which is of course the type of margarine preferred and desired by the consumer. This would seem extremely unfair. Mrs. Housewife, who has and is still making her demands for repeal of margarine restrictions known, is on the one hand promised tax-free yellow margarine, and on the other finds the concession snatched away by a prohibition against all yellow margarine.

The repeal proposal to which I have alluded does not try to avoid the problem by running away from it, ignoring the consumer's interest. It sets up protection for the consumer at the debated point—the public eating place. It does this carefully and realistically, invoking the tried experience of the Food and Drug Administration, which has been carefully built up just for that sort of situation. It would give the home consumer yellow margarine, under the usual and normal protection of full labeling as required by law and practiced by the food industry.

The butter proposal does not do what it claims to do. It does not adequately protect the consumer at the public eating place. We all know that few restaurants will serve other than yellow margarine. And, in addition, it forces the home consumer to do without yellow margarine—even in the majority of States where yellow margarine is sold.

To conclude, then, the butter proposal is not a consumer proposal. It is not interested in the consumer at all. It is like all the other butter proposals with regard to margarine, only dressed up a little and shorn of the obviously unsupportable taxes and license fees. It is restrictive. It wants no margarine. It is one more expression of that memorable monopolistic attitude stated so clearly by the Dairy Record years ago when it said:

> The dairy industry must set as its goal the complete extermination of oleomargarine. It must never rest until the manufacture and sale of oleomargarine has been outlawed in this country.

Much more statesmanlike from the standpoint of all interests concerned is the declaration by the American Milk Review recently, when it said:

> The public wants a yellow fat spread for its bread. Oleo colored yellow is acceptable. Because it is markedly cheaper, a large portion of the buying public is using oleo. They are not interested in whether oleo colored yellow is infringing on something that logically belongs to butter. They are not even interested in being protected against oleo sold as butter—largely because they don't believe it. What they are interested in—and the only thing they are interested in—is a cheap, palatable yellow spread for their bread.
>
> There are two courses open to the butter industry, and, therefore, to the dairy industry. We can fight oleo to the last ditch. We can fight in the courts and in the legislatures. And we may possibly win a continuation of restrictions. But it will be an endless battle and it will call for the expenditure of large sums of money for public-relations purposes. Or we can retire from that phase of the conflict, making tremendous capital out of the reasons for doing so, and join the battle anew where it must be eventually joined—namely, in the market place.
>
> We do not believe that the first course, even though successful, will regain the market that has been lost. We do believe that butter is a product superior in every way to oleo. We believe that butter can lick the vegetable juice right out of oleo in any kind of competition, fair or unfair, if given the chance.
>
> We believe that only by aggressive salesmanship, only by enlightened and dynamic merchandising, can this be accomplished. It will cost money to do it. It will cost a lot more money not to do it. We think that the time has come to stop arguing with the umpire over the ringers on the other team. We think that the time has come to bust a couple of long ones right out of the park.

Council of Europe

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial entitled "Council of Europe," which appeared in the Manchester Evening Leader, Saturday, February 5, 1949. The Manchester Evening Leader is published in Manchester, N. H.

The editorial follows:

COUNCIL OF EUROPE

Progress toward world stability since war's end has been held to a snail's pace principally because of the lack of international understanding and cooperation, widespread mistrust, greed, and narrow nationalism.

Conscientious efforts in the interest of permanent peace has been repeatedly thwarted by those who refuse to rise above petty pride and ambition in approaching vital world issues.

Occasionally, however, there are developments on the world scene that offer encouragement that we may be inching nearer and nearer to the day when at least some of the more basic deterrents to peace will be removed. The establishment of the Council of Europe may conceivably prove such a development.

It is too early to speculate upon the success of this cooperative move by five western European nations, and the possible effect it will have upon the course of the world's history. Advocating unity and practicing it to the fullest do not always go hand-in-hand. But at least the fundamental principle of the new Council is admirable.

For years Europe has been a hotbed of international jealousy, bitter rivalry, and deep-rooted nationalism. In a way it can be understood. Most of the countries on the Continent are relatively small. Few are economically independent. They have had to struggle to maintain their own sovereignty through the years. But their attempts to protect their own existence have frequently led to open conflict.

Their inherent nationalism traits, developed through many generations, are not easily subordinated to the dictates of internationalism, even if it is apparent that European unity of purpose has become a requirement of peace. But the formation of the new Council indicates a gradual breaking down of some of the barriers of the past.

People everywhere will watch with interest the progress of the Council of Europe. Its success in fulfilling its important aims may play a large part in bringing stability to all the world.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. WILLIAM T. GRANAHAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. GRANAHAN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein the following copy of a letter to the Secretary of State, the Honorable Dean Acheson, from the Catholic War Veterans, protesting against the trial of Josef Cardinal Mindszenty:

CATHOLIC WAR VETERANS OF THE UNITED STATES PROTEST AGAINST TRIAL OF JOSEF CARDINAL MINDSZENTY

CATHOLIC WAR VETERANS
OF THE UNITED STATES OF AMERICA,
Washington, D. C., February 8, 1949.

Hon. DEAN ACHESON,
Secretary of State, Washington, D. C.:

We have learned with profound sorrow of the persecution to which the Catholic Church in Hungary is being subjected at the hands of a Government whose principles are in direct opposition to those of Christianity.

Catholics the world over, as well as millions of others not of our faith, were shocked when Josef Cardinal Mindszenty was brought to a trial that has made justice a mockery and law the whim of a tyrant. To us Catholics, this cruel injustice is a repetition of past history, wherein the enemies of Christ strove to destroy with violence the Catholic Church and the Christian way of life. For those who hate the church of God always strike first at its shepherds, with the hope of scattering the flock committed to their care.

The conscience of all thoughtful people has been profoundly stirred by this latest example of Soviet injustice. The trial is a mockery because the Cardinal was prejudged and predoomed and the whole farcical procedure was a mere ritual, reminiscent of the barbarous customs of ancient times, when men, out of favor with the ruling powers of a country, were humiliated and martyred for the bestial gratification of their tormenters.

It has made the world aware of the lengths to which the Kremlin, acting through the puppet government it has set up in Hungary, is prepared to go in its war against religious faith.

Guilt must be clearly fastened upon the originator and architect of religious persecution, the Government of bloody Josef Stalin, of Moscow.

We feel it incumbent upon ourselves to raise our voices in protest against such a travesty of justice. This we do, not only as Catholics and war veterans, but also as Americans and in virtue of the doctrine written into the Declaration of Independence: "That all men are endowed by their Creator with certain inalienable rights and among these are life, liberty, and the pursuit of happiness."

Aware of the importance of the issue, we propose as our resolution—

1. That our Government, through its Secretary of State, express to the Government of Hungary, its anger at such a flagrant violation of the Hungarian peace treaty which guaranteed religious liberty.

2. That the Secretary of State insists that the Hungarian Government release Josef Cardinal Mindszenty and that religious persecution in Hungary be brought to an end.

3. That the Secretary of State take immediate steps if the Hungarian Government fails to comply with the above to sever relations with this ignoble puppet government.

Rev. JOSEPH T. FLYNN, C. Ss. R.,
National Chaplain of C. W. V.
NICHOLAS J. WAGENER,
National Commander of C. W. V.

The Marine Corps Fights for Its Life

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Richard Tregaskis from the Saturday Evening Post of February 5, 1949:

THE MARINE CORPS FIGHTS FOR ITS LIFE
(By Richard Tregaskis)

During the latter part of any week, Gen. Clifton Bledsoe Cates, commandant of the United States Marine Corps, is likely to become fidgety in his plush-carpeted Washington office up the hill from the Pentagon.

Now well initiated as commandant, Cates frankly states his major problem: "My biggest worry is to keep the Marine Corps alive, to keep it the potent element of national security it has been in the past, to develop its unique capabilities. There are lots of people here in Washington who want to prevent that, who want to reduce us to the status of Navy policemen or get rid of us entirely."

Cates wouldn't say so, but the "lots of people" are mostly Army and Air Force enthusiasts who have long hankered to chop the Marine Corps into nothingness or—worse to a marine—to change it into just another Army unit. The basis of all the antimarine schemes is, as in previous attacks, that the corps is unnecessary, that it duplicates functions of other armed services like the Army or Air Force. But Lucky Cates, like other marines, contends that the corps is invaluable for specialized missions. "We don't want to supplant land troops. We have our certain job, amphibious operations. We are shock troops. We can get in and take a beachhead and get out. And we are trained to be always in readiness for action. The marines always stand ready to do more on a moment's notice than any other service and, on a man-for-man basis, to do it better and for less money than any other service."

Some of the anti-Marine Corps people don't see it that way, and don't pull punches in saying so. Brig. Gen. Frank Armstrong, an Air Force firecracker, is one such. He said in a speech at Norfolk last year: "As for the Marines, you know what the Marines are. They are a small, fouled-up Army talking Navy lingo. We are going to put those Marines in the Regular Army and make efficient soldiers out of them."

The current attempt to assassinate the Marine Corps is only the latest of its kind. The first came in 1864, the last, before the present one, in 1931. Marine Corps history has been a series of fights with the external enemies of our country, alternated with battles with internal political foes in times of peace. As one Marine put it during the Eightieth Congress battle, "We fight for the right to fight." And that is still true in the continuing battle raging in Washington.

When World War II was over, General Marshall, at that time the Army boss, had prepared a paper urging reorganization of the armed forces into three branches, Army, Navy, and Air Force. That paper was secretly considered by the Joint Chiefs of Staff, the head men of the Army, Army Air Force, and Navy. The memorandum is still "classified"—the military man's polite word for secret—but the principal features were embodied in the Collins plan, introduced into Congress, and therefore made public, in 1945.

The Collins plan, so called because it was sponsored by the Army's then public-relations chief, Lt. Gen. Joseph Lawton (Lightning Joe) Collins, was a shocker to the Secretary of the Navy, and especially to the Marine Corps. It provided for a general-staff setup—separate Army, Navy, and Air Force, with a military staff governing their operations, and control centralized in the chief of staff, who would, of course, be an Army general. There simply was no mention of the corps.

Fortunately, the then Secretary of the Navy, James Forrestal, came up with a counter scheme. His plan recommended three separate departments of Army, Navy, and Air Force, but the top control was not centralized in the Army. The proposal provided closer coordination between the separate branches, but not merger under one dictatorial head. It also left living space for the Marine Corps and for naval aviation, ignored in the Collins plan.

A Damoclean sword hung over the Marines. The Joint Chiefs of Staff, meeting in secret session, were concurrently considering papers called J. C. S. 1478. These were later brought into the public light at a House committee hearing under Representative HOFFMAN, so that some excerpts are now printable. They are clear indication that the Army and Army Air Forces planned the assassination of the Marine Corps as a fighting unit.

Said General Eisenhower in one of these memorandums to the Chiefs of Staff: "The following is proposed for consideration: (1) That the Marine Corps is maintained solely as an adjunct of the fleet and participates only in minor shore combat operations in which the Navy alone is interested. (2) That the land aspect of major amphibious operations in the future will be undertaken by the Army, and consequently the Marine Corps will not be appreciably expanded in time of war. (3) That it will be agreed the Navy will not develop a land army or a so-called amphibious army, Marine Corps units to be limited in size to the equivalent of a regiment, and the total size of the Marine Corps, therefore, limited to some 50,000 or 60,000 men." (There were more than 500,000 marines in World War II.)

Gen. Carl Spaatz was quick to support General Ike, adding that Marine forces should be "lightly armed"—presumably meaning that they should be little more than a police force and that the corps' "roles and missions" should be only "to protect United States interests ashore in foreign countries and to provide interior guard of naval ships and naval shore establishments."

General Vandegrift, then Commandant, went into a huddle with his chief advisers and they worked out an eye-popping oration to be delivered before the Senate Naval Affairs Committee. It created a furor.

The usually gentle-spoken "Sunny Jim" Vandegrift talked boldly, striking back at the Army's plan to submerge the Marine Corps. "I know that the War Department's intentions with respect to the Marine Corps are well advanced and carefully integrated. * * * Under the provisions of this legislation (the Collins bill), the single Secretary for Common Defense and the all-powerful National Chief of Staff are entirely free either to abolish the Marine Corps outright or to divest it of all its vital functions, leaving only a token organization in order that the name of the corps may be preserved. And if the proposed Chief of Staff is of Army antecedents, I feel there is a strong possibility that that is precisely what will take place."

POINTING TO THE RECORD OF MARINE LEADERSHIP

He asked Congress to save the corps, as it had done many times before in history. Proudly, he pointed out that the Marines have always been spearhead troops in every American war except the Civil War—always ready to fight while the slower moving Army was getting organized. Guadalcanal was one of his prime examples: "The operation against Guadalcanal could not have been launched (without the Marine Corps), because there were at that time no Army troops prepared to conduct amphibious-assault operations. * * * The War Department is now contending that the amphibious efforts of the marines are an invasion of the Army's sphere (but) the amphibious specialty is the Marines' sphere. Furthermore, those Army troops which took part in landing operations during the past war were actually applying the principles and using the techniques, methods, and equipment developed by the Marine Corps. In some cases they were even trained by the Marine Corps."

Sunny Jim ended with a burst of oratory. "The bended knee is not a tradition of our corps. If the Marine as a fighting man has not made a case for himself, he must go. But I think you will agree with me that he has earned the right to depart with dignity and honor, not by subjection to the status of uselessness and servility planned for him by the War Department."

The effect of that counterattack was sensational. The Naval Affairs Committee dropped the Collins bill like a lost election, and didn't bother to report the bill out. Nobody dared resurrect it. But the toughest battles waged by the most colorful combatants were still to follow, in the Eightieth Congress, and subsequently.

This time it was Maj. Gen. Merritt A. (Red Mike) Edson, a Marine Corps Pacific hero, who fought the most spectacular battle for the corps—a risky, bold fight that eventually cost him his job and his career, but helped greatly to prolong the corps' miraculous life.

Of course, the Army foes of the corps made their plans without consulting the Marines. The Marines had their notification in the newspapers that day in January of 1947 when President Truman announced an Army-Navy plan to reorganize the armed forces into three branches—Army, Navy, and Air Force—under a single Secretary of National Defense. A bill to this effect was to be introduced in Congress.

Worst of all to the corps was the invocation of a gag rule by President Truman: All communications with any part of Congress regarding pending legislation must be cleared through Navy Department censorship. This was most unfair, since the Army people were not thus hampered. In fact, they had a special high-powered legislative section for the job of supplying information to Senators and Representatives.

Apparently by spontaneous combustion, one blaze started in the legislative committee of the Veterans of Foreign Wars.

At the same time, fast-moving, impatient Mike had been seen visiting beefy Omar Ketchum, the chief lobbyist—national legislative representative—of the VFW in Washington, to plan the fight for the Marine Corps in Congress.

Shortly after, the VFW legislative committee passed a resolution declaring it the official VFW policy to protect the interest of the Marine Corps before Congress. And the VFW national commander, Louis E. Starr, declared himself a strong supporter of the Marine Corps. Yet in those early days the battle was going badly for the Marines. On March 18, 1947, the unification bill was introduced into the Senate, the first hurdle. Subsequently it was skillfully guided by the dignified, pince-nezed CHAN GURNEY, of South Dakota, a strong Army supporter.

In the House, the Marines benefited from an Army blunder. Army adherents there steered the merger proposal into the House Committee on Expenditures in the Executive Departments, hoping to work a slick maneuver. The maneuver was this: Testy old—72 years—Representative CLARE HOFFMAN, of Michigan, was head of the committee. He had never shown much interest in matters military. His committee was very busy with other governmental affairs. So he would probably appoint a subcommittee to consider the merger bill. If he did, the most likely chairman would be a man who had supported Army projects for a generation, Representative JAMES W. WADSWORTH, of New York.

HOFFMAN was astute and suspicious; he had been aware of the tremendous Army pressure behind the merger bill. So he didn't delegate the bill to a subcommittee; he tackled it himself.

With Representative WADSWORTH only a committeeman and not the chairman, and the thoroughgoing HOFFMAN running the show, the chances of the Marine Corps in the House looked better. Tough old HOFFMAN also wrote to Secretary of the Navy Forrestal protesting the Navy gag rule as a serious infringement of the right of free speech. Forrestal eventually acted on the request, and waived the rule, but not until much later in the battle. The only real effect of lifting the gag then was to give belated legal status to the extracurricular and somewhat risky activities of Red Mike Edson and his Marine Corps cohorts.

Meanwhile, the Marine Corps faced powerful opponents in the House and Senate committee hearings. General Eisenhower was one, and he was so charming that even the Marines were attracted. One Marine officer said, "If they had ever voted on the thing just after Eisenhower finished talking, it would have gone just the way he wanted. He certainly has appeal."

In his testimony, the Army boss gave reasons for streamlining the armed forces, and with his usual supple tact, neatly turned aside pointed questions about the Marine Corps, leveled by Chairman HOFFMAN. HOFFMAN had been examining the so-called 1478 papers of the Joint Chiefs of Staff, which had allocated so little living space to the Marine Corps. The conscientious HOFFMAN had secured those papers after considerable wrangling with the Army. Now he taxed General Ike with Ike's suggestions that the Marine Corps should be crippled in size and function. A small sample from the hearings will indicate the quality of this interchange:

"The Chairman (Mr. HOFFMAN). Those views did create in the minds of high-ranking officers in the service the thought that there was a proposal on the part of the Army to eliminate the Marine Corps as an effective combat element, reducing it to the status where it would perform a naval police duty, and possibly certain military service functions in respect to certain operations.

"General EISENHOWER. I have never said that in any statement.

"The CHAIRMAN. Your position created that opinion in the minds of certain officers.

"General EISENHOWER. It may have.

"The CHAIRMAN. It did. Do you not know that to be a fact?

"General EISENHOWER. They said that was the reason they were fearful? I suppose they said that, but I cannot see how any sane man can read those statements and think that I have any thought of eliminating the Marines; therefore, I do not see why they should be fearful about me."

The Army Air Corps generals, of course, backed General Eisenhower in his advocacy of the unification bill as it stood. But when some of the admirals—like the Deputy Chief of Naval Operations Forrest Sherman—supported Eisenhower, the Marines were grieved, and a schism began to develop between pro and antimarine factions in the Navy. Many Navy men were concerned about the future of the Marines, because they felt the fate of naval aviation depended on what happened to the Corps: If the Army and Air Force had too strong a voice in the new set-up, the naval air arm, like the Marine air arm and the Marines, might be squeezed out of existence.

Unfortunately, General Vandegrift was not playing an aggressive hand in the congressional poker game this time. Summoned before the Senate Armed Services Committee, he agreed to an amendment of the bill which, some of the committee said, would protect the Marine Corps. But it was actually a poor guaranty: "The provisions of this act shall not authorize the alteration or diminution of the existing relative status of the Marine Corps * * * or of naval aviation."

Many Marines felt this was much too vague—especially in the words "existing relative status"—to mean anything. Red Mike Edson decided he must do something about it. Edson also felt the control of the armed services was too centralized, that such centralization could lead to eventual control of the civil government by the military. But the gag rule was still in effect. He says now that he had a couple of sleepless nights thinking about it—a degree of indecision unusual in Red Mike. "The alternative," he says, "was to keep my mouth shut and give lip service to the type of organization which is not beneficial to the Marines, to the overall national security or to the Government."

Senator Robertson, of Wyoming, friend of the Marine Corps and a member of the Senate committee, had asked Edson to appear at the hearings. Edson made his decision and sent a note to General Vandegrift.

"In order to feel free to express my personal views on this proposed legislation without embarrassment to or as a representative of the Marine Corps or the naval service, I herewith submit my request for retirement."

General Vandegrift refused the retirement request at the time, but this was before Red Mike began to make sparks fly in the committees. When it was repeated 2 months later it was accepted.

Meanwhile, in the Senate committee, Edson attacked the bill. He lashed out particularly at the joint staff, a large body of officers created by the bill as a sort of executive group, which he maintained was an embryonic national general staff, liable to lead to dictatorship and inefficiency in affairs military; and he suggested a more definite guaranty of Marine Corps roles and missions.

But perhaps, in Red Mike's judgment, his testimony before the Senate committee

was too mild—for the bill, S. 578, was approved by the committee and passed by the Senate. It was still being considered in CLARE HOFFMAN'S committee of the House, as House of Representatives bill 2319. Edson appeared before the House committee, and this time he pulled out all the stops. He attacked the very basis of the bill as a dictatorial infringement of the rights of Government. He warned that it brought grave danger of the repitition of the Prussian general staff's grab for power in pre-World War I days, and of the Nazi and Fascist systems which helped to lose World War II for the Axis. He also bluntly said that the vague relative-status clause accepted by General Vandegrift in the Senate hearings was not enough of a guaranty for the Marines.

On June 25 HOFFMAN introduced his own preferred bill, which embodied Edson's recommendations, including a strong guaranty of Marine Corps functions. This had a tremendous effect on the compromise bill finally sent up to the House for action.

Dapper John Williamson, the VFW lobbyist on Capitol Hill, realized that the handling of the unification bills—H. R. 4214 and S. 758—had reached a critical stage. He spent a good portion of his time during the next few days on the Marine project, supplying information and suggestions to middle of the roaders whose decisions could be vital.

Meanwhile, Army and Air Corps proponents were busily trying to influence the committeemen in the other direction—against the guaranties for the Marine Corps or naval air. On July 22, 1947, Lt. Gen. Laur'is Norstad, the Air Forces handsome Flash Gordon, was to be found busily putting in a good word with passing members of the conference committee outside the door of the committee room.

At the end of that day's argument, the prized Marine roles and missions, the corps' legal warranty, had been preserved. It was a triumph. After that day's battle, a Marine officer wrote: "Few Marine officers will ever realize how close the Marine Corps had been to virtual extinction. * * * I know of no Marine officer who fought with more sincerity or determination for the Marine Corps than did Mr. HOFFMAN."

But whether it had been Red Mike Edson or CLARE HOFFMAN who had done the most, the proper roles and missions paragraphs had been incorporated, and the conference bill passed the Senate as the National Security Act on July 24, the House of Representatives on July 25. Red Mike had lost his job. A good many Marine officers had developed stomach trouble. HOFFMAN was prostrated with fatigue. But the Marine Corps was saved—at least for the time being.

General Vandegrift, at that time still Commandant, could announce with relief, "it is the first time in the history of the Marine Corps that the roles and missions have been spelled out in language that an 18-year old could understand."

Yet the Army and the Army Air Force had not finished their assaults on the corps. At first, subsequent skirmishes were kept off the congressional stage. The Army and Air Force brass, outnumbering the Navy 2 to 1 in the newly created Joint Staff, led the way. In debates on the functions of the armed forces, the Army tried to limit Marine amphibious activities to attacks on small islands. The Navy, parent organization of the Marine Corps, contested this. The Army and Air Force men said Marines should be used only in small operations where less than a division of troops was required. Navy representatives said no. The Army maintained the Marine Corps should never be big enough for sustained combat, which, in the Army estimate, turned out to mean every kind of combat except fights of hours or a few days' duration. The Navy fought back for the Marines. And so the merry-go-round of discussion circled upon itself. The Army bigwigs were finding a powerful source of irritation in the small legal provision of the National Security Act that the Marines were to be the armed forces specialists in amphibious operations. Prickled by this provision, the Army brass was out to keep the Marine Corps' size to a minimum. The Air Force was similarly upset by the law's guaranty of naval air functions.

It was clear to the new Secretary of Defense, Mr. Forrestal, that a conference of big wheels of the several services should be held at some secluded spot away from the knife-fighting atmosphere of Washington. He suggested the naval station at Key West, Fla. Conferences were held there from March 11 to 14, 1948. Generals Bradley, Spaatz, Norstad, Wedemeyer, and Gruenther, and Admirals Duncan, Radford, and Denfeld met in a setting designed to be tranquil.

When the conference was over, the Marine Corps emerged, through the efforts of Navy friends, with another guarantee of its functions—almost verbatim that of the National Security Law. But the Army and Air Force men did succeed in getting through a tentative four-division limitation on the size of the Marine Corps even in time of war.

The Key West conference, however, was not the last word by any means. Congressional advocates of a still stronger centralized control of the services—meaning stronger Army control—began to be heard on Capitol Hill, again as the second session of the Eightieth Congress continued, Senator MORSE, of Oregon, introduced a new bill to this effect. The Morse bill was brought to the Senate too late for action, but its provisions will probably be introduced again in the current Eighty-first Congress, an old bogey in a new night sheet.

Meanwhile, the new Commandant, Lucky Cates, may bring the corps good fortune, and he will surely bring it vigor and freshness at the top. He makes a point of the fact that a Marine is not only America's best shock trooper but the cost of maintaining a Marine for a year is just a little more than half the cost of maintaining an Army man. His figures, arrived at by dividing annual expense for each service by the number of men, are about $4,000 for a Marine, about $7,000 for a soldier. When the current attack on the corps reaches a climax, as it undoubtedly will, in the Eighty-first Congress, Cates and his friends will be put to the final test. And possibly he will bring some of his famed luck to the transaction. He is counting on it anyhow, for he is a great gambling man. Usually he will take a bet on almost any issue, and one of his favorite phrases in everyday life is "Five'll get you ten that" so-and-so will happen. Betting on the future of his corps, however, Cates is inclined to be reckless. "I'l bet you any amount of money, any odds, that it'll survive," he says.

Panama Canal—The Sea-Level Project

EXTENSION OF REMARKS

OF

HON. HARLEY O. STAGGERS

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. STAGGERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of a paper published in the proceedings of the American Society of Civil Engineers, January 1949:

PANAMA CANAL—THE SEA-LEVEL PROJECT

(A symposium [1] by Harry O. Cole,[2] member, American Society of Civil Engineers)

From the nature of the papers in this symposium, together with another extremely able paper,[3] it is clear that the investigation of the Canal under Public Law No. 280 (79th Cong., 1st sess.) was solely directed toward securing the authorization of the predetermined objective of a sea-level project on the premise that the present lock Canal is totally lacking in security to meet the future needs of national defense, and that the only alternative is a sea-level canal.

It appears that the investigation reported in the symposium was not directed toward securing any major improvement in the operating deficiencies of the present lock Canal. At least, if there was any such objective, the writer has not found it in the symposium papers.

The first major contribution toward the solution of operating difficulties in the Canal was developed by Miles P. DuVal [4] in a paper published in 1947. The plan presented in that paper—its recording and analysis of accidents, hazards, and difficulties encountered by ships in transiting the Canal over a period of 30 years—was so revealing and informative that it has apparently affected all subsequent engineering thinking at Panama. As all informed engineers with experience in building the Panama Canal know, the problems are not problems of complexity as much as there are of magnitude.

Viewing with alarm the breakneck speed at which the United States has been spending hundreds of billions of dollars during the 7 years since 1941 (and still doing so) it is clear to all thinking men that unless the Nation safeguards its resources, present investments, and future expenditures, it will further seriously jeopardize the national security at a critical time.

It is fair to ask the question, and insist upon a truthful and an unbiased answer: Is an expenditure of $2,500,000,000 justified at Panama or elsewhere on the Isthmus for any canal, lock or sea level, under any circumstances?

The recognized superiority of the Panama Canal as a navigable waterway for ocean vessels over any feasible canal at Nicaragua, Tehuantepec, the Atrato River, or elsewhere, and the high vulnerability of any type of canal to the atomic bomb certainly makes the very idea of expending $2,500,000,000 (and probably much more) for a sea-level project at Panama, or for a canal at any other location, entirely indefensible.

The national resources of the United States should not be squandered in a futile Isthmian project at Panama, or any other place, that would inevitably divert funds and resources from other urgently needed projects and defense programs in the United States.

From evidence presented elsewhere by the writer,[5] [6] it is very clear that the great fundamental defect in the original design of the Panama Canal was the separation of the Pacific locks into two groups and the placing of one of them squarely across the south end of the Culebra Cut (later Gaillard Cut) at Pedro Miguel. The writer has given the definite reasons why that was done, and

[1] This symposium was published in April 1948.

[2] Construction engineer, Morgantown, W. Va.; formerly resident engineer, Pacific division, the Panama Canal, Canal Zone.

[3] Appendix of the CONGRESSIONAL RECORD, p. A2449.

[4] The Marine Operating Problems, Panama Canal, and the Solution, by Miles P. DuVal, Proceedings, ASCE, February 1947, p. 161

[5] Appendix of the CONGRESSIONAL RECORD, p. A2743.

[6] Ibid., p. A3190.

has proved beyond reasonable doubt that, had not that decision been reached and carried out at that time, the United States would have had no canal at Panama during World War I.

The third locks project of 1939, had it been completed (it was abandoned in 1942) would not have been the cure, but it would have greatly aggravated and increased the difficulties at Pedro Miguel because this project was not navigationally sound.

Also, revived with the 1939 third locks project was the idea of "converting" the Panama Canal to sea level, with a plan that had not been studied adequately. The Panama sea-level project reported in the Symposium apparently grew out of that plan and will make it necessary to abandon a great part of the present canal. It is not a true "conversion" but really a great project for a new Panama Canal.

Authorities who are considered well informed have expressed the opinion publicly that any type of canal is definitely vulnerable to the atomic bomb and that the only function of the canal is to transport ships safely and conveniently. It is self-evident now, as it was when the Panama Canal was constructed, that a canal formed by large lakes affords safer and more convenient navigation than any canal that has a restricted, canyon-walled channel 30 miles long and whose tidal waters are changing in velocity and direction thoughout every day in the year.

Furthermore, the proposed huge tidal-lock control works with a lock 200 feet by 1,500 feet contemplate an independent 750-foot wide, navigable-pass channel controlled by a 6,000-ton, 6-link, chain-gate system. This project definitely rules out the possibility of converting the lock canal to a true sea-level canal.

According to one of the highest naval authorities, the expenditure of building a so-called sea-level canal, or even huge locks, to expedite the transfer of two or three superwidth Navy ships from one ocean to the other, is not justified, since the United States now has a two-ocean Navy, and since these superwidth ships can readily go around Cape Horn when it becomes necessary for them to be transferred from one ocean to the other.

One other technical phase of this subject is of the most vital importance to the American people. The estimated first cost for converting the lock canal to sea level, of $2,483,000,000 alone (which appears to be grossly underestimated), is prohibitive, unless the cost is to be borne by the national defense budget. The annual interest of 3 percent, not to mention paying off the debt, amounts to about $75,000,000. This would mean an increase in toll charges of about $2 per ton over and above the present toll charge of $1. Even now, shipping interests are clamoring for a reduction in toll charges. If authorized as a defense project with a debt to be paid off in the next 100 years, the American taxpayers would have to do it.

A review of the facts and references as set forth in the foregoing should give a better perspective of the canal investigation that is under discussion.

Apparently the major premise (national defense), on which the recommendation for converting the canal to sea level was based, has now definitely been removed.

The sea-level plan recommended in the symposium proposes to abandon the present high-lake type of canal (which has demonstrated its convenient operation since 1914) and substitute a sea-level canal—at the exexpenditure of untold billions of dollars with no positive proof that in the end it will prove to be as good, or any better, or more economical, or safer for transiting ships, than an improved lake-type canal at only a fraction of the cost and the time to build.

Reciprocal Trade Agreements

EXTENSION OF REMARKS
OF

HON. RICHARD M. SIMPSON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made today by Mr. Walter W. Cenérazzo, president, American Watchworkers Union, Waltham, Mass.:

The statement of Congressman COMBS on the floor of the House was not a full analysis of what was said before the Ways and Means Committee. Waltham watch's misfortune and the industry's precarious position today is directly due to the reciprocal trade agreements, and the failure of the Ways and Means Committee and the Congress to take action in past sessions. There is no way, no method under the reciprocal trade program by which an industry, or the representatives of workers in the industry, may obtain relief under the present administration of the reciprocal trade program. This is evidenced by the fact that on last Wednesday three Congressmen from the three watch-manufacturing districts, the mayors of Elgin, Ill., Lancaster, Pa., and Waltham, Mass., and the Governor of Massachusetts presented the President of the United States himself with a petition with over 50,000 names from the city of Waltham, Mass., asking for relief against Swiss watch imports. The President is quoted by the Governor of Massachusetts, Governor Paul A. Dever, as saying that he recommended a Subcommittee of the Ways and Means Committee to make a study of the watch situation, and Governor Dever asked him whether or not this was a matter for the executive branch, and the President replied that it was not.

Congressman COMBS' statement that the domestic watch industry has had as much profit if not more than in prewar times is wrong. The percentage of profits as compared to prewar times is less for the entire industry even if we are to exclude Waltham's deficit. The Swiss-watch importers have had a far greater profit during the last 7 years, and at a time when the domestic industry was producing war materials 100 percent.

Speaking for the workers in the American jeweled-watch industry, I say that unless Congress takes action during the Eighty-first Congress, there will be no jeweled-watch industry in America within 4 years. We need help at once.

Something New in Housing

EXTENSION OF REMARKS
OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Sunday News for January 23, 1949:

SOMETHING NEW IN HOUSING

President Harry S. Truman, in his state of the Union message, conceded that American housing miseries were still with us, and hoped again that Congress would do something about it. Shortly thereafter New York's Governor Dewey said about the same thing, and specifically urged his legislature to start off by modernizing New York's obsolete building codes, which add $1,000 or so to the cost of an average Empire State dwelling unit.

We hope that these and other political chiefs will inspire more hammering and sawing, and we'll be delighted to hear those sounds.

Right now, though, we'd like to pass along some recent findings and happenings in the building industry itself. Some of them, just possibly, indicate that we may be getting some housing action even before our lawmakers make up their minds about causes and remedies.

Most unusual recent housing news, it happens, comes from Mr. Truman's own State of Missouri. From, to be exact, Springfield (population 70,514).

Out there a building union, Local 978, United Brotherhood of Carpenters and Joiners, A. F. of L., suddenly decided to do something about its own housing—and employment—woes.

THE RAISE COST MONEY

The situation: Last spring the carpenters won themselves a 15-percent raise in hourly wages. So did their fellow building craftsmen—bricklayers, plasterers, electricians, etc. But a few weeks ago the carpenters added up their 1948 incomes, and discovered to their chagrin that they had simply priced themselves out of work. In 1947 Springfield's 500 union carpenters worked on 561 new houses. In 1948 only 364 residential construction permits were taken out, and an average of 90 carpenters was unemployed at all times.

The carpenters figured, gloomily but realistically, that 1949 would be even worse. So, by union vote, they decided to price themselves back into their jobs. They decided on a 20-percent wage cut, and simultaneously proposed to other building unions and to contractors, lumbermen, etc., that they slice their fees and prices accordingly.

"FEATHER BEDDING" ELIMINATED

So far, the carpenters haven't sold their bill of goods completely. Two contractors and one lumber company offered to come along. But other building unions shy at hopping off the gravy train before they have to. And some Springfield contractors, soured by previous experience with some feather-bedding craft groups, opine they'd like to dispense with unions altogether.

By employing more reasonable nonunion building workers, they claim, they can pay their help good annual wages, and still save $1,400 to $1,800 per house. Most of this extra cost, they snort, comes from arbitrary, make-work union regulations. If a nonunion bricklayer, for instance, finds it necessary to nail in a board before continuing his masonry, he'll do it himself. Too often the union bricklayer, in the same situation, will sit down at the house buyer's expense, and wait until the contractor finds a carpenter to drive the nail.

VACANT HOUSES

From other parts of the country come reports that the Missouri carpenters aren't alone in their discovery that they have priced or feather bedded themselves out of work. In Los Angeles, for instance, a survey shows no fewer than 6,000 new houses standing vacant. They're not being sold because, apparently, the building industry has just about run out of desperate customers willing to pay $10,000, say, for homes worth only $7,500.

Similar reports come in from St. Louis, Atlanta, Detroit, Pittsburgh, Baltimore, and other cities.

Other housing surveys have it that some 4,000,000 Americans, in the past 7 years, simply abandoned their dreams of new houses and repaired their old ones, or remodeled existing structures into multiple-unit dwellings.

Many of these projects employed a minimum of regular union labor, and some localities report that a considerable number of price-outraged citizens have taken to doing their own painting, carpentry and even wiring and plumbing.

Anyway, there are more and more indications that the bloom is off the boom as far as house building goes. So keep your eye on those Springfield carpenters. There's a sound chance that they were really smart and foresighted in urging their fellow craftsmen to look ahead, and price themselves back into the job market.

Commenting upon the above editorial, Dr. Willford I. King, chairman of the committee for constitutional government, observes:

It is a common fallacy that wages can be elevated by law. However, long experience, as well as economic theory, indicates that such is impossible. All that minimum wage laws ever really do is to prevent the less efficient of the Nation's potential working force from holding jobs, producing, and thus making an honest living. Is it in the interest of the public to throw these potential workers upon the relief rolls, thus pauperizing them against their will?

Freedom Road

EXTENSION OF REMARKS
OF

HON. HENRY J. LATHAM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "Freedom Road," delivered by Raymond S. Richmond, Tuesday evening, January 18, 1949, before the Newtown Historical Society at the Elmhurst Public Library, Elmhurst, N. Y.:

The eyes of the Nation are centered on Washington, D. C., this week—and rightly so. A President and Vice President of the United States are to be inaugurated. Hundreds of thousands of our fellow citizens are now converging on the Nation's Capital City to witness the impressive ceremonies and to partake of the subsequent merrymaking.

I am not one of those who decry the pomp and circumstance surrounding our inaugurations. In fact, I believe in it. It is good for national morale, and particularly at this moment, when our time-tested political and social philosophies are under attack by a godless alien power and its stooges and dupes within our gates. Inaugurations spotlight our fundamental national unity. They attest to the world that, in keeping with the customs and procedures so wisely outlined by the founding fathers, the quadrennial political contest has been fought and decided and that immediately following the contest Americans have closed ranks and are doing honor to the Chief Executive of their selection. He is being legally and formally installed in his high office, and, regardless of whether we as individuals were winners or losers in the political conflict that preceded the inauguration, we rejoice that our constitutional provisions and precedents continue to be carried out in this time of world tensions and stress. As a people we are proud of our ordered and orderly processes in a disordered world.

Members of the Newtown Historical Society may well ask, after hearing this introduction to my theme, whether I am not going a bit far afield from the announced topic of "The Congress of the United States, Queens and Old Newtown." Possibly, but not so far afield as one might think after relating the ceremonies and festivities of this week to the historic acts that made them possible. And in this field of activities men of old Newtown and Queens played a vital part. Men of Queens, representing their neighbors, and carrying out the wishes of their constituents, were in truth architects of a new country and pioneers of a new idea. The new country is ours and the new idea under which we live—and by God's grace will forever continue to live—was that free men and women could band themselves together in a completely free nation in which the rights of the lowly were coequal with those of any strata of the population.

It took fortitude and blunt, stubborn courage to carve out a new nation against the wishes and the military power of the then greatest nation in the world—Great Britain. And I would be avoiding the truth if I said that all men always measured up to the challenges of that day. There were those who sincerely believed that the Colonies should wrest from the Crown every conceivable concession, short of war and rebellion. There were those, happily greatly in the minority, who marched right up to the gates of freedom, gazed into the vistas of complete independence that lay beyond, and then, in timidity, in cowardice, or still believing in the divine right of kings, turned their backs and fled from the ideal of freedom and equality. Happily, after diligent research, I can find that no Queens members of the Continental Congress flinched when freedom's bullets began to fire with an explosiveness that was heard around the world.

We in Queens had no Isaac Low, who was a New York delegate to the Stamp Act Congress in 1765, a member of the Continental Congress in 1774 and 1775 and a delegate to the Provincial Congress in 1775. He traveled freedom's trail until armed conflict became inevitable. Then after the Declaration of Independence he abandoned the patriot's cause. In 1776 he was accused of treason and was arrested. His property was confiscated in 1779 by the American authorities. In 1783 he moved to England, where he died on the Isle of Wight on July 25, 1791. What a tragic career. This man was born near New Bruswick, N. J., in 1735 and attained high prominence. He was one of the founders and early presidents of the New York State Chamber of Commerce. But because he couldn't or wouldn't face up to freedom's call he died in a country not of his birth, "unwept, unhonored, and unsung," as the poet Scott puts it.

It is interesting to note there was no appeasement in those days. The issues were clearly cut. Those who were not on one side were definitely on the other. It took more guile than most men of that day cared to exercise to walk the tightrope of alleged neutrality between the contending forces of tyranny and liberty. And when a man chose tyranny's side, neighbor and former friend though he might be, he was more than merely ostracized. He was stamped and branded as a traitor and treated accordingly. There was no appeasement. There was no room or basis for appeasement. And it must continue to be our prayer that those in high power in our country, today and tomorrow and in all of the tomorrows to come, will never stoop to appeasement where our fundamental rights and liberties are concerned.

We all agree that the American ideal could well be used to bring freedom to the oppressed everywhere. The ideal is there if the oppressed choose to grasp it—to fight for it. No true American can or should ever tolerate courses of action that restrict our independence as a nation or our freedom as individuals. We must never risk appeasing ourselves into impotence or national oblivion. We must not sacrifice any fundamental in our national sovereignty. As inheritors of the great tradition of the early Queens and old Newtown men we must continue, in our respective spheres, in possibly less heroic times, to keep ablaze the torch of freedom lighted for us by those who came before us.

Four Queens men, who lived their lives here and who loved this borough of ours so much that by their express wish their bodies were buried in the borough, sat in the Continental Congress between September 1774 and March 2, 1789. As you know, the First Congress of the United States in its present general structure, came into being on March 4, 1789. Considering that a total of but 33 men from New York sat in the Continental Congress from its inception until its dissolution, to be succeeded by the present Congress, it is quite apparent that Queens played its full part in the shaping of the Revolution and Revolutionary War policies. I am not including men from the present counties of Nassau and Suffolk or old (and then quite rural) Brooklyn. If I did, so many additional Long Island patriots' names would be added, and this paper would be going so far afield, that it would be difficult to find terminal facilities for it.

It is hardly fair to single out one man as outstanding among these early revolters against the British Crown. It is hardly fair because all so-called rebels ran equivalent risks. Those who raised their voices for independence and gave moral or material aid to the rebellion risked summary execution as and when caught or discovered by the British. And execution did not always mean a comparatively honorable death in front of a firing squad. The sinister shadow of the hangman's rope dangled menacingly in the waking and sleeping moments of those Americans in the forefront of the legislative and military arms of the movement for independence. Equally bad was the risk of jail with its years of near starvation, filth, and degradation.

But, there is one man who chose Queens for his residence we must pause long enough to render special thanks to because every one of us are the beneficiaries of his courage and forthrightness. This man provides a direct contrast to Isaac Low, the member of the Continental Congress who, although born in New Jersey, preferred to live out his days in England rather than to subscribe to a fight for freedom in the rebellion. This patriot, this Queens patriot—Francis Lewis—was born in Llandaff, Wales, in March 1713, and became an American revolutionist by choice and not by accident of birth. Like George Washington, in his earlier years, he fought for the British Crown.

His biography is, I think, an intensely interesting one. As a youth he attended Westminster School in London, following which he entered the countinghouse of a London merchant. He emigrated to the United States in 1735 and established mercantile houses in New York and Philadelphia. He, with a shrewd Welsh eye to business, secured a contract to clothe the British Army in America in 1753. But Lewis was more than a mere merchant, fattening off of army contracts. He participated in the French and Indian War as an aide to General Mercer. He was captured at Oswego, N. Y. and taken to France as a prisoner. On his return the Colonial Government was so grateful for the service he had rendered the Crown they gave him 5,000 acres of land. But the yeast of independence seemed to be rising in this former British contractor and soldier because in 1765 we find him a delegate to the Stamp Congress that met in New York City in 1765. That same year he retired from business and moved to old Whitestone, Queens. He was a Member of the Continental Congress con-

tinuously from 1774 to 1779, delegate to the Provincial Convention in 1775, a member of the Committee of 100 in 1775, served in the Provincial Congress in 1776 and 1777 and was one of the signers of the Declaration of Independence, Queens' only signer. Thus, forever, the name of Francis Lewis, a resident of Queens by choice, will go ringing down the corridors of time. We honor and revere him.

He was commissioner of the board of admiralty in 1779 and passed away in New York City on December 30, 1803, leaving generations to come and generations yet unborn deeply in his debt. It is interesting to note that he served in the Continental Congress and Provincial Congress concurrently for 2 years. In these days that would be the equivalent of serving as a State senator and Congressman or Senator of the United States at the same time. If this cofounder of our country had any faults, lack of capacity for work and laziness were not among them.

Another delegate to the Continental Congress, who might be claimed as a Queens man, inasmuch as he chose to spend his declining years in old Newtown was John Alsop, a native of Orange County, N. Y. On reaching maturity he settled in New York City and carried on a mercantile and importing business. He represented New York City in the Colonial Legislature, served as a Member of the Continental Congress and served as a member of the Committee of 100 appointed in 1775 to take charge of the Government until a convention could be assembled. In recognition of his activity in commercial life he was the eighth president of the New York State Chamber of Commerce, serving in that capacity in 1784 and 1785. He died here in Newtown on November 22, 1794, and his surviving relatives buried him in Trinity Churchyard in Manhattan.

A name to be conjured with during the pre-Revolutionary and Revolutionary days was that of Egbert Benson, who spent the last years of his life in Jamaica, where he died in August of 1833. Benson had the unique distinction of serving in both the Continental Congress and in the subsequently organized Congress of the United States. His was a life filled with merited honors given him by his fellow Americans.

He was born in New York City in 1746 and graduated from Kings College (now Columbia University) in 1765. He entered the practice of law. He was deputy to the provincial convention in 1775, a member of the Council of Safety in 1777 and 1778; in 1777 was appointed the first attorney general of New York State and served until 1789; he was a member of the State assembly from 1777 to 1781 and again in 1788; in 1789 he was appointed one of the three commissioners to direct the embarkation of Tory refugees to the loyal British provinces in Canada; (this exodus of those loyal to the crown you will recall was set forth at length in Kenneth Roberts' historical novel Oliver Wiswell) he was associate judge of the Supreme Court of New York from 1784 to 1801; he was a member of the Continental Congress from 1784–1788; a member of the State Constitutional Convention in 1788, which ratified the Federal Constitution (there appeared to be no limit in those days to the concurrent service of a man in several official capacities and certainly no limit to Benson's ability and willingness to hold public office) he was elected to the First and Second Congresses and served there from March 4, 1789 to March 3, 1793.

One would think this was about all of the public service that one man could undertake. But not this man. After 4 years in the newly created Congress he was appointed judge of the United States Circuit Court, Second Circuit, and apparently tiring of judicial life we find him elected to the Congress again in 1813, after an absence of 20 years from that body. He resigned during his term but lived 20 years longer, spending most of that time in Jamaica, where he died August 24, 1833, to be interred in Prospect Cemetery.

It is interesting to note, too, that he had a proper regard for historial values. He served as the first president of the New York Historical Society from 1804 to 1816.

Melanchton Smith was another Queens man of the stirring Revolutionary days, who achieved eminence as a soldier and patriot. He was born in Jamaica on May 7, 1744, and was buried there on July 29, 1798, although his commercial and Revolutionary activities took him elsewhere. As a youth he clerked and went into business at Poughkeepsie. He was made a delegate to the first Provincial Congress in New York in 1775. In June of that year the Continental Regiment was organized and he served in it. He organized and became captain of the Dutchess County Minutemen. He was later sheriff of that county. In 1785 he moved to New York City. He served in the Continental Congress from 1785 to 1788 and was a member of the State convention that met at Poughkeepsie and ratified the Federal Constitution on July 26, 1788. Later he served in the State Assembly. Queens is proud that she is the final resting place of this distinguished and patriotic son.

Another noted patriot, who served in the Continental Congress is buried in Jamaica, although why his body was taken from its original place of interment in the family vault under the old church of St. Thomas in New York City and reinterred in our borough I have been unable to ascertain. This man, William Duer, had a most interesting career in an age when the uncommon seemed to be the rule and not the exception. He certainly left his imprint on the country of his adoption. He was born in Devonshire, England, March 18, 1747; attended Eton College in England and in 1765, when the North American colonists were meeting to protest the excessive stamp taxes, he was in another part of the world, serving as aide-de-camp to Lord Clive, the Governor General of India. Lord Clive was one of the towering world figures of his day and was chiefly responsible, you will recall, for the imposition of British rule on India; a rule that lasted until only recently. I recall as a boy the thrill I received in reading Henty's adventurous story "With Clive in India."

In 1768, William Duer emigrated to the Colonies and settled at Fort Miller, Washington County, N. Y. There he was appointed justice of the peace by royal authority and on July 1, 1773, became the first judge of Charlotte in Washington County. He built the first saw and grist mill there and later erected a snuff mill and a powder mill.

Evidently the service for the Crown with Clive in India stirred sympathy for the oppressed within him because shortly after settling in Washington County he became prominent in pre-Revolutionary movements. He was a Member of the Provincial Congress in 1776 and 1777; he served in the State senate in 1777 and served 2 years as an appointed judge of the court of common pleas.

In 1778 he moved to Fishkill, N. Y., and later to what is now Paterson, N. J. In Paterson he erected the first cotton mill and this operated so successfully he established another cotton mill in Westchester County. Snuff and cotton mills. Strange enterprises for New York State in light of the location of this type of manufacturing today. Evidently William Duer was more than a revolutionary. He was a pioneer in business enterprises. In 1777 he was a Member of the Continental Congress, serving through 1788, when he moved to New York City. In 1786 he was a member of the State assembly.

At the request of Alexander Hamilton, he assisted in the organization of the United States Treasury Department in 1789 and 1790. Thus, this transplanted imperialist, who became a revolutionist and a pioneer in business enterprise, left his imprint on the fiscal system of our country. Why, after all of his wanderings, his mortal remains finally found their last resting place in Queens, I have been unable to learn, but I plan to research further to get the answer. Unanswered questions such as these are sometimes more interesting than the matter of factual recital of historical data.

This brings us to one of the most interesting of Queens' Revolutionary heroes and lawmakers—another transplanted Queens citizen, whose memory must always remain in the foreground of our thinking when conjuring with Queens' giants of yesteryear. This great citizen was Rufus King.

In his case, as was evidenced in the biographies previously set forth in this paper, we find a flaming patriotism, a resolve to serve his country in high places and a driving restlessness as to place of permanent abode that ended only when he breathed his last in Jamaica on April 29, 1827.

He was born in Scarboro, Maine, which is very near Portland, and which was then a part of Massachusetts, on March 24, 1755. He attended the Dummer Academy at Byfield, near Newburyport, Mass., and was graduated from Harvard College in 1777.

He served in the Revolutionary War and became aide to General Sullivan in his expedition to Rhode Island. He studied law in Newburyport and was admitted to the bar and commenced practice in 1780; he was a member of the Massachusetts House of Representatives in 1782, a member of the Continental Congress from Massachusetts from 1784 to 1787; delegate to the Federal Constitutional Convention at Philadelphia in 1787, and to the Massachusetts State Convention in 1788, which ratified the Constitutional Convention proceedings.

Then he made another major move. He settled here in 1788. He served as a member of the New York State Assembly in 1789 and 1790. He must have been a man of exceptional attainments to become an official of the State of New York within a year after having moved into the State.

Now note his progress. He proceeded to zoom into national leadership with almost skyrocket effect. He was elected as a Federalist from New York to the Senate of the United States in the First Congress, which convened on March 4, 1789. His New York colleague in that first Senate was Philip Schuyler, of Albany, another Revolutionary giant.

Rufus King was reelected to the United States Senate in 1795 and served until May 18, 1796, when he resigned. Then he was appointed United States Minister to Great Britain, and he served in that capacity from May 20, 1796, to May 18, 1803. Here is drama in history. Only a few short years previously Rufus King had borne arms against Great Britain and now he was an accredited minister at the court of the country he had helped forcibly wrest his country from.

But this man's career was not ended. By no means. In 1804 he was the unsuccessful Federalist candidate for Vice President of the United States when Thomas Jefferson was elected for his first term as President. His successful opponent for the Vice Presidency was Aaron Burr, who was later to create lurid chapters for the historians, and who has become one of the most controversial American figures of all time.

This political set-back for Rufus King was only temporary because we find, 9 years later, in 1813, that he was again elected to the United States Senate in the thirteenth session of Congress. He served in the United States Senate until March 3, 1825—which was the Eighteenth Congress. Think of it. A man who served in the very first Congress finally laying his legislative burdens down in the Eighteenth Congress.

While in his second tenure in Congress he somehow found the time to be a candidate (unsuccessfully) for governorship of the State of New York on the Federalist ticket

and was beaten for the Presidency by James Madison of Virginia.

This particular era was the heyday of the Virginia politicians or statesmen, if you prefer the latter appellation. Washington, Jefferson, Madison, and Monroe, Virginians all, followed in rapid order, with only John Adams, of Massachusetts, intervening as the second President between Washington and Jefferson. And to his dying day Adams thought Jefferson had, to use a current colloquialism, double-crossed him out of a second term. And he told him so the day that Jefferson took over the reins of government.

In any event, there was a time in the early days of the country when Virginia so dominated the high echelons of the American political scene that it seemed that only Virginia mothers could look on their newborn boy babies and say fondly, "Someday you may grow up to be President of the United States."

But to resume the King career. After retiring from the Senate finally in 1825 we find this remarkable man again becoming the United States Minister to the court of Great Britain from May 5, 1825, to June 16, 1826. Ill health forced him to return to his home in Jamaica, Queens, where he passed away on April 29, 1827. His remains are interred in the churchyard of Grace Church.

What a glorious half century Rufus King spent in the service of his country—he was truly a builder of our America and a foremost exemplar of the free political processes he fought for and worked to bring into being.

The King family was otherwise distinguished. He had a half-brother, Cyrus King, who was raised in Maine, who, after graduating from Columbia University, served as Rufus King's secretary when he was Minister to Great Britain. Cyrus King returned to Saco, Maine, where he became one of the founders of Thorndyke Academy; he was elected as a Federalist to the Thirteenth and Fourteenth Congresses. He died in Saco, Maine, still a comparatively young man, in 1817.

Rufus King's son, John Alsop King, subsequently became a Member of Congress and Governor of New York State in 1857 and 1858, and another son, James, served a term in Congress. Although he lived much of his life in New Jersey, James King is buried with his father and brother, John Alsop King, in Jamaica. Truly, a remarkable family — one which produced a United States Senator and three Congressmen in two generations.

It is significant to note that the New York delegation to the first Congress of the United States had eight men in it—six Representatives and two Senators. Of these eight men, two were from Queens—Senator King and Congressman Benson, whose career I set forth earlier.

In this paper I have reviewed the careers of early day Queens statesmen from the days of the Constitutional Convention down to and through the first session of the Congress of the United States.

Possibly "Old Newtown's Part in the United States Congress" shouldn't have been the proper title for this paper. There seems to be much of Jamaica in it. In extenuation, I can only say I had to follow where research led me. But, after all, the history of all sections of Queens is closely intertwined. The people of Old Newtown were the friends and neighbors of the good folk living in Flushing and Jamaica. Their families intermarried and they visited back and forth. They had everything in common, including their love for liberty. Rufus King and Egbert Benson were as close to and meant as much to the people of Newtown as they did to Jamaicans. Old Newtowners of legislative bent begin to dot the pages of history in numbers just a bit later than the era I have high-lighted.

The careers of other Queens and Old Newtown men, who lived and legislated, yes, and fought for their country in 1812 subsequently, are just as interesting as those reviewed tonight. There was Sam Riker, of Newtown, whose direct descendants are our neighbors and friends today. There was Cadwallader Colden, an ancestor of one of our most distinguished Supreme Court Justices, Charles S. Colden. There was Joshua Sands, for whom Sands Point was named. Before it was renamed it was known as Cow Point. Then, there was the magnificent career of John Alsop King, whose luster was not dimmed by his distinguished father and who is a story in himself.

To one who is interested in historical matters, Queens is a fertile field for examination. The street (once country road) we are meeting along has known the tread of patriots and king's soldiers and horses. Those who lived along it or near it have known the sorrows and fierce exultations arising from armed conflict. Queens in that heroic day might have been only a collection of country towns, but what was thought and done in Queens in those far-off days, when our country was being born, with accompanying labor pains, was part and parcel, and an important part and parcel, of the developing fabric of a free country.

In years gone by Queens and Newtown men and women helped mightily in the fashioning of a Nation. They did not want to die by sword or bullet, before a firing squad, or dangle from a hangman's noose any more than any of us want to die in those violent fashions. But, the point is, they were ready to die, for an ideal they had consecrated themselves to—the ideal of national, political, and personal liberty. In selfishness they might have followed the line of least resistance and gone on from year to year, decade to decade, hoping that a half-mad king might grant them the liberties that their dignity as human beings demanded. They did suffer much. And they suffered for years before they revolted.

But when they erupted, when they decided it was time to strike the yoke of foreign domination from their necks, they erupted violently and stubbornly. They were unbeatable because the ideal of freedom and liberty burned high in the breast of all—or nearly all—nothing short of mass extermination would have finally extinguished this flame.

And because of them we sit comfortably here in this beautiful building in Old Newtown tonight. Our sons, mine among them, have fought and shed blood for this country in all our country's wars since the Revolutionary War. God forbid that they or their sons will ever have to fight again. If they do they will not be found wanting. Their patriotism, we know, is as high as that of the early sons and daughters of Queens and Old Newtown.

I am not one of those who entertain special fears for the younger generation. I remember when I was growing up my mother and father used to say mournfully, "What is to become of the younger generation?" And mothers and fathers throughout the land are asking the same question today. And they always will, in every generation. It is not the present younger generation I am nervous about. They have just proved themselves in the most brutal and most devastating of all wars.

We can—and if we are to survive in this turbulent world—we must see to it that no backward steps are taken; that no hard-won liberties are infringed on; that no ideologies imported from godless or materialistic nations get a foothold in this country. And those who gave aid and comfort to alien ideologies must be converted to the American way or ruthlessly have their capacity for injury to our country and its institutions destroyed. It is every country's duty to protect its rights and political and economic systems from enemies from within and without.

We all felt nauseated yesterday when we read of the traitorism of an American soldier who deserted his flag and became a radio voice for Nazi Germany while we were at war with Germany. He received a 25-year term in prison—a light sentence, considering the gravity of his offense. In any other country in the world that traitor would have been shot or hanged. There seemed to be no mitigating circumstances whatever in his case. What could have gone wrong in the thinking of this young man? Can it be that our collective patriotic thinking is not well enough integrated; is not emphatic enough; that fundamental love of country—enlightened patriotism—is not dwelt on enough in our schools and churches? Someone who had the responsibility for the early thinking of that traitorous American soldier failed in his or her job somewhere along the line. Let us make sure there are no failures among those who receive their inspiration and ideologies from us when they are young and impressionable.

And I wonder if you felt a vicarious sense of shame when members of a sidewalk mob, recruited on behalf of an alien power, booed and hissed a Federal judge yesterday when he was about to take his place on the bench to preside over the trial of those accused of plotting to overthrow our Government by force. I did, and along with shame came a feeling of hot anger. This sort of thing must stop. We must see to it that it stops. Respect for law and the courts is fundamental in our national structure. We must not permit those who deride our courts to weaken or subvert the judicial processes. We must not sit meekly by when the ruffian scum that gives its allegiance to a foreign power that is embarked on a program of forcing the entire world to yield to its materialistic philosophy of statism, boos and derides our officials. We must see to it that justice is done, through our courts. We must continue to elect officials who believe deeply that the Constitution of the United States is still the most enlightened document written by man for the government of man.

We must beware of those, regardless of party, who listen to the siren calls of godless, lock-step, collectivist systems for the sake of garnering votes. We must rid ourselves of any and all who would destroy our honored, time-tested American principles of free government.

Let's back up our courts. Let's back up those who are, in their official capacities, seeking to rid us of those who would first topple our form of government into the dust and subsequently enslave us. Let us make sure we continue to have names and do not become numbers in a master file in a room behind an iron curtain.

Let's educate on behalf of the American principles of freedom for all and liberty within the law for the individual. Let's resist, and if need be deport or incarcerate those who value the approving nod of a foreign dictator more than they do their own or our freedom or our country's integrity and sovereignty.

This Broadway, this old street that faces us, is to me a hallowed street—one of the most hallowed and significant in all America. I always think of it as Freedom Road. Through its dust and dirt of other earlier years trod men and women imbued with the ideal of liberty. Their sweat and their tears mixed with the dust of old Broadway in Old Newtown. Out of their reverence for God, out of their beliefs, out of their exertions, out of their sacrifices, out of their wounds, out of their tears, came the freedom you and I so comfortably enjoy.

Let us do our utmost, living on our respective roads, to see to it that every highway in the United States, whether old and much traveled like old Broadway in Old Newtown, or whether the newest paved street in the

newest subdivision of the land, is truly, now and forevermore, Freedom Road. It is the best road that man, throughout all the ages, has ever built and traveled.

Fort Stoddert, Ala.

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD I include an article by Hon. Peter A. Brannon, archivist of the State of Alabama, which article appeared in the Montgomery Advertiser under date of January 30, 1949. This article contains some very interesting history of Fort Stoddert, Ala., and stresses the importance of this outpost in the early 1800's.

THROUGH THE YEARS—ALABAMIANS URGED TO SUPPORT PLEA FOR FORT STODDERT STAMP

(By Peter A. Brannon)

The current agitation started by the Historic Mobile Preservation Society for a commemorative stamp to honor the one hundred and fiftieth anniversary of the establishment of Fort Stoddert, on Mobile River, gives Alabamians an opportunity to revitalize the many interesting incidents connected with that post. FRANK BOYKIN, of the First Congressional District, is making a splendid effort to convince the Postmaster General that the point is of sufficient national importance to warrant the issue. BOYKIN has even gone so far as to introduce a bill in Congress to direct the Postmaster General to issue such a stamp. We Alabamians should vigorously support the Congressman's efforts.

Fort Stoddert, founded as an outpost near the boundary line of Spanish territory and the United States in 1799, bears the name of Benjamin Stoddert, one-time Secretary of the United States Navy and credited by some as once Acting Secretary of War. The post was the port of entry for goods from Spanish Mobile, and was the most important United States military post in the Gulf area for years. It should be remembered that Mobile, located south of the thirty-first degree of north latitude, did not get into the possession of the United States until after Andrew Jackson took the town during the period of the war with Great Britain. Settlers in south Alabama, when they bought commodities which had to come through the Spanish customs, paid a much higher price for goods than those floated down by boat and portage from the Allegheny routes.

Some writers on Alabama history have confused the two sites, Mount Vernon and Fort Stoddert, and have intermingled the historical references, but this need not be confusing for Mount Vernon, up on the hill out of the river swamp, was established as a health resort and for what was known in early military records as a cantonment.

Its history, rich in pioneer American lore, does not need any of Fort Stoddert's to entice the interest of the student. Fort Stoddert had at one time Capt. Peter Philip Schuyler, son of the old Revolutionary New Yorker, as its commanding officer. Capt. Bartholemew Schaumberg, a Pennsylvania Dutchman, was one time commander. Edmund Pendleton Gaines, at times commander in chief of the United States Army, and son-in-law of Judge Harry Toulmin, once commanded the post. It was he who captured Aaron Burr early in 1807 and confined him there until he was sent to Richmond to stand trial for treason.

Fort Stoddert was frequently host to George Strother Gaines, brother of Edmund Pendleton, long time the United States factor at St. Stephens and the removal agent of the Choctaws to the west. Judge Toulmin held court there, having succeeded that interesting old Connecticut gentleman, Col. Ephraim Kirby, who was appointed as the first Federal district judge there by President Jefferson.

Kirby, a veteran of the Revolutionary Army, came as a land commissioner to the Mississippi Territory, and subsequently was named to a post in the Orleans district. But when this was withdrawn, he was designated as the first United States district judge of the eastern section of the Mississippi Territory. The territorial papers published in recent years proved that Mr. Kirby never held a term of court, though the historians did not know that until recently. As late as May 1, 1804, Kirby was addressing the President from Fort Stoddert. Published in Carter's Territorial Papers of the United States, and as excerpts from the Jefferson Papers in the Library of Congress, is a long letter giving much data relative to that section of the State. Published only 2 pages in advance of Mr. Kirby's letter is one from Harry Toulmin to the Secretary of State of the United States, wherein Mr. Toulmin writes from Frankfort, Ky., his letter bearing the same date as Mr. Kirby's.

Fort Stoddert is located in what the Spanish knew as Ward's Bluff. It was erected by United States troops under Lieutenant Schaumbert (sometimes he is referred to as Captain) in the summer of 1799. It was anticipating that this would be about the line agreed on between Spain and the United States. When the Ellicott boundary line was fixed, it was found to be north of the 31st degree and within American territory. The site was used as a military post with an outlying cantonment at Mount Vernon until the close of the war with Great Britain, when the establishment at Mount Vernon became permanent.

Judge Kirby is buried at Fort Stoddert and his grave bears an appropriate marker.

ECA Can't Do Everything

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Fortune magazine for February 1949:

ECA CAN'T DO EVERYTHING—IT HAS ALREADY BEEN SURPRISINGLY SUCCESSFUL IN PART—TO BE WHOLLY SO, IT NEEDS NOT MORE MONEY BUT (1) A MILITARY GUARANTY, (2) A COMPREHENSIVE FOREIGN POLICY, (3) A PROGRAM ENABLING EUROPE TO EARN MORE DOLLARS

To the Eighty-first Congress and the solid citizens of the United States: This is essentially to remind you of what you probably never will forget: you are stuck with the rest of the non-Communist world. As this appears in print, you will be arguing earnestly how to renew for the next 15 months the Economic Cooperation Act of 1948, popularly known as the Marshall plan. Some of the idealists among you may strive to rid the act of jokers such as the provision that one-fourth of the wheat shipped abroad must go in the form of flour. Others, alas, will sweat mightily to introduce new jokers. But many of you will dutifully and conscientiously check the record of the Economic Cooperation Administration against its mandates in the act. Aware that it is "the most portentous experiment in the history of American foreign policy," you will probably scrutinize it with its high objectives in mind. Without too much petty haggling, after the breast beating is over, you will make a deficiency appropriation of about $1,300,000,000 to cover its expenditures up to June 30, 1949, and appropriate between $4,000,000,000 and $4,500,000,000 for the fiscal year ending June 30, 1950.

All of which is fine, honorable lawmakers, but will you go all the way in your scrutiny? To appraise ECA you cannot merely look it over professionally, as a Missouri farmer inspects a mule; you've got to climb high enough to take a long deep look at it and the whole complex and difficult world. You must of course weigh what ECA has done to help Europe to viability. You must give more time and thought than many of you seem inclined to give to the question of whether Europe has done enough to help itself by mutual self-aid and particularly by sound fiscal policy. But beyond that you must ask yourselves what ECA was supposed to do and whether it can do it. Do any of you still believe that it can achieve its aims without a military guaranty? Do you think ECA alone can adequately prepare the way for its own demise?

For the disquieting fact, as revealed in the plans and estimates of the 19 Marshall countries, is that they may not achieve the high degree of viability they have been hoping to achieve by 1952. That, after all, is not strange. Even before the late $1,352,000,000,000 war, many of these countries were running adverse trade balances and generally going downhill. ECA is only the latest chapter in the old story. The United States, since World War I, has given away billions of dollars in goods and services to the Marshall countries. Since July 1945 it has topped them with another $9,000,000,000 worth. The foreign investments of these nations, normally equal to the cost of more than half their imported food and raw materials, were largely wiped out in the war. They cannot sell what they once did to others or to one another. Even if they increase vastly their exports to the United States and other hard-currency countries (as they confidently hope to), and even if they export more to eastern Europe than they used to (about which they are less sanguine), they estimate they will be able to afford no more than 75 percent of their prewar imports by 1952. Yet their population will have increased by more than 10 percent. Barring a miracle, they fear they will have to reconcile themselves to a lower standard of living than they had hoped for—and until a few weeks ago, indeed, were led to think they would have. Many Americans think that ECA will end Europe's dependence on the United States. If you think so, how can Europe increase its trade and its exports? Must it reduce its imports, and what will that mean? Can ECA adequately prepare the way for such eventualities?

You cannot escape such questions, honorable lawmakers, if only because you thought you had answered them all when you rushed ECA through in the first place. Taken together, its objectives, even in the well-worn prose of the act, are almost presumptuously Olympian in scope. The act, to preserve democracy abroad, aims to bring about "* * * sound economic conditions, stable international economic relationships, and the achievement * * * of a healthy economy independent of extraordinary outside assistance * * *" to be achieved by a "plan * * * based upon a strong production effort, the expansion of foreign trade,

the creation and maintenance of international financial stability, the development of economic cooperation, including all possible steps to establish and maintain equitable rates of exchange and to bring about the progressive elimination of trade barriers * * * to encourage these countries through a joint organization to exert sustained common efforts."

And ECA's unstated but understood aims cover even more ground. Many of you Congressmen—and perhaps enough to defeat the act—were for it because it had been sold to you as the only way to stop communism. To many others it is a substitute for military aid. To still others it is a means of tapering off aid. To people who feel good only when other people are feeling good it is a humanitarian scheme. To farmers, manufacturers, and others of little faith who are beginning to worry about surplus production, it is a handy solution. It is indeed a little of everything to nearly all men; and its strength and defects, its accomplishments and failures, can be appraised in terms of that fact.

IF THERE HAD BEEN NO ECA

You will find it easy to become enthusiastic about much that ECA has already done. Its formation was a triumph of organization. Nine months ago, when Paul Hoffman took over, it was nothing at all. Today it is a flourishing group of more than 2,000, nearly 1,500 of them in "missions" abroad. The staff is the pick of Government and private industry. "As a whole," says Senator VANDENBERG, "ECA is the best group ever put together for public service." Despite early turn-over of expert personnel, owing to the policy of drafting prominent advisers and technicians on a temporary basis, ECA has functioned well, and even efficiently, making more than $5,000,000,000 worth of allocations with more judgment than anyone had a right to expect.

ECA PICKS UP THE TICKET

In the scenes described here, ECA has "picked up the ticket"—provided the means to continue a project or carry it through more thoroughly. Its contribution is often small, dispersed, and hidden—a little concrete here, a little steel there, some wheat for the workers' bread. It is hard to dramatize to Europe. But it deserves to be dramatized, for it is usually the scarcest and hence most vital contribution.

ECA's surpassing achievement so far has been what Europeans call the support it has given their economies. Striking, yet only typical, is the example of Britain. E. Austin Robinson, a Cambridge fellow who sat on the committee deciding British economic policy when the $3,700,000,000 loan ran out and it looked as if more aid would not be forthcoming, recalls the experience vividly. "It was terrifying," he says. "Britain planned to sell everything it could, its plant and machinery, for what quick dollars it could get. Instead of reorganizing and equipping its industry so it could be a source of permanent wealth, it would have had to jettison the whole thing. Our meager rations of butter, sugar, cheese, and bacon would have had to be cut by more than a third, and the weekly ration of about one shell egg and 21 cents worth of meat per person would also have been reduced severely. Worst of all, we would have had to cope with a standing army of unemployed estimated to reached 2,000,000."

So ECA, if only because it gave Europe hope, literally saved the continent, saved it from civil war, economic collapse, and communism. "The money we spent," says Paul Hoffman, "* * * is the best bargain the people in the United States ever got." What is more, ECA is giving Europe a chance to rebuild itself. Production in most countries has risen above prewar levels, and is still rising steadily. Exports to the United States have gone up 39 percent in 6 months.

LIKE NOTHING SINCE THE HOLY ROMAN EMPIRE

But what has ECA done to improve trade, and otherwise to promote the sustained common efforts, the economic unity that will prepare for a united Europe so confidently ordained in the act? Here it can boast of two phenomena that at first glance are encouraging, even astonishing. One is the OEEC (Organization for European Economic Cooperation), and the other the Intra-European Payments Scheme. The OEEC was not founded by ECA, but in fact antedates ECA. After General Marshall's famous promissory speech at Harvard on June 5, 1947, European nations were swept by a wave of desperation, relief, and sweet reason. "When they sniffed dollars," remarked one Frenchman, "they dropped everything and came running like cats to fresh milk." Hastily and voluntarily, with Ernie Bevin leading the pack, they formed OEEC to prepare and integrate estimates of what they needed. Whether it was the lure of billions of dollars, or the birth of a new spirit in Europe, they managed to get on together. And when ECA looked around for a means of allocating its aid, it sagaciously gave the responsibility to OEEC.

There is a lot of palaver in the OEEC offices on the Quai d'Orsay above the Seine in Paris—no fewer than 897 committee meetings were held last July and August—and much of it is racked by bickering and argument. But OEEC, like a crocus beside a glacier, blossoms hopefully. Each country, when it presents its program, is cross-examined by at least two others; and it is not only obliged to cough up any and all information, it actually does. It seems incredible, but members insist that central bureaus actually disclose trade practices, and that technicians actually reveal industrial secrets. The British, who only a couple of months ago were accused of dragging their feet at OEEC, are now capitalizing on their relative abundance of trained technicians and their improved trading position to take the lead in the organization's affairs. And although OEEC is plausibly criticized for not being authoritative enough, members of the top council, composed of ministers from the nineteen Marshall countries, do have the power to accept certain changes in their countries' production and trade plans. It is easy to see why OEEC has been fervently if loosely described as something which has not happened to Europe since the Holy Roman Empire.

OEEC's most important achievement is the intra-European payments scheme, sometimes called the little Marshall plan. In the summer of 1947, owing to the ever tightening net of currency restrictions and controls as well as lack of exchange, intra-European trade was mainly on a barter or bilateral basis, and was rapidly grinding to a stop. So OEEC took action. After preliminary haggling, which must have been edifying to listen to, it set up a trial clearinghouse; and after that, last October 16, each creditor country agreed to donate its credits to its debtors by extending them drawing rights. These came to the equivalent of $810,000,000. Great Britain, the major donor, contributed the equivalent of $312,000,000, and Belgium and Luxemburg, next largest, together gave the equivalent of $218,500,000; while France, the major recipient, got the equivalent of $333,000,000. To enable the scheme to work at all, ECA had to give contributing countries conditional dollar grants to match their donations. Since these came from regular Marshall plan funds, Europe as a whole gets no more dollar aid as a result of the pooling scheme. What it amounts to is that the contributing countries, chiefly Britain and Belgium, have generously done unto others as the United States has done unto them. The results are encouraging. Intra-European trade is still less than two-thirds its prewar volume, but it is picking up, and a major part of it is now accounted for by the scheme.

THE IMPORTANCE OF FISCAL RECTITUDE

Nevertheless, honorable legislators and citizens, do not allow your enthusiasm to become unduly inflamed. The plane may be doing 150 miles an hour, but it still isn't off the ground. Partly this is a question of military security; yet if the Marshall countries had a huge modern army, tens of thousands of aircraft, and all the secret weapons known, they still would be insecure. The trouble with ECA's achievements in OEEC, thrilling as they are, is that they are, at bottom, only a substitute for, at best, a step toward sound, old economic practices. If Europe enjoyed responsible governments and reliable currencies, as decontrolled and freely convertible as they were, say, in 1910, there would be little or no need for OEEC and an inter-European payments scheme. Trade would expand naturally. American banks and industries would have incentive to put money into European government and industry. OEEC may be the shining hope of an advance in European cooperation, but it is also the result of a long and depressing retrograde in European cooperation; it must get Europe to adopt sound monetary and fiscal practices before it can amount to anything much.

These practices boil down to balanced government budgets and recognition of the fact that investment plus consumption cannot, in the long run, amount to more than the national output; and ideally they result in a currency sound enough to be freely convertible in the open market. No economy, totalitarian or free, in Siberia or North America, can long flout these principles with impunity; for they are based on the simple laws of arithmetic, which no regime has yet succeeded in repealing. If 90 out of every 100 workers in a country with little or no unemployment are devoted to the production of consumer goods and services, you cannot assign 20 of them to making capital goods without reducing the production of consumers' goods. To put it another way, you should not put them to work at capital goods unless your consumers save enough or can be taxed enough to pay for the capital goods. If you try to turn the trick by running into debt—that is, by creating money by government fiat (the printing press) or private banking (too much credit)—you only reduce the value of your money. If you keep on creating money, you have an inflation on your hands. And the only cure for inflation, in Afganistan or Peru, in Spain or in Russia, is fiscal rectitude. In the late depression, it is true, this principle tended to fall into disrepute when the Keynesian theory of deficit financing became useful. One trouble today is that the politicians, naturally delighted with the practice of deficit financing, have kept on applying this depression remedy to boom conditions.

PLAN AGAINST PLAN

ECA is sometimes criticized for substituting Government planning for the natural play of economic forces. It was, indeed, at the request of ECA that OEEC asked all the Marshall countries to submit plans showing how each proposed to balance its exports and imports by the time Marshall help ended. Even Britain, that citadel of planning, had to be rushed into submitting a plan it did not want to submit. The "plans," however, were unavoidable. Congress could not have been persuaded to grant lump sums to Europe; and, as Paul Hoffman has pointed out several times, the only alternative to wading through interminable shopping lists was to ask the countries for programs. Ernie Bevin recently took great delight in reminding Parliament of this. "I hope I shall not be taken wrongly in America," he cackled, "if I say

that the Americans are a great free-enterprise people inside and wonderful planners outside."

But with all respect to the elated Mr. Bevin and the alarmed critics of planning, OEEC has not advanced the cause of national planning one bit. On the contrary, it has all but ruined it. For once the plans were assembled, they mercilessly exposed government planning for what it is—the preparation of estimates of what might happen if certain policies were followed under dozens of conditions not one of which is very predictable. The plans contradicted one another all along the line. Almost every country hoped to balance its trade by selling goods the others could not buy, and by exporting more than it imports. What is left when these contradictions are resolved is only the most tentative kind of guide, bristling with unresolved problems and bulging with unanswered questions.

The contradictory plans, furthermore, performed the salutary function of demonstrating that the intra-European payments scheme, for all its good works, would collapse like a corncrib in an earthquake without the conditional grants of dollars, and that only sound currencies can in the long run save Europe. Right now, to be sure, such fiscal principles cannot be applied suddenly and dogmatically. If currencies were freed from all controls overnight, much of the capital left in Europe might take the opportunity to flee. Until certain countries can boast more security, capital rests there uneasily and under duress. Not even the Belgians, who enjoy a hard currency and would prefer outright convertibility to OEEC's drawing-rights scheme, seem to think complete convertibility is possible right now. But the time has come, nevertheless (as if it had ever gone), when Europe must take steps to return to fiscal rectitude or let its trade die.

And Europe is obliged to practice it not only for the sake of its trade; Europe must practice it simply to learn to get along by itself. All the signs, to repeat, point to a leaner Continent, one that will enjoy fewer imports per capita than before the war. They also point to a Europe with a very different kind of internal trade. Consider Britain, the most important sector in Europe's mercantile pattern. Before the war, when the pound would buy at least twice what it does today, some 11,000 Englishmen enjoyed incomes of more than £5,000 a year; fewer than 300 do now. The British 4-year plan may be worthless as a prediction, but the British income figures demonstrate clearly enough why Britain is likely to reduce more or less permanently its imports of things like wine, perfumes, and expensive comestibles. As it is, everybody, including Britain, wants to import necessities and export luxuries.

Europe's only sane course is to prepare itself for the future by practicing correct monetary and fiscal policies while it still has ECA. And this does not mean, as many advocates of controls imply, that such policies demand inhuman sacrifices from the common people. The exact reverse is true. They are the people's best insurance against bad times—specifically against inflation, with its high prices, black markets, and a few gorged incomes in an ocean of miserably shrunken ones. OEEC can justify its great expectations no more resplendently than in persuading all free Europe to adopt and enforce these fundamental policies.

THE SPECIAL CASE OF FRANCE

What is ECA doing to bring OEEC and Europe to them? Here the record is spotty, and nearly every fine conclusion carries on its back a mean qualification. Belgium is a model of fiscal rectitude, but it was before ECA. Britain under Sir Stafford Cripps has turned in an all-time example of civilized (if dogmatic) self-restraint; but even Britain is not done with suppressed inflation—that is, an excess of buying power inefficiently and imperfectly checked by price and ration controls. Western Germany, after a good start with its new Deutsche mark, has demonstrated again the national weakness for biting off more than it can chew by increasing its money supply faster than its productiveness, and is mired in inflation. (This is not ECA's fault, for it is responsible for very few of the dollars being used in Germany. General Clay's military government has the money; and it also has the power, which no American agency has elsewhere, to enforce fiscal rectitude. But it let the Germans have their heads.) Above all, there is France, at once the most crucial nation in ECA and the most flagrant example of what is wrong in Europe.

France, as everyone knows, is potentially the Continent's richest and mostly nearly self-sufficient nation. Ordinarily she can almost live on the food she raises; last year's crop, according to dubious official estimates, came within 15 percent of normal, that is, within 10 to 20 percent of supporting the country. She needs to export only 8 or 9 percent of her gross output (she is now exporting 3 percent) to pay for all her imports—compared, for instance, to 15 or 16 percent for Britain. "If she could only reform herself fiscally," says one ECA official, "she would need about 6 weeks to become the most prosperous, stable country in Europe."

ABOVE ALL ELSE, SECURITY

To repeat, Congressmen and citizens, ECA is doing about as much as it can. If you want it to do more, you must give ECA itself some aid, specifically on the political-military fronts. Any organization dispensing free aid on so colossal a scale, to be sure, necessarily wields a political and military as well as an economic weapon. But ECA is a little too much of everything to nearly everybody; it has to function at once as a banker, politician, and propaganda agency. With help, it would have a vastly easier time in its fight for fiscal reform and in its attempts to forfend the so-called long-term dollar shortage. At the same time, it could stick closer to its specific economic function, the allocation of aid. It could investigate more of the countless charges of graft in the import and distribution of aid. And it might get along with less money.

What help will enable ECA to do all this? ECA above all needs some kind of security for the Marshall countries. That surely means a military guarantee, if not an alliance. Much of the current brand of continental cynicism arises, as Fortune has previously suggested, from physical fear. So long as Frenchmen believe that Russia can take over Europe with relative impunity any day it chooses, French capital will flee as it did in the late thirties, even if the franc is miraculously stabilized. Armaments, of course, claim men and materials badly needed in more productive effort. But the governments of Europe, as they gather strength, are bound to arm themselves anyway. It would be senseless for them to set up separate military machines. A military alliance with the United States, accompanied by lend lease, would enable them to form, and should indeed depend on their forming, a common defense organization. Above all, it would restore their confidence in the future. Money would tend to stay at home. The United States would be in a far better position to "recommend" the very economic reforms that would automatically reduce the need for ECA help.

PROBLEM: TO SELL THE UNITED STATES

On the political front the visible sector is propaganda. Here ECA is weak. Americans may be the most skillful sellers and promoters the world has ever seen, but you'd never know it in Europe. When the Communists can spend a few hundred thousand dollars and nullify as much as $160,000,000 worth of aid (as the French coal strike did), something obviously needs to be added to American propaganda.

Selling people on economic aid is hard. Most of ECA's raw materials have gone into stock piles and storehouses, for distribution to factories, mills, wholesalers. Rarely can you point to a bridge or building and say, "Without ECA you would not have this." ECA has set up exhibitions in several cities; its packing cases are frequently marked with its insigne; and sometimes there are little ceremonies when first shipments arrive. But except in the Netherlands, where the Dutch have done a fine job of promoting the aid, the average man in the street, such as the farmer, knows practically nothing about it. Most of what the French know is wrong; the little French businessman figures that somebody must be getting a cut of the swag, and he only knows he isn't. "The Marshal plan? I can't see that it's working," is an old refrain.

ECA doubtless is not yet spending enough, or even all it hopes to, on advertising and publicity. Nearly all reports from abroad indicate that it should spend more. But the problem of selling ECA is more than just plugging ECA—it is the problem of selling the whole United States. That demands first of all a sincere, integrated foreign policy designed to discharge intelligently America's responsibilities to the rest of the world. It is a problem now for the Mr. Acheson who, speaking in Mississippi a month before Mr. Marshall's famous speech at Harvard, proposed a development of the foreign reconstruction policy of the United States. And it certainly is a challenge for the Harry Truman whose election pleased so many people in Europe.

PROBLEM: TO EARN MORE DOLLARS

What ECA needs, finally, is some action on the problem of what Europe will do when ECA is gone. How, aside from slashing their dollar imports, which they must do, can the Marshall countries solve their dollar shortages? In 1952–53, they expect—hope is the more accurate word—to sell twice as much to dollar areas as the $1,300,000,000 worth they sold in 1947. Even so, they may run up as much as a $2,000,000,000 deficit, unless they trim imports very severely. Manifestly they've got to try to export more, and that as soon as possible. They must stop selling in their own high-priced home markets (which wouldn't be so high priced if they punctured their inflations), and must apply themselves more assiduously to studying the American market and sales methods, of which they are distressingly ignorant. Despite the progress Italy is making, for example, she almost surely will be asking for more aid in 1953 unless her exports to the United States increase severalfold. The United States would surely not be going too far if it set up a genuine, live organization to help others sell to it.

The United States is not going too far, either, in taking another long look at its own tariff policies. On the whole they're lower than they've been since 1912, but they're still too high. The Danes complain, for instance, that they could go a long way toward solving their dollar problem were it not for the crippling 14-cent-a-pound duty on all butter after the first 50,000,000 pounds (at 7 cents). The shipping interests in Norway, Britain, and other nations are loud and emphatic: If the United States would apply the same noble concepts of free trade and honest competition to itself as it insists Europe adhere to, they aver, most United States cargoes would be carried in foreign bottoms, which can do it cheaper. Nothing impressed Europe more with the sincerity of ECA than Paul Hoffman's recent threat to stop loading 50 percent of ECA's

bulk cargoes in American ships. And so it goes. Europe still tends to regard the United States as a worker might regard an industrialist who gives millions to old people's homes and soup kitchens while bitterly fighting every little wage increase. So long as the United States maintains sizable tariffs, so long, even, as it restricts immigration, there is an uncomfortable amount of truth behind the attitude. If the United States cannot demolish this, it can at least do all that is humanly possible to make it insignificant.

The best if not immediately the likeliest way of getting dollars abroad is to encourage their export as American capital. Much, much more attention should be given to the idea. In the ECA Act, to be sure, Congress recognized this and allocated $300,000,000 to guarantee the convertibility of money earned by new American projects abroad (up to the amount invested). The trouble with the guarantee idea is that unless Europe adopts correct fiscal policies and gains military security, no politically feasible guarantee will suffice to attract capital. If on the other hand, Europe stabilizes currencies and has security, such guarantees are hardly necessary.

There is, happily, a considerable ferment of ideas on the subject. Eric Johnston would have a $1,000,000,000 fund set up to guarantee American investments abroad. R. W. Gifford, chairman of the Borg-Warner International Corp., would found a relief corporation, financed by international loans and the sale of American industrial equipment abroad, to export badly needed American managerial and technical talent. Something is already being done to export American know-how, on a limited scale, by the Anglo-American Council on Productivity. Others think that foreign countries should guarantee not only the convertibility of profit but the rate of exchange—as the Netherlands has done. Still other schemes would have the Government even underwrite extraordinary risks like confiscation and competition from monopolies. Many of these ideas are plainly unfeasible but all are worth examining. There is no easier, fairer, or economically more valid way of helping other countries to their feet than sending private American capital abroad.

THE BUSINESSMAN ABROAD

And American money should be accompanied by American enterprisers. On page 116 of this issue, Eric Johnston reports on his impressions of the all-too-human European businessman. His report may be somewhat oversimplified, but like all hyperbolic essays, it contains nude and bitter truths. Chew them over, citizens and Congressmen; they will enable many of you to think better of your much maligned American Babbitts. They will also help you understand why Karl Marx, who seems so absurd to most American businessmen, was a Savonarola to so many Europeans.

If, as Mr. Johnston seems to indicate, a considerable percentage of continentals conduct their businesses as devices to get all they can before the police (or the Reds) catch up with them, it may be futile to talk about restoring free enterprise in Europe until you reform the old guard or install a few new genuine free enterprisers there. When you think of dispatching American capital to Europe, therefore, you probably must think of American business teaching European business the responsibilities as well as the opportunities of the system. What! American businessmen as teachers, as missionaries? Well, not exactly. All they have to do is demonstrate how it pays a company to be socially conscious, and to concentrate on large volume and low prices, instead of constricted volume and high prices. That surely ought not to be an insuperable assignment.

Taking everything together, citizens and Congressmen, the prospect may sometimes seem a little more than you had bargained for. But first remember you're stuck with the non-Communist world, stuck with the fact that the seat of world power has shifted squarely to the United States, stuck with the trite but still quite important job of preserving civilization. You can't back out of these responsibilities any more than you can turn the clock back. And there is no reason why you should if you could. With ECA you have taken a major step toward fulfilling your responsibilities. Give it the support it needs, and the rest is possible.

Broadcast of Hon. Joseph C. Harsch

EXTENSION OF REMARKS

OF

HON. FRANK B. KEEFE

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. KEEFE. Mr. Speaker, on January 30, 1949, the distinguished news analyst, Hon. Joseph C. Harsch, delivered a broadcast from Station WTOP, on the Columbia Broadcasting System, which I am sure many Members of Congress and many American citizens did not have the opportunity to hear. I consider this broadcast to be so noteworthy that I am including it in the RECORD as part of these remarks. I congratulate Mr. Harsch upon his keen analysis which was in the nature of a valedictory, it being his last broadcast on that particular Sunday program.

The broadcast follows:

Stalin has answered another set of questions put to him by a reporter, this time an American reporter, J. Kingsbury Smith, of INS. Stalin says the Berlin blockade could be lifted if Britain, France, and the United States would agree to postpone their plans for a western German state. Stalin says he would be glad to sign a joint declaration with the United States saying that neither intends to go to war with the other. Stalin says he would be willing to meet President Truman at a mutually acceptable place.

Like all previous Stalin answers to such set questions, this one has already stirred up quite a commotion with some politicians in Washington calling it an "opening wedge to peace." But there isn't really anything new in the Stalin answers, except that he has made them. There is no commitment which hasn't been made before.

The State Department just wonders why Stalin chose this moment to dust off some old ideas. One reason may be to distract attention from the unpleasant questions Moscow put to Norway yesterday. The questions sounded like an effort to scare Norway from joining the Atlantic Security alliance. This morning Norway, Sweden, and Denmark announced their failure to form a Scandinavian alliance. If Norway could also be scared away from Atlantic Security it would be quite a feather in Moscow's cap.

Perhaps also Stalin wants to distract attention from Czechoslovakia. It is official now that Russian Deputy Foreign Minister Vishinsky is there. The Russian story is that he is ill and at a sanatorium at Karlsbad for treatment. Reports persist that there is more to the story, perhaps involving some fairly serious Czech Communist deviationism.

As for other news. Latest reports from China say that Nationalist naval and ground forces have been withdrawn from the Yangtze River line, leaving Nanking in effect an open city. Acting President Li Tsung-Jen is the only high official reported still in Nanking. The 5-month-old government in Paraguay has been overthrown in a bloodless coup d'etat. It was strictly a palace affair. The public learned about it from the radio. Here at home the Air Force has put 10 more C-82 "flying boxcars" into the Nevada haylift. A mass of warm air in western Canada spreading down into the American Rockies promises some relief for the storm-stricken plains. That is the day's news so far.

Now, may I invite your welcome next Sunday at this time to Charles Collingwood, a distinguished newsman and a friend and colleague of mine who is going to take over this Sunday program. You will, I know, find his information and his views most helpful in understanding what is going on in this complicated world in which we live.

Today being my own last appearance on this program, I want to talk in more general and bolder terms than have been my custom about the one matter which has been dominant in the news throughout the nearly 2 years I have been using this time to try to clarify our affairs. The matter is Soviet Russia. When I began this series of broadcasts we had just embarked—because of Soviet Russia—on the Greek-Turkish aid program, more popularly known as the Truman doctrine. The biggest events in our lives since then have been associated with that program and the logical developments from it—because of Soviet Russia. We refurnished our armed services. We launched the Marshall plan. We set in motion a defensive alliance of the North Atlantic nations. We encouraged the western European nations to form a union among themselves.

In all of this we Americans have been playing an unaccustomed role in the world—because of Soviet Russia. It has been a daring, a controversial and an expensive role. Not everything we have attempted has been successful. China is the most glaring of our failures. Our success in Greece, where all this started, has been, to put it mildly, incomplete. But for all the mistakes we have made in the process, we have taken in hand great projects and have gone an impressive distance with them. The 2 years of these events have been anxious, sometimes frightening, sometimes enormously stimulating, and always overlaid with that most baffling question of our times: what is this Soviet Russia which goads us to such unaccustomed actions, which troubles us even in our home lives, which clouds the future with such grim possibilities as even war?

Like everyone else who has lived and worked with the news during this period, I have thought and read and talked endlessly about Soviet Russia. Some of the product has come out from time to time in these broadcasts in connection with passing events. But now I want to put it all together in a single effort to define this force so strange to our American experience which has set our course down such an unfamiliar road. Here, then, is what I would submit to you about Soviet Russia, in the interest of clearer thinking on Soviet Russia:

First of all, while Soviet Russia seems strange and unfamiliar to us, it is not in fact a new thing in this world. It is rather a combination painfully familiar to anyone who reads history. It is the combination of a strong state with a strong philosophy. In effect, it is the religious state, or church state. In this case its religion is antireligion, its God is anti-God, its faith materialistic, not spiritual. Yet antireligion is a form of religion. The French revolutionaries literally worshipped the goddess of

reason. The Nazis revived the paganism of Wotan. Just so Stalin's Communists have made a cult of atheism and combined that cult with the Russian state, and made the purpose of the cult the purpose of the state. The purpose of the cult is the conversion of the world to communism. The avowed purpose of the Russian state is to develop Russia as the physical base for Communist world revolution.

All of that is the direct opposite of our own concept of the purpose of government. Among ourselves we Americans disagree as to how our Government should serve our interests. But we do agree—most of us—that the function of government should be to govern for our material welfare, not for some purpose beyond our material welfare. Our founding fathers were passionately careful to write the separation of church and state into our own political foundations and they did it for a reason. The bloodiest pages of history have been written by religious states.

What challenges us today is not the doctrine of communism alone, or the Russian state alone, but the combination of the two. Communism is not the only universal dogma afoot in the world. In Cairo today orthodox Moslems still preach the holy war against all infidels. But their preaching does us not the slightest harm, because Mohammedanism is no longer combined with a power state. It was once, some 1,200 years ago, just as communism is combined today with the Russian state. In those ancient days a united Moslem world made war on all the rest of the world. Islam pushed east and west. To the east it was stopped only by the physical barriers of the Himalaya Mountains and the Pacific Ocean. To the west it was stopped only by the thick walls of Vienna and the strong arms of men like Charles Martel at Tours and Roland and Oliver, the fabulous palladins of Charlemagne, at Roncesvales. After the Christian world had turned back the religious state of Islam, Christians divided themselves into rival religious states. The most destructive wars in western history were the wars fought between Catholic and Protestant states. It took Germany a century to recover from the awful destruction of life and wealth in the 30 years' war. It may take Germany as much as another 10 years to recover from her losses in this last war, probably not so long.

Communism, as an idea separate from the Russian state would do us no more harm than a lot of other millennial ideas which circulate harmlessly in our midst. Communism was pretty harmless at Brook Farm outside Concord, Mass., in the days of Emerson and Thoreau. Communism, by itself, is simply one theory of how to bring about the millennium, like the single-tax theory.

And the Russian state separated from Communist dogma couldn't do us much harm, either. The average Russian is quite as isolationist in his inclinations as we would like to be. He is no world wanderer like the Englishman of Queen Elizabeth's day. The world has found it fairly easy in times past to cope with a Russian state which was just that and no more.

But when you have the two combined—a concept which would bend all men to its dogma and a power base as big as Russia—then you have something like Islam, or the rival Catholic and Protestant states of the period of the religious wars or the combining of the Roman Empire with Christianity under Constantine. When a leader of a powerful state, takes a mystic symbol in his hand and says, In this sign we conquer, then there is always trouble. Those who disagree with the new faith either accept it, or fight for their lives and their own faiths.

We of the west have resolved our older religious wars. Moslems and Christians, Catholics, Protestants, and Jews, neither try to slit each others throats nor are afraid of having their own slit when they live together under a government which is neutral like ours in their religious differences, although Moslems, Christians, Catholics, and Protestants all hold to universal doctrines. The Jews are different. Their faith is exclusive, not universal. They don't care so much about converting the heathen. We might remember, however, that if the Moslem, Christian, Catholic, or Protestant faith were to be revived in fanatical form and combined again with a power state we would have the equivalent of what Soviet Russia is today—a religious state bent on forcible conversion. Every one of these faiths has done it in the past. In theory, though we trust not in practice, it could happen again.

Now, here we are dealing with a religious state bent on conversion of the world. So long as Soviet Russia remains a religious state bent on conversion of the world we who don't like its religion must defend ourselves as best we can against it. But that does not mean that our salvation requires either putting to the sword every Communist, or wrecking the Russian state. We achieve our security if the Communist-Russian combination goes the way of all such combinations in the past. The key to the solution is not to destroy one or the other, but the separation of the one from the other. We must defend ourselves against the combination so long as it exists. But if history proves anything, it is that such a combination tends to fall apart. That can take a long time, and a lot of outside help. Islam plagued the world for two centuries. But the time span has not always been that long. The crusading impetus of the French revolution scarcely lasted 10 years.

The history of such combinations of church and state is that the fanaticism at the center grows cold around the fringes. Long before the end of the Islamic Empire the governors of its border provinces were doing political and commercial business with neighboring Christian princes. We cannot calculate accurately how long it will take for the process to work in the Soviet-Russian Empire to the point where we can feel comfortable again. Conceivably the Communist-Russian combination is immune to the tendencies which have always weakened such combinations in the past. But they have operated in the past, always. And we have already seen them separate one of Stalin's outer provinces from the orthodox communion.

Perhaps Yugoslavia will be brought back to the Moscow fold, by force or by treachery. Even if it is not, Yugoslavia will in all probability call itself a Communist country for many years to come. But the fact remains that heresy in the classic manner has already done its routine work in Yugoslavia, to our advantage. And we know that potential heresy exists in other Soviet provinces. And we have some reason to believe that Moscow is seriously worried over how to sustain the purity of the Communist faith in the vastnesses of China. And we know that even the high priests of communism in the Kremlin have at times compromised the interests of world revolution for the immediate interests of the Russian people.

None of this says that we can afford to let our guard down. There might not be any Christian world today if Charles Martel's sword had broken on the battlefield of Tours. There might not be any Protestant world today if Drake had mishandled his ships against the Spanish Armada. Only the sword has ever held back the onrush of the religious state in its period of crusading ardor. But the ardor does spend itself in time. And the religious state does become either less of a state or less militantly religious.

Today Vatican City is all that is left of the once powerful papal state. Today King Ibn Saud is a Moslem, but he doesn't consider it desirable to put the infidel to the sword either within or without his borders, no matter what the Koran says. In other words, the will to resist, plus time, has always before saved the unbelieving world from the religious state. And making it harmless does not depend on our own actions alone.

We have allies within the opponent's household, the same allies which have always before helped to keep the world from belonging to one man or one faith. And the greatest of those allies is the very fact that the religious state does not put the material interests of its people first. The time comes when the people demand that their government serve them, not some other purpose.

Closed-Shop Case

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Washington Post of February 9, 1949:

Some very shabby arguments were pressed upon the Supreme Court in the effort to have the Nebraska and Arizona constitutional amendments and a North Carolina statute forbidding the closed shop declared unconstitutional. The old shibboleths of an almost forgotten era were trotted out. Only this time they were pressed by labor unions instead of employers. The court was asked to strike down these regulations of employment practices on the pretense that they violate the rights of freedom of speech and of assembly, that they impair the obligations of contracts, deny equal protection of the laws and due process of law. Merely to state these complaints against laws that forbid discrimination against nonunion men is to emphasize the flimsiness of the case.

In writing for a unanimous court in the Nebraska and North Carolina cases, Justice Black gave special point to the irony of the A. F. of L.'s arguments. "There cannot be wrung from a constitutional right of workers to assemble to discuss improvement of their own working standards," he wrote, "a further constitutional right to drive from remunerative employment all other persons who will not, or cannot, participate in union assemblies." The whole opinion is a healthy rejection of the idea that the present court can be induced to distort the Constitution for the benefit of organized labor, as the court once distorted it for the benefit of employers.

In the early years of the century, State and Federal laws protecting the right of labor to organize and fixing minimum hours and wages were stricken down in the courts over the protests of Justices Holmes, Hughes, Brandeis and others. Such statutes were said to be unconstitutional for want of conformity to due process of law. It took many years of judicial ferment to establish the principle that legislatures may fix wages, prices, and conditions of employment without running afoul of the Constitution. At last that principle has been so well established, however, that no employer would think it worth his time and money to go into court to challenge it.

The court may well have been shocked, therefore, to hear organized labor mouthing the old discredited doctrines of *Lochner* v. *New York*, *Coppage* v. *Kansas*, and *Adair* v. *United States*. The fact that labor was this time asking the court to strike down laws

forbidding the closed shop does not alter the principle one iota. Obviously, if Congress and the States have the power to protect organized labor, they also have the power to protect the rights of nonunion workers. Labor could have succeeded in this case only if the court had been willing to revert to the reactionary view that the States may not invalidate either the closed shop or the "yellow-dog" contract; for legislation against both is necessarily on the same legal footing.

It is good to have the court emphatically reject such discredited arguments regardless of what the merits or demerits of the closed shop may be. The court says in effect that organized labor is no more immune to the effects of regulatory legislation than is industry. That impartial adherence to the best judicial tradition is the more significant because it comes on the heels of an election supposed to have put labor in the saddle. The decision is such a pointed repudiation of Mr. Dooley's claim that "th' Supreme Court follows th' iliction returns" that Justice Frankfurter felt impelled to quote and discredit that cynical quip. "A court that yields to the popular will," he said, in a phrase that ought to ring through every courtroom, "thereby licenses itself to practice despotism * * *"

With the court successfully resisting that temptation, the closed-shop and union-shop problems may be worked out in accord with the democratic process. We suspect that where the union shop does not develop grave abuses, it will have a large measure of toleration, but it is imperative that the representatives of the people retain the power to legislate against abuses in the employer-employee relationship whenever they arise.

Central Valley Project

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. MILLER of California. Mr. Speaker, the Water Project Authority of the State of California, created under the laws of California, adopted a resolution at a special meeting of the authority held on January 25, 1949, urging that the appropriation recommended by the President for the Central Valley project for the fiscal year 1950 be increased from $63,000,000 to $66,800,000.

The immediate completion of the Central Valley project is of great importance to the economy of the northern California economic area and the action of the Water Project Authority supports and substantiates that statement so often made upon the floor of this House.

I am including with my remarks the letter of January 27, transmitting the afore-mentioned resolution to me, together with the resolution:

WATER PROJECT AUTHORITY
OF THE STATE OF CALIFORNIA,
Sacramento, Calif., January 27, 1949.

Hon. GEORGE P. MILLER,
Member of Congress,
Sixth California District,
House Office Building,
Washington, D. C.

DEAR MR. MILLER: Enclosed for your information is a copy of a resolution adopted by the Water Project Authority of the State of California at a special meeting held on January 25, 1949, recommending an appropriation in the sum of $66,800,000 in furtherance of construction of Central Valley project, California, for the 1950 fiscal year. There is being sent to you for your information and in support of the resolution a copy of a report prepared by the staff of the water project authority entitled "Central Valley Project—Construction Progress, Status of Costs, and Recommendations for Congressional Appropriations for Fiscal Year 1950," January 1949.

Sincerely yours,

A. D. EDMONSTON,
Acting Secretary.

Whereas there is included in the budget of the President of the United States submitted to the Eighty-first Congress, the sum of $63,000,000, including $3,000,000 for irrigation distribution systems to be expended on construction of the Central Valley project during the 1950 fiscal year; and

Whereas the water project authority of the State of California considers that the Central Valley project can and should be completed and placed in full operation not later than 1951; and

Whereas the water project authority believes that a sum larger than that recommended by the President can be expended advantageously during the 1950 fiscal year as follows: (1) Shasta Dam and Reservoir and appurtenant works, $3,500,000; (2) Shasta power plant, $1,000,000; (3) Keswick Dam and Reservoir, $2,500,000; (4) Keswick power plant, $800,000; (5) Delta Cross Channel, $2,000,000; (6) Contra Costa canal system, $200,000; (7) Delta-Mendota canal, $25,000,000; (8) Friant Dam and Reservoir, $400,000; (9) Friant-Kern canal, $15,000,000; (10) Madera canal, $100,000; (11) main electric transmission lines, $6,000,000; (12) switchyards, $4,000,000; (13) substations, $300,000; (14) Delta steam-electric plant, $5,000,000; (15) irrigation distribution systems, $500,000; and (16) water rights and miscellaneous irrigation facilities, $500,000; aggregating a total of $66,800,000: Now, therefore, be it

Resolved by the Water Project Authority of the State of California, That the Eighty-first Congress of the United States be requested to appropriate in the 1950 fiscal year budget of the United States Bureau of Reclamation, Department of Interior, the sum of $66,800,000 for construction of the Central Valley project, California; and be it further

Resolved, That the executive officer of this authority be authorized and directed to make representations before the appropriate bodies in support of this resolution; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, the Secretary of the Interior, the Commissioner of Reclamation, chairmen of the Appropriations Committees of the Congress, and to the California Representatives in the Congress.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. HALE. Mr. Speaker, without exception, the Republican Members of the House have been shocked by the persecution of Cardinal Mindszenty. They gave formal expression to their indignation in a resolution adopted in their conference yesterday. The resolution reads:

Whereas the conscience of mankind has been shocked at the brutal proceedings against His Eminence Josef Cardinal Mindszenty, Roman Catholic primate of Hungary, terminating in a finding of his guilt; and

Whereas the intent of said proceeding appears to be an assault upon the Christian religion and Christian morals: Now, therefore, be it

Resolved, That the Republican Members of the House of Representatives in conference assembled express their condemnation of the arrest, confinement, and trial of said cardinal and their hope that the verdict against him will be reversed.

The Importance of Development of the Missouri River

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. LOVRE. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I should like to call attention of the Members to the progress being made in the development of the mighty Missouri River in my State of South Dakota and its importance to the welfare of the entire Missouri River Basin and the Nation as a whole.

Let me give you a few facts and figures to point out the huge size of this undertaking.

The drainage basin of the Missouri River covers an area about 1,300 miles long and 700 miles wide, including part or all of the States of Colorado, Wyoming, Montana, North Dakota, South Dakota, Nebraska, Kansas, Minnesota, Iowa, and Missouri. The Flood Control Act of 1944 authorized a general comprehensive plan for the development of the resources of this area, including development of the potential hydroelectric sites. This plan includes a series of multipurpose reservoirs to be created on the main stem and tributaries of the Missouri River so that the water impounded in periods of heavy run-off for flood control and conservation can be released during other periods for irrigation, navigation, and power requirements.

The irrigation development of the Missouri Basin will bring water for irrigation to nearly 4,900,000 acres of new land and supplemental water supplies to approximately 500,000 additional acres of cultivated land.

The navigation development for the Missouri Basin will provide a navigation channel on the Missouri River from Sioux City, Iowa, to St. Louis, Mo., and in addition will provide slack water navigation in the reservoirs on the main stem of the Missouri River.

Power development in the Missouri Basin is being planned to provide the maximum possible power output consistent with the irrigation, navigation, and

flood-control requirements of the basin. An ultimate development of over 2,500,000 kilowatts capable of producing an estimated average of 11,000,000,000 kilowatt-hours annually is planned for the basin. Approximately 1,360,000 kilowatts of this capacity will be constructed by the Corps of Engineers of the Army on the main stem of the Missouri River, while the Bureau of Reclamation will construct dams and power plants on the tributaries of the river, including about 350,000 kilowatts by diversions of water into the Missouri Basin from the upper Colorado River Basin in Colorado.

The development of the power facilities of both the Bureau of Reclamation and the Corps of Engineers is progressing. The Bureau is now constructing the Boysen and Kortes Dams and power plants in Wyoming and the Canyon Ferry Dam and power-production facilities in Montana. The Boysen power plant, with a capacity of 15,000 kilowatts, is scheduled for completion in fiscal year 1952, and the Kortes power plant, with a capacity of 36,000 kilowatts, is scheduled for fiscal year 1950. The Canyon Ferry construction is now scheduled for completion in fiscal year 1954.

The Corps of Engineers are actively constructing the Garrison Dam and power plant in North Dakota and the Fort Randall Dam and power plant in South Dakota. They are also starting construction at the Oahe dam site located in South Dakota. It is estimated that the first units of the 400,000-kilowatt Garrison power plant will be placed in operation in fiscal year 1955 and the first four units in the 320,000-kilowatt Fort Randall power plant will be completed in fiscal year 1954.

In addition to these power developments already under construction, the Bureau is doing preconstruction work on the Yellowtail Dam and power-plant site in south central Montana and is preparing plans for the necessary transmission facilities to be ready when further power supply is available. At present transmission lines are under construction in Montana, North Dakota, Wyoming, and Colorado, and some power is already being supplied from the Fort Peck project to North Dakota by interim power-wheeling arrangements.

The people of South Dakota realize the importance of development of the Missouri River. When the dam site at Oahe, a few miles north of Pierre, was opened, Maj. Gen. Lewis A. Pick, now Chief of Engineers of the Army, called the Missouri a river of gold. It is in reality a river of gold—a river that will bring prosperity and golden happiness to the many persons living in the Missouri River Basin.

The awareness of the value of the river to the State of South Dakota is well illustrated in the inaugural address of the Governor of the State, George T. Michelson. I would like to quote the Governor's remarks at this time:

NATURAL RESOURCES AND MISSOURI RIVER DEVELOPMENT

South Dakota's stake in the development of the land and water resources of the Missouri River Basin is a multitude of tangible benefits of staggering proportions. This gigantic program has properly been termed the greatest piece of engineering in the history of the world. The four dams either in the process of construction or scheduled for construction on the main stem of the Missouri River in South Dakota will constitute the key to the success of the entire program. It is the fulcrum by which the future welfare of the people of this State, area, and the entire Nation will be levered into a better position of economic security and well being. And yet, these key projects, all within the borders of our State, are only a part of the total picture. Dams on the tributaries and streams, combined with the main stem dams and the diversion of stored water for irrigation purposes, comprise the largest program of any State in the entire basin. There is scheduled for expenditure in South Dakota during the next 6 years over $1,010,000,000. This work is no longer just an engineer's vision. Substantial parts of it are out of the planning stage and construction is actually in progress. For the past 2 years I have been urging our citizens to become better acquainted with this vitally important program so that full advantage can be taken of its many benefits. I should like to repeat here and now a statement I have previously made: "That program for developing the land and water resources of the Missouri Basin is the greatest single undertaking since our acceptance of the responsibilities of statehood."

The next 2 years quite conceivably could be the most important 2 years in our State's history. In that time the river program will have advanced to the peak of the construction stage in many of the largest projects, some will have been completed and still other smaller ones will have been started.

We should most certainly be remiss in our obligations to present and future generations if we did not now take the steps necessary to insure the benefits accruing from the results of this stupendous effort. No less than 10 departments, institutions, or other agencies of State government have major roles to play in the successful execution of this plan in cooperation with the many Federal agencies involved.

The functions of the Natural Resources Commission should be expanded and the sum of $100,000 for the next biennium should be appropriated to carry on this work.

Mr. Speaker, it is my fervent prayer that the South Dakota Legislature will appropriate sufficient funds to carry on the important work of the Natural Resources Commission. It seems to me that this is one of the most important matters facing the people of South Dakota. Adequate appropriations at this time to carry forward the development of the mighty Missouri will, it seems to me, bear untold future benefits, benefits which will accrue as the years go by and which will be reaped by future generations. I sincerely hope nothing happens to stop this important work and that the people generally are made to realize the vast potentials of power, irrigation, and soil development which will be brought to South Dakota and other States in the Missouri Basin through these mighty dam and reservoir projects. We must capitalize on these potentials and develop them, to insure the happiness of future sons and daughters and a prosperous economy to the State through the encouragement of new industries, activities and new business. If proper steps are taken at this time I can visualize a gigantic surge forward in industrial and agricultural progress for our State.

If far-sighted action is taken at this time to make the many opportunities which lie in South Dakota known to business and industry generally, there will be opened to the people of our State the greatest chapter of all in its economic and cultural development.

Soviet Union

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I enclose the following article from the Boston Post, Boston, Mass., of February 6, 1949:

SOVIET CHIEFS EX-GANGSTERS—AND THEY RUN RUSSIA BY METHODS THEY LEARNED AS SUCH—TIME TO CALL A SPADE A SPADE

(By Lester Allen)

In a file on the Soviet Union the other day a yellowed clipping popped up which stated in matter-of-fact fashion that a low-life Bolshevik by the name of Vyshinki, who operated the torture chamber of the NKVD in the Lubienka prison in Moscow, was to present the results of his inquisition to a special court set up to try Trotskyites.

It was an old clipping, published in an American newspaper in a day a decade or more back when the American people looked upon the Soviet Union as a bit backward and on Communists—foreign and domestic—as wild-eyed and wild-haired people who had nothing wrong with them that a $5,000-a-year income couldn't cure.

And from that clipping it seemed apparent that what is wrong with our thinking about the Soviet Union and Joe Stalin and company is just that we haven't been calling a spade a spade.

STARTED AS ROBBER

Joe Stalin, for example, is politely called Marshal Stalin. He is top man in the Soviet Union, without question, but that can be accepted as proof that the Russian people are pretty dull tools when they let themselves be bossed by a man who got his start in life by practicing the gentle art of train and bank robbery under the guise of a revolutionist.

Yes, sir, old Joe was a stick-up man, no more, no less, and, even when Lenin took over in 1917, so little trusted because of his propensity for whipping out a roscoe the old Bolsheviks figured that if they sent him around the corner for a bucket of beer he would steal the money and pawn the bucket.

That's a fine background, indeed, for a man the one-worlders want President Truman to meet and settle the cold war. Naturally, he has reformed since his bank-robbing days. There's no longer any need for sticking up banks, because he has all the boodle there is in Russia to command.

Through all the bloody history of the Bolshevik revolution, through the purges, through Stalin's whole regime, there was always something vaguely familiar about the methods—but everyone seemed to be too polite to come right out and say what it resembled. Yet, every newspaper in the United States had published the outline of the methods in their reports of the Chicago gang wars, which were a microcosm of the

methods used by Stalin to gain and keep power. Only a gangster like Capone, directing a campaign of extermination of his opposition, could dream up such methods.

HOW IT WORKS

Is there someone in the mob getting too big for his boots? Give him a job to do that will get him into trouble. Let him know that if he is disloyal he will be bumped off, and if he fails he will be thrown to the legal wolves.

Let's take the most recent case of Comrade Vyshinski, the ex-inquisitor of the Lubeinka torture chamber. A few days ago he was Deputy Foreign Commissar Andrei Vyshinski, the common scold of the United Nations meeting in Paris.

Through semiofficial sources it was hinted that Molotov was in bad and that Vyshinski was being groomed for the job. The same unofficial sources hinted the Politburo was divided into two parties—one headed by Stalin wanting peace, and the other headed by Malenkov wanting war.

Remember how they used to hint that the gang chieftains in Chicago were having trouble with their closest lieutenants, and how, when the lieutenants turned up dead, it was discovered that the gang leaders had no trouble which they couldn't settle with a tommy gun.

The Baltic Review, an anti-Communist group operating out of Stockholm, recently discussed all these semiofficial rumors, which were deliberately put out to keep the western powers off balance.

GROTESQUE SITUATION

It makes very interesting reading. "Any rumors about disagreements in the Politburo can only be inventions and totally unsupported rumors," says the Baltic Review in its news letter from behind the iron curtain.

"The only thing known with any certainty about this institution is that Stalin himself has composed it of his most loyal followers. Its 14 members are men who have been tested over many years and who have always obeyed Stalin unquestioningly. All the 14 are younger than the dictator, all owe their career entirely to him. As secretaries of the party, Zhdanov and Malenkov have been realizing Stalin's wishes down to every detail. The idea that these creatures of Stalin are opposing him is not only improbable, it is grotesque.

"Equally unrealistic is the suggestion that Stalin may have found himself in a minority on the taking of a vote in the Politburo. The time when anybody dared to vote against Stalin lies a good 20 years back. Nowadays differences in the questions of policy are no longer settled by vote in any institution of the Communist Party, for such differences do not exist, least of all in the Politburo where Stalin is present. The members of this body know better than anyone else what lies in store for Stalin's adversaries. The whole tenor of Soviet life, from its lowest grade to its highest, bears witness to this state of things. Once Stalin has had his say the matter is settled for good.

"Moreover, men like Voznessenski and Bulganin (two of those rumored to have split with Stalin) do not belong among Russia's leading statesmen. They are only candidates for the Politburo and have never been known to have any opinions of their own."

The same applies to Vyshinski who, in the absence of Molotov, may be allowed to abuse the western powers at various conferences but has never been anything but a dependent and executive official. This renegade has never played any independent part; he climbed to his position by doing the dirtiest work imaginable for Stalin, and is maintaining it by absolute subservience to the dictator. If he heads the Soviet delegation to a UN conference it is because the Soviet government does not consider the conference important enough to be attended by Molotov.

That last ought to make the State Department and President Truman feel kindly toward the Soviet Union.

An ex-bank robber has the unmitigated gall to treat the peace efforts of the civilized world with disdain and sends to it a loudmouthed ranter under instructions to insult everyone who ventures to disagree with the Soviet Union. That is courtesy, diplomacy, and peace negotiating—Soviet style.

If the Russian people want to put up with semislavery under the command of an exheist guy, that is their affair. If they want to live in fear all their lives—terrorized by a man with a gun, that, too, is their own business. But, when, in this twentieth century, the Soviet Union projects its boorish behavior into such a solemn undertaking as the cooperative effort of the nations of the world—it is time for the United States to refuse to have any more of it.

Gangsterism was stamped out in the United States by an aroused citizenry who demanded that the robber barons of the booze business be put behind bars and assorted Dillingers and Pretty Boy Floyds tracked down and given the coup de grâce.

The practice of communism according to Stalin is even more shameful than the practice of nazism according to Hitler. Nazism never pretended to be other than it was—a cynical racialism and nationalism with no holds barred. Nazis sought power and unblushingly went after it, even to the point of bald genocide.

Stalin's perversion of communism, however, sneaks around with a lot of words. "Workers of the world, unite, you have nothing to lose but your chains." And, even while shrieking this at the top of their lungs, there are 11,000,000 slave workers in labor camps in Russia, condemned to killing labor under appalling conditions for offenses as trifling as deviation. Millions of adult Americans are guilty of deviation every day in the week when they pick up their morning papers and grumble that the country is going to the dogs.

OLD ADAGE APPLIES

It is plain today that the greatest mistake in foreign policy this country ever made was to recognize the Soviet Union and establish diplomatic relations. The old adage that if you wrestle with pigs you are bound to get covered with mud holds true in this case. If you bargain with gangsters sooner or later you will get a hole in the head.

It is almost too much to ask that decent men with decent instincts meet with a crew like that which Stalin has doing his dirty work to arrange anything with as noble an objective as world peace.

If Stalin had been content with keeping gang-rule at home, something might eventually have been done about herding the Russians back on the sane and civilized path, but, even as Capone reached out for the South Side, the Cicero business, the North Side and other beer territory, Stalin has reached out to blight the rest of the world.

In Czechoslovakia, the latest acquisition, church property has been expropriated, priests, ministers, nuns, and monks have been hustled off to slave labor camps, and opponents of the regime are condemned to labor camps. When they really want to get rid of them the Communists ship them off to the uranium mines at Yakhimov in northwest Bohemia. They don't last long there.

CAN'T KEEP THEIR WORD

The clincher, however, in any attempt to make a deal with Russia seems to be that it is a waste of time, because they haven't kept any agreement they have made to date, even with their own satellites. And this isn't a peculiarity of the Russian Communists. Kipling's poetic warning against the truce of the bear was penned long before the Bolshevik revolution.

A truce with Russia means only that it gives Russia time to move in closer and closer to get into position for a smashing blow. That's what it meant 150 years ago, and that's what it means today.

Play friendly and get in close, and then launch the attack. It doesn't have to be an armed attack. It can be a subversive attack, an infiltration. At the moment the Soviet Union is maneuvering the Scandinavian countries into position, first to keep them out of the North Atlantic pact, and next to clamp the bear hug on them.

In News of Norway, the official Norwegian information service in this country, has an ominous paragraph of double talk. It says simply, "Packs of wolves from northern Russia are reported to be sweeping across Norway's arctic Finnmark Province. (That's the place where the Luftwaffe had its air bases), and Lapp herdsmen in the area are applying for army rifles and shells to combat the invaders."

Military authorities have accordingly released 100 rifles and ammunition for the anti-wolf campaign.

Trade Agreements Will Guillotine Our Critical Defense Industries

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I am inserting the following address by one of the great American engineers, Otto Herres, vice president of the Combined Metals Reduction Co., Salt Lake City, Utah:

TARIFFS AND THE TAXPAYERS' MONEY FOR THE DEVELOPMENT OF FOREIGN MINES

THE BOLD NEW PROGRAM

"We must embark on a bold new program for making the benefits of our scientific advances and industrial progress available for the improvement and growth of underdeveloped areas."

In these words of his inaugural address on January 20, 1949, the President described a plan to help peace-loving peoples everywhere realize their aspirations for a better life by fostering capital investments in areas needing development. Needless to say the President was not thinking of underdeveloped mining areas in the Rocky Mountain States at the time he spoke.

The Government is prepared to promote industrial development abroad by offering long-term agreements to buy part of the foreign output of vital materials. It is proposed to encourage American and foreign investors by means of loans and other assistance to put money and equipment into mines and mills in underdeveloped areas by assuring them of a market for some years ahead. A government agency is to sign long-term commitments for the purchase of minerals, metals, and other strategic and critical materials for stock piling, or resale to industry.

There can be no quarrel with a program for making the benefits of our scientific advances and industrial progress available to the people of Asia and Africa in order to better their lot and lighten their toil. That is a service the free people of America have been contributing from their industries, in-

stitutions, and great foundations for human welfare in one form or another ever since the time our forefathers wrote the Constitution and gave the world a tradition of freedom. But there is a feeling of uneasiness concerning the significance of the bold approach and the consequences of adding something new to the program.

POLITICAL PLANNING

In his state of the Union message to Congress earlier this year, the President suggested to the steel industry a program for the expansion of existing facilities, or the alternative of direct construction by the Government of such facilities if action by private industry fails to meet our needs. The inference is that copper, lead, and zinc may be in for the same treatment, but from a base in foreign countries.

The economic planners fix the goals and warn private business to reach them or else the politicians will take over business. From observation of the results obtained by politicians in their handling of the Nation's interests in world affairs during recent years is there any reason to question the high order of their business ability? Has everything they have done been such a success and saving to the American taxpayer in China, eastern Europe, and Germany as to warrant the Nation letting them take over the business of the country? It seems strange indeed that Government economists should have supported the dismantling of German steel plants and later recommended Government intervention in the American steel industry, but in any event neither procedure is likely to prove a kindness to the taxpayers of this country. By lowering the contribution of the German steel industry to world output they placed the burden on us to make up the loss at our expense and created a steel shortage in the United States. Possibly they planned it that way?

OUR FOREIGN POLICY

During and since the Second World War we have become so involved in world politics that we cannot withdraw if we would. Perhaps our Government officials have the wisdom and high moral inspiration to intervene in the affairs of other people on the several parts of the globe and set the world aright. It is a noble aspiration, fascinating in magnitude. But as a man wise in experience once observed, "No one goes so far as he who knows not whither he is going."

We have given our substance and depleted our resources without requiring agreements for a just and lasting peace in return. We have found no brave new world, nor have we accomplished the abandonment of practices objectionable to peace. Our savings are going into armament to rust in foreign fields in a cold war—lost to the productive uses of Americans. There is much to be done—and considerable that remains to be undone. In consequence, it is the view of the mining industry that the political planners who have been guiding our affairs through a sea of troubles, some of their own making, have problems enough without taking over the responsibility for the Nation's mineral resources. Rather the relationship of government should be cooperative with industry to the end that the resources are used in the national interest and that free enterprise is continued and strengthened. It was American industrial strength and capacity for production that carried us successfully through two world wars. And today American industry stands as the one great citadel of economic freedom against an invasion of Asiatic Russian communism. When the planners have done as well in their foreign political fields it will be time enough for them to consider taking over business. It is not wise to discount ability and experience. A more statesmanlike course is to call on sound industrial thinking for assistance.

TARIFFS

The mining industry is greatly concerned with the disposition of the Government acting through its numerous departments and bureaus, to direct and control the national economy. The trend became more apparent from the trade and tariff agreements negotiated by the State Department at Geneva reducing drastically the duties on many metals and minerals produced under wages and conditions unfair in competition to American workers. As the President has indicated, proposals are being considered to make loans and possibly gifts of equipment and financial aid to producers in other countries to be repaid by imports of foreign minerals and metals. The propaganda machines in Washington have been busy for several years turning out "have not" propaganda to prepare the way.

All available evidence indicates that the State Department is not interested in the welfare of the domestic mining industry, or possibly lacks understanding of the domestic industry, even to the point that national security is endangered. Otherwise, why are our strategic metal industries being allowed to die of neglect? What are we going to do for antimony, chrome, manganese, mercury and tungsten if war closes the sea lanes? We are dependent upon overseas shipments for our supplies of these strategic metals and have no assurance of deliveries in an emergency. We cannot afford to pay the price of subservience and insecurity in this respect.

Since January 1, 1948, trade and tariff agreements by the State Department with 23 nations, at Geneva, Switzerland, have become effective for the most part reducing tariffs up to 50 percent in concessions to foreign producers. Reductions were granted on ores, metals or products of zinc, copper, manganese, tungsten, aluminum, antimony, chrome and lead. Many other minerals also were affected, but the list is too long to consider in detail at this time.

FOREIGN COMPETITION

Effects of tariff reductions cannot become evident immediately because of world shortages and heavy demands to fill needs deferred during the war and for reconstruction and rearmament purposes. Later on, when foreign production of competing products is restored, and when foreign currencies are devalued, we may expect to lose some of our export markets and see imports into the United States become a serious competitive factor in our home markets. It is important that these facts should be understood clearly, because probably a majority of the people have been converted by State Department propaganda and lack of foreign competition, to the idea that American producers, by and large, do not need protection from outside production. How long they will remain of the same opinion when they again have to face the struggle for existence in a competitive world is yet to be seen. Because the lowering of import duties jeopardizes productive ability and is detrimental to mine development, it cannot be considered as in the best interests of the country. The Nation, for the protection of its people must see to it that the mineral industries, as among the greatest of national assets and safeguards, are maintained in sound and healthy condition.

We are helping backward countries to industrialize and providing industrial nations with efficient machinery and equipment by means of gifts and loans and propose embarking on a bold new program. When the programs are accomplished and our subsidies cease these nations must export or die. Where does that leave us when foreign industrialization becomes effective? The watchmaking industry of New England found the answer recently when the 99-year-old Waltham factory went down. Some 6,000 workers in that and other factories learned that depressions cannot be attributed to our high tariff policy in all instances, regardless of campaign oratory.

RECIPROCAL TRADE AGREEMENTS

The contribution of the American taxpayer, loaned from his future earnings to help reconstruct countries all over the earth, should receive some consideration in the reciprocal trade agreements program. Devices used by Socialist governments and managed-economy nations such as state trading, managed currencies, quotas, export and import controls, and the like are the real barriers to world trade today, not the little that is left of the American tariff system. The United States will remain more prosperous and the world will be served better if the President's proposal to offer an incentive for exploration and development of mines producing strategic and critical metals and minerals is adopted by Congress rather than measures penalizing the domestic mining industry with tariff cuts.

INTERNATIONAL TRADE ORGANIZATION

Minerals and metals normally enter world trade in substantial volume. In dealing with nations that have gone over to socialism and communism in varying degrees the implication of intergovernmental arrangements to control production, prices, and distribution of minerals and metals becomes a matter of great concern to the domestic industry. In considering the proposed charter for an International Trade Organization it must be remembered that our national security rests upon the strength and economic health of our mines, farms, and factories.

Experience of the mining industry under the governmental regulations of OPA was not such as to arouse any enthusiasm for intergovernmental commodity arrangements which contemplate the regulation and control of mineral prices and production on a global scale, or the shifting of production facilities and manpower by political planners. These powers traditionally belong to Congress and the people.

THE TAXPAYER

It is well to consider the taxpayer's place in the bold new program for the development of foreign production and his rather discouraging experience of recent years in attempting to have a part in the brave new world.

For nearly a generation private initiative has been handicapped by restrictive legislation and confiscatory taxation, and as for venture capital, the more successful its efforts to produce and support the more abundant life, the more it finds itself penalized by tax collectors and abused by politicians. A producer, successful against long odds in a difficult underground mining venture, ends up with his proceeds taken from him for resdistribution by the economic planners of "the welfare state." He concludes that what belongs to everybody belongs to nobody, and so exploration to find new mineral wealth is discouraged, development of mines slows down, and State Department economists in Washington reach the conclusion that we have become a have-not nation. Tariffs must be cut and millions of dollars of the taxpayers' money made available for the development of foreign mines.

FAIR TREATMENT FOR DOMESTIC MINES

History indicates that real advancement for mankind is brought about through the resourcefulness of free men. Men will struggle and die to find mineral wealth in undeveloped lands. American miners need an even break with foreign producers in matters of competitive trade and Government assistance if they are to continue the struggle. They ask no odds, but want no handicaps. The mining industry has depended to a large degree upon the small operator to

risk his efforts to find the minerals in our mountain slopes and desert areas. Give him fair treatment and an incentive to work and there will be less need for the Nation to seek foreign mines at the taxpayers' expense.

There can be a reasonable relationship between foreign production, imports, and a healthy domestic mining industry. Complementary foreign trade in goods and services which can be exchanged advantageously is highly desirable and profitable to all concerned. But if we pass the point where we begin to import the things we can produce just as efficiently ourselves and displace our own production, we start to lose. Some little consideration is due our own people. They will pay for what we give Europe and underdeveloped countries, not only through taxation but through living costs and later, possibly, in unemployment.

WORLD ORE RESERVES LIMITED

The United States with only 7 percent of the world's population consumed 42 percent of the world's output of lead, 46 percent of the zinc and some 50 percent of the copper production during recent years. World ore reserves are limited and no more inexhaustible than our own. Political doors are closing access to much of the world's resources in metals and minerals. When the other 93 percent becomes industrialized with the help of our money and our machines, where will the metals be found? Under the circumstances it would seem wise to start considering support for the domestic-mining industry on a long-range basis in addition to arranging for foreign sources of supply of essential minerals lacking or greatly deficient in our own resources. The United States might well afford to guarantee to buy all surplus production of critical and strategic minerals and metals of future utility which can be stored without loss at reasonable established guaranteed minimum prices for at least 10 years.

The development of foreign sources of supply should be left to the industrial organizations of foreign countries in cooperation with American industrial interests, if agreeable to the countries involved. Opening and operating mines cannot be considered a proper function of our form of government in normal times. It is not believed that there is any legitimate field of commercial mineral enterprise that cannot be handled by private business if given proper cooperation from Government. Other nations may have their own ideas about questions of international political leadership, but probably many will cooperate on a live-and-let-live basis of developing natural resources.

CONCLUSIONS

Guardianship of all the world's people and protection of their economic and political interests is beyond the capacity of our taxpayers, as we shall find out in due course of events. Nor is it probable that our resources are sufficient to buy economic recovery and peace for all the world, devoutly as we may desire peace. We are very much inclined to mistake good fortune for wisdom. We owe much to our abundant natural resources and a competitive industrial system of private economic interests under a constitutional government which permits a high degree of individual freedom. Foreigners are not blessed with so fortunate a combination nor have they been so favored by freedom from invasion, but neither are they so lacking in intelligence and ability as our actions sometimes seem to imply. If our giving is held within our means other people will find a way to help themselves and one another.

Our only hope of lasting peace is economic strength. Self-preservation requires us to protect and support our mineral resources that we may remain strong in difficult and dangerous days to come.

Policy on Cartels

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 7, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Thomas L. Stokes which appeared in the New York World-Telegram of January 13, 1949:

POLICY ON CARTELS

Successive developments emphasize further the need of a full-scale congressional investigation of the antimonopoly program designed to break up the giant industrial cartels in Germany which furnished the munitions of war for Adolf Hitler's war and actively promoted Nazi aggression.

Dissolution of these monopolies was a war aim of ours. It seems to have become obscured.

The latest in a long series of incidents comes to light in connection with the recent inquiry in Germany by a three-man commission appointed by Secretary of the Army Kenneth C. Royall. The Secretary was prompted to order the investigation last month by evidence submitted to him about abandonment of the antimonopoly program as it related to some of the biggest cartels. The program was curtailed several months ago on instructions by Gen. Lucius D. Clay, United States military governor in Germany.

In the course of its inquiry this commission, headed by Garland S. Ferguson, Chairman of the Federal Trade Commission, called in Alexander Sacks, a lawyer in the decartelization branch of the American Military Government.

Mr. Sacks was critical of William H. Draper, formerly head of the economics division of AMG in Germany, who had much to do with decentralization policy.

The lawyer charged that Mr. Draper had hampered enforcement of the decartelization program in his post in Germany.

Now he has been suspended by an order signed by Gen. Charles Gailey, chief of staff for General Clay. The charge is that he attacked the integrity and good faith of Under Secretary Draper. His suspension is subject to a hearing.

In what appears to be rather unusual procedure in the case of an independent commission, Mr. Ferguson turned a copy of the commission's whole record of its investigation over to Lawrence Wilkinson, General Clay's economic adviser. Mr. Ferguson remained in Germany after the other two members of the commission had returned to the United States—Samuel S. Isseks, New York lawyer, formerly in charge of the New York office of the Justice Department's antitrust division, and Arthur Kearney, business management expert of Chicago.

For a complete understanding, this incident should be related with some past history.

Mr. Sacks, who is a New York lawyer, was one of 19 members of the staff of the decartelization branch of AMG who signed a protest last March against orders of General Clay which thereafter exempted enterprises in the capital goods or heavy industry field from deconcentration action, and specifically exempting two big companies, Henschel, which has almost a 100 per cent monopoly in locomotives, and VKF, which enjoyed a similar privileged position in ball-bearing manufacture.

In their protest they said that General Clay's orders virtually repealed the decartelization law. The orders were never put in writing but were transmitted verbally by Richardson Bronson, chief of the decartelization branch. General Clay confirmed them later in a subsequent conference in his office with the 19 members.

The Pinched People Are Becoming Wise

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 8, 1949

Mr. REED of New York. Mr. Speaker, it is evident from communications which I am receiving that the rank and file of the people are beginning to see the futility of our endeavoring to feed the world without impoverishing our own people. I have had some personal experience in what is happening abroad. The emotional propaganda which has been ladled out to the people about the starving is vicious and untrue. There are countries abroad where the people are making a great effort to rehabilitate themselves, and are doing so. There are others that are sitting back and doing nothing, and looking to Uncle Sam as the head of a great WPA.

We know that in order to feed our own people we have been importing foodstuffs from abroad for 16 years and probably before that. It perhaps has not occurred to our officials that there are people of vast wealth in the countries we are helping who have their money safely deposited in the banks of Switzerland and the United States, who are not contributing one cent to the rehabilitation of their own country. The whole world is saying, "Let the United States do it."

Fat jobs have been created for innumerable Americans, and I am not speaking of ordinary jobs with low salaries, but jobs running $9,000 and $10,000 a year for people who never had a salary over $2,500, until they went on the Government pay roll. These people have all their travel expenses paid, including that of their family, furniture, automobile, and so forth. They can, of course, buy at the PX stores, thus enjoying low cost of living, and live in what would be affluence here in this country.

There are, of course, some very selfish, greedy exporters and importers and industrialists who are making their millions by letting the taxpayers of this country pay for the things they manufacture, export and give away abroad, whether needed or not.

This little game is becoming known by the people in this country who are feeling the pinch of the high cost of living, and crushing taxes. I am inserting, under leave to extend, an editorial which appeared in one of my home papers, the Olean (N. Y.) Herald-Tribune, on February 5, 1949:

WE SHOULD TAKE HEED

Some time back, this newspaper reproduced and commented on a letter it had

received from an out-of-town mother with a family of six, whose husband's pay was around $50 a week, and who found that they were barely able to pay for the necessities of life.

New clothes, she said, were not for them; and they could never put by anything for the rainy days. In fact, all the days were rainy.

That letter brought a tremendous response from other readers; so great, indeed, that it is a manifest impossibility to publish the letters.

But they all have one common note—the tragic plight of those who have to get along on a meager income these days, and even on relatively moderate incomes if the family is large.

These are the people who are going without everything they can possibly go without—including dental, medical or other professional care, adequate clothing and in many instances adequate food.

These are the people who pinch and scrape until they can pinch and scrape no further. They have reached rock bottom. They must just let it go at that, and hope for the best.

"Yes, it is hard going for a large family to try and get along," writes one woman who lives out Allegany way.

"We have felt it for a long time; but we just don't like to complain, although really it is the children that suffer mostly with not having the right food and clothing.

"My husband also works out in all kinds of weather. The other day he came home soaked clear to the skin. If he gets sick then where will the family be? We also never have new clothes."

Fortunately, some alleviation is on the way—has already come, indeed—in the way of lowered prices.

The cost of feeding a family is substantially less today than it was 3 months ago; and many other essential commodities are cheaper.

But the situation in general is one that should be brought home to our legislators in every way possible; for the cost of Government is being permitted to go higher, instead of compelled to go down.

Now that the various countries of western Europe are beginning to find their economic feet, our assistance to them should be curtailed to the utmost extent.

Moreover, any administrative activity that will entail the expenditure of vast sums of money, but which can be done without for the time being, should be left in abeyance.

And above all, the most rigid economy should be practiced in the operation of the public's affairs.

A striking cartoon appeared on this page on Thursday of this week. Probably you will recall it.

Everybody had climbed aboard the "gravy boat"—except the landlord; and he wanted to get in, too.

All of us know just what the "gravy boat" is. It is the means whereby we humans try to get "ours" no matter what happens to the other fellow.

But, as depicted in the cartoon, the "gravy boat" can become heavily overloaded; and then it becomes topheavy. It may even capsize altogether.

We have an idea that we Americans will have to get rid of the habit of thinking in terms of billions of dollars. Certainly, we are convinced that we will have to do so as far as aid to other nations is concerned.

For although this is a great and rich country, there is a bottom to the national barrel. We cannot go on indefinitely handing out largesse by the billions—either from the standpoint of the National Treasury or from that of the average, low-income American family which, and we may just as well be frank about it, has forgotten all about the once-vaunted American standard of living.

We should also remember that as long as that condition is permitted to exist, there will be an increasing demand for social security of every possible kind.

And the more of that we get, the less of the old rugged individualism of the past we will have. Maybe, we want it that way; or have we just not given the situation the proper amount of thought?

Low-Cost Housing

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I should like to have inserted in the RECORD the appended article by Jacob Hulitt which appeared in the February 1949 edition of the American Legion Journal, Philadelphia, Pa.:

LEGION LEADERSHIP CALLED FOR IN LOW-COST HOUSING TANGLE

(By Jacob Hulitt)

Housing is still one of the great problems facing our country. It must be stated at the outset that low-cost, low-rent housing accommodations are still nonexistent. The low-income veteran is waiting in vain for relief. Those who profited most by the war appear to be least concerned about his plight. It behooves us—all veterans' groups—therefore, to furnish the heart and the consecrated leadership in the premises.

The enlarged edition of the Taft-Ellender-Wagner bill now pending in Congress and housing legislation proposed by our State administration, if enacted into law, should solve our housing problem ultimately.

The new version of the T-E-W bill, like the old one which died by strangulation in the House in the Eightieth Congress, includes slum clearance and other features not found in the old bill. The current bill calls for 40-year, $18,000,000,000 program.

PROBLEM IS SERIOUS

Legislative representatives of all veterans' organizations, except our own are supporting it vigorously. The American Legion spokesman in Washington has repeatedly expressed opposition to this legislation. Moreover, he has villified proponents of the T-E-W bill on numerous occasions.

I do not know whether he has yet heard the echoes from the national election held on November last, or whether the sentiments expressed at our State and National Legion conventions made any impression on him. I do know this, that the housing problem must not be left to the whims of an indifferent and repudiated spokesman. Our failure to put our best foot forward in Washington at this time may well endanger housing legislation and subject our good faith in the matter to serious doubt.

MUST NOT FAIL NOW

If Americans are to count in the battle of life and preserve democracy they must not be compelled to live under conditions which breed crime, disease, and confusion. We must not remain indifferent or complacent and leave our citizens to the mercy of selfishness, greed, and venomous philosophies. We will have failed in our duty if we do not recognize the present emergency and act accordingly.

In this critical hour our comrades deserve and have a right to expect fearless, enthusiastic, and determined leadership. Let us all take our stations and do our duty. Let us unite with the same strength, the same courage, and the same wisdom which was ours when we faced a foreign enemy, and act now as we did then for the common good.

I ask it in the name of those honored comrades who have found eternal homes; I ask it in the name of their living comrades who are homeless, and finally I ask it in the name of our beloved country.

Mock Elections in Northern Ireland

EXTENSION OF REMARKS
OF
HON. FRANCK R. HAVENNER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. HAVENNER. Mr. Speaker, I have just received a copy of an editorial which appeared on January 22 in the Irish press of Dublin. The editorial was written just after the call for a special election was made on January 20 in northern Ireland. No valid reason exists for the calling of this election at this time, other than to demonstrate once again that the elections in northern Ireland are thoroughly controlled through an elaborate system of gerrymandering the parliamentary districts and also to preclude the use of the new voters register, which becomes effective early in April.

As a result the election will serve no purpose, since it is evident that the Unionist forces, favoring union with Great Britain, will again have their usual majority in the Stormont Parliament at Belfast. No opportunity is given to the people to vote on the question of uniting themselves with their fellow Irishmen and eliminating the border, which was imposed upon them by an act of the British Parliament back in 1921. Were that question before the voters, we could get an idea as to the sentiment of the people, since each vote would be counted individually. But under the present arrangement, whereby the districts are gerrymandered into unreasonable and unnatural units, one Union-with-Britain vote is made equal to two Irish Nationalist votes. The processes of true democracy have not yet been applied to northern Ireland, and not until the border has been eliminated will democracy be established there and all traces of bigotry and ill will be destroyed.

Because the editorial in the Irish press gives such a clear picture of the situation in northern Ireland, I desire to include it as a part of my remarks for the benefit of my colleagues. The editorial reads as follows:

THE MOCKERY

The permanent government in the six counties is to demonstrate once again that it has the will of the people in its pocket. That same government was set up by the British Parliament in 1921 and, although a generation has since passed, it has never been out of office. Nor is it just a matter of men with the same ideas being at its head: there have been no changes other than those which death or old age have enforced.

Nothing like it exists in the world today, except in other countries where the forms of democracy have been used to stifle its

spirit. A stranger learning that in a rapidly changing world there is one government that has never been out of office for 28 years could come to only one conclusion—that the people under that government never got a real chance to put it out. And he would be right. For what he would find is the complete and perfect travesty of popular government. There is adult suffrage, there is free speech, and yet no democracy. The reason is simple.

When partition was imposed on this country, an area was carefully mapped out in which the Unionists would always have a majority. It mattered not in the least that the chosen area—ludicrously named Northern Ireland—had no natural boundaries, that it had no distinctive identity mark, that not a single argument in favor of its severance from the rest of Ireland could be drawn either from geography or history. All that mattered was that the area chosen should keep on electing a Unionist Government. To make assurance doubly sure, to guarantee that Britain would always have a puppet government in the northeast to do what it was told, the Nationalist opposition was reduced to a representation far less than its numbers justify. Gerrymandering has been made a fine art, with the result that today 10,000 Nationalist votes are worth no more than 5,000 cast by Unionists. In its treatment of the minority under its jurisdiction, the six-county government has outraged every canon of democracy and the most elementary principles of justice.

Now the same government is staging an election which it will misrepresent as a plebiscite. But in any country the only plebiscite worthy of the name is one that embraces the whole nation. Soviet Russia, for example, if that government decided to adopt the British method, could select areas beyond its own frontiers in which it could find a majority in favor of Communist rule. The most genuine plebiscite witnessed in Ireland was in 1918, when the whole country voted on a single issue. On that occasion there was no doubt whatever about the result. In a free all-Ireland election—free, that is, save for the fact that most of the Republican leaders were in gaol and that intimidation was used openly by the British authorities against Republican candidates and their supporters—out of the 105 candidates returned only 26 were Partitionists. How did Britain react to that verdict of the Irish people? She partitioned Ireland.

That crime against nationhood was committed by Lloyd George and his Tory colleagues. Ulster, they held, would not be permitted to merge with the rest of Ireland whether she willed it or not. Britain determined to hold on to that corner of Ireland no matter what the Irish people might say. Today there is a Labor Government in power in Britain—a government whose members have the word "democracy" forever on their lips—but so far as Ireland is concerned, Lloyd George and Lord Birkenhead and Winston Churchill might still be in Downing Street. Mr. Attlee gives his backing and his blessing to Sir Brooke as Lloyd George gave it to Sir James Craig.

Trial by Error

EXTENSION OF REMARKS
OF
HON. EARL T. WAGNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Post:

TRIAL BY ERROR

The Budapest trial of Josef Cardinal Mindszenty cannot prove either his guilt or innocence of treason, espionage, and black marketing, or of any other charges.

For it has been held under a reign of terror. Not only the defendant is the victim of that terror. All connected with the exhibition, including prosecutor and judge, whether willing or unwilling participants, are subject to a law which puts itself above the laws of man and God. That is the law of dictatorship.

In the eyes of that lawless rule all men of honor and conscience who oppose it forfeit their right to live. Whether they are ignored or shot or tortured to death or sent to a prison camp, or whether they are used as drugged or terrorized puppets in an obscene travesty on a court of law, depends solely on the will of the dictator.

A Bridge Between Peoples

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 7, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following article by Marquis Childs that appeared in the Detroit Free Press of February 8, 1949:

A BRIDGE BETWEEN PEOPLES

WASHINGTON.—The good that men do is not always interred with their bones. It does often live after them.

The late Laurence Duggan gave himself in selfless devotion in many ways. But his chief interest after he left the Department of State was the Institute of International Education, of which he was president as his father had been before him.

At the time that tragedy cut off his life, Duggan was starting to raise additional money for the Institute.

Now his friends have formed a committee to contribute a fund in his name to carry on the work in which he so deeply believed.

The Institute of International Education is a private organization that serves as a bridge, not between governments, but between the people of one country and the people of another. It does this by providing funds for American students to go abroad and for foreign students and teachers to come to our universities.

The last is especially important. There is no way of measuring the profound influence of American education and experience on the thousands of foreign students who have come to our shores in recent decades.

One young man returning to his native land to take a position of leadership with a favorable impression of American educational standards is worth millions of words of propaganda by government.

After the Boxer Rebellion in China, the Government in Washington wisely decreed that the indemnity to be paid by China to the United States should go to finance Chinese students in this country. Several thousand Chinese availed themselves of the fund before it was exhausted.

Incidentally, Chinese students in this country now find themselves in a difficult plight. It has been difficult or impossible for them to get American dollars through their government, and under United States immigration laws they are not permitted to earn any money.

A ship is now being fitted out to send back to China those who have completed some phase of their education.

Besides the foreign students who have come here, other thousands have been educated in American schools abroad. That is true particularly in the Near East, where several institutions have done pioneering work.

One of them is Athens College, headed by the redoubtable Homer Davis. At the end of the war Davis returned to Athens, and in the face of seemingly insuperable obstacles he got the college started again. Davis is now in this country to persuade donors to continue their support for the college.

The comfortable assumption is that the Government is taking care of everything over there. Billions are being sent abroad and surely that relieves the individual citizen of responsibility.

But if it is all left to Government, we shall lose something of infinite value; something that has grown out of American idealism and character. Expressions like the Friendship Train to Europe and now, in reciprocation, the French Thank-You Train show how deep is the impulse of the individual to reach across the formalities of Government.

This impulse must be encouraged. It was the goal to which Duggan had intended to devote his life. At the time of his death he was working on plans to enlarge the work of the Institute.

Larry will be long remembered for what he did and what he stood for. Those who slurred him after he was dead dishonored only themselves. That slur will quickly be forgotten. And the job that Larry Duggan started will be carried on.

Our Norwegian Ally

EXTENSION OF REMARKS
OF
HON. EARL T. WAGNER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. WAGNER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Post for February 7, 1949:

OUR NORWEGIAN ALLY

Stalin's second intimidating effort to keep Norway out of the Atlantic pact shows how important he considers that proposed democratic defense union. He does not exaggerate. It is the answer to Soviet aggression. And Norway is the key to its effectiveness.

The readiness of little Norway to defy threats of the Russian giant—3,000,000 population against 200,000,000—is one encouraging aspect of a black international situation. The illusion that a small democracy has no stake in this struggle of the great powers, and can remain neutral, is very tempting to those looking into a Soviet gun. The fact that Norway, unlike stronger Sweden, refuses to be caught in this snare is evidence both of her realism and her unusual courage.

Moreover, it is proof she trusts the United States. This is significant because of the general fear in western Europe that American aid may be followed by isolationist reaction, that at the showdown we may withdraw and leave our allies to their fate of Russian enslavement.

Stalin's second move—after objecting to Norwegian participation in the Atlantic pact—is to offer her a Soviet nonaggression

treaty. The Norwegian foreign minister's reply to that is to fly to Washington to hasten the western negotiations. Such a Soviet treaty is a kiss of death for a small neighbor, as learned by the destroyed Baltic republics and by the communized satellite states of eastern Europe.

Norway's importance is threefold. Her decision will influence Denmark, which controls strategic Greenland, and will have some weight at least with Sweden. Norway has minerals needed by Russia. Stalin's best chance of winning a war at sea with his large fleet of German-developed submarines would be from the hundreds of Norwegian fjords, the most deadly submarine nests dominating the North Atlantic.

The United States does not request Norwegian bases now, as charged by Stalin. But our security does demand the requested rearming of Norway with American aid and coordination with the larger Atlantic defense system. Stalin cannot stop that.

The Fate of Josef Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include the following radio speech made on the Voice of America program on the fate of Josef Cardinal Mindszenty by our distinguished colleague and outstanding American, the gentleman from Illinois [Mr. SABATH]:

The entire world is profoundly shocked at the momentous and far-reaching decision coming from the godless iron curtain of an enslaved Hungary.

From the meager reports of the trial received here, the life sentence together with confiscation of his properties meted out to Josef Cardinal Mindszenty is a source of deep grief and sorrow to all Americans regardless of their religion, faith, or creed.

The right of freedom of speech and religion are among the sturdy pillars of our structure of American freedom and liberty. These rights are denied in too many quarters of the world. It is apparent that the cardinal has met with these denials of right inherent to every citizen, whether he is an American or a subject of any foreign nation living in his native land. That this Catholic prelate occupying a respected position and high rank in his church should labor to defend his faith and defend and protect his followers cannot be gainsaid; that he sought vigorously to further the cause of Catholicism in the midst of a hostile regime, brooking no opposition and bravely fighting a concerted enemy, is also understood.

That he has become a pawn in the power of the iron fist of Communist Russia to be traded to the western world for some concession later, is only too apparent. Suffice it to say, that this is not simply a struggle between the Catholic Church and communism, but it is also a fight between a creed of humanitarianism and God on one side, and irreverence and cruel suffering, on the other. Which shall endure, only time and future will tell.

We in America, thousands of miles removed from the scene of this unfortunate occurence, attempting to appraise and evaluate the seriousness of the situation, must keep in mind that wherever the blame may rest, it cannot be placed upon the already heavily laden shoulders of the Hungarian people. They are, they have been, for many years, bearing a heavy yolk of suffering. Perhaps the day is not too far distant when we may extend to them and others a helping hand, the hand of friendship and cooperation which we have already extended to many distraught and troubled peoples held in bondage and subjugation, in various parts of the world. They, too, have been punished for crimes they have not committed—crimes they have been forced to confess by coercion and by threat.

We in America hold sacred the right to a fair trial without bias and prejudice. The charges of treason, speculation, and smuggling of foreign currency abroad, filed against the Hungarian cardinal, are the most serious of crimes; that a trial lasting less than a week covering such important issues, with 1 day taken by the defense, is food for thought for those skeptical of the fairness of the trial. We have heard little or nothing of the defense, except the statement of the cardinal and excerpts of his counsel's plea for leniency. We have not been told of any witnesses being offered on behalf of the defense. It must also be considered in this connection that also on trial with the cardinal were six other defendants against whom charges were preferred and heard. While we have not been made familiar with the judicial procedure of the Hungarian courts of law, it does require further explanation as to the fairness and equitable manner of conduct of this trial.

We in America rebel at the thought that full and open reports of a trial public in nature, be it of one in low or high estate in life, should be clothed in so much mystery and darkness.

The American spirit of fair play is foremost in our thinking and in our action. The fate of Cardinal Mindszenty strikes at that upholdment. We should, as a people devoted and consecrated to liberty and justice, seek to explore with understanding, with intelligence, and firmness, avenues of aid and comfort for this noble and distinguished churchman who has devoted his entire life to the works of God. Let us as Americans give thanks to Almighty God who, in his goodness and in his greatness, has seen fit to provide us with not only the material benefits of life, but also with a grant of life, liberty, and the pursuit of happiness.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 8, 1949.

Hon. DEAN ACHESON,
Secretary of State,
Washington, D. C.

DEAR MR. SECRETARY: In the name of thousands of patriotic Americans in my district, I call upon you to protest the inhuman proceedings now taking place in Hungary against Josef Cardinal Mindszenty.

As the elected Representative of Americans of many faiths, I feel it my solemn duty to point out to you such ghastly injustice which outrages decency in every land.

The persecution of this high Roman Catholic churchman is the beginning of a wave of intolerance which will push through the iron curtain and endeavor to engulf the entire world. No holy man of any faith will be spared from this Red purge.

The trial of Cardinal Mindszenty may rank with the martyrdom of St. Joan of Arc in its extent of a departure from justice.

I ask you to lend the support of your great office to assist this unfortunate man now being used as a pawn in the gigantic struggle for power waged by godless leaders abroad.

Most sincerely,
EDWIN ARTHUR HALL.

Travesty of Justice

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. DOLLINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of February 9, 1949:

TRAVESTY OF JUSTICE

The mock trial of Cardinal Mindszenty has come to its predetermined end in a travesty of justice staged for their own purposes by the Kremlin and its Communist henchmen in Hungary. The cardinal and his six codefendants have been found guilty of opposition to the Communist dictatorship in Budapest and have been sentenced to a living death in prison from which few can hope to emerge alive. The cardinal's last sacrifice in pleading partly guilty to violating the letter of the Communist law, which makes all opposition a crime, has failed either to avert this new blot on our civilization or even to serve the end for which it was made—the furtherance of peace between the church and a totalitarian state which regards the existence of any independent body as a menace to its existence.

Cardinal Mindszenty thus takes his place among, and becomes the symbol of, the many thousands and even millions of martyrs who have fallen victim to the Communist state. It is a special irony of history that he has been condemned by a judicial system spiked with former Nazis to satisfy, among other things, the personal revenge of Hungary's Communist Chieftain Rakosi, who was sentenced to death on the same day and in the same courtroom 24 years ago for conspiracy to assassinate leading government officials. But the significance and importance of the case go far beyond the fate of any person involved in it.

For this trial was staged, first of all, as a blow against freedom of religion in general and the independence of the churches in particular, in an effort to bring both religion and the churches under the domination of a militantly antireligious Communist regime and to convert them into instruments of Communist mass control, like the present Orthodox Church in Russia. But it was also staged as a propaganda show against the United States, whose Ambassador was accused of interference in Hungarian domestic affairs. On both these counts, the trial flaunted an open defiance of the peace treaty, which obligates the Hungarian Government to assure to all persons under its jurisdiction all fundamental religious, political, and human freedoms, and makes the United States, a signatory to the treaty,

one of the guarantors of these freedoms. It is difficult to see how the United States, and the other western signatories, can escape responsibility for taking whatever action is possible under the circumstances to uphold the sanctity of that treaty.

"I Wouldn't Leave This City for Anything—It Is the Most Interesting Politically, the Friendliest, the Most Thoroughgoing and Natural City in the World—Above All, Cleveland Has the Courage To Face Its Shortcomings and To Do Something About Them"

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, that statement was made by a nationally known, direct actionist, a candid, hard-hitting, and two-fisted fighter, and, above all else, a real newspaper man.

He hits hard but he hits clean. America needs many more like him. Cleveland is a better city today because Louis B. Seltzer keeps on hitting hard and often—and he keeps it up until he gets for his home town the progress that is Cleveland's destiny.

Mr. Speaker, while reading the Christian Science Monitor the other evening I came upon a special feature article entitled: "Growing Cleveland Takes Time Out for Self-Examination."

It is unnecessary for me to remind my colleagues, hundreds of whom daily read the Monitor, of the splendid editorials, news features and other items of factual reporting that it brings to us each day. There is probably no news sheet published in the world sc international in scope. Personally I know of no other daily paper printed in our country that circulates under one masthead daily articles of marked length in scores of foreign countries, printed in as many as 20 different languages.

The Monitor daily carries to a war-torn world inspirational dissertations on moral, ethical, sociological, and spiritual subjects, tidings which bring knowledge, peace, and abiding comfort to millions of people in every clime.

Several days ago one of the articles in the Christian Science Monitor which had to do with my home city of Cleveland, Ohio, spoke at great length of my good friend, Mr. Louis B. Seltzer, and Cleveland's popular editor in chief of the Cleveland Press.

A counterpart of the Cleveland Press is found in the Washington Daily News. These are two of the leading news organs in the great catalog of the Scripps-Howard Newspaper Alliance, with newspapers in all of our principal cities from coast to coast.

The hundreds of copies of the noon edition of the Scripps-Howard Washington Daily News that are sold each day from the table located at the entry to the House Restaurant, evidences the popularity of that sheet among the Members of this Congress.

Mr. Speaker, I wish all could see the grandeur pictorialized in the photograph of Cleveland—the forest city—which accompanied that article. In the foreground one can see the smallest detail of the beautiful arches of the magnificent high-level bridge as it crosses the Cuyahoga River.

Standing majestically in the distance, and backed by a beautiful bank of clouds one can clearly discern the great commercial and industrial skyline of Cleveland. The whole of that majestic pile of architectural masonry is topped by the tremendous tower piercing the heavens above the Terminal Building.

In order that all Members of this body may have an opportunity to learn more about what is now the sixth largest city in these United States, and about the driving force and power behind the Cleveland Press, I am presenting the news article carried in the Monitor about Mr. Louis B. Seltzer entitled "An Editor Chats on Progress in Own City."

The article follows:

AN EDITOR CHATS ON PROGRESS IN OWN CITY

CLEVELAND.—The name Louis B. Seltzer means Cleveland to a lot of people who live here where civic consciousness bubbles over.

It means Cleveland particularly to those people who have grown to appreciate the friendly, over-the-back-fence approach to its readers, developed by the Cleveland Press, a Scripps-Howard paper of which he is editor in chief.

Catching Mr. Seltzer, after a search through the Press Building, was something of an achievement. The date book of this smallish man, who likes loud neckties (today it was a bright red one) and wears a pocket handkerchief that spouts, is crammed with engagements. Fortunately, he was staying close to the office to give phone instructions about a flight to New York. Between this phone call and 12 others (by actual count), the interview buzzed along merrily.

As we chatted, there was buzzing of a different sort and a lot of cars honking outside. "Cleveland's traffic," said Mr. Seltzer, "is a mess." He locked his arms behind his head and leaned backward, pushing his feet against the top of the desk.

"What does Cleveland need?"

He dropped his feet and leaned forward. He emphasized his points by striking his fist quietly on his desk, bare except for a pen set and a single piece of paper.

"We need a rapid transit system. We need greater development of our lakefront. But the plan slides along while courts argue over ownership of the land. We need more parks, more recreational areas. We need homes for the mentally ill and the aged. * * *

"But there's one good thing about Cleveland: it keeps after what it needs."

He grinned suddenly. "If Cleveland would put as much energy into civic projects as she puts into her pennant-winning ball club, this city would go places."

CITY HALL PRODDED

Mr. Seltzer seemed reluctant to criticize the city administration.

"Our city government is reasonably good. It's honest. Mayor Burke is a good housekeeper. But City Hall for years has lacked aggressiveness. It needs more vision."

Like most Clevelanders, Mr. Seltzer proudly proclaimed his city's virtues. Cleveland, he said, is second to none in diversification of industry. It has more home ownership, he believed, than any other city in the country.

"People leave the city at night for home and don't return for entertainment. Night clubs are scarce."

Glancing out of the window a moment, he swung around and said, "I wouldn't leave this city ever. It is the most interesting politically; the friendliest and most thoroughgoing and natural city in the world. Above all, it has the courage to face up to its shortcomings and to do something about them."

CITY'S ROLE STRESSED

Mr. Seltzer, being the stanch Clevelander that he is, will not let you forget that this metropolitan area of 1,350,000 population (the city is sixth largest in the Nation) controls most of the shipping of iron ore from the great Mesabi range in Minnesota to mill cities like Youngstown, Ohio, and Pittsburgh. It founded the community chest idea. It puts on grand opera and makes a success of it. It is the home of the Lincoln Electric Co., whose incentive system pays employees an average of $5,800 a year. It is the largest producer of jet engine parts, and has the largest municipal airport in the world.

Reveling in the success of one of the Nation's most heterogeneous cities, Mr. Seltzer naturally believes that the press has played an important role. However, he thinks there is a great void in understanding between most newspapers and their readers. He says that his Cleveland Press is bridging this gap by being a home-town paper—by keeping its doors wide open to the public.

THE PERSONAL TOUCH

"The editor," as he impersonally refers to himself, probably derives his keenest pleasure dashing off tributes to the big people and little people alike in sincere and sentimental editorials which he signs with his initials. Working up the hard way, Louis Seltzer began his newspaper career in 1911, as an office boy with the Press. Before long he was the youngest city editor of a metropolitan daily in the country. He appears reluctant to discuss his personal history unless it relates to Cleveland's progress.

His philosophy seems to accord with a quotation by Ralph Waldo Emerson, which hangs in the Cleveland public library: "Great men have often the shortest biographies. Their real life is in their books or deeds."

Ireland Is Entitled to True Democracy

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. McDONOUGH. Mr. Speaker, there was recently held in Dublin, Ireland, a conference of the various leaders of all the political parties in the 26 counties of Ireland. This conference was called by the Prime Minister, John A. Costello, to discuss means of aiding the Anti-Partition candidates running for election to the Stormont Parliament in northern Ireland. Although this election in the north will prove nothing because of the manner in which the various districts have been gerrymandered and the fact that a 3-year-old register of voters is being used, nevertheless the occasion is noteworthy, in that it calls the attention of the world to the undemocratic methods being employed.

In the event truly democratic methods might be used in holding elections in northern Ireland, then a true picture of the sentiment of these people in regard to the border question might be gained. If the gerrymandering would be eliminated and the natural boundaries employed, with approximately equal numbers of voters in each district, then some insight into the real division of public opinion in that area might be obtained. As it is, those favoring union with Great Britain will again win control of the northern parliament, and one union vote will again outweigh two Nationalist votes, which favor a united Ireland.

To obtain the actual sentiment of the people, however, a vote should be taken in all Ireland, so that every voter would have the opportunity to express his will regarding the continuance of the enforced partition of Ireland. On the outcome of such an election, there would certainly be no doubt as to the wishes of the majority, and it is because of this, that no opportunity for such a nation-wide vote can arise so long as the present conditions continue in northern Ireland.

The Gaelic American in its issue for February 5, contains a fine editorial on the Dublin conference, which, with the permission of the Speaker, I desire to include in my remarks. It reads as follows:

A MAGNIFICENT STAND

It was an inspiring message that came from Ireland last week. The representatives of all parties met in the Mansion House, Dublin, with Premier John A. Costello and the former Premier Eamon de Valera at the head of the conference table.

The purpose of the conference was to decide on the best ways and means of helping the Nationalist candidates in the general elections which will be held February 10, in the six counties now held by the British Government. The unanimous decision was to form a national fund to provide the anti-partition candidates with finances to wage a vigorous campaign against the Partition of Ireland.

At the close of the conference, a joint statement was issued, which in part reads:

"We assert once more the right of the Irish people to ownership and control of all the national territory and we repudiate the right of Britain to carve up the Irish nation, or occupy any portion of it, even though a local majority against unity can be procured in the area which was deliberately selected for that purpose by the British Parliament."

This is a frank and manly statement, made by the chosen representatives of the Irish people today. It practically reiterates the proclamation of the Irish Republic, issued by the martyrs of Easter week, 1916, which states in part:

"We declare the right of the people of Ireland to the ownership of Ireland, and to the unfettered control of Irish destinies to be sovereign and indefeasible. The long usurpation of that right by a foreign people and government has not extinguished the right, nor can it ever be extinguished, except by the destruction of the Irish people. In every generation the Irish people have asserted their right to national sovereignty; six times during the past 300 years have they asserted it in arms."

The Irish people can never be destroyed. Irish exiles scattered all over the world hail this action of the people at home, in standing as one man against the forces of British might and coercion in the six counties of the motherland.

In whatever land the Irish exile may be, his blood will warm and trickle through his veins when he reads that his kith and kin in the cradle land, have courage enough and gallantly buried their local and domestic differences, and are now magnificently reasserting Ireland's God-given right to full freedom and nationhood.

The long line of Ireland's patriots and martyrs, who have shed their blood and given their lives for a free Ireland, must as they look down from the battlements of heaven, pour forth their blessings on those who stand solidly for a united and free Ireland from Antrim to Cork.

The Irish people and their leaders, regardless of what party labels they may wear, are to be congratulated on the splendid spirit of unity manifested at the recent Dublin conference. In this they have the entire support of the Irish race in America, as is shown by the number of cables sent to Ireland by individuals and organizations all over the country. Copies of these cables are reaching the desk of the Gaelic American editor in every mail which proves that the Irish race in the United States is rallying to the cause of justice and freedom for all of Ireland's 32 counties.

This is all Ireland wants. With the united effort of the people at home and the race abroad the infamous partition of the Irish nation must be abolished and the last vestige of British tyranny and oppression must be driven from the sacred soil of Ireland. May God hasten the day and may He guide the destinies of ancient motherland.

The action taken by the leaders of all parties, in the Mansion House, Dublin, last week brings to mind the Patriot Poet when he wrote:

"A nation's voice, a nation's voice
It is a solemn thing:
It bids the bondage-sick rejoice
'Tis stronger than a king.
'Tis like the light of many stars
The sound of many waves.
Which brightly look through prison-bars
And sweetly sound in caves.
Yet is it noblest, godliest known
When righteous triumph swells its tone.
May Ireland's voice be ever heard
Amid the world's applause,
And never be her flag-staff stirred
But in an honest cause.
May freedom be her very breath,
Be justice ever dear,
And never an ennobled death
May son of Ireland fear.
So the Lord God will ever smile
With guardian grace, upon our Isle."

Cleveland Industrial Workers Contributed Their Brains and Brawn to the Huge New United States Air Force Bomber B-47 Without Propellers and With Gross Weight of 125,000 Pounds Which Broke All Previous Records As It Roared Across the Continent in 226 Minutes

---

EXTENSION OF REMARKS
OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mrs. BOLTON of Ohio. Mr. Speaker, yesterday I was thrilled to hear of the record-breaking speed that had been attained by the United States Air Force "Strato-Jet" bomber in its ocean-to-ocean flight across the continent.

Recalling the work that was being done in building the vital parts of a new power plant for just such a craft at our own Thompson Products and Cleveland Pneumatic Tool plants in Cleveland, I called my good friend, Maj. Gen. J. D. McIntyre, USAF, to confirm that report.

More particularly I called General McIntyre to confirm my opinion with respect to the part that the industrial workers in my own congressional district had played in making it possible for the men of the United States Air Force to achieve that great record.

General McIntyre conceded my surmise to be correct, and, splendid gentleman that he is, he even went further and said:

Mrs. BOLTON, the workers in the factories are as much a part of American air power as are the men of the Air Force itself. We only fly the product that they make for us.

Mr. Speaker, the most vital parts of the new and revolutionary method of driving airplanes—by use of jets—minus the old revolving type engine-driven propellers, are in a large part the product of the brain and brawn of both men and women who work in our aircraft-parts industries in the great city of Cleveland.

Think back but a few years, Mr. Speaker, to the days of the old pusher-type airplane—made with a few sticks and bits of canvas, doing 80 miles an hour—a feat that challenged the imagination of men.

Think of the Liberty and the Rotary Engine, propeller types, which boasted a cruising speed of but a few hundred miles an hour.

Now vision with me this latest-type bomber plane of our United States Air Force. Built to carry a 10,000-pound bomb load, it is itself a giant fabrication of 125,000 pounds of iron and steel, aluminum, copper, magnesium, lead, tin, zinc, glass, plastic, fuel, and a host of other organic and inorganic materials, flying through space nearly 7 miles above the earth, and at an average speed of 607 miles an hour in a nonstop transcontinental flight.

Mr. Speaker, and you my colleagues, how few of us vision how this old world of ours is shrinking.

Our Air Force fighter and pursuit planes have already pierced the sonic barrier at speeds exceeding that of sound. Our Super Fortress B–36 can easily span the Pacific Ocean in a nonstop flight and without refueling.

Surely today we can travel fast, and we can travel far.

The battleship and the mammoth caterpillar-treaded tanks of yesteryear are no longer the weapons with which wars would be made today.

Today it is the little factory next door—or the mill down the street—that will supply the military might of the world. Cripple the factories and the productive capacity that supports the Army on land, and divisions of soldiers are immobilized and defenseless. Whole fleets of battleships will sink into the sea.

Mr. Speaker, most of us think of air power as things that fly through the air. But air power is far more than planes, be they fighters, pursuits, reconnaissance, light, medium or super bombers. These with their complement of air and ground crews constitute but the air force of a nation.

The air power of a nation is the nation's air force plus the plants that make the planes and the engines—the thousands of mines and mills and factories and farms, big and little, where men and women labor to make the radio and radar tubes and parts, the instruments, the bolts, nuts, and screws, and the more than 60,000 other presents and components that are necessary to the fabrication, completion, and perfection of our B–36 superbomber.

Mr. Speaker, modern American air power means security to our Nation—yes—and peace to the world.

If we are to remain strong we must have a stabilized aircraft-production industry.

A small but steady and never-ceasing aircraft-production line—daily producing the most modern of all aircraft—is of essence to our national security, and of vital importance to us here in this Nation's Congress.

To my mind the prime order of business here in this Congress is to insure the peace and the security of this Nation and of our American way of life.

Second only to that is to insure continued and uninterrupted employment at prevailing rates of wages to all of our American workers; and, last but not least, to insure to all the most economical expenditure of every last cent of the taxpayer's dollar.

Fifteen billion dollars are budgeted this year for the armed services of this country.

It is not economical to produce 1,000 planes one day and none the next. A stabilized aircraft industry—furnishing planes under a long-term defense program means reduced costs to the Government, and the ultimate savings of hundreds of millions of dollars for aircraft procurement.

It is because of these facts that I am pleased to note that our Armed Services Committee just yesterday unanimously reported out a bill that is favorable to the long-range program for the procurement of aircraft—or to establish what is known as the 70-group air force.

Thus the Nation will at last be assured the annual production of approximately 5,200 planes. This is the rate of annual plane production which our own Joint Congressional Aviation Policy Committee and the President's Aviation Policy Board long since determined was the minimum number of planes that should be produced to provide adequate defense to our country and a stabilized aircraft-production line—with constant employment to the workers of that industry.

In conclusion, Mr. Speaker, may I take this opportunity of congratulating the United States Air Force and the Honorable W. Stuart Symington upon the splendid job that has been done by them since the establishment of that branch of government as a separate arm of our military services.

I am happy to note the business principles that have been made applicable by the Secretary of the Air Force—both with respect to the budgeting of all funds through a supervised system of cost control—and of the businesslike follow-up of all expenditures, management, and disbursements through the exercise of the control of costs.

Taxes are paid, Mr. Speaker, in the sweat of all who labor. With the billions of dollars of tax levies now being spent, I feel that I bespeak the thought of my every last colleague when I say that the Secretary of the Air Force has the full power of this Congress behind him in insuring to America supremacy in air power and a maximum of national security—at a minimum of cost to our taxpaying citizens.

Joint Committee on the Economic Report Hearing

EXTENSION OF REMARKS

OF

HON. EDWARD J. HART

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. HART. Mr. Speaker, yesterday at page 979 et sequentes of the CONGRESSIONAL RECORD there was printed at the request of Hon. JOSEPH C. O'MAHONEY, chairman of the Joint Committee on the Economic Report, a summary of the testimony given before that committee on that day by Mr. Leon Keyserling, Vice Chairman of the President's Council of Economic Advisers.

As vice chairman of the committee, I submit herewith in similar fashion a summary of the testimony offered before the committee at today's hearing by Dr. John D. Clark, also a member of the Council:

Present postwar inflation is world-wide and, in many respects, similar to that after World War I. As then in Russia, Austria, and Germany, so now some countries such as China are licked by the problem. Others, such as France and Italy, emerge with prices several times higher than before. In but few are prices kept under reasonable control. In the United States the amount of postwar rise has been about the same as it was after the Civil War and after World War I.

Since VJ-day inflation has passed through three stages. During the first stage, that is until the removal of OPA, there was only a moderate rise, a continuation of the strikingly successful containment of inflationary forces during the war. When controls were removed in June of 1946 prices jumped. It was during that summer that the Employment Act of 1946 became law. By late autumn, as the Council of Economic Advisers was being organized, every businessman that spoke for the record, and nearly all business analysts and economists, registered the opinion that post-OPA price rises had shot their bolt. Competition was supposed to bring prices back down.

The Council of Economic Advisers hesitated to go counter to such unanimous business judgment, but it saw clearly that the major problem in 1947 would be inflation and urged voluntary self-restraint on the part of all groups—business executives, bankers, labor leaders, and merchants. This was dubbed an effort to talk down prices.

In the second period the economy experienced real monetary inflation. Total industrial production remained the same (the index being identical for March 1947 and August 1948), prices continued an upward surge so great that the general index of the Bureau of Labor Statistics rose from 124.7 in March 1947 to 145.0 in August 1948. This monetary inflation was broken largely by the determined efforts of the American Bankers Association, who deserve for that effort a generous acknowledgment of praise. The total money supply which had risen from $151,900,000,000 in January 1946 to $170,000,000,000 in December of 1947 not only discontinued its rise, but during 1948 has gone down slightly to $168,000,000,000.

It was thought in the collapse of farm prices a year ago that other prices would follow. But the Council of Economic Advisers saw clearly that no such result would follow as it had, for example, in 1920–21. New farm legislation not only protected farmers, but protected business in general against the contagious row-of-dominoes effect which used to take place when farm prices broke. Such assurance to business and to farmers kept the economy operating at a high level.

Since last August, however, the economy has entered a third phase, one in which some prices are continuing to go up, while those of farm products and foods are continuing to go down. The resultant dispersion, disparity, and disequilibrium threatens the stability and upward climb of national productivity and output.

Two kinds of action seem desirable. The first is that of providing a floor, of aiding the price decline in farm products to stabilize to a sound and healthy basis. The second is that of stopping the rise of administered industrial prices by such deterrents as higher taxes on corporation profits, wise credit controls, restriction of unwise spending activity by Government, and encouragement of consumers to put their money in E bonds rather than gray markets.

Thus the Nation enters 1949 with dangerous instability forces at work. The drop in prices of foods and some items of clothing in January 1949 may provide a modicum of relief for individual family budgets, but such price declines achieve vital significance only when they result in lower costs of production. There appears little prospect for lower production costs on most items at present. The record level of personal and disposable incomes does not foreshadow any major decline in total demand. It is probably still true that the 80 percent of American families who have incomes under $5,000 will make full use of their buying power during 1949. The demand for goods may well be maintained at levels little, if any, under present rates of production.

The current dip in consumer buying and in corporate purchases may be accounted for in considerable measure by the fact that during the 3-month period from December 15 to March 15 the Government collects the bulk of both personal and corporation income taxes. In both 1947 and in 1948, 48 percent of total income taxes collected were collected during this 90-day period. These tax collections in fact have a greater anti-inflationary effect than any other Government program. It is thus much too early to state with certainty that beneficial price declines will continue. In the third quarter of 1947 and again in February a year ago similar soft spots were trumpeted as the end of the sellers' market and the beginning of a recession. Dogmatic forecasters may merely be putting on a repeat performance. Patience, an open mind, and caution would seem the better counsel.

Commissioner Ewin L. Davis

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 27, 1949

Mr. PATMAN. Mr. Speaker, a few days ago, Commissioner Ewin L. Davis, of the Federal Trade Commission, delivered an important statement before the Senate Subcommittee on Trade Policies relative to the basing point question. The entire text of the statement was inserted in the CONGRESSIONAL RECORD by Representative JOE L. EVINS, of Tennessee. It appears on page A385 of the Appendix of the RECORD. This is a very important statement and I hope it is read by all Members who are interested in this question. I am quoting a part of Judge Davis' testimony which I hope will not be overlooked. It is as follows:

On January 12 of this year, less than 2 weeks ago, the majority of the Commission approved and made public a letter by its secretary which contains answers to various questions submitted by the Chamber of Commerce of the State of New York as to the meaning and implications of the above described October 12 statement. I believe that these various statements have in large measure explained the views of the law by the majority of the Commission and have dissipated substantially the earlier confusion. If in the future it appears that any significant points are still obscure the Commission will consider issuing an additional public statement. However, there is obviously a limit beyond which the Commission should not go in issuing in its quasi-judicial capacity interpretations of the laws which it administers apart from its decisions in litigated cases. The question presented in these cases is whether or not the effects of certain pricing practices are injurious to competition. It required thousands of pages of testimony and other evidence in the Cement case to determine the facts as to the pricing policy in that industry and the effects on competition of that policy. It is for that reason that while the Commission may, when the public interest requires, make a general statement as to its interpretation of the law, it should not give ex parte opinions on a given statement of alleged facts.

BASING POINT USED AS VEHICLE TO FIX PRICES

Much of the public discussion relative to the recent cases decided by the Commission has been in reference to the basing-point system of pricing and the resulting practice of freight absorption by the concerns parties to that system. The Commission acting pursuant to section 5 of the Federal Trade Commission Act has challenged basing-point systems when these systems have been used by groups in an industry to establish identical prices at each point of delivery. These are just another and perhaps more complex variety of the familiar collusive price-fixing cases. They constitute violations of the Sherman Act as well as the Federal Trade Commission Act. In these cases the basing-point system was an instrumentality used by concerns to fix prices. When the Commission challenged the fixing of prices by means of the basing-point system it did not necessarily challenge the use of the basing-point method of pricing. The Commission has not in a single case challenged the use of the basing-point method of pricing per se separate and apart from collusion. The Commission has not challenged freight absorption per se. The Commission has not required f. o. b. mill pricing. The Commission has not challenged the legality of the use of uniform delivered prices by an individual concern.

EVERY BASING-POINT SYSTEM NOT ILLEGAL

It should be emphasized that the Commission does not see a violation of the law in every basing-point pricing case which comes before it. Positive and irrefutable proof of this is contained in the fact that the Commission has closed without prejudice matters under consideration in which the facts revealed unmistakably the existence of basing-point pricing which, however, was not accompanied by evidence of collusion in violation of the Federal Trade Commission Act or competitively injurious discrimination in violation of the Clayton Act.

INSTANCES WHERE BASING-POINT SYSTEM DECLARED LAWFUL

For example, in two specific cases the Commission investigated charges that a basing-point type of pricing was being followed and that it resulted in a violation of the law. In these cases the facts after investigation revealed unmistakably that a basing-point method of pricing actually was being followed. Investigation also however failed to disclose sufficient evidence of collusion or discrimination to constitute violations of the law. Consequently, the Commission closed without prejudice each of these cases and no complaint was issued despite, and I repeat despite, the fact that basing-point systems of pricing were followed. These cases reveal that the mere existence of basing-point pricing in and of itself does not constitute in the opinion of the Commission a violation of any of the laws administered by the Federal Trade Commission.

EACH SELLER CAN CHOOSE F. O. B. OR BASING POINT

The Commission has not required any concern to use any particular method or methods of pricing. Each seller may choose his own method of pricing provided that he does not conspire or agree with his competitors and provided that he does not discriminate in price in the manner prohibited by law and thereby injure competition or tend to create a monopoly. A seller may absorb freight or absorb part of his manufacturing costs or any other costs in order to in good faith meet an equally low price of a competitor. This price however must be a competitive price, not one fixed by agreement, express or implied, from all of the facts, and it must not injure or prevent competition among his customers.

Which Shall It Be: A Stabilized Currency or Communism?—We Must Either Stabilize the Currency by the Adoption of a Sound Monetary System or Resign Ourselves to the Inevitability of Economic Collapse With Unbridled Anarchy Throughout the Entire World

EXTENSION OF REMARKS
OF
HON. JOHN SANBORN
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. SANBORN. Mr. Speaker, I am today introducing a sound money bill similar to that introduced in the Eightieth Congress by Senator ECTON, of Montana, and myself. In view of the fact that this proposed legislation is fully explained in a pamphlet titled "Why Prices Are High," which will be mailed free on request, I will limit my remarks.

However, I do want to refute the untruthful statements of opponents of sound money, who would confuse the issue by saying that sound money legislation is instigated by mining interests solely to increase their profits. Neither the price of gold nor the price of silver is an issue. There are just four real issues before the American people—world peace, economic stability, national security, and constitutional government; and all four are predicated upon a sound monetary system. These are not partisan issues; and those who oppose sound money—or are indifferent to the subject—are, wittingly or unwittingly, playing right into the hands of the Communists and international banker-racketeers, who are deliberately and premeditatedly selling America down the river.

THE UNNECESSARY WAR

Economic and monetary authorities of the type of the late Sir Henri Deterding, financial genius of the Royal Dutch Shell Oil Co., repeatedly pointed out in the years between 1929 and 1933 that the depression could have been ended in a few months if silver had been joined with gold, at fixed and proper ratio, to restore monetary reserves, and thereby insure the redemption of paper currency at face value, on demand; and if the London Economic Conference of 1933 had adopted such a sound monetary policy, we would have been spared the horrors of World War II, which Winston Churchill so aptly called the unnecessary war.

THE REAL TRADE BARRIER BETWEEN NATIONS

An unsound monetary system, such as is current throughout the world today, is more fruitful of human misery than war, pestilence and famine; and has brought more injustice than all the bad laws ever written. Every single crisis in the world today—from Berlin to Bagdad, from Korea to Indonesia—can be traced directly to a debauched, manipulated, irredeemable paper currency which, under the pseudonym of managed currency, masquerades as a monetary system. This, and not the tariff, is the real trade barrier between nations, for few businessmen dare the hazard of selling goods across any border in Europe where the value of currencies fluctuate daily, often hourly.

A STRANGE, UNHOLY ALLIANCE

We are being led to believe that communism is the one and only enemy of freedom, but communism is merely one of the instruments that the real conspirators are using. They know that communism is the greatest economic hoax in all history, ready to fall apart from its own internal weakness once they withhold their financial support. It is a recognized fact that international racketeers are financing the Communist leaders of Indonesia, the price of their support being the control of such raw materials as rubber, tin, manganese, and

bauxite—all of which are absolutely essential to our economy; and once these racketeers gain control and set up international cartels for their distribution and sale, American industry can expect to pay through the nose for such materials. The next move will probably be the control and cartelization of the natural resources of the Philippine Islands.

As Gen. Douglas MacArthur so succinctly stated: "Our failure to support the Government of China immediately and vigorously at the end of the war, will turn out to be one of the biggest single blunders in the history of the United States."

For a Communist-controlled Manchuria, Korea, and Kurile Islands provide perfect springboards for attacks on Japan and Alaska; and without the natural resources of Manchuria and northern Korea, China can never develop a sound economy.

ABSOLUTISM OR FREEDOM?

The real struggle that goes on in the world today is not between communism and capitalism, but between absolutism and freedom. From the earliest days of this Republic, the absolutists recognized in our system of government a threat to all forms of absolutism and have never ceased in their efforts to destroy us. But so long as we were able to produce 97 percent of our own raw materials and consume 94 percent of our own production, under a system of free competitive enterprise, protect our home market for our own production, and finance our business enterprises through a people's capitalism, the conspirators were unable to dominate our industry and commerce.

COMBINING THE ISMS OF CECIL RHODES AND KARL MARX

The international bankers are the No. 1 absolutists. They would emulate Cecil Rhodes, who dreamed of a small select group controlling the world's raw materials through cartels and monopolies, not unlike his diamond cartel. Thus, they would control production, distribution, prices, credits, money, and the value of money. Possibly Rhodes, in his ego, envisioned a benevolent despotism directing and controlling the lives and economy of the world's peoples better than they could control themselves. But despotism has a way of ceasing to be benevolent and becoming only despotic.

The international bankers have long realized that before they could control American industry and commerce, they must eliminate the protective tariff and so drain away our wealth that we could no longer consume the major portion of our own production. Then the American manufacturer would be forced to seek foreign markets and foreign goods would flow into free-trade America to pay interest on foreign bonds.

They were quick to recognize as valuable, if but temporary, allies the Communists, fellow travelers, and international do-gooders who, to further their social and economic programs, were steadily draining away our wealth. Thus, through a blending of the ideologies of Cecil Rhodes and Karl Marx, there has been consummated a strange, unholy alliance.

THREE KINDS OF CAPITALISM

The followers of Karl Marx, in pursuit of their vaunted objective to abolish capitalism, have succeeded only in abolishing freedom. But, as a consequence of their machinations, a new type of capitalism has emerged; and the world now has three kinds of capitalism: international capitalism, state capitalism, and a people's capitalism.

The first two mean absolutism, a controlled economy which regiments and controls the lives of the individuals; while a people's capitalism, such as has always existed in the United States since the founding days of this Republic, means freedom for the individual and the right to engage in free competitive enterprise. We must decide, and decide quickly, under which form of capitalism we want to live.

IT IS BUT A STEP FROM PRIVATE MONOPOLY TO STATE MONOPOLY

Europe has always suffered under a semifeudal, monopolistic, private capitalism—international capitalism—which, during the past 75 years, has successfully pillaged every country in the world outside of the United States; and now seeks to pillage us. When the people of other lands rebelled and took over control of their governments, it was but a step from private monopoly to state monopoly—state capitalism. They did not change systems, they merely changed masters. Today, we see international capitalism and state capitalism joining hands to destroy our people's capitalism by taxing free enterprise in the United States to build up socialism (state capitalism) in Europe, which is committed to the destruction of free enterprise. Moreover, through the reciprocal trade agreements and the Bretton Woods monetary agreements, we are subsidizing imports from these Socialist countries 60 percent and discounting exports to them by 37½ percent. How can American industry and labor meet that kind of competition and just how long can our economy stand the strain?

International capitalism and state capitalism are both throwbacks to medievalism, the one difference being that absolute monarchies are replaced by international cartels or state monopolies. There is one way—and one way only—to combat these forces that would put mankind in economic chains; that is by adopting a sound monetary system.

A SIMPLE, PRACTICAL SOLUTION OF THE MONETARY PROBLEM

Since it is perfectly obvious that there is not enough gold in the entire world to furnish a base sufficiently wide to support world currencies and insure their redemption, the monetary base must be widened by joining silver with gold at fixed and proper ratio. There is no intent on my part to be arbitrary about the price at which gold and silver are pegged. You will note that my bill does not increase the value of gold, but merely adjusts the price of gold to the depreciated value of the dollar, while the ratio of 16 to 1 between silver and gold was established by the Congress in 1837.

A correct ratio, based on the relative world production of the two metals, will double the base that supports world currencies. If, after careful investigation by appropriate committees of the Congress, it is decided that a sound currency can be maintained by increasing monetary reserves 70 percent instead of 100 percent, then a ratio of 20 to 1 could be established which would peg the price of silver at $2.80 per ounce instead of $3.50 per ounce.

However, the ratio of approximately 15 to 1, or 16 to 1, was established more than 2,000 years ago; and careful consideration should be given any drastic change in this ratio. For example, you will note in your dictionary that gold and silver shekels of equal weight and size were minted in 139 B. C. and, based on the price of gold prior to 1934, worth $10.88 and 72½ cents respectively, or a silver-gold ratio of 15 to 1. Over the centuries this ratio, based on the relative world production of gold and silver, has become a part of the natural law, and whenever we legislate contrary to the natural law, we get into trouble and the result is the opposite of that "planned."

The principal function of money is to serve as a constant, invariable measure of the value of goods and services. But under the present monetary policy of a "managed currency," money has become a commodity to be bought and sold and made cheap or dear by the manipulations of a group of international bankers, in direct violation of the Constitution, which states in article I, section 8, clause 5: "That the Congress shall have power * * * To coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures."

At the present value of the dollar, any reduction in prices must come out of the farmers and other producers of raw materials. This is not merely the concern of the farmer, for agriculture's income is always one-seventh of our national income, and every billion dollar reduction in agriculture's income causes a reduction of $7,000,000,000 in our national income. It is well for the Congress to ponder these facts.

I will not further burden my colleagues today, but sincerely trust they will read my bill and pamphlet titled "Why Prices Are High" and give the subject their thoughtful consideration.

Basing-Point Decision of Supreme Court Is Helpful to Small Business and Should Not Be Changed by Congress

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 27, 1949

Mr. PATMAN. Mr. Speaker, I am inserting herewith a letter from W. R. Archer III, president of the Archer Products Co., Inc., of Fort Worth, Tex. This letter gives in plain, simple language many of the good reasons why the Supreme Court decision in the Cement case

outlawing the basing point, where used in conspiracy against the public and to create a monopoly, should not be changed by the Congress. It is as follows:

ARCHER PRODUCTS CO., INC.,
Fort Worth, Tex., December 9, 1948.
Hon. WRIGHT PATMAN,
Texas Congressman,
Washington, D. C.

DEAR SIR: During the last few weeks the matter pertaining to f. o. b. prices of merchandise with the Federal Trade Commission views and the Supreme Court decision relative to these matters have become more prominent in the public eye. As a result we have expended our energy in all avenues of information, cause, and effect, pertaining to this ruling's effect on our business and we would like to present them to the committee.

I read with considerable concern the statement by the Capehart committee stating, and I quote, "Witnesses before CAPEHART'S committee have complained the decision threatens industry generally with chaotic conditions, and has led to hardships for many concerns, especially small-business men." In our opinion this interpretation will have four-pronged advantages, to first the consumer, second, the small-business man, third, decentralization of industry, and fourth, labor. Since this interpretation is so far reaching I will attempt to cover only the salient points pertaining to little business and its effect. I am not familiar enough with the distribution of goods through wholesale channels to hazard so much as a guess along these lines.

The advantage to the consumer would, first, be lowering prices. In many cases immediately, in other cases subsequently. The immediate lowering of prices to the consumer would be effected by manufacturers' discontinuing zoning practices which make consumers in area of manufacture pay the same price as the consumer in the distant areas. It is obvious that if the f. o. b. pricing system was employed and a manufacturer in the East used a price of $5 per unit of a 50-pound unit weight the consumer adjacent to the manufacturing point in a radius of 350 to 400 miles (average freight rate of 30 cents) would buy this item for $5 per unit up to $5.15 per unit, whereupon the consumer in the Los Angeles area would buy this merchandise (figuring $1.30 a case freight) at $5.65 per unit. The effect of this would necessitate eastern manufacturers to either open a plant in the Los Angeles area or suffer the loss of business in this area to local manufacturers. Local manufacturers generally mean small-business men, consequently the consumer in the Los Angeles area would then have available either the national manufacturers' goods manufactured in Los Angeles or an increase in the small local manufacturers', thus enabling him to reduce his cost by increasing his volume of the f. o. b. basing system. It is not to be construed that in the above statement the writer is attempting to cover every manufactured item in America. There are rare cases where products are indigenous only to a given area and could not be developed in other areas, such as fruits and fish. However, there are many products which could be developed in many parts of the United States but lack the necessary impetus the basic pricing would provide. It is the writer's opinion, however, that these represent less than 10 percent of the manufactured items in America.

The small-business man would immediately receive the protection necessary to make plans in his business without fear of eventually being subject to monopolistic practice of big business because no large manufacturer could, as has been done throughout the history of American industry, reduce the price on merchandise in one area such as the Southwest to a below-cost figure of 5 percent and increase the price in five other areas 1 percent and use this weapon to break or force little business to sell out. It would force big business to use the same basing price for all markets and consequently render it impossible for him to divide and conquer little business competitors throughout the country. If this fear is not existant ask any little businessman who has attempted to expand his operations what answers he receives from the banks and other financial organizations in his locality and you will find that his financers have advised him: (1) Do not grow large enough so as to incur the unpleasantness of national competitors; (2) the man with the most money in this type of business usually wins; (3) if your competitors did not include the largest manufacturers in America we would be happy to go along with you, but the bigger your business grows the more vulnerable you become. Last but not least, the question most prominent with banks and other sources of finance, what are you going to do when your large competitors start after you? You can readily see how f. o. b. pricing would immediately force big business to either decentralize or be noncompetitive in various markets; (4) decentralization of industry with advent of atomic, bacteria, and chemical warfare is perhaps the greatest necessity in this country today.

If the committee were to request of the Secretary of Defense Forrestal and the Ordnance and Quartermaster Departments of the armed forces, I feel certain that they would agree without reluctance to the fact that decentralization in America is necessary for the survival of this country in case of total attack employing the above-mentioned weapons. Even though we are a small industry, the f. o. b. pricing would force us to do one of two things: (1) pull out of such markets as the far West and Southeast and concentrate our efforts in the area surrounding our plant within a 350- to 400-mile area. Our plant could produce merchandise cheaper than our competitors not in this area (because of elimination of freight equalization), or (2) to open plants in the Los Angeles and Atlanta areas. I am certain the f. o. b. pricing would make available finance to small business to accomplish the latter if they so desire. There has been some discussion regarding the effect on little business if big business placed plants in areas of operation. My answer to this is that if any manufacturer does not have the ability he would eventually be frozen out anyway, because the American principle of business is based upon free enterprise and ability. I am certain that few large business executives are happy with the thought of competing with the type of management little business can afford as compared with salaried management big business affords since little business has always had to operate with more efficiency and less overhead to survive. F. o. b. pricing would perhaps go further in accomplishing decentralization than any other factor short of United States Government financing decentralization of big industry. Decentralization through f. o. b. pricing would be done by providing small business with necessary finance and would be accomplished in a course of several years, due to the effect of consumers buying, whereby any other channels might take billions of dollars in decades of years. Just to cite one of the terrific advantages of decentralization in peace and in war, I quote an example existing at this very minute.

The Quartermaster Corps is purchasing at present canned meat for our armed services and ERP. Our plant is located in Fort Worth, Tex., with a capacity of 6,000 cases of canned meat daily. We were not able to bid on any of these contracts because sources of finance would not assist us in enlarging our plant, which was taken up by domestic business; consequently the bulk of contracts for canned meat items, which we manufacture, were awarded to concerns in the Middle West and East. One contract, which alone involves several hundred thousand pounds, was awarded to an eastern concern which is purchasing the boned meat in Fort Worth, Tex.; it is being shipped from Fort Worth to this point at a freight cost of $3 per 100 pounds and a boxing and freezing charge of 1½ cents. On a 1,000,000-pound contract it is costing our Government $45,000 more to secure this item than it would if the same merchandise was manufactured f. o. b. Fort Worth.

The transportation divsion of the armed forces would quickly admit that one of the biggest problems during the last war was rail cars and transporting of troops and supplies. Speaking for my industry alone the facilities are available for the canning of meats in large quantities in southwestern points. The manufacturer need go no further than 250 miles from his plant to secure unlimited supplies of meats and could then ship the finished item to one of the many ports in the Gulf coast area at a saving to our Government of: (1) freight on raw materials to point of manufacture; (2) freight on finished products to port of embarkation.

In the event of mass atomic attack on this country at present one attack each on points such as Detroit, Chicago, and Pittsburgh would virtually render this country impotent since it would demoralize steel, precision manufacturing in the rail hub of America. Whereupon defense plans are to break this country into self-sufficient cells that could operate independent of each other.

The final and perhaps the greatest effect of f. o. b. pricing would be brought about in a more even distribution of labor throughout the country as the No. 1 factor, and secondly a higher standard of wages and living. At present we service the Southeast, Pacific coast, and the Southwest with one superintendent of production, one head of an auditing department, one director of sales, and one general manager, assistants and secretaries for each. The keymen mentioned above have a terrific responsibility and no manufacturer can run without executives in these departments plus capable general management. In the event we decide to open plants in the Los Angeles area or the Atlanta area it would be necessary for us to secure for each of these plants, one production manager, sales manager, etc., making a total of 12 key personnel, whereupon at present we have but four in this capacity. To secure capable personnel in the above-described positions it is necessary to pay a minimum of from $6,000 to $15,000 a year. The cost of this additional personnel would not be paid out of additional cost of manufacturing but would be paid by the freight savings from decentralized plants. For example, we ship canned meats weighing 57 pounds from Fort Worth to Los Angeles at $1.35 per 100 pounds freight rate making our merchandise cost the consumer 76.95 more than if we manufactured the merchandise in Los Angeles. Using 100,000 units per month manufactured our cost would be increased by four key personnel in a Los Angeles plant of only 17 cents per unit, whereupon our cost f. o. b. the plant would be reduced by 59.9 per unit. More even distribution of labor would be brought about since multiple decentralization would divide into units of 20 to 500 employees in one given area, which makes impossible mass lay-offs, unrest, union racketeering, and a thousand-odd evils of mass employment. It is reasonable to assume that 10 small plants would have a better control of efficiency and elimination of waste than one large plant manufacturing the same tonnage.

I would like to reiterate that the facts outlined above pertain solely to the manufacturing of canned meats and canned foods and that I in no way am attempting to voice an opinion with reference to fabrication of automobiles or other type industry. But I am

certain the food industry would be benefited greatly if for no other reason than most food items such as some canned meat items, pork and beans, and other items similar run from 30 percent added water to 75 percent added water. In other words the western consumer is paying 57½ cents for eastern water. It just as easily could be added in the western area.

If I may be of assistance in any manner toward the eventual enforcement of f. o. b. pricing I would consider it a service to my country as well as small-business men and I will be available at any time and in any capacity.

Sincerely,

W. R. ARCHER III.

California Legislature Endorses Full Flood-Control Program for 1950

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. McDONOUGH. Mr. Speaker, the President's budget for 1950 provides $430,287,000 for flood control, general, which is supposed to complete the general flood-control program in the United States in 10 years.

However, the proposed general flood-control appropriation for California projects contained in the President's budget represents only half the amount required to complete California's program on a 10-year basis.

Recurrent floods in California cause loss of life and property, disrupt transportation, and waste water to the detriment of the health, safety, and welfare of the people of the State.

The flood-control needs of California should receive consideration on a basis of equality with the Nation-wide program, and appropriations should be provided commensurate with the flood-control needs of the State.

The California State Legislature has passed the following resolution listing the flood-control projects and the amounts which are urgently needed for the protection of life and property in California:

Senate Joint Resolution 17

Joint resolution relative to memorializing Congress to consider flood-control needs in California

Whereas recurrent floods in California have caused loss of life and property, disruption of commerce and transportation, and the wasting of water detrimental to the health, safety, and welfare of the people of the State; and

Whereas the local agencies concerned in flood-control works have joined together in the California Flood Control Conference and developed a coordinated program for construction of authorized Federal flood-control projects; and

Whereas the State Water Resources Board has held public hearings on, and carefully screened, the requests for appropriations presented by the California Flood Control Conference, and determined an urgent need for appropriations for the following projects and amounts:

San Francisco engineering district: Salinas River	$1,000,000
Los Angeles engineering district:	
Upper Los Angeles River	2,000,000
Tujunga Wash	3,000,000
Compton Creek	2,268,000
Whittier Narrows	12,000,000
Sawtelle-Westwood (lower)	3,917,000
Live Oak Wash	500,000
San Antonio flood-control basin	2,500,000
Stewart Canyon (Ventura County)	880,000
Carbon Canyon (Orange County)	1,000,000
San Diego River	3,500,000
Sacramento engineering district:	
Black Butte Dam	500,000
Cherry Valley	1,500,000
Farmington Dam	2,000,000
Folsom Dam	5,000,000
Isabella Dam	6,000,000
Merced group	500,000
Pine Flat Dam	12,500,000
Sacramento River major and minor tributaries	1,000,000
Sacramento River (old project)	6,000,000
San Joaquin River levees	1,000,000
Success	500,000
Terminus	500,000
Total	69,565,000

Whereas the Legislature of the State of California demonstrated its concern in the flood-control problems of the State and the authorized Federal program by appropriating $25,000,000 to pay the cost of local participation in these projects; and

Whereas the President's budget for the fiscal year 1950 provides $430,287,600 for flood control, general, which would complete the general flood-control program of the United States in 10 years; and

Whereas the proposed general flood-control appropriations for California projects contained in the President's budget represent about half the amount required to complete California's program on a 10-year basis: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California, jointly, That the Legislature of California respectfully memorializes the Congress of the United States to consider the flood-control needs of California on a basis of equality with the national program and to that end provide appropriations commensurate with the need as justified in the program developed by the State water resources board; and be it further

Resolved, That the secretary of the senate is hereby directed to transmit copies of this resolution to the President and Vice President of the United States, to the Speaker of the House of Representatives, and to each Senator and Representative from California in the Congress of the United States.

Compulsory Arbitration

EXTENSION OF REMARKS

OF

HON. PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1949

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the significant and thoughtful address on the subject, Is Compulsory Arbitration Inevitable? recently delivered by Dr. George W. Taylor, former Chairman of the War Labor Board and now professor at the University of Pennsylvania, together with a brief foreword of my own.

Notwithstanding an estimate from the Government Printing Office indicates that it will cost $230.75 to print the manuscript, it has such merit and value in connection with pending labor legislation that I request the printing.

There being no objection, the foreword and address were ordered to be printed in the RECORD, as follows:

FOREWORD BY SENATOR DOUGLAS

The character of our legislation in the field of labor relations is a test of our essential democracy. To develop clearer thinking and a reliable fund of knowledge and opinion for use by Government, management, and labor, the Industrial Relations Research Association was recently organized. It held its first annual meeting on December 29 and 30, 1948, at Cleveland, in connection with the gatherings of the other learned societies in the field of economics.

Many splendid papers were read to the Government, labor, and management representatives gathered in Cleveland. Special interest was stimulated by the addresses made by the nationally known Dr. Edwin E. Witte, first president of the Industrial Relations Research Association, now professor at the University of Wisconsin, and by Dr. George W. Taylor, former Chairman of the War Labor Board and now professor at the University of Pennsylvania.

As Mr. John Herling, editor of Chester Wright's Labor Letter, remarked over Station WCFM in Washington, D. C., "This hard and clear thinking—whether you agree with it or not—was a fortunate characteristic of this first meeting of the Industrial Relations Research Association. The papers of Edwin Witte and George Taylor helped give a cutting edge to the discussions at the first annual meeting of the Industrial Relations Research Association."

IS COMPULSORY ARBITRATION INEVITABLE?

(By George W. Taylor, of the University of Pennsylvania)

Out of the strike experiences of the past decade has come a widespread realization that certain stoppages of production—those which threaten the public health and safety—cannot be used to resolve labor disputes. Because of this practical limitation on the right to strike, an inadequacy of collective bargaining theory has become apparent.

THE FUNCTION OF THE STRIKE

The essence of collective bargaining is a meeting of minds. An agreement as to conditions of employment has to be arrived at as a result of either peaceful negotiations or a work stoppage. Arrangements are made by union representatives on behalf of the employees as a group. According to union standards, unless employment terms are acceptable to a majority of the employees, no jobs are to operate. Defense of the group right to determine whether any jobs will be operated has been so vigorous that, in recent years at least, most employers have not attempted to operate their facilities once a strike has been called. The right to strike, in accordance with the definition long sought by the unions, involves a complete shut-down. This is not compatible with public needs in the emergency disputes.

So much attention has been given to the right to strike that the function of the strike has not been precisely perceived. In a col-

lective-bargaining system, the rights to strike and to lock-out serve as the motive power which induces a modification of extreme positions and then a meeting of minds. The acceptability of certain terms of employment is determined in relation to the losses of a work stoppage that can be avoided by an agreement. In collective bargaining, economic power provides the final arbitrament.

When the rights to strike and to lock out are withdrawn, as during a war or under compulsory arbitration, a most important inducement to agree is removed. The penalty for failing to agree—stoppage of production—is waived. Even more devastating consequences result. Each party is reluctant to make any concessions around the bargaining table. That might prejudice its case before whatever board is set up to deal with labor disputes. In addition, the number of issues is kept large and formidable. Demands that customarily wash out in negotiations are carefully preserved for submission to the board. Why not? There is everything to gain and nothing to lose by trying to get one's unusual demands approved without cost.

The experience of the War Labor Board in World War II, as well as scattered returns from those states which recently passed anti-strike legislation applicable to public utility industries, strongly indicate that possession of the rights to strike and to lock out is essential if labor and management are to settle their differences by their own agreement.

The strike itself is an instrument of persuasion or of coercion, depending upon one's point of view, which is counted upon in the collective bargaining system to produce a meeting of minds in the most persistent disputes. However reluctantly, employees will choose to take up their tools and resume production at the terms finally agreed upon as a strike settlement. With whatever misgivings, management will open up the plant at those same terms.

Arbitrament of economic power, which is implicit in collective bargaining, does not insure that conditions of employment will be fair and equitable by anyone's standards. It does give assurance that working terms will not be imposed by the Government upon either employees or employers. The system obviously involves costs, but they must be weighed against the advantages of the meeting-of-minds criterion. To be sure, if collective bargaining is to operate effectively, the actual resort to strikes and to lock-outs must be the exception and not the rule. At the same time stoppages actually undertaken must be allowed to run their course. Only then can they fulfill their collective-bargaining function of bringing about a meeting of minds.

The strike cannot perform its collective-bargaining function in public-emergency disputes. A work stoppage doesn't primarily exert pressure upon the disputants to come to terms. The parties can hold out longer than the public or the Government. In consequence, a strike which creates a public emergency exerts primary pressure upon the Government to intervene and also to specify the terms upon which production is to be resumed. The use of such work stoppages as a technique is, at least, bad workmanship by any union representatives who want to retain collective bargaining. They and the employers with whom they deal are faced with the necessity of devising means other than the strike for inducing a meeting of minds if they would keep industrial relations safely in their own hands.

In public emergency disputes, then, the ultimate test of economic power cannot, in fact, be used to motivate a meeting of minds. Out of this situation a formidable dilemma arises. Is it possible to find substitutes for the strike that will serve effectively to induce agreements between unions and management in such cases? Or is it necessary to adopt an entirely new concept about the setting of employment terms—that they have to be imposed and not agreed to? Here is the crux of the problem in public-emergency disputes.

COMPULSORY ARBITRATION

Those favoring compulsory arbitration of public emergency disputes would scrap collective bargaining in that one area. The meeting-of-minds criterion of fairness and equity would be supplanted under a system in which a government agency decides employment terms for employees and employers alike.

Nor can these comments be effectively rebutted by insisting that compulsory arbitration would become operative only if the parties failed to agree. Theoretically, avoidance of compulsory arbitration might even be looked upon as an inducer of agreements which serves the same function as a strike in collective bargaining. The evidence strongly indicates, however, that the mere provision for ultimate compulsory arbitration in itself discourages the making of those offers and counter offers without which there is no negotiation. Why should the employer make any offer which the union can use not as a starting point for agreement but as a springboard for arbitration? Why should the union accept any employer offer when, in compulsory arbitration, it would not likely get less and might get more? Why shouldn't a union make and hold to a large number of so-called fringe demands? If they are dismissed in arbitration, nothing has been lost. If they are approved, much has been gained. Negotiating tactics are entirely different when compulsory arbitration and not a strike is the last step. The reason: Under collective bargaining a dispute can only be settled by a meeting of minds; in compulsory arbitration this criterion is supplanted.

Granting that regular collective bargaining won't suffice in public emergency disputes, isn't it inevitable that a new system like compulsory arbitration be introduced? Is there any real alternative to Government determination of employment terms in such cases or to the institution of Government sanctions against employees and employers to enforce imposed terms? Despite the difficulty of the problem, it is my firm conviction that compulsory arbitration is not inevitable. It is unthinkable in this country. And, fortunately, there are alternatives to compulsory arbitration for dealing with public emergency disputes which will, in my judgment, prove to be more satisfactory and more effective.

Before discussing those alternatives, it is important to note why compulsory arbitration doesn't provide the easy answer. To begin with, there is actually no guarantee of a continuity of production. It is even unlikely that compulsory arbitration would diminish the number of crises that have to be contemplated under the alternative programs to be discussed presently. Compulsion could even make the occasional crises more difficult to resolve since maintaining the position of the Government would require the effectuation of an arbitration award regardless of depth of resentment against it. This kind of compulsion in labor disputes is entirely incompatible with our ideas about the way men should live and work together. On less idealistic grounds, compulsion won't effectively meet the problem of avoiding work stoppages that create public emergencies.

ALTERNATIVES TO COMPULSORY ARBITRATION

The shortcomings of collective bargaining in settling public emergency disputes do not call for any pell-mell, thoughtless rush to compulsory arbitration. A further development of collective bargaining to deal with this particular problem is the real need. The basic challenge is whether or not industrial relations in public emergency disputes can be grounded upon a meeting of minds even though a test of economic strength is not available as the final arbitrament.

The needed development of collective bargaining can be facilitated, I believe, by thinking of the public emergency labor dispute as one in which the strike cannot perform its collective bargaining function. Some industry-wide strikes have compelling public emergency characteristics; others do not. On the other hand, some local stoppages would be of vital importance. It would appear from past experience, that a rather extensive shut-down of telephone service, for example, is not nearly as crucial as a stoppage in a local plant making gas for domestic use, which creates almost immediate peril. As a matter of public policy, it should be made clear that, wherever possible and to the fullest feasible extent, a strike called will be permitted to run its course. Nor should Government intervention be made to avoid mere public inconvenience. That is one of the costs of maintaining collective bargaining which is not excessive when weighed against the costs of alternative systems. Nor should there be any certainty about Government intervention by precisely defining industries or circumstances under which action would be taken. Even the hope of Government intervention, in particular cases, can deter agreements. Substantial progress in meeting the problem of public emergency disputes can be made by the acceptance of two principles: (1) Strikes will be permitted to perform their collective bargaining function to the fullest possible extent, even though public inconvenience results, and (2) whether or not the Government will intervene, and when, should, by and large, be determined on the facts of each case and not by any prescribed formula. Such policies would lessen the number of crises which arise.

Against this background, three alternatives to the use of compulsory arbitration in settling public emergency disputes without work stoppages will be discussed. Each of them utilizes, in varying degrees, the collective-bargaining principle of a meeting of the minds. They are (1) voluntary arbitration, (2) procedural substitutes for the strike as inducers of agreement, and (3) plant seizures by the Government as a basis for continued mediation. Each of these will be briefly discussed and evaluated. It is suggested that, if the possibilities in these devices are fully developed, there would be fewer crises than with compulsory arbitration. The crises that would occur, moreover, could be more expeditiously dealt with.

VOLUNTARY ARBITRATION

In public emergency disputes, conferees who have failed to agree have a peculiar responsibility to attempt to agree upon a stipulation under which their differences will be submitted to voluntary arbitration. Every impasse which is overcome by resort to voluntary arbitration narrows the extent of the general problem under discussion. Here is an improvement of the collective-bargaining process which provides an incomparably better approach than compulsory arbitration. A much better understanding of voluntary arbitration is called for.

Recognition of the availability of voluntary arbitration involves no enervation of collective bargaining as in the case of compulsory arbitration. As indicated previously, a principal defect of compulsory arbitration arises from its certain application to any unspecified future disputes that may arise. What is to be arbitrated is an unknown. In voluntary arbitration, there is an agreement covering a clearly specified

dispute after it has arisen. The scope and the risks of arbitration can, therefore, be limited in the stipulation. An arbitrator in whom the parties have confidence can be named by them. Of even greater importance, acceptance of an award does not involve Government sanctions. Acceptance is a matter of the parties keeping their word about abiding by a decision made under a procedure which they have set up themselves. It is in the American tradition to accept losses under such circumstances.

Within the past 10 years, voluntary arbitration has been extensively adopted as the sound way to settle disputes arising under the terms of existing agreements. With the labor contract itself as a point of reference, or as a guide for disposing of those disputes, such arbitration has been adjudged as not unduly risky and hence as a procedure preferable to work stoppages. Unions and management both have been generally unwilling to permit arbitrators to decide the actual terms of their labor contract. The results are too unpredictable, and the stakes are too great. Strikes have been generally preferred to arbitration in these cases.

As respects public emergency disputes, the choice is not a simple one between voluntary arbitration and a strike. In the critcical cases, voluntary arbitration has to be weighed against the consequences of that form of government intervention which, at a given time, is most likely to result from a strike. The choice may still be against arbitration. But not because that will prevent outsiders from having a considerable influence in working out the terms of a new labor contract. Only through voluntary arbitration can the outsider be appointed by the parties themselves and be subject to their joint instructions. For these reasons, voluntary arbitration is in the collective bargaining tradition. There must be some cases where both parties would prefer voluntary arbitration to Government intervention. There would probably be many such cases if the voluntary arbitration process were better understood.

The lack of confidence in voluntary arbitration of disputes over contract terms has arisen from experience with what may be termed open-end arbitration. Since the arbitrator has been asked simply to decide the case as he sees it, decisions have tended to be personal in nature with all the attendant risks. But, the arbitration need not be open-end. The parties who set up the procedure can give the arbitrator instructions and guides. Where this has been accomplished, voluntary arbitration has often produced excellent results.

There has been another kind of experience. In some industries affected with the public interest, notably the transit industry, the parties frequently agree in a current labor contract that any differences which may later arise over a renewal agreement will be arbitrated. The results of this kind of voluntary arbitration have been seriously questioned, but the basic cause of the difficulty has not been generally perceived. Under an agreement to arbitrate any and all differences that might arise in the future, there are no limits to the subjects to be submitted to an outsider and no assurance that the issues will be clearly defined. Nor is there any likelihood of giving instructions to the arbitrator about the guides to be followed by him.

The risks of voluntary arbitration have to be much more limited than in either the open-end type or the prior commitment to arbitrate all disputes if the process is to find more general acceptance. The possibilities inherent in voluntary arbitration lie in the agreement to arbitrate specific issues which is made only after the parties have failed to resolve those issues in negotiations. Specific issues may very well be adjudged to be arbitrable when they are precisely defined, related to particular criteria to be used in deciding them, and made determinable by a Board of Arbitration whose members are mutually acceptable.

The road to be travelled was carefully and helpfully surveyed by the participants in the President's national labor-management conference of 1945. In the report of that conference it was unanimously agreed that, "If direct negotiations and conciliation have not been successful, voluntary arbitration may be considered by the parties. However, before voluntary arbitration is agreed to as a means of settling unsettled issues, the parties themselves should agree on the precise issues, the terms of submission, and the principles or factors by which the arbitrator shall be governed." For the first time, this report focused attention upon the stipulation to arbitrate as the key to sound development of voluntary arbitration.

No one should minimize the difficulties faced by negotiators in consummating a stipulation for voluntary arbitration along the lines just referred to. Skeptics will say: "If the parties could agree on those matters, they could agree directly on the items in dispute." There is substance to that point of view which does not, however, give a complete picture. It is a fact that, in an increasing number of instances, parties have found it possible to agree upon a stipulation to arbitrate, and have thus avoided a strike and the threat of government intervention, even though they were unable to come to a direct meeting of minds as respects the issues in dispute. Voluntary arbitration has to be looked upon as a problem of collective bargaining and not as a substitute for collective bargaining. If it is fully recognized that a failure of negotiations in public emergency disputes invariably carries a choice between voluntary arbitration and Government intervention, then the parties to such disputes may see an important self-interest in utilizing the voluntary arbitration process to a much greater extent than ever before. One of the likely alternatives to compulsory arbitration of public emergency disputes is voluntary arbitration of them.

PROCEDURAL SUBSTITUTES FOR THE STRIKE

What if the parties fail to agree on voluntary arbitration? The crises which public emergency disputes create are so serious that the country cannot count upon the ability and the willingness of labor and management to utilize voluntary arbitration. At best, such a refinement of accepted collective bargaining conduct is certain to be slow. So attention also needs to be directed to various procedural substitutes for the strike as means of facilitating or inducing agreement.

As noted at the outset, the principal function of the strike is to exert pressures to bring about a meeting of minds. Since the strike cannot perform its function in public emergency disputes, perhaps effective procedural means other than the strike can be devised to exert pressures upon disputants to reconcile their defferences. The requirement of the Taft-Hartley Act that demands for contract changes must be made to give sufficient time for negotiations and mediation is one example of a facilitating procedure.

Legislative requirements upon disputants to follow certain specified procedures in an effort to reach agreement will inevitably evoke strong controversy. They involve restrictions upon union latitude in calling strikes. Heated differences will also arise over the extent to which required procedures minimize the power of either side to achieve its purposes. In addition, mere procedural requirements can even provide the inexorable pressure for an agreement that is exerted by a stoppage of production or a threat of one.

For these reasons, procedural substitutes for the strike will be most likely to succeed when they are devised by agreement between the unions and management. On the record are two notable examples of this approach to public emergency disputes. As I understand it, the procedural requirements for the peaceful settlement of labor disputes in the railroad industry were developed essentially by labor and management. The procedures have consequently had a high degree of success in avoiding strikes. It can almost be said that any procedures for the peaceful settlement of public emergency disputes will work if the parties themselves are determined that they will work. And the parties are apt to be solidly behind a program only if it is of their own making.

The machinery of the War Labor Board in World War II was another agreed-upon procedure that served with relative success as a substitute for the strike in public emergency disputes. Throughout most of the war, virtually every labor dispute constituted a national emergency, so desperate was the need for production. Except as respects facilities seized and operated by the Government, it was never illegal for employees to engage in strike action during World War II. But unions and management by and large used the Board instead of work stoppages as a final arbitrament. It was a voluntarily accepted procedure because of the tripartite composition of the Board and because labor and management representatives at all times retained the right to withdraw and thus force a change in national policy.

In contrast to the agreed-upon procedures just mentioned, certain sections of the Taft-Hartley Act are apparently designed to induce a meeting of minds of negotiators in public emergency disputes, industry-wide in nature, without recourse to strikes but without the acquiescence of those directly affected by the required procedures. At any event, labor and management could conceivably feel impelled to work out an agreement to avoid being caught in the emergency dispute procedure of that act. These steps, which would not have to be taken if an agreement is reached, include appearance before a board of inquiry, issuance of an injunction, and an employee vote on the employer's last offer. It is difficult to see how those steps intrinsically help to bring about a meeting of minds once they are taken.

Whether or not these procedures of the Taft-Hartley Act have actually been of material assistance to a negotiated understanding is debatable. Yet it is on this criterion that they must be judged. Only by an agreement of the parties can the dispute finally be resolved even under the Taft-Hartley Act. The ultimate right to strike is retained and at no point does the Government directly evaluate the contesting claims of the disputants.

One of the required procedures of the Taft-Hartley Act is uniquely inept. If a labor dispute persists, the President is finally instructed to report the facts of the case to Congress. Unless the contemplated consequences of congressional treatment are a sufficient threat to bring about a last-minute agreement, the result is not only a critical national emergency but one in which the President is deprived of any power to take action to save the Nation. In the face of national peril, the President should, of course, have a wide latitude to take such steps as are necessary to preserve national health and safety.

Because procedural substitutes for a strike are useful only if they facilitate agreement-making, there is an urgent need for a fundamental understanding between labor and management as respects the steps to be followed in public emergency disputes. A successful labor-management conference to deal with this problem would be of incalculable value to the preservation of collective bargaining. Nor should the conference idea be lightly dismissed because of the lack of success of the 1945 national conference.

In the absence of a labor-management recommendation, there is little doubt that the President must be empowered to secure an injunction against a work stoppage which would jeopardize public health and safety. Otherwise the Government would be powerless to take effective measures to protect the national interest. But, once it is issued, the injunction does no more than give time to work out a negotiated settlement. The ways by which this can be facilitated vary with every case. It follows that required negotiating procedures should not be specific. Such devices as the vote on the employer's last offer have already been thoroughly discredited.

A likely program would be the setting up of a special board, for each particular case, with the widest possible latitude to take such steps as will, in its judgment, aid in the consummation of an agreement. Whether or not a fact-finding report or a recommended settlement should be made would depend upon whether either is likely to help in getting an agreement. It is certainly incongruous to take such steps if they would widen the gap between labor and management.

One possible action by such a board could well be more fully considered than heretofore. Recommendations of substantive terms of employment as a fair basis of settlement, if unacceptable to either party, cause the Government to take sides in the labor dispute and may make settlement more difficult. There are cases, however, in which voluntary arbitration, under specific terms proposed by the board, might be proposed. The precise issues could be stated along with criteria applicable to their arbitrament and possibly suggestions of the names of arbitrators. One of the most feasible ways for dealing with public-emergency disputes might well be through a recommendation of an acceptable formula for voluntary arbitration.

One way for dealing with the public-emergency labor dispute, and in the collective-bargaining tradition, is to devise special procedures to facilitate or to induce disputants to come peacefully to a meeting of minds. Like voluntary arbitration, this alternative to compulsory arbitration depends, in the last analysis, upon the ability and the willingness of labor and management to arrive at a meeting of minds about the kind of procedure that should be used to compose their differences.

If labor and management agree upon the peaceful procedures that should be used, as they did in the railway industry and as respects the operation of the War Labor Board, then those procedures are virtually certain to be relatively successful. It is this fact that underlies a continuing interest in a labor-management conference to deal with the public emergency dispute. In the absence of a labor-management recommendation, the only workable procedures will almost certainly include the issuance of an injunction when the President finds that essential, to give added time for negotiation and mediation. And, if this approach is to work, any Government agency which takes over the task of mediation must not be fettered by inflexible rules. It must have wide latitude in taking such steps as will bring about a meeting of minds.

PLANT SEIZURES BY THE GOVERNMENT AS A BASIS FOR FURTHER NEGOTIATIONS AND MEDIATION

There is one last device, short of compulsory arbitration, which can be, and has been, used to get public emergency labor disputes settled by agreement of the parties but without an interruption of production. Plant seizure by the Government may afford a basis for continued negotiation and mediation without an interruption to production. As will be noted presently, this approach carries an imminent risk that basic collective bargaining rights of employees and employers will be impaired. It still falls far short of compulsory arbitration under which these rights may be eradicated.

A strike vote evidences a group unwillingness of the employees to work at terms offered by the employer. If the public interest would be irreparably harmed by resort to a work stoppage to resolve the difference, as in time of war or national peril, it has been reasoned that men may properly be requested temporarily to work at unsatisfactory terms as long as the Government is the employer. Such employment at the contested terms would not be for the profit and benefit of the private employer.

Although productive facilities have occasionally been seized by the Government in times of great emergency, there has never been a disposition to require individuals to work at contested terms of employment—that would fall within the recognized concept of involuntary servitude. But when it has been said, as in the War Labor Disputes Act, that workers cannot strike against the Government there has been a negation of the claimed right of employees as a group to decide whether or not all employees would work. After Government seizure of a plant, a return of strikers to employment has been conceived as a matter of individual choice and not a group choice.

The results have varied with the cases. Even where the employees unanimously decided to work for the Government, they were assured that, as an employer, the Government would give equitable consideration to underlying disputes. The Government thereupon assumed negotiating responsibilities. When the employees individually refrained from resuming work, even for the Government, until their claims were first disposed of, an even greater complexity ensued. A new meeting of minds became important—between the union and the Government.

Through plant seizure, production stoppages may be avoided in public emergency disputes—though not assuredly. The underlying labor problem still has to be resolved in one way or another. The first obligation of the Government operating agency is to attempt to mediate between the union and the employer. Success in this endeavor is the only sure way to return the facilities to private operation. It is concluded, therefore, that Government seizure need not vitiate the collective-bargaining criterion of the meeting of minds, although the reasons for agreeing may be peculiar to this situation.

If the employees individually refrain from work until their claims have been disposed of, and if a resumption of production is of overwhelming importance, the Government operating agency may have no alternative but to consummate a labor agreement with the union. The so-called Krug-Lewis agreement for the bituminous-coal industry made in 1944 is an example of this kind of bargaining. When this kind of settlement is made, employees as a group are not required to work under unsatisfactory terms, but the position of the employers is most unenviable. Only by embracing a settlement to which they were not a party can they secure control of their plants.

A general defect of the plant-seizure formula is that the executive department of the Government becomes a direct party to the labor dispute. Employees are individually requested to work at terms of employment which they have jointly appraised as unacceptable. According to established union standards, the Government thus acts "as a strikebreaker". At the same time the Government must take a heavy responsibility for successfully mediating the dispute. If it fails in this endeavor, it may have to deprive the employer of his collective-bargaining rights, since a Government-union agreement may be the only way to insure uninterrupted production.

In certain situations, as in wartime, the executive branch of the Government may be under strong compulsion to seize and to operate production facilities. These are times when the public need for uninterrupted production overshadows any of the usual rights of management or of labor. But the right of the Executive to seize and to operate productive facilities should be looked upon as a reserve power usable only to preserve the national interest in times of peril. Seizure certainly should not be a regularly specified step for dealing with public-emergency disputes, and seizure is a feasible step to take only if there is a reasonable assurance that individual employees will choose to work for the Government while their complaints are being adjusted.

CONCLUSION

Compulsory arbitration provides no real answer to the problem of public-emergency disputes in which, unlike other labor disputes, a stoppage of production is, in fact, not available to bring about a meeting of minds between labor and management representatives.

No program for the imposition of unacceptable conditions of employment is complete without sanctions to be used, if necessary, to make employees work and to make employers manage.

Implicit in compulsory arbitration is a dreadful sacrifice of cherished notions about the way men should live and work together; and for what? Compulsory arbitration would not even insure the sought-for continuity of production.

Strikes would still occur, and they would be more difficult than ever to resolve. It should be added, moreover, that working and managing at unacceptable conditions of employment would surely bring an appalling deterioration of effort in day-to-day relationships that would spell the end of economic progress in affected plants.

Some program other than compulsory arbitration is clearly called for to meet the problems created by public emergency disputes. The heart of any constructive program is the cooperation of labor and management in developing substitutes for strike action and the acquiescence of these parties in various procedures that will assist disputants to arrive at a meeting of minds.

Specifically, there is a need for these parties (1) more fully to utilize the potentialities of voluntary arbitration and (2) to join in an effort to evolve agreed-upon procedures that will be effective substitutes for strike action. Labor and management thus have the power to forestall any drift or drive toward imposed procedures or terms.

In the absence of their recommendation, there is no alternative to Government-prescribed procedures for working out public emergency disputes without dangerous work stoppages. They will center about (1) injunctions secured by the President against strike action, to allow time for settling an isssue, and (2) mediation machinery designed to effect a settlement. As a reserve power, to be used to avoid pressing peril, is (3) the possibility of Government seizure and operation.

The more or less voluntary approaches suggested are not "sure-fire"—but neither is compulsory arbitration. Under either, there are certain to be crises where work is interrupted despite great peril to the public—and probably as many by either route. They have to be disposed of as matters of crisis government.

There is neither need nor gain in sacrificing collective-bargaining principles in a vain attempt to avoid public emergency disputes once and for all by compulsory arbitration. It can't be done.

American Industrial Relations

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Thursday, February 10, 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the CONGRESSIONAL RECORD the most interesting and instructive address on the subject Where We Are at in Industrial Relations, delivered at the first annual meeting of the Industrial Relations Research Association, on December 30, 1948, at Cleveland, by Dr. Edwin E. Witte, professor at the University of Wisconsin, and first president of the Industrial Relations Research Association.

I have had an estimate made of the cost of printing this address. The cost is estimated to be $213.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WHERE WE ARE AT IN INDUSTRIAL RELATIONS

(Address of Edwin E. Witte, of the University of Wisconsin, president, Industrial Relations Research Association, December 30, 1948)

ATTENTION GIVEN INDUSTRIAL RELATIONS

Industrial relations have been in the headlines very frequently in the last 15 years. In the first part of this period, marked progress was made in protective labor legislation, climaxed by the passage of the Social Security Act and the Fair Labor Standards Act. Since then both social security and protective labor legislation have lagged, but there has occurred a great increase in legislation dealing with labor-management relations.

Unions have increased their membership from 3,000,000 to 16,000,000. The mass production industries, which were considered unorganizable, are now nearly all operating under union contracts. The conditions of employment of one half of all production workers in what might be called industrial employments are now determined by collective bargaining.

Management is giving greatly increased attention to industrial relations. Successively, scientific management, personnel management, labor relations, and human relations have been acclaimed in management circles as the key to improved industrial relations and reduced production costs. Most sizable establishments now have industrial relations departments and there is also widespread use of outside specialists. Top management increasingly regards labor-management relations as one of its major responsibilities.

PROGRESS MADE IN THE LAST TWO DECADES

When it comes to results, there can be no question that conditions of employment and labor-management relations have definitely been improved in the last two decades. Labor's share of the total product has not changed very greatly, viewing industry as a whole, but the workers, the managements, and the stockholders have all benefited from the near full employment we have enjoyed since the outbreak of World War II. Great progress has been made in the development of orderly wage rate structures. "Fringe benefits" in such matters as overtime, vacations, holidays, and shift premiums have become well-nigh universal for production workers. Turn-over has been reduced and a high degree of stabilization of employment has been attained, without much need for conscious attention to the problem. At the same time there has been some growth and greatly increased interest in guaranties of annual wages or employment and in profit-sharing plans.

Very important has been the improvement in the treatment accorded workers within industrial plants. Most such plants now have orderly grievance procedures and workers can get redress when not treated fairly or in accord with human dignity. Arbitrary discharges are far less common than formerly and can no longer be resorted to with impunity as a method of fighting the unions. In lay-offs, and to some extent even in transfers and promotions, seniority rules prevail.

In some respects, also, labor disputes have become less serious difficulties. In all the many strikes we have had since the close of World War II, there has been little violence compared with earlier periods. Industrial espionage seems all but to have disappeared as have professional strikebreakers. Goon squads and racketeering have become much less common than formerly. No less important has been the great progress made in the arbitration of unresolved disputes between labor and management.

UNSOLVED PROBLEMS

But it is very evident that the millenium has not been attained in industrial relations. While there are plants in which the existing relations are acclaimed by both labor and management, and also by neutral observers, as highly satisfactory, there is much evidence of mutual distrust and continuing strife in a large part of American industry. Unions feel that many managements, if not management generally, are still bent upon destroying unionism. Managements are much concerned about unsatisfactory production and inclined to blame the unions for this situation. The public is very jittery about strikes and blames both labor and industry for prevailing high prices.

At this time, the principal interest lies in what sort of legislation the Eighty-first Congress is going to enact to replace the Taft-Hartley Act. I believe that I was the first person from academic ranks to write an article about the Taft-Hartley Act. Later, I discussed this law at a dinner meeting of the American Economic Association and in numerous addresses in different parts of the country. From the beginning, I took the position that, while the Taft-Hartley Act was not a slave-labor law, it was unfair to organized labor and would complicate the development and maintenance of sound-management relations in this country. But, just as I then said that where managements and unions so desired and had developed sound procedures there was no reason why existing good relations could not be continued despite the Taft-Hartley Act, so I say today that the development and maintenance of sound labor-management relations will not be brought about by any new law, regardless of what may be its content.

FREE COLLECTIVE BARGAINING

Both labor and management have professed and still profess that they want the Government to keep hands off and let them settle their own difficulties. Long before the Wagner Act encouragement of collective bargaining was declared to be our national labor policy. This declaration is repeated in the Taft-Hartley Act. Free collective bargaining is acclaimed by labor and management alike as the best way for determining labor-management relations.

When the present American scene is examined, however, doubt is cast upon the sincerity of these professions. In half of American industry—particularly in the small establishments and the less-industrialized areas—conditions of employment are still determined by individual bargaining. There also is much evidence that many managements which are dealing with unions have not really accepted unionism. But few of them resort to discrimination, company unionism, and similar tactics, which were widely employed in fighting unions but little more than a decade ago. Contests over the recognition of unions are now resolved through NLRB elections, in which employers generally aline themselves against the unions but usually accept the results when the elections go against them. Many managements, however, which have recognized and made contracts with unions representing a majority of their employees, are engaged in vast propaganda campaigns to win the loyalty of these employees away from the unions. They also seek to confine the collective bargaining to narowly defined limits, which place beyond the pale as management rights, never to be questioned or even discussed, many matters about which other unions have long bargained.

Many unions, on their part, similarly act as though the employers with whom they deal were their mortal enemies. Such an attitude is undertandable toward employers who seek to undermine their unions, but, unfortunately, is manifested also toward other employers. The last vestiges of the former Communist control of quite a few unions are rapidly disappearing, but savage attacks upon the integrity and motives of management are not confined to the Communists within labor's ranks. Provoking hatred of management and making unreasonable demands is often the surest way to win and retain union office. Genuine cooperation with management to improve production, I fear, is the exception, rather than the rule.

Free collective bargaining should result in the joint determination of conditions of employment through a meeting of minds. It is a process of give and take, carried on in the realization of common interests, despite differences. In such an atmosphere, the possiblity of a strike, and even an actual strike, may serve the useful purpose of making the parties more willing to compromise. It is not occasional strikes which menace collective bargaining, but the unwillingness often manifested by the contending parties to accept its implications.

To make collective bargaining work both sides must recognize that they have more matters of common interest than points of difference. Clearly, management must wholeheartedly accept unionism and recognize that workers can be loyal at one and the same time to the company and the union, just as it is possible to be loyal simultaneously to parents, spouse, and children, to the church, community, and Nation. Unions must cease berating management, cooperate in trying to secure maximum production, and leave no doubt of their acceptance of our system of free enterprise. A State of armed truce is not a satisfactory industrial relations situation, any more than it leads to peace and good will internationally. Satisfactory collective bargaining is very largely a matter of day-by-day living together and learning to cooperate. Further, it involves more than good intent. It requires also the development of sound procedures for the practical solution of many troublesome problems.

Viewing the total American scene, it seems to me that collective bargaining, as it exists today, still falls far short, not only of the ideal, but of the attainable. But we have made great progress toward truly satisfactory collective bargaining in many industries and in literally thousands of establishments. For the better functioning of collective bargaining, these successes merit at least equal attention with the failures.

GOVERNMENT INTERVENTION IN LABOR-MANAGEMENT RELATIONS

As I view the present scene, perhaps the greatest of all dangers to free collective bargaining is the proneness of both sides to seek the aid of Government to give them the victory in their contests with each other.

Until 15 years ago, labor felt that employers, through injunctions and otherwise, utilized Government to defeat and destroy unionism. Since passage of the Norris-LaGuardia and the Wagner Acts and the decisions of the United States Supreme Court sustaining this legislation, management has felt that the Government was on the side of labor.

While the Wagner Act was in effect, the unions greatly increased their strength, although no one can ever be certain how much of this growth was due to this law and how much was a consequence of full employment. Because the unions had been mainly responsible for its enactment, although it was passed practically unanimously, management from the outset sought repeal or drastic amendment of the Wagner Act. In the Eightieth Congress, it was successful in getting rid of this act. But it did not stop with the mere repeal of the law to which it objected. It insisted upon and won numerous restrictions upon the unions. The Wagner Act limited the Government's interference to the organizational stage, stopping at the bargaining table. The Taft-Hartley Act continued the Government intervention in the organizational stage and, in addition, prescribed the procedures to be followed in collective bargaining and, in numerous respects, regulated what the parties might agree upon.

The Taft-Hartley Act seems destined to be replaced by a radically different law. Quite likely there will be some reduction in the extent of governmental interference in labor-management relations. But this is by no means certain, and there is still greater doubt whether the trend will continue in that direction. The truth seems to be that not only do both labor and management want to get the Government on their side but the general public calls on the Government to do something whenever there is a wave of great strikes, or there is any threat to the uninterrupted flow of vital necessities.

Some economists have been very much worried about the danger that employers and employees may gang together to hold up the public. The public, more realistically, has been concerned, not with the possible injury to society which conceivably may result from agreement, but with the consequences of the failure of labor and management to agree. In large segments of American industry, the strike today cannot effectuate its valuable results in facilitating a meeting of minds because the public insists upon an immediate settlement. In such industries the choice seems rapidly to be becoming voluntary arbitration or compulsory arbitration, but with machinery such as that which has long existed on the railroads worthy of consideration.

SOCIAL SECURITY AND PROTECTIVE LABOR LEGISLATION

As I size up the present situation, the prospects for the years immediately ahead are that there will be increased governmental intervention in labor-management relations. I do not like the trend toward increased governmental intervention, but, like about everybody else, want to see Government action extended in some directions.

I strongly believe that improvement of our social security and protective labor legislation is long overdue. Prospects seem good for the adoption of the amendments to the Federal old age and survivors' insurance law proposed by the Advisory Council on Social Security (which, while falling short of what I would like to see, will be all to the good). Some improvements may be expected in the benefits under workmen's compensation and unemployment compensation in many States, although these will probably not be as great as required by the changes in the cost of living. There is every prospect also that there will be laws in many States this winter for cash sickness compensation, with the real battle coming over the extent to which private insurance companies shall administer this new form of social insurance. I wish that I could also say that I expect a national health insurance law to be enacted, but reporting truthfully how I see the present situation, I cannot do so. Although organized medicine bet on the wrong horse in the election, I fear that its influence is sufficiently great to make anything unlikely in the coming session beyond the first real consideration that Congress has ever given to health insurance. Instead of health insurance, we will probably get increased public medical care, as we have been getting for quite some time, while the AMA continues to denounce a contributory insurance system as socialized medicine but offers few objections to increased medical care provided at public expense. It is a safe forecast, also, that union demands for employer contributions to pension, health, and welfare funds and employer costs for these purposes will increase, so long as we do not have an all-inclusive and adequate social insurance system.

I view these developments affecting social security with mixed feelings. I am happy that there is greatly increased interest in social security and that the prospects are good for additional social security protection for many people. But I am concerned because we still lack anything like a common approach to social security problems. Social security involves both benefits and costs. These are the two sides of the same shield. The difficulty is that labor is inclined to look at only the benefits, while industry looks only at the costs. Since 1938 until now, industry's point of view has been largely controlling, with results which now are proving embarrassing to industry. Today, some representatives of labor are going to the opposite extremes. I believe that such a policy will also have results which its proponents do not expect.

I have been impressed by the fact that both extremes recently have been advocating much the same type of social security legislation—a universal flat pension system financed from general taxes—a baby Townsend plan. Mr. Miriam of Brookings Institution and the Hoover Commission advocates such a program expecting that its end result will be that only people in need will receive benefits. Labor advocates of universal pensions favor such a system of social security because they think it will result in large benefits toward whose costs employees will contribute very little. In view of the support which the idea enjoys in both camps, I see a considerable likelihood that some type of baby Townsend plan will sometime be adopted in this country. It is my view that if we ever come to such a plan, we will witness a great battle between the two groups of advocates. The radicals will strive ever to get these pensions increased. The conservatives on the other hand, pointing to the impossible costs, will then press for limiting the benefits to people who are in need. Which group will prevail I would not hazard a guess but it is a certainty that under such a system social security would ever be a political football. On my part, I greatly prefer a contributory social insurance system. Such a system has the official support of both organized labor and organized business, but will be replaced ere long by something very different unless we soon get an all-inclusive, comprehensive, contributory social insurance system, in which equal consideration is given to benefits and costs.

Regarding protective labor legislation, the prospects for some long-overdue improvements seem fairly good, but it must be reported that interest in this aspect of industrial relations continues to be much less than its importance warrants. The Eighty-first Congress seems likely to reverse, in part, the action of the Eightieth Congress in greatly weakening the Fair Labor Standards Act. Almost certainly it will materially increase the very inadequate minimum wage rate of 40 cents per hour. Something also will be done about returning to the United States Department of Labor some of its lost functions. But the bulk of our protective labor legislation is State legislation, and we are still in the mood of overlooking the States.

I would also expand governmental industrial relations activities in the informational and educational fields. For the best functioning of collective bargaining, the parties should have available to them all information which is material and likely to be helpful in bringing about a meeting of minds. An impartial governmental agency is the best possible clearing house for such information. It will never do that the only sources for basic statistical information are partisan private agencies. Government also should undertake research of such dimensions and expanse as to be feasible only for very large organizations. Further, I see nothing wrong with Government aid for industrial relations research any more than with Government aid for research in the medical and natural sciences. Workers' education has such potential ties for improved labor-management relations that Federal aid is clearly called for.

SAFEGUARDS AGAINST HARMFUL GOVERNMENTAL ACTION IN INDUSTRIAL RELATIONS

Many of you will think that I am very illogical in advocating an extension of governmental activities along the lines suggested while wishing to restrict governmental intervention in labor-management relations. Perhaps I am, but, as I see it, both free collective bargaining and governmental action have their proper place in industrial relations. What I have advocated is a far cry from the complete domination of industrial relations by the Government, which seems to me to be the only real alternative to free collective bargaining and its extension and improved functioning.

Let me add some thoughts about principles and procedures in relation to the Government's role in industrial relations. In the establishment of standards governing conditions of employment, the Government should outlaw only conduct deemed unsocial, not only by employees and the public, but also by most employers. Labor legislation should set only minimum standards, designed to bring the laggards (Theodore Roosevelt's dirty tenth employer) up somewhere close to the average. It should leave for bargaining between managements and unions the determination of the actual conditions which will prevail in the great majority of plants, in all respects customarily dealt with in collective bargaining. On matters not dealt with in collective bargaining, it should stimulate forward-looking employers to exceed the legal minimums.

For the development of sound labor legislation, I strongly believe in the desirability of the conference method, which is really collective bargaining in the legislative field. Under the initial leadership of John R. Commons, the Industrial Commission of Wisconsin for more than 30 years has successfully used advisory committees to draft industrial safety codes, minimum wage orders, apprenticeship rules, workmen's compensation amendments, and more recently, changes in the unemployment compensation law. It has always followed the principle of giving representation to all major interested organizations and of appointing to membership the persons designated by them as their representatives. What these committees have agreed upon—and almost invariably they have come to an agreement, often after wide differences to begin with—the Commission and the legislature have accepted without question. It is this procedure, rather than the detail of the legislation, which accounts for the fact that Wisconsin's labor legislation,

including its much debated unemployment compensation law, has had the support of employers and employees alike and has never become the subject of bitter animosities and knock-down-and-drag-out fights in the legislative halls or on the political hustings.

In Wisconsin collective bargaining of this type has been applied to labor-relations legislation only to a very limited degree. I believe it was worth trying even in that sphere. This was, in substance, President Truman's suggestion in 1946. Neither labor nor management supported the suggestion, and Congress went ahead with the enactment of labor-relations legislation in the old political method, with the result that this legislation aroused bitter resentment on the losing side and must be rewritten. The National Association of Manufacturers now has called for labor-relations legislation to be arrived at by labor-management agreement, but it wants the Taft-Hartley Act to be continued in the meantime. As this is, naturally, unacceptable to labor, this belated proposal is not likely to get very far. The best that can be hoped for is that the politicians this time will give more consideration to the minority's views than they did in 1947. But the principle is sound that not only must labor legislation be impartially administered but that it must be of such character that labor and management are willing to live with.

It is also my view that the national labor-management conference method has promise of being useful on many other aspects of industrial relations. It has had demonstrated value in railroad-labor legislation. Something akin has been followed in social-security legislation. Within the last few days the Board of Economic Advisers has suggested a labor-management conference on wage-price policies. I agree with Dr. George W. Taylor that this is one of the most difficult problems on which to get agreement. But it seems to me that a labor-management conference is more likely to result in the development of principles taking account of the effects of wage-price policies upon the whole economy than we now get under the present system of interunion competition in demands for wage increases and the follow-the-leader policy which is so widely pursued by management. The Labor-Management Conference of 1945 is usually said to have been a failure. Its unanimous and since widely followed recommendation that all union contracts should include a provision for the arbitration of all unresolved disputes over the interpretation and application of contracts, however, alone made a greater contribution to improved labor-management relations in this country than all of the politically enacted labor-relations legislation we have had since the close of the war.

OTHER ASPECTS OF THE CURRENT INDUSTRIAL RELATIONS SITUATION

I could go on much longer, giving you my ideas on other current industrial relations problems. But limitations of time compel me to deal only with collective bargaining and the role of the Government in industrial relations. I am aware also that I have not touched upon the broader implications of these aspects of industrial relations. How collective bargaining functions and what the Government does in this field, have important bearing upon the maintenance of a stable, high-level, and progressive economy and the preservation of democracy and individual freedom, upon which depends all else that is worth while. But I must leave this subject to others who are better qualified to deal with it than I am.

I am also not oblivious to the fact that collective bargaining is by no means all there is to industrial relations on the industry and plant level. In no industry, have all conditions of employment become a matter of collective bargaining. While opposed to rigid definition of management rights, all but Communist-controlled unions concede that there are management rights and functions of management which they do not wish to usurp or even share. In any consideration of industrial relations, the existence of management rights must be recognized. But in our democracy, all rights carry with them duties. I believe that we will make greater progress, if management stresses less what are its rights than what it should do so that these rights will be exercised to benefit, not merely the management and the stockholders, but the workers and the consumers as well. Conversely, unions, in this day and age, in which they are assuming an importance comparable with that of corporations, need to recognize that they have a high degree of responsibility for the prosperity of industry and the general public welfare.

INDUSTRIAL RELATIONS TEACHING

Supplementing the observations I have made about the present industrial relations situation, a few remarks would seem appropriate regarding the present status and the prospects for research and academic teaching in industrial relations.

There is today vastly more instruction in industrial relations than ever before. Everywhere courses in industrial relations are among the most popular of college courses. In 1942, when the last classification of members was issued, more members of the American Economic Association listed labor as their first interest than any other field within economics, including even economic theory. Courses in industrial relations, moreover, now are given in many academic departments besides economics. At Wisconsin, such courses are offered in seven departments of the liberal-arts college and in five other colleges and also the extension division; and much the same situation exists in all other large universities. While only Cornell has an independent college of industrial relations, more than 30 colleges and universities now have industrial-relations centers, with differing titles and somewhat different activities and objectives, but invariably seeking to coordinate and improve the campus instruction in industrial relations. Most of them also do a good deal of extension instruction of many types—organized classes, short courses, institutes, and conferences—serving labor, management, and to some extent labor and management together and also the general public. A number of other universities which have not established industrial-relations centers are doing quite as extensive and effective teaching in industrial relations, on and off the campus. Only the smallest institutions of higher learning now lack any special courses in labor economics or industrial relations, and some instruction in those subjects is even getting into the curricula of secondary schools in industrial centers.

All this instruction in industrial relations seems to me to be to the good, if impartially and competently presented. Considerable danger exists, however, in that we may be getting too many college graduates who prepare themselves, narrowly for careers in industrial relations. While employment opportunities for such specialists are increasing, they are far less numerous than the students now in the colleges who would like to go into such work. Important as is the training of qualified specialists in industrial relations (and most such training, I believe, must be done on the job), the greater responsibility of the universities is to give all students some acquaintance with industrial relations problems, the points of view of both labor and management, and the possibilities for the reconciliation of differences. This is particularly important for students, like those in engineering, business administration and law, who are almost certain to have to deal with some aspect of industrial relations in their careers. But it is valuable also for all other college graduates, as training for the responsibilities of leadership and citizenship in our present-day American society, in which industrial relations have come to occupy such a very important place. Equally great is the responsibility of the universities in meeting the ever increasing demand for off-campus instruction in industrial relations which comes from unions, management, and the general public.

RESEARCH IN INDUSTRIAL RELATIONS

Growth in the amount of attention given to research in industrial relations has kept pace with the increase in teaching in this field. Nearly all the industrial relations centers emphasize research, even more than instruction. Much important research is being done in universities independently of the industrial relations centers and, also, outside of the colleges. Government agencies, like the United States Bureau of Labor Statistics, do some of the most important research in this field. Research is also receiving increasing attention from both industry and labor.

It is almost literally true that some new book dealing with industrial relations has been published in every week of the past year. Articles and pamphlets have been even more numerous. So extensive has been the outpouring that it has become quite difficult for the academic student, to say nothing about the practical industrial relations man, to keep up with this flood of literature.

Much of the research has been done by newcomers in this field. These include many younger economists whose training was mainly in economic theory and who have been surprised that what they have found to exist is difficult to reconcile with the theory they were taught. Others have come from the academic disciplines which have only recently become interested in industrial relations. In plant and other field studies, questionnaire and interview techniques have been extensively utilized in this recent research. Documentary sources have been pretty much neglected and but little attention has been given to earlier studies.

While I am an old-timer who has made little use of the techniques relied upon by the newcomers in the field, I recognize that they have made very important contributions to an understanding of many industrial-relations problems. But I protest against the use made of some of the recent studies by people who have an ax to grind.

The most discussed single research studies of recent years in the industrial relations field are the Hawthorne Studies of Elton Mayo and his associates. I recognize these studies to be of great importance, if for no other reason than that they made such a very great impression upon management and upon many of the younger men who are doing most of the research in the industrial relations field today. Mayo utilized experimental methods, which, while limited in scope and conducted under conditions which made the test group very conscious of being guinea pigs, were in many respects comparable to those of the early days of natural science when many of the most important basic discoveries were made. In discovering the informal groups among the workers in industrial plants and emphasizing that the production of individual workers depends upon group thinking and action, Mayo laid the basis for what is now called human relations in industry. Important as were Mayo's contributions, he was not the first to discover that there are group limitations to production even in unorganized plants. John R. Commons noted this fact in his report on Regulation and Restriction of Out-

put by Employers and Unions, which was published by the United States Bureau of Labor in 1904, and Stanley Mathewson reported the same phenomenon in his Restriction of Output Among Unorganized Workers in 1931. Still less was Mayo the first to make in-plant studies in industrial relations or to conduct controlled experiments in this field.

Mayo did not discover the importance of unions in industrial relations, no doubt, because there was no union in the Hawthorne works when the studies were made. On the basis of the Mayo and similar studies, some managements have drawn the conclusion that unions have very little to do with satisfactory labor relations and even to dream of getting rid of the unions by building up the informal groups within plants—precisely how, has never been clear. It is to the credit of other industrial sociologists that they have discovered the unions and their great influence. But I feel that their work, too, would have been enriched had they known more about the unions before they made their in-plant studies and had made greater use of published sources. I feel that the greatest contribution can, perhaps, be made by the sociologists if they will carry further the study of the unions as institutions, which was begun many years ago by the institutional economists who were called, derisively, "labor economists" by many of their professional colleagues. The community and membership activities of unions I believe to be a most fertile field for study, heretofore almost wholly neglected.

In singling out the industrial sociologists for special comment, I do not detract from their very real contributions to a better understanding of industrial relations. I like their approach much better than that of economists who ignore all but what they call economic factors in accounting for the behavior of employers and employees. I recognize that there is value in reaching the same results through different approaches and for learning through direct observations, even when they are repetitive. Nor do I begrudge investigators the thrill and acclaim they get when, through original research, they discover what they could have learned from published sources. And, of course, we need to know much more about industrial relations than can be gotten from prior studies and documents. I also am very happy that there are so many newcomers in the study of industrial relations. They bring to their studies fresh enthusiasms and new approaches and they have a distinct advantage because they have not been labeled, as [illegible] who honestly express themselves in this surcharged field are certain to be in the course of time.

There is plenty to do for all who seriously want to study industrial relations. No aspect has been exhausted or is in danger of being soon exhausted. There is need for field studies and for library research; for large projects, requiring much manpower, and for smaller studies which are quite manageable for an individual scholar or suitable for an independent doctor of philosophy thesis. We need original investigations, but also compilations, analyses, and interpretations and work of a conceptual character.

There is need in the study of industrial relations for the approaches of all academic disciplines represented in this association and those of practical-minded people who must deal daily with these problems. But it is highly desirable that there should be cross-fertilization between these workers in their differing approaches and points of view and that all people who undertake research in industrial relations should have ready access to what has been done by others. Improvement of the situation in these respects is one of the major objectives of the Industrial Relations Research Association.

Concluding, industrial relations still present many pressing problems. The way these problems are resolved will have much to do with the future of our economy, our Government, and our entire way of life. The development of more satisfactory industrial relations is primarily a responsibility of labor and management, but will be powerfully affected by what the public wants and the Government does. To the members of this association who are mainly academic teachers and research workers or practical practitioners in the industrial relations field, the present industrial relations situation presents both an opportunity and a challenge. We must measure up to this opportunity and meet this challenge. Principally, through the discovery and dissemination of truth we can make our contribution to improved industrial relations.

Women's Patriotic Conference on National Defense

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1949

Mr. WILEY. Mr. President, from January 27 to 29 there was held in Washington the Twenty-third Women's Patriotic Conference on National Defense. This conference included among its patriotic organizations some of the most outstanding groups in the Nation. It was my pleasure to address the conference, along with many other speakers, and I ask unanimous consent that there be printed in the Appendix of the RECORD the text of the speech which I delivered on January 29.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CHECKS AND BALANCES: AMERICA'S GREATEST NEED

Mr. Chairman, distinguished guests, fellow citizens, it is a real pleasure for me to be with you here today. Organizations such as yours constitute the sentinels of American liberty. One hundred and forty-eight million people look to you and to your constituent patriotic organizations for leadership, for direction, and for guidance. All of America is in flux and ferment today in this troubled atomic age. So, too, the peoples of all the world are looking for light as a war of rival ideologies rages throughout the globe—the ideology of free men versus the ideology of the slave state.

I am grateful to you for the honor of appearing before you this morning and submitting a few thoughts on what I regard as one of the crucial concepts of our American way of life. But before I discuss this subject may I express my deep congratulations to you for your enterprise, your industry, your public spirit in coming together today from distant places, from my own and other States, in order to consider the urgent patriotic problems of this Republic. When you go back to your respective areas, I know that you will be refreshed, reinvigorated. Your batteries will be recharged, so to speak, and you will become better exponents of the American way of life. Now, just what is that way?

THE MEANING OF CHECKS AND BALANCES

Basically, the American way is set forth on what Prime Minister William Gladstone called the "greatest document ever struck off at a given time by the brain and purpose of man." I refer, of course, to the United States Constitution, the guiding landmark of 170 years of growth and progress on these blessed shores. In this document will be found the basic concepts which are as vital and alive and meaningful today as they were a century and three-quarters ago. Under this document, three separate and coequal branches of Government were established—legislative, executive, and judicial. Each was assigned its proper area. Each was designed to serve as a check and balance against the "will to power in any one branch." Why did the founding fathers do this? Because they had read the pages of history. They knew that throughout history men and women have sought power; and when they have gained power, they have used it often arbitrarily and tyranically, unless they were checked by some other force.

Now, my friends, the greatest challenge to you and to me today is to seek to extend this principle of checks and balances in every field of our national life, so that in no one field can any single individual or group gain such power that it can trample upon the liberties of all other individuals and groups.

EXTENDING CHECKS AND BALANCES PRINCIPLE

Thus you and I must seek the extension of checks and balances in the field of economics, in the field of politics. Yes; basically in the field of men's thinking. We are told by the Good Book that "as a man thinketh in his heart, so is he." When a man becomes obsessed with one single thought, when he doesn't have checks and balances in his own mind, when he forgets moderation, when he goes off the deep end so to speak, then invariably he does damage to himself, and often to his fellow man.

But how are we to extend the principles of checks and balances? The answer is obviously in the field of education.

I am not referring to book learning, nor to some of the processes in the Nation's higher institutions of learning, which go under the guise of "education." I am referring to dynamic inspiration of men and women, young and old, by personal contacts, by heart-to-heart talks, by newspapers, by radio, by motion pictures. Each of you in your own community is a leader—a leader in the women's organizations—a woman's club or veterans' auxiliary, a patriotic group, a business or professional group, a church group. You are coleaders in your own homes, sharing responsibilities with your mates and with your children. In this, as in every avenue of public opinion, it is up to you to help mold opinion along right lines.

WRONG TYPE OF EDUCATION

The alternative is for a wrong type of education to continue, especially in the case of the young. You and I have seen this wrong type of education most dramatically demonstrated in the case of Miss Elizabeth Bentley. As you will recall, she is the reformed Communist who testified some months ago before the House Un-American Activities Committee regarding her own subversive activity and those of her associates. She was an "educated" woman, with a bachelors degree from Vassar and a Masters degree from Columbia. Yet, she had become so inoculated with alien ideas, with subversive concepts with man's transitory knowledge, that she had lost her balance, so to speak; she had become the slave of a foreign ideology and a foreign state. How many other young people have also gone cockeyed by becoming the slavish adherents of foreign beliefs and mere human knowledge. You can answer that question as well as I can, because you know the

problems of schools and colleges in your own communities.

THE CHALLENGE TO LEADERS

And so, good friends, I am calling upon you, or rather your Nation is calling upon you to redouble your efforts in order to preserve the foundations of this constitutional Republic, to conduct a great educational crusade, acquainting our people with the facts about this Republic and its philosophy of government and life. Too often you and I and others simply learn the facts about our Government in school when we are young. Gradually, these facts slip away from our minds and with their loss, we lose a sense of inspiration. We come to regard the Constitution as a dead letter, the Bill of Rights as a fine document but one that does not require our study nor our adherence. We must, however, breathe into the Constitution the spirit of life by our deep sense of loyalty to it. We are told by Paul that "the letter killeth but the spirit maketh alive." This is true of the Constitution, just as it is true of every law on American statute books.

SENATE DOCUMENT ON CONSTITUTION

One small means by which I personally hope to bring about a greater understanding in respect to the Constitution is through the preparation of Senate Document 210 of the Eightieth Congress. This is a document which I prepared in my former capacity as chairman of the Senate Judiciary Committee. The document consists of the text of the Constitution, an index to it, a chronology of important events which led to its founding, an amendment, and a series of the most famous quotations regarding the Constitution. I hope that you folks will write in to the Senate and House document rooms for copies, or to your Senators or Representatives. I know that they will be happy to send you copies as soon as they become available, which will be in a few weeks, and as long as the limited supply holds out.

CHECKS AND BALANCES IN INDUSTRY

But let us never forget that behind this document, the Constitution, is the spirit of checks and balances. Let us never forget that in the field of industry, for example, we must not allow any single group to become so powerful that it can dictate to the American public. Years ago a single businessman evidenced the psychology of arbitrary power when he said, "The public be damned." Because power had gone to his head and to the heads of a small group of other businessmen, the Nation enacted antitrust laws. Later, the pendulum of power swung, and this time it was organized labor which secured excessive power. As a result of that fact, the Eightieth Congress enacted the Taft-Hartley labor law. Now we are hearing that there are those who would repeal this law in entirety, even though they admit that without it on the statute books, we may be plunged into industrial chaos. I am hoping that the valuable features of this law will be conserved. The name of the law is not important. Inequities and imperfections under the law can be eliminated, but the basic principle behind this law, the principle of checks and balances in industry, should be preserved.

CONCLUSION

I want to express my deep appreciation to you for the honor of having attended your sessions. Seeing you patriotic women here today and Thursday evening has given many legislators, like myself, a new sense of confidence and faith. By your coming together, you have reinvigorated yourselves and you have served to reinvigorate representatives from your national legislature.

I wish you Godspeed on your great patriotic crusade, continuing success in your efforts on behalf of the greatest way of life which man has fashioned on this planet in all his centuries of existence.

Addresses by Hon. Margaret Chase Smith, of Maine, and Dr. K. Frances Scott Before the National Federation of Business and Professional Women's Clubs, Inc.

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, February 10, 1949

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Dr. K. Frances Scott, president of the National Federation of Business and Professional Women's Clubs, Inc., on January 3 of this year, at the Hotel Statler in Washington, introducing Senator SMITH of Maine at a dinner honoring Senator SMITH, and the address delivered by Senator SMITH on the same occasion.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

ADDRESS OF DR. K. FRANCES SCOTT, PRESIDENT, NATIONAL FEDERATION BUSINESS AND PROFESSIONAL WOMEN'S CLUBS, INC.

The year 1948 has been memorable in many ways—and not the least of these is the fact that we now have a woman in the United States Senate. In 1948 we observed the one hundredth anniversary of the woman's rights meeting and its declaration of sentiments, listing the legal and social injustices of that day. During this year the women of America celebrated this anniversary and charted, with pride, the gains women had made during the century.

Today we face the beginning of a new century, the year 101 for women. How better could we celebrate such a beginning than by paying honor to the new Senator from Maine, MARGARET CHASE SMITH, the first woman to enter the United States Senate under her own steam through the democratic processes of running, against opposition, for nomination and election?

At the beginning of a new century we should pause to consider what we modern women would like to put into a new declaration of sentiments. Unlike the women of 1848, who declared emphatically that men were responsible for the injustices to women of their day, we could not possibly blame men for our failure to achieve the full rights we desire. We must face the hard fact that we begin our year 101 with all the tools needed to gain power to change our status if we will use these tools.

We have the vote. We constitute more than half the population of the United States. Add these two facts together and we have the power to put into elective office those persons most favorable to the changes still needed in the legal status of women and to wiping out discriminations based on sex.

Not only have we the vote, we have the right to run for and hold office. By learning the techniques of our political system; by studying the machinery of our procedures of nominations and elections; by coming up in our political parties through the ranks we can be elected to office.

By using our votes, by earning our elections, we gather power and influence and that will gain us appointments of qualified women to high-policy posts.

Yes; our modern declaration would certainly call on women to enter our political life as full-time working citizens.

To the women of 1949 this full participation in the life of our communities and our Nation is important because they feel they have as much to contribute as men. Their ideas and aspirations are apt to differ from men's and have as much right to be represented in government. In fact, our present governments today are sadly unbalanced—lopsided with the male viewpoint of values. Women are very nearly in a position of taxation without representation and history teaches us what happens in such cases.

To balance the scales and benefit our communities our women must cease hiding their talents and take their places in our governments on equal terms with men.

Such and more might be in our new declaration, but all could be summed up in one sentence: that we, as women, resolve in this coming century to take up our responsibilities as citizens, serving our communities and our Nation as full partners with men.

ADDRESS OF HON. MARGARET CHASE SMITH OF MAINE

I shall preface my remarks with what all of you know—that this is a great day for me. To be completely honest with you, I must confess that I'm nervous, I'm walking on air, and I'm choked up a little with my heart in my throat. What is happening to me today has never happened to another woman or man. Rarely has a woman taken a seat in the Senate and I doubt if the hundreds of men Senators have been showered with the generous friendship and honor that you have given me today.

I'm naive enough to admit to you that I can hardly realize that I am not in a wonderful dream. But if that is lack of sophistication, it is because I know now, and I shall always remember, that these unprecedented honors are granted to me not because I am MARGARET CHASE SMITH, but rather because I am merely a symbol of those who have granted me these honors. Any one of you could be in my place today had you been fortunate enough to have the good breaks and fervently sacrificing friends that I have had.

I am not a United States Senator today simply because I am a woman. I was not elected just because I am a woman. To the contrary, I was elected in spite of the fact that I am a woman. And that in itself was a victory for all women for it smashed the unwritten tradition that the Senate is no place for a woman. The point that so many miss is that women do not blindly support some candidates just because they are women, we are not headed for an Amazonian world—rather that no one should be barred from public office just because she is a woman.

Perhaps the greatest significance of my victory is the growing realization that ability and proved performance, rather than sex, are the best standards for political selection just as much as they are for any other kind of selection. I like to think that I am a symbol of this growing realization.

I have been repeatedly warned that while officially I will be the junior Senator from Maine—unofficially, I will be the Senator at Large for women all over the Nation. While my first duty is to the people of Maine, I will gladly accept the unofficial responsibility of being Senator at Large for America's women to the extent that the women desire. This would mean that I should hold myself in readiness to be a voice of America's women on the floor of the Senate and in committees.

But are there any subjects in which women have exclusive interests that might come before the United States Senate? If I were to guess on the subjects of greatest interest to women, I would say (1) world peace and (2) domestic security. But men are just as interested in these subjects as women—men and women are no different on this point.

Through national polls and the great national women's organizations, such as the National Federation of Business and Professional Women's Clubs, Inc., the great majority of women have gone on record as being convinced that the United Nations is the only hope for peace. The pace of the United Nations has been far too slow to satisfy most of us. But the United Nations has been laboring under the great handicap of the uncompromising attitude and obstructionist tactics of one of the largest nations.

At home there are growing signs that we are approaching a buyers' market—and gradually easing away from a sellers' market. Supply is catching up with demand. But that is not the whole story. Buyers are looking more closely at prices. They are hestitating. They are watching for bargains. They seek more quality for less money. The lush days when anything sold at any price are over. Merchants now fear intensive buyers' strikes.

This means that we are at last beginning to curb inflation. And the country can thank the women mostly for this happy turn of events, for it is the women who do most of the consumer buying. They are bringing prices down to fairer levels. They are erasing black markets. They are doing these things themselves which Congress could not do, with or without price control. And yet some people still underestimate the power of American women.

But while we are beginning to solve the very core of our problem of domestic security in the curbing of inflation by consumer restraint rather than government controls, we don't want the curbing of inflation to nosedive into drastic deflation. One need not elaborate on what drastic deflation means or what it is like. One need only remember the depression of the early thirties to realize that we must avoid drastic deflation.

What the women of America want is the highest possible standard of living at the lowest possible cost for the greatest number of all Americans first—and then the rest of the world. They want homes—homes at prices that they can afford. Or they want apartments at lower rental charges—apartments where babies and dogs are not barred—apartments where they can live a healthy, normal American life rather than subject to restrictions that do not make for normal living.

What the women of America want are reasonable prices for good food. They want to be able to go to the neighborhood grocery store and buy enough food for a family meal without draining their pocketbooks.

What the women of America want is a respectable salary scale for the teachers who shape the lives of their children. They want schoolhouses that aren't crowded—schoolhouses that aren't firetraps. They want school lunches that give real nutrition to their children. In short, they want their children to have the best food possible, whether it be for the head in what they are taught or for the stomach in what they are fed.

These are not unreasonable demands. They are not unnecessary drains on the taxpayers. They are sound investments in the future of America. And, after all, these are the desires of the taxpayers themselves, for the bulk of our taxpayers are mothers and fathers.

And as the only woman United States Senator, I pledge myself in full support of these objectives of the women—not just because they are objectives of the women, but because they are objectives upon which we must lay the foundation of America's future.

I am proud to have been a member of the BPW for more than 26 years. The BPW is largely responsible for putting me in the Senate. My work in the BPW taught me the very touchstones of political success. BPW work taught me to develop cooperation. As an inclusive, rather than exclusive organization, the BPW offered me greater variety of personal contacts than other groups. It taught me efficiency in committee work and officership. It taught me how to give and take in the participation of debates and discussions, in the development of powers of expression, and the growth of ideas.

I know of no organization that has as much to offer business and professional women as the BPW. I know of no organization that can provide better training in cooperation, tact, and efficiency. I know of no better way of increasing one's chances of success than participation in the BPW.

And the BPW shows its loyalty to its members when it really counts. I know, because the Maine Federation of the BPW was the only women's organization to endorse my candidacy for the United States Senate. I shall never forget what the BPW did for me in my hour of need—and of how the BPW stood out far above the crowd, and significantly before victory.

Lincoln Day Dinner Address by Governor Dewey

EXTENSION OF REMARKS

OF

HON. IRVING M. IVES

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1949

Mr. IVES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by Gov. Thomas E. Dewey, of New York, on the evening of Tuesday, February 8, at the Lincoln Day Dinner in the Mayflower Hotel, Washington, D. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great pleasure to come to Washington—even if it is only for a visit. At one time last year I expected to come for a longer stay. I was under the impression, which was shared by a great many others, that I had a clear call to duty. But last November it turned out to be some other kind of noise. As a result, my relationship with this fair city of Washington will continue, as in the past, to be merely that of an occasional visitor.

Recent events have made it clear that no Republican President was going to live at 1600 Pennsylvania Avenue anyway. No Democratic President is living there either. The White House has been in Democratic hands so long that, like the Government itself, it's falling apart.

So, if those 29,000 votes had gone the other way last November, I would have faced a double housing crisis—no White House to live in, and two Democratic houses to live with.

Instead, I find that I have been re-elected for a second straight term to that somewhat mythical office known as titular head of the Republican Party. It is an ancient and honorable office that carries with it the theoretical right to speak for the party but no guarantee whatsoever that anybody will listen to you. I have been graduated at a comparatively early age, to the role of elder statesman, which someone has aptly defined as a politician who is no longer a candidate for any office.

DISMAL RECORD FOR GOP

With the bluntness which that enviable role permits, I should like to discuss with you some of the ills that beset our party and our country.

It is now 20 years since our country last elected a Republican President. In that whole period we elected a Republican Congress once, 2 years ago. This is a dismal record that is important not merely to Republicans. It is of desperate importance to the country, lest we slip unconsciously into the abyss of one-party government.

Without seeking to find scapegoats or to make excuses, I would like to bring out in the open one basic problem. The Republican Party is split wide open. It has been split wide open for years, but we have tried to gloss it over. We have tried to deny it to ourselves and conceal it. That doesn't work. I suggest that we face it; get it right out in the open and look at it. Then let's see what we can do about it.

We have in our party some fine, high-minded, patriotic people, who honestly oppose farm-price support, unemployment insurance, old-age benefits, slum clearance, and other such programs. These people consider these programs horrendous departures into paternalism and would actually repeal them all. These people believe in a laissez faire society and look back wistfully to the miscalled good old days of the nineteenth century.

They also take the position that the sole duty of an opposition party is opposition. They urge Republicans in and out of Congress to fight every proposal of a Democratic administration, regardless of its merits. This group also honestly believes and says with considerable vigor that all Republicans who support these forward-looking programs are me-too Republicans and no better than New Dealers.

At the other extreme are those in the party who seem to embrace the entire New Deal and want to go far beyond it as rapidly as possible at almost any cost and regardless of consequences.

Personally, I disagree with both extremes. The fact that I disagree is not so important, but what is important is that both courses are fatal to our party and would be fatal to the country. If, as a party, we try to go back to the nineteenth century, or even to the 1920's, you can bury the Republican Party as the deadest pigeon in the country.

On the other hand, we can't outpromise the Democrats. If we tried to outbid the Democrats with the public money, it would be wrong, immoral, and a betrayal of our party and our country. Moreover, you couldn't outpromise the Democrats if you tried because they will promise anything to anybody to get a vote.

What we ought to do is to stop bellyaching about the past, either the distant past or the immediate past, and start making it everlastingly clear to the country where we stand and why. And that should not be too hard to do.

It is perfectly clear that only a progressive, forward-looking Republican Party can provide the leadership this country needs and must ultimately get. The overwhelming majority of all Americans in both parties believe that government today has to be more than a cold and impartial umpire.

PLATFORM OF 1948 IS CITED

That has been the position of our party consistently, both in the Congress and in our party's platforms. That position has been repeatedly affirmed in national conventions. In 1948, our platform was unanimously voted without one dissent at the national convention. It must mean something. Unless it was designed to deceive, its various sections say and mean that we are a liberal and progressive party.

To be entirely specific, they say and mean that our party has solemnly declared that we believe wholeheartedly in unemployment insurance, in old-age assistance on an increased basis, in broader social security generally, in slum clearance and public housing, in public development of our water

power resources, in farm price supports, in vigorous protection of the rights of labor.

All these are good. They are necessary; they are right; they are the officially declared principles of the Republican Party as solemnly adopted in convention assembled. I believe that we, as representatives of our party, are bound by these principles and are under a duty to carry them out.

Those who disapprove of these principles and want to fight them ought to go out and try to get elected in a typical American community and see what happens to them. But they ought not to do it as Republicans. They ought not to get their personal prejudices confused with the basic aims the Republican Party has repeatedly set forth in its platforms.

SEES ONLY 5 PERCENT REACTION

The people who want to turn the clock back are a very small percentage of the Republican Party, though sometimes they seem to make all the noise. I believe that 95 percent of all Republicans, whether as voters or public officers, believe in the party platforms, and it is up to us to make it clear that those platforms are the real intent of the party.

Let's let the people know. Let's stop quibbling among ourselves about issues that are dead and gone.

Most of all, we must make our party the vehicle for the aims and ambitions of the young people of the country. One of the most gratifying things that happened last fall was that in the high schools and colleges of this country from Maine to California our party was the choice of a heavy majority of the students. We should welcome these young people with open arms, bring them in, give them a voice in our decisions, a part of the responsibility of carrying them out, and again make ours the party of youth.

But I can still hear people say that if we mean what we say in our platforms, then how are we different from the Democrats? If we mean what Republican speakers said throughout the Nation last year in support of our platform, then, they ask, what better do we have to offer than the Democrats?

The difference is as wide as the ocean. Let me be specific again. In foreign affairs one difference is that we Republicans have insisted on a world-wide foreign policy and not merely a European foreign policy. It is the bitterest irony that it was America's traditional friendship for China and our insistence upon her integrity that brought about the Japanese attack at Pearl Harbor which took us into the war.

After terrible sacrifices, the Allied arms won the greatest military victory in history. And then almost immediately the Communist conquest of our traditional Chinese allies began. It was this present national administration which supinely sat by and allowed it to happen.

OUR CHINA POLICY A FAILURE

Fifteen months ago I called the attention of the Nation to the onrushing tragedy. The Republican Congress forced an appropriation for aid to China. But the administration failed utterly in its policy and its implementation of that and succeeding appropriations. We now see the appalling spectacle of 400,000,000 people, our traditional friends and allies, the Chinese, threatened with complete Communist conquest.

We are witnessing the frightening spectacle of all Asia, representing a majority of all of the people of the world, falling ever closer into the Communist orbit. In a little more than three short years, the fruits of the most glorious victory for freedom in the history of the world have been turned to bitter ashes by the incompetence of this administration.

Similar perils threaten us at home if our social progress is to be left in the hands of this administration.

You know, it is a curious thing that the same objectives of full employment and social security are claimed as their purpose by both political parties in America; by both the Socialist and non-Socialist governments of Europe; by the Communist nations of eastern Europe; and were claimed by the Hitler government.

Everybody claims to be going to the same place. But some are going as slaves with chains around their minds and clanking on their heels. Others are going as freemen with their heads high and their minds and souls unfettered by the state.

The whole difference between freedom and slavery lies in how you advance toward your goals, whether you go forward under a free system, or march on the treadmill of a slave system.

DEMOCRATS' AIM CALLED DOLE

I see nothing in the program advanced by the Democrats which is opposed to the belief that they intend to lead us into a system where everything man gets from cradle to grave is doled out to him by a ruling political clique. I see nothing in the program of this administration to lead anyone to believe that they desire to avoid the kind of nation where your home or your job, your right to education, or even to a bread card or a pair of shoes all depend on government.

That is the great fundamental difference between the Democratic and the Republican Parties.

Our party believes in social progress, and we believe it can only be achieved under a flourishing, competitive system of private enterprise where every human right is expanded. We are utterly opposed to tyranny in any form, whether by business, finance, labor, or government.

We are opposed to delivering the Nation into the hands of any group who will have the power to tell the American people whether they may have food or fuel, shelter, or jobs.

As we fight for the view that Government must protect the liberty and security of our people, we should fight also the view that any of these fundamental rights flow from the bounty of any political clique or party which happens to control Government at the moment.

We know and believe that we can pay for the advances of social progress only through more efficient, more economical, and better managed Government. That is an idea that has been completely forgotten in our Federal bureaucracy for a great many years. It is the kind of Government that nobody under 30 years of age can even remember in the United States. Yet, we are trying as a nation to make those advances under a political spoils system which has grown and spread out fantastically in all directions.

There is enough demonstrable waste in this Federal Government to pay for all of the social advances that were proposed by our party platform. We will only get rid of that waste, finally, by getting the executive and legislative branches of Government in Republican hands. Meanwhile, we can fight for part of it, at least, while in the opposition.

BACK-BREAKING TAXES

Only with a new degree of competence and skill in the fine art of government can we make progress which will not break the backs of our people with taxes. We are trying to make progress under a Government that does not seem to realize that the American people are entitled to spend their own earnings to the limit possible instead of having them taken away by Government to be squandered on sheer incompetence.

There are more differences between our party and the Democrats. They are willing, for political reasons, to play with any radical and unsound scheme in order to win over this or that pressure group. A basic issue between us is that we believe with all our soul and with all our hearts in human freedom.

And since that word is so much abused, let me say that I mean a system under which man is free to work at the kind of a job he wants—a job which fits his own skill and talent—to seek a job or to quit one—free to seek the education he wants—free to start a business—free to create—free to produce—free to benefit society by the ablest use of his talents—and free to keep enough of the proceeds to provide incentive to others to go and do likewise.

I mean a way of life under which government exists to protect the rights and equal opportunities of all its citizens—not a way of life in which the individual lives to serve as a cog in the machine of government. This is the heart of our political faith. It is the thing this present administration does not believe in, as their legislative programs and their tax programs prove.

NATIONALIZATION FEARED

Again, let me be exact and specific. The President has asked the Congress for the right to take steps which would lead toward the nationalization of various industries. That is the route to tyranny, in which all employment flows from government and you have to see your district leader to get a job.

Soviet Russia has nationalized her industries. So did Nazi Germany. Other nations are doing the same. But should we follow them down the trail? Let's see.

Right now, today, in the United States, we have 7 percent, or about one-fifteenth, of all the people in the world. Yet we are making by the free system more steel of every kind than all the other nations of the world put together. We are making by the free system more automobiles than all the other nations of the world put together. We have more telephones—and almost everything else by the free system than all the other nations in the world put together.

And yet, this present Democratic administration wants to copy the techniques of all the nations that have failed. They talk about just a little nationalizing. Well, that's like putting just one drop of strychnine in a glass of perfectly good milk. It's good milk until you put in the drop of strychnine and from then on none of it is any good.

Who is going to save a thousand dollars, or borrow a thousand dollars from his uncle to start a little business, or build a filling station, or anything else, if he knows that government may build one across the street, tax free, and run him out of business?

We believe everlastingly in social progress. And we believe in achieving it as free men and not by trying to copy all the nations which have dragged great peoples down to serfdom.

NO COMPROMISE WITH WASTE

There are many areas of compromise in Government. There are many areas of agreement between both parties. But on the great issues which divide us from the Democrats, there can be no honest compromise. There can be no compromise with waste. There can be no compromise with incompetence.

There can be no compromise with efforts which would abandon us to the tyranny of the few, whether within or without Government. There can be no compromise with the use by Government of the instruments of totalitarianism, however smooth and silky may be the guise in which they are presented.

I propose that as a party we turn our faces ahead and keep them steadfastly in that direction. I propose that we build for the betterment of the whole American people, through every legitimate device of Government for their security, for their comfort, and for their individual opportunity.

I propose that we support every proposition which will achieve these ends, regardless of its origin, and without regard to political

credit. And by that I do not mean supporting half-baked, badly drawn laws or evil inventions like the Murray-Wagner-Dingell bill which would reduce our doctors to Government servitude. I propose that, opposing every totalitarian device, we fight ever to enlarge the area of human freedom.

That is the historic role of the party of Lincoln, in honor of whose memory we meet tonight. Our party was formed in the hot fires of a struggle to advance the cause of human liberty and under his wise leadership won victories which will resound throughout all history.

It is time we returned to our historic role. The world is in desperate need of a fresh demonstration of faith that free systems are better than slave systems. Adhering faithfully to the principles repeatedly stated in our platform, let us move forward again—the party of progress in America in behalf of human freedom everywhere.

Address by the Ambassador From Norway at the Christmas Carnival, Birmingham, Ala.

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1949

Mr. SPARKMAN. Mr. President, on November 27, 1948, I had the pleasure of attending a dinner in Birmingham, Ala., at which the Ambassador from Norway, Wilhelm Morgenstierne, spoke. I ask unanimous consent that the address delivered by the Ambassador may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

This is the last of a series of memorable days and evenings we have had together here in the city of Birmingham. I want to say a few things which are very much on my mind. And I know that my colleagues and friends from the other Marshall-plan countries will join me in this.

We came here last Wednesday not knowing more about the Birmingham Christmas Carnival than Mr. Rayford Ellis had told us during our pleasant talks in Washington. Today we realize that this great Birmingham idea, under the cloak of cheer and joy, represents the determination of the people of this progressive city, to make their contribution to understanding and good will between the nations of the world.

It is true that we have personally had a most delightful time here. I cannot conceive of a friendliness and hospitality more genuine, more heartwarming than that with which we have been met here. After 4 days we do feel, deeply and sincerely, that we are among friends—I almost said old friends. And, by the way, I have never been to a place before where one sees one's friends five or six times a day. That human experience we shall take away with us and always cherish. And for that experience we want each and all of us to express tonight our warmest thanks.

But what has impressed us more than anything else, I think, is the way in which this entire community seems to have rallied to that simple, but fundamental idea that fellowship and understanding between men and women of the nations of the world must be the basis of all international relations and of any international organization hoping to survive. You, the people of Birmingham, have got something here. I feel convinced that this will continue to grow, as it has grown these 14 years, until the Birmingham Christmas carnival will be widely recognized as a real and permanent contribution toward that great goal—Peace on earth, good will to men.

I feel that at this Thanksgiving season we who are privileged to represent the Marshall plan countries want to give our thanks a wider application. We want to take this opportunity to express once more the deep-felt thanks of our respective countries for that grandiose American plan, which bears the name of your great Secretary of State. I, for one, firmly believe that you may search the history of mankind without finding a scheme of greater scope and vision than the Marshall plan. Like lend-lease during the last war, it is expressive of a statesmanship and generosity worthy of the finest traditions of the American people.

Without the Marshall plan—a hand stretched out to all war-stricken countries of Europe, regardless of differences of ideologies—I do not know where the free, democratic nations of Europe would be today. Or shall we rather say that we know only too well where they would be.

In our peace- and freedom-loving countries the name of America stands today for the upholding and protection of those things which we cherish above anything else—peace, freedom, justice, democracy, and the decencies of human brotherhood.

And so we want tonight to extend our thanks beyond the limits of this fine, progressive city and its friendly people, beyond the boundaries of the State of Alabama, to all of the United States of America. Mr. Mayor, Mr. Governor, God bless your city and your State. God bless America, the beautiful and bountiful. This comes from the hearts of the men, women, and children of free Europe, whom you are standing by and giving courage and hope in our struggle for reconstruction and the upholding of our common ideals.

Tribute by Hon. Garrett L. Withers, of Kentucky, to Lt. Gen. Simon Bolivar Buckner

EXTENSION OF REMARKS

OF

HON. GARRETT L. WITHERS

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1949

Mr. WITHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a tribute prepared by me in memory of Lt. Gen. Simon Bolivar Buckner.

There being no objection, the matter referred to was ordered to be printed in the RECORD, as follows:

On February 9, the State of Kentucky paid its final tribute to a great hero of the late war.

Lt. Gen. Simon Bolivar Buckner is to be laid away to his final rest in the historic cemetery high on the bluff that overlooks the State Capitol at Frankfort, Ky.

General Buckner was a great son of an illustrious family. His brilliant career was cut short by an enemy bullet at Okinawa in 1945.

He will rest beside his father, a general of the Confederate Army and subsequently a Governor of Kentucky; and beside his grandfather, who fought in the War of 1812.

Not only does the State of Kentucky mourn the death of General Buckner, but so do the thousands of men who served under him as he led our forces across the Pacific. Those men came from all parts of our Nation.

In life he made a notable and worthy contribution to his country and to his fellowmen—in death General Buckner leaves a heritage of which his State and the Nation are justifiably proud.

His life, both as a military man and as a citizen, will ever be an example to the youth of our country, those in uniform and those in civilian life.

Work of the United States Air Force in Maintaining Berlin Airlift

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1949

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by me entitled "Nation Should Honor Air Force for Success of Berlin Airlift."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

NATION SHOULD HONOR AIR FORCE FOR SUCCESS OF BERLIN AIRLIFT

On June 26, 1948, 7 months ago, the United States Air Force began the operation known as the airlift. It started as our answer to the Russian blockade of Berlin and it has continued without interruption through all weather, fair or foul, at all hours, day and night.

From the day that the airlift began, until February 3, 1949, our Air Force has carried 690,443 tons of food, fuel, other supplies and passengers through the narrow air corridors. This has been accomplished with approximately 200 planes in regular use, which have made a total of 78,689 flights into the besieged German capital.

This tremendous job has not been without loss. Twenty-five young airmen have been killed. Seventeen planes have been lost, including nine of the big C54's, six C47's, and two R5d's.

Operation Vittles has been a vast success. The American people should honor the men of our Air Force—from the Secretary down to the most humble recruit—for the brilliant conception and courageous execution of this great feat. History will recall the airlift, not only as a magnificent military accomplishment, but, also, as an amazing demonstration of the best qualities of American leadership, initiative, and resourcefulness.

The Miracle of America

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 10, 1949

Mr. McDONOUGH. Mr. Speaker, from all directions criticism pours forth denouncing our American form of government and urging various substitutes

ranging from deep red communism to parlor pink socialism. And all too seldom do we pause to take stock of the truth about America, what it stands for, what it has accomplished, and what it can achieve for mankind.

The following article, entitled "The Miracle of America," by Herbert Hoover, which recently appeared in the Woman's Home Companion, is a forthright discourse about the greatness of America. A man who received the highest honor the people can bestow when he was elected President takes pen in hand to remind us of the achievements of America and the bright future we can build inspired by the concepts of free spirit and free mind:

THE MIRACLE OF AMERICA

(By Herbert Hoover)

During the last score of years our American form of civilization has been deluged with criticism. It comes from our own people who deplore our undoubted faults and genuinely wish to remedy them. It comes from our political parties by their denunciations in debate of our current issues. It arises from the forthright refusal of the American people to wash their dirty linen in secret. It comes from our love of sensational incidents where villainy is pursued by law and virtue triumphs. It comes from intellectuals who believe in the American system but who feel that our moral and spiritual greatness has not risen to the level of our industrial accomplishments.

Criticism also comes from our native Communists who want to overturn the system. And from the fuzzy-minded totalitarian liberals who believe that their creeping collectivism can be adopted without destroying personal liberty and representative government. It comes bitterly and daily from the governments behind the iron curtain and their officials and even from the press of the western European nations that we are trying to help.

Altogether we seem to be in a very, very bad way and engaged in our decline and fall. Criticism is no doubt good for our national soul—if it does not discourage us entirely.

Perhaps the time has come for Americans to take a little stock and think something good about themselves.

We could point out that our American system has perfected the greatest productivity of any nation on earth; that our standard of living is the highest in the world. We could point to our constantly improving physical health and lengthening span of life. We could mention the physical condition of our youth as indicated somewhat by our showing in the recent Olympic games.

In the governmental field, we could suggest that our supposedly decadent people still rely upon the miracle of the ballot and the legislative hall to settle their differences of view and not upon a secret police with slave camps.

In the cultural field, we could point out that with only about 6 percent of the world's population we have more youth in high schools and institutions of higher learning, more musical and literary organizations, more libraries and probably more distribution of the printed and spoken word than all the other 94 percent put together.

On the moral and spiritual side, we have more hospitals and charitable institutions than all of them. And we could suggest that we alone, of all nations, fought in two World Wars and asked no indemnities, no acquisition of territory, no domination over other nations. We could point to an advancement of the spirit of Christian compassion such as the world has never seen, and prove it by the tons of food and clothes and billions of dollars we have made as gifts in saving hundreds of millions from famine and governments from collapse.

Much as I feel deeply the lag in spots which do not give equal chance to our Negro population, yet I cannot refrain from saying that our 12,000,000 Negroes probably own more automobiles than all the 200,000,000 Russians or the 300,000,000 Negroes under European government in Africa.

All of which is not boasting, but just fact. And we could say a good deal more.

Whatever our faults may be, our critics do not grasp the sense of a word which is daily on our lips—America. From its intangible meanings spring the multitude of actions, ideals, and purposes of our people. Recently I had an occasion to say something on that subject which I can summarize here.

America means far more than a continent bounded by two oceans. It is more than pride of military power, glory in war or in victory. It means more than vast expanse of farms, of great factories or mines, magnificent cities or millions of automobiles and radios. It is more even than the traditions of the great tide westward from Europe which pioneered the conquest of a continent. It is more than our literature, our music, our poetry. Other nations have these things also.

What we have in addition, the intangible we cannot describe, lies in the personal experience and the living of each of us rather than in phrases, however inspiring.

Perhaps without immodesty I can claim to have had some experience in what America means. I have lived many kinds of American life. After my early boyhood in an Iowa village, I lived as the ward of a country doctor in Oregon. I lived among those to whom hard work was the price of existence. The opportunities of America opened up to me the public schools. They carried me to the professional training of an American university. I began by working with my own hands for my daily bread. I have tasted the despair of fruitless search for a job. I know the kindly encouragement of a humble boarding-house keeper.

I have conducted the administration of great industries with their problems of production and the well-being of their employees.

I have seen America in contrast with many nations and races. My profession took me into many foreign lands under many kinds of government. I have worked with their great spiritual leaders and their great statesmen. I have worked in governments of free men, of tyrannies, of Socialists and of Communists. I have met with princes, kings, despots and desperados.

I have seen the squalor of Asia, the frozen class barriers of Europe. I was not a tourist. I was associated in their working lives and problems. I had to deal with their social systems and their governments. And outstanding everywhere to these great masses of people there was a hallowed word—America. To them it was the hope of the world.

Every homecoming was for me a reaffirmation of the glory of America. Each time my soul was washed by the relief from the grinding poverty of other nations, by the greater kindliness and frankness which comes from acceptance of equality and the wide-open opportunity to all who want a chance. It is more than that. It is a land of self-respect born alone of free men.

In later years I participated on behalf of America in a great war. I saw untold misery and revolution. I have seen liberty die and tyranny rise. I have seen human slavery again on the march.

I have been repeatedly placed by my countrymen where I had need to deal with the hurricanes of social and economic destruction which have swept the world. I have seen bitter famine and the worst misery that the brutality of war can produce.

I have had every honor to which any man could aspire. There is no place on the whole earth except here in America where all the sons of man could have this chance in life.

The meaning of our word "America" flows from one pure source. Within the soul of America is the freedom of mind and spirit in man. Here alone are the open windows through which pours the sunlight of the human spirit. Here alone human dignity it not a dream but a major accomplishment.

At the time our ancestors were proclaiming that the Creator had endowed all mankind with rights of freedom as the children of God, with a free will, the German philosophers, Hegel and others, and later Karl Marx, were proclaiming a satanic philosophy of agnosticism and that the rights of man came from the state. The greatness of America today comes from one philosophy, the despair of Europe from the other.

But there are people in our country today who would compromise in these fundamental concepts. They scoff at these tested qualities in men. They never have understood and never will understand what the word "America" means. They explain that these qualities were good while there was a continent to conquer and a nation to build. They say that time has passed. No doubt the land frontier has passed. But the frontiers of science and better understanding of human welfare are barely opening.

This new land of science with all its high promise cannot and will not be conquered except by men and women inspired by these concepts of free spirit and free mind.

And it is those moral and spiritual qualities which rise alone in free men which will fulfill the meaning of the word "American". And with them will come centuries of further greatness to our country.

Oil Production in Texas

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1949

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Ernest O. Thompson, commissioner, Railroad Commission of Texas, relating to oil production in Texas.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THOMPSON OUTLINES REASONS WHY FLARE GAS CURB DELAYED

AUSTIN, February 3.—Texas had to wait until oil became plentiful before it could crack down on wastage of flare gas, says Railroad Commissioner Thompson.

In a statement answering criticism of the United States Senate's Small Business Committee, Thompson said the committee complains about flare gas in Texas and at the same time says we do not produce enough oil.

THOMPSON'S STATEMENT

Thompson said in his statement:

"The subcommittee report takes us to task for not shutting in the flare gas from oil wells long ago.

"This would have made the oil shortage of 1946 and 1947 which they complain about even worse. To have shut in the gas then would have shut off the oil produced with the gas. That's why we did not cut off the gas waste sooner."

Thompson said that in 1946 and 1947 Texas produced every barrel of oil that could be produced without doing irreparable harm to the oil wells. We permitted production of oil at the maximum efficient rate in every field in Texas.

"Month after month oil production in Texas was increased until in December 1948 we found it necessary to reduce production because of the flood of imported oil coming into the United States taking the market formerly filled with Texas crude," he said.

REPORT CONFUSED

"The committee complains that we did not allow enough oil to be produced when every Texas well was straining at maximum rates every day all during these years," Thompson said.

"Then they complain at us for not shutting in oil-well flares in the same breath, when to have done so back in 1946 and 1947 would have shut off badly needed oil."

He said the Senate committee's report seems confused.

Surely the Federal control boys can't complain when we produce all the oil the Federal Bureau of Mines says is needed. * * * They even ask that the Bureau of Mines be required to stop forecasting market demands.

"That's like telling the Weather Bureau to stop giving us the weather forecast," Thompson countered.

THE THOMPSON STATEMENT

1. The report is an attack against the method (reasonable market demand) being utilized to prevent physical waste, to provide for constant production to meet the Nation's needs and to obtain the ultimate maximum recovery of petroleum from underground reservoirs. This is a practice of long standing in the production of oil and gas. The first reasonable market-demand law was passed in Oklahoma in 1915. It has been specifically upheld by the Supreme Court of the United States (*Champlin Refining* v. *Corporation Commission* (286 U. S. 210)). In discussing this case the Court said: "The Commission construes the act as intended to empower it to limit production to the amount of the reasonable daily market demand and to require ratable production by all taking from the common source. In current orders it has been found that waste of oil will result in the prorated areas unless production is limited to such demand."

(A complete reading of this case is suggested.)

It should be noted that Texas' market-demand statute (also upheld as reasonable by the higher courts) was enacted after the Champlin case decision.

2. Reasonable market demand is not the sum total of what individual oil producers themselves regard as usable by them or marketable by them but is calculated on a formula which has been worked out over a period of many years and which has proved to be very accurate as being a production figure which will furnish the national consuming public with its varying requirements of petroleum products. It is figured on a basis of national consumption and is used as a guide to meet these needs.

For instance, it is necessary that the total probable consumption of fuel oil be estimated sufficiently far in advance of the winter heating season so that refining, transportation, and storage schedules for fuel oil can be made. This is true, also, of the production of motor fuels to meet the heavy demand for farm fuels during the plowing and planting and harvesting seasons and to meet the heavier demand for gasoline during the summer travel season.

Since it is universally admitted that the oil reserves of the Nation are of such a nature as to require some degree of management to obtain the maximum public benefit therefrom, it would appear prudent to have reputable official agencies make these estimates of reasonable market demand, rather than to trust to luck that somehow and by some method (how, when, or where it might be arrived at no one seems to know) the varying seasonal requirements and total national needs would be met.

3. The agencies charged with providing for our national defense have laid great emphasis on the need for accumulating large petroleum reserves in event of an emergency. Because of its nature, oil and gas cannot be stored above ground without excessive physical waste. Some factor relating production to the total national consumptive requirements must be used as a measuring stick if the armed forces and the public are to be protected in their normal needs and if petroleum producers are to be able to plan this operation to meet any unusual emergency demands.

At the start of the last war, the petroleum industry had producing capacity of approximately 1,000,000 barrels above the then current market demand. In the upsurge of consumption following the war, this producing capacity proved insufficient to meet demand.

As of February 1949 it is estimated that the industry has so increased its potential productivity that it now has a reserve capacity of 300,000 barrels daily. Years of orderly production based on reasonable market demand resulted in storage of reserves underground which were available during the recent war and it was the production of these reserves which made possible the industry's brilliant record in fueling the war machine. It was not too little and too late where oil for war was concerned.

4. The statutes authorizing production based on reasonable market demand spread the total consumer requirements over the entire petroleum industry and producing areas and serve as a restraint on monopoly. Large producers who might be able to meet all their own requirements for crude from wholly owned sources in a single State, or in a single area, or even in a single field, are thus forced to purchase a portion of their requirements in the open competitive market. Constantly we hear selfish complaints that we will not permit selective buying. To do so would stifle orderly development. Those oil fields closest to refineries and close to tidewater would hog the market to the exclusion of those fields further removed from refining centers and ocean ports.

It took us years of effort to make a place in the market for west Texas crude, but when the need for oil was apparent then west Texas crude filled the demand and was most welcome. It deserves its full ratable share in the market-demand picture. Refiners should equip themselves to handle their fair share of sour crudes along with the sweet crudes.

5. The Interstate Oil Compact Commission furthers competition within the petroleum industry. Producers who own large reserves in several States could, by centering their production in any one State, stifle competition and obtain an unfair advantage.

The voluntary association of the respective States in the Interstate Oil Compact Commission also maintains a healthy, public interest relationship between the producing States. States with large reserves thus are deterred from producing at such a rate as might be harmful and cause waste in their sister States. It should be noted that the Interstate Oil Compact Commission was established after the Supreme Court of the United States had held valid statutes authorizing production based on reasonable market demand and that the compact was strongly endorsed and espoused by President Roosevelt as an ideal example of worthwhile cooperation between the States in the public interest.

It is a matter of grave concern that the report attacks one of the few cooperative efforts ever made to maintain the sovereignty of the individual States in a voluntary association the sole purpose of which is to protect the States in their sovereignty and at the same time provide the necessary machinery for protecting and serving the public interest in conserving and preventing waste of a valuable resource. The Interstate Oil Compact is purely and simply a physical waste-prevention treaty by and between the oil-producing States whereby the States agree to pass and enforce State laws aimed at waste prevention in the production of oil and gas. The Congress has repeatedly approved this forward-looking action on the part of the sovereign States to do their own work.

6. General: State conservation laws protect the interests of all operators and make it possible for thousands of individual operators to carry on successful exploration for and development of petroleum. In Texas alone, there are 3,200 operators producing crude oil. There is no tendency toward monopoly in oil production in Texas or the United States and the fact that petroleum prices currently are relatively lower than other commodities in relation to the Government's base year of 1926 for all prices is the best evidence that competition operates in the industry and has been effective in keeping prices down.

State conservation laws have been criticized because they provide for limiting production to market demand, and it is assumed that such laws result in fixing prices. The facts are entirely different. Authority to restrict production to market demand is as important in preventing physical waste as regulation of the rate of withdrawal in accordance with good engineering practice. Experience has demonstrated that when a State permits oil to be produced in an excess of demand, physical waste as well as economic waste results and available petroleum resources are dissipated too rapidly, so that ultimate scarcities and high prices develop to the disadvantage of all consumers. The argument that all of the oil that can be produced efficiently could be marketed if the price were low enough does not work out in practice. The effect of producing more than demand is to bring about uneven withdrawals among different properties in the same fields served by purchasers whose demands are not alike. This situation causes physical waste and the loss of recoverable oil. Production in excess of demand also leads to unnecessary storage, resulting in evaporation and waste of oil above ground. If new fields are allowed to absorb too much of the market, the older wells cannot compete and have to be abandoned prematurely with a large loss of reserves.

Regulating production to market demand is the only means by which the industry can build up a margin between its maximum, efficient, producing capacity and current production. Such a margin is needed for national security, according to the statement of military officials. High Government officials have repeatedly stated that one of the most important factors in the success of the military forces of the United States and its allies in World War II was an ample supply of petroleum. This supply was available because State conservation laws had regulated production to demand so that it was possible to increase the production on existing wells by about 1,000,000 barrels daily above prewar production.

The rapid growth in demand during and after World War II eliminated that margin of available production and forced all wells to be produced at the maximum efficient rate, thereby placing the Nation in a vulnerable position with respect to meeting increased demand for military purposes in case of another emergency. Through diligent effort and large capital expenditures, the petroleum industry has increased the production capacity of the country sufficiently to exceed the growth in demand and begin rebuilding a margin of oil available for emergency.

Criticism of State conservation of petroleum reveals utter lack of true information of the contribution which these laws have made toward increasing the recovery of oil and providing ample quantities available year after year so that the customers will not have to pay the high prices incident to scarcity. Conservation has been a major force in providing petroleum products at reasonable prices and the attacks being made against sound conservation and production practices is not only entirely unwarranted but also shows the danger that Federal bureaucratic thinking and Federal control have for the Nation and the consumers of petroleum products.

Under State regulation the domestic oil-producing ability of the United States has been increased by more than 1,000,000 barrels per day since 1941.

The industry shows an increase in production of about 31 percent over all. To my mind that is a record to thrill the hearts of every American.

More than 300 new oil fields have been discovered. Never has there been such a search for oil and the results are at hand.

There are today more than 1,400 separate oil fields in Texas alone, with 111,000 producing oil wells.

Texas is meeting all demands for oil and was recently forced to reduce her oil production by more than 250,000 barrels daily because the flood of imported oil coming into the United States left no room for our full ability to produce. If we produced in excess of market demand, this much desired search for new oil for the future would cease and the United States would become dependent upon foreign oil. This would stifle our domestic oil-producing industry and wither away our greatest munition of defense. Oil is our most potent defense material. We cannot afford to hamper its full development. Oil means security.

We must build up a potential reserve of at least 1,000,000 barrels of oil daily producing ability from wells already on production before we can rest on our oars. The only oil reserve worth while is one ready at the turn of the valve. A fair price for oil will bring about this desired result. The present price is getting the job done.

ERNEST O. THOMPSON,
Commissioner, Railroad Commission of Texas.

California Legislature Endorses McDonough Bills—H. R. 205 and H. R. 208

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. McDONOUGH. Mr. Speaker, the war-levied tax on transportation of persons and property has placed a special burden on those who must use transportation facilities for their business or to ship their merchandise. These levies, enacted during the war, were necessary to dissuade civilians from further burdening the already crowded public carriers engaged in the movement of troops and military supplies, but they were enacted with the implied promise that they would be repealed after the war.

Today there is no longer any valid reason why these discriminatory taxes should be continued. Transportation is an essential service, not a luxury. It is a service which must be used regularly by large sections of our population. And it is a service which should not be taxed at the present excessive rate in time of peace.

I have introduced two bills, H. R. 205 and H. R. 208, which would repeal the present high tax on transportation of property and of persons respectively, and I believe passage of these measures would bring needed relief to which our people are entitled.

Since introducing these measures, I have received an overwhelming response in approval which included adoption of a resolution by the California State Legislature in support of passage of my bills, H. R. 205 and H. R. 208. The resolution follows:

Senate Joint Resolution 14

Joint resolution relative to memorializing the Congress of the United States in relation to repealing the transportation tax

Whereas for the purpose of meeting wartime emergency necessity, the Congress of the United States enacted as excise taxes a 15-percent levy upon the transportation of persons and a 3-percent levy upon the transportation of property; and

Whereas one of the principal purposes of levying such tax upon the transportation of persons was to discourage unnecessary wartime travel, the need for which no longer exists; and

Whereas it is the opinion of the Legislature of the State of California that excise taxes should not impose an unfair burden on the long-distance shipper and the long-distance traveler as does the present tax on the transportation of property and persons; and

Whereas it should be a principle of Federal taxation to levy taxes in such a manner as to prevent them from falling as an unequal burden on citizens residing in different areas of the country; and

Whereas the distances to, from, and within the West impose an unfair burden on the western traveler and shipper; and

Whereas the present transportation tax on property is unfairly burdensome upon the State of California as it adds what is in effect an additional tariff on the goods shipped from California to the eastern markets, with the result that those goods are not able to compete freely with the goods originating in more closely adjacent southern areas; and

Whereas the State of California is particularly interested in preserving the eastern market as an open market in which the agricultural products of California, in particular, may compete freely with southern produce without the hindrance of artificial barriers such as the present transportation tax; and

Whereas the State of California is particularly interested in protecting and developing its vacation and tourist travel on an equal basis with other vacation travel areas; and

Whereas the transportation of both persons and property plays such a vital role in the economic life of this country to the extent that the costs of transportation should always be kept at the lowest possible level; and

Whereas transportation is in no sense a luxury but is a vital necessity and there is, therefore, sound reason for distinguishing between the transportation taxes and other excise taxes that are imposed upon luxury items; and

Whereas it is the opinion of the Legislature of the State of California that the best interest of the country and particularly the Western States, who are now discriminated against by the present transportation taxes, would be served by a repeal of those taxes; and

Whereas there is presently pending before the Congress of the United States H. R. 205, which would repeal the tax on transportation of property and H. R. 208, which would repeal the tax on transportation of persons: Now, therefore, be it

Resolved by the Senate and Assembly of the State of California (jointly), That the Legislature of the State of California respectfully memorializes the Congress of the United States to enact into law H. R. 205 and H. R. 208 or any other bill or bills which would accomplish the same purpose; and be it further

Resolved, That the Secretary of the Senate be hereby directed to transmit copies of this resolution to the President and Vice President of the United States and to each Senator and Representative from California in the Congress of the United States.

Peter Marshall, Late Chaplain of the Senate

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Thursday, February 10, 1949

Mr. O'CONOR. Mr. President, on the occasion of a recent meeting of the Senate eulogies were expressed by different Members of the Senate concerning the life and work of the late Peter Marshall, Chaplain of the Senate, whose recent untimely death has been mourned by us all.

Because I was engaged in a committee meeting at the time when these eulogies were being expressed, opportunity was not given for me to voice my sentiments in regard to Dr. Marshall's noble character, integrity, and attractive personality.

I therefore ask unanimous consent to have inserted in the CONGRESSIONAL RECORD a statement expressive of my innermost feelings in tribute to his memory.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

REV. PETER MARSHALL

With other Members of the Senate and countless friends of our late Chaplain, I was profoundly shocked and grieved to receive the news of his untimely death.

The splendid influence for good which he exerted, the high ideals which were voiced by him in his invocations, and his noble example, all combined to stamp him first as a man of God and, secondly, as a man among men.

I am prompted to express myself because of a unique experience which I had with Dr. Marshall only very recently. Since the beginning of our session earlier this month, death has taken from our family one who was cherished and loved most tenderly. As soon as this event occurred, he brought comfort and consolation to other members of the family and to me by a very sympathetic message. Later, upon my return to the Senate, he made a special point to give personally a most heartening expression of condolence.

His words to me now appear to have been almost prophetic. Emphasizing the fact that life on earth is merely a temporary sojourn, he asserted that all are striving for the same goal, although our course may be along various denominational paths.

While little did he think that he himself was so near to death, his comments on the value of faith in a supernatural life could not help but leave a lasting impression. I can but repeat, in expressing hope for the happy repose of his soul, the very words which he used in commenting upon my bereavement, "May our Lord comfort and give peace."

Dr. Marshall's good works and noble endeavors will be the best monument to him which can be treasured by all who knew him. I express the sentiments of others with whom I have spoken concerning our late Chaplain in tribute to his memory by quoting the lines of the poet:

"Out of the strain of the doing,
Into the peace of the done;
Out of the thirst of pursuing,
Into the rapture of won;
Out of pale dusk into dawn;
Out of all wrong into rightness,
We from these fields shall be gone.
'Nay,' say the saints, 'not gone, but come
Into eternity's harvest home.'"

President Truman's Day

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Thursday, February 10, 1949

Mr. LUCAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "President Truman's Day," published in the Sheboygan Press, of Sheboygan, Wis. The editorial was written by Charles E. Broughton, editor of the Sheboygan Press, and one of the outstanding Democrats in that section of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRESIDENT TRUMAN'S DAY

How well we can recall the Sheboygan Press editorial of 1933, when we termed Franklin D. Roosevelt a man of destiny.

What we said then is equally true of Harry S. Truman, born of humble parents, coming from a small town in Missouri, where he conducted a retail business, later was county judge, and rose by sheer force to other position of trust, and in 1934 was elected United States Senator from Missouri.

He had no ambitions to be other than a servant of the people and in 1940 was reelected, and it can be said that his record as chairman of the Special Committee to Investigate National Defense brought additional honor.

Thursday was a new day in history. President Truman was elected Vice President along with President Roosevelt in 1944 and succeeded to the office of President on April 12, 1945, when the man he loved and with whom he had served passed away at the little White House at Warm Springs.

No public servant ever went through more tragic times than Mr. Roosevelt, no one ever gave more for his country than the man who was honored world-wide, as he passed from this life.

To assume the reins of office was a test for Mr. Truman. We were fighting a world war, and our house at Washington was divided, something like in the days of President Lincoln. The things that Mr. Roosevelt had fought for, and we might say died for, were being challenged by the opposition.

Then came the Eightieth Congress and an outright rebellion against the so-called New Deal. President Truman held stanchly to the gains that had been made, and he won the confidence of the American people. On Capitol Holl, and in Wall Street and the great financial centers, it was a foregone conclusion that Mr. Dewey would be elected. It was "in the bag," according to Dr. Gallup and others conducting polls, but the little fighting general had a different viewpoint. He took his cause to the people, and out of a strenuous campaign came victory. In December last he wrote over his signature these words:

"At this season of the year may I repeat what I have often said, that I would rather see lasting peace in the world than be President of the United States. Peace is a goal which can be reached with patience, tolerance, understanding — and work. As the brotherhood of man is the essence of Jeffersonian democracy, it is the essence also of religion, no matter what the creed. Let us all, individually and collectively, take up the task of working toward peace on earth, good will toward men."

Thursday, January 20, at high noon, Mr. Truman took the oath of office and his 4-year term is under way. On the same threshold of the Capitol Building that saw President Roosevelt and the preceding Presidents inaugurated, Mr. Truman took his second oath of office as President of the United States. It was a solemn ceremony. There was something out of the ordinary that drew more than a million people to Washington. It was Harry S. Truman, a fighter and a President in his own right. A veteran of World War I who saw service in the Meuse-Argonne—a man of the people who battled all the way, confident of victory. We never viewed a greater gathering of people, or a more beautiful day in which to carry television; the first inaugural in history to be televised to American homes throughout the land.

Through the ages, the United States of America has been most fortunate in its selection of Presidents. The spirit that dominated Washington, in the cause of freedom, has dominated every President in a war crisis. It was so with Lincoln, McKinley, Wilson, Roosevelt, and Truman. It is our guaranty for a continued democracy, based on the equality of man, and the sacred regard for freedom. We like to quote these words from Mr. Truman's address, a man who as a farm boy rose to the highest position within the gift of the people:

"I accept with humility the honor which the American people have conferred upon me. I accept it with the deep resolve to do all that I can for the welfare of this Nation and the peace of the world."

Patronage Jobs

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, February 10, 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Patronage Jobs," published in the National Tribune-the Stars and Stripes, in its issue of January 6, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PATRONAGE JOBS

A new Congress, the Eighty-first, is now in session, and both branches are under the control of the Democratic Party. Although there has long been agitation to place all positions at the United States Capitol under the so-called merit system, and even though years spent in such service do count toward retirement privileges, most jobs on Capitol Hill are still filled by what was once known as the spoils system. "To the victor belong the spoils," is what politicians used to say, and most of them still believe in that principle.

Two years ago when the Republican Party took over—and this has happened as often as congressional control has changed hands—most Democratic job holders lost out. Now the Democrats have turned the tables, and their supporters will replace the political enemy. There are exceptions, of course, but that is the order of the day, and it has always been considered cricket.

What is little known by most people is that there are, in round numbers, about 1,000 of these jobs available and under the supervision of patronage committees. They run from well-paid clerical assignments to police officers, elevator operators, and what not. Many a legislator began his career at one of them, and many thousands of young men and women have completed college courses in Washington while working at the Capitol.

At one time doorkeepers were made up in part by veterans. There used to be a veterans' row of them, all veterans of the Civil War. Even now a fair proportion of the places are filled by veterans of our wars, but, although we would not presume to suggest that all such jobs be reserved for war veterans, we do not think they are receiving a fair shake.

It has been proposed, and with much merit, that legislation be enacted to give veterans' preference to a reasonable percentage of the spoils. In our judgment, they will never be found in any one political corner, and certainly their service to country in time of stress has earned for them greater consideration than they now receive. By the same token military or naval service should be considered in the matter of promotions. Here is something that we believe should have the best thought, not only of Congressmen who have the privilege of handing out patronage but also of the major veterans' organizations which hold to the belief that veterans' employment must ever be one of their principal activities.

Time To Stop, Look, Listen

EXTENSION OF REMARKS
OF
HON. CLYDE M. REED
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, February 10, 1949

Mr. REED. Mr. President, I ask unanimous consent to have an editorial entitled "Time To Stop, Look, Listen," from the Kansas City Star of Sunday, February 6, 1949, placed in the Appendix of the RECORD. It is very timely and is chock full of common sense.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TIME TO STOP, LOOK, LISTEN

Sometimes, when we read all the clamor from Washington for more taxes, more spending, more Government functions, we wonder if they really know what is going on out over the country. Eventually, Washington and its myriads of experts will find out. Facts have a habit of catching up with theory. But often it is too late and genuine needless damage has been done.

If there ever was a time to look and think realistically, when sober judgment is needed, not just pious good intentions, that time is now. The country didn't begrudge President Truman his joyous, happy inaugural. He had it coming for his surprise victory and the almost single-handed battle he waged for reelection. But the tumult and shouting is over now and the painful "morning after" is at hand—much sooner than anyone anticipated.

Almost unnoticed, except by the people immediately hurt, there has been an acceleration in the drop of commodity prices that justifies genuine concern over the future months to come. The cost of living is coming down, for which housewives the country over probably will sing hosannas. Everyone, including the farmers themselves, recognized that food prices had got out of hand and were entirely too high the last 18 months. It was generally recognized a readjustment was coming and that it was a healthy, not a dangerous, omen. But most economists—and certainly Government leaders—hoped for an orderly adjustment, not a slide such as brought on the depression of the early twenties. What has happened in recent weeks has been a blizzard on farm commodity prices almost comparable to the blizzard that has locked the great West in ice and snow.

From the high spots of 1948, more than $10,000,000,000 has been taken off the value of livestock generally. More than half of this has come since the fateful November 2 election when many farmers thought they were voting for sustained high prices. To be fair about it, this drop probably would have happened just the same whether Dewey or Truman had been elected. But it has stunned cattle and hog raisers out West. The farmers aren't broke, but feeders have been badly hurt, and there is growing uneasiness and concern over the future, which is not healthy.

The Associated Press reported this week that its wholesale commodity index had dropped to the lowest point since February 11, 1947, with a decline of more than 3 percent in the last week and over 7 percent in the month of January. From the all-time high point, the index has dropped from 208 to approximately 170. All this has not been reflected yet to the consumer's table, but it is on the way. Specifically, on the Kansas City market, hogs reached a record high in August 1948 of $31.75. On election day, November 2, they were $25.50 a hundred—one of the reasons many farmers didn't vote or were afraid of Dewey. They felt there was a better chance of getting help from Truman than Dewey. The top price at the end of last week was around $20.50 a hundred, even below the OPA price.

Or take cattle. The record high was in July 1948 at $40.50 a hundred. On election day, the top for steers was $33.50. The very top this last week was $25, and there were days when good fed cattle brought only $22. When it is recalled that feeders often paid above $30 for their steers, the licking they have taken is apparent.

Lard has slipped worse than anything, although the Government is endeavoring to bolster the market by increased shipments abroad. From a record high in March 1947 of $32.75 a hundredweight, lard sold at $19 on election day, bobbed back up on the hope that the Democratic administration was going to do something, and then dropped back down to as low as $13.60 last week. Lambs haven't shown such a wide fluctuation. From a record high in July of last year of $33 and a price of $25.50 on election day, they are off only about $1 now from the election day figure.

The story on grains is a bit different because of Government supports. Wheat, which stood at $2.24 a bushel on election day held pretty well until the last week when it tumbled at least 10 cents a bushel. Corn took its big drop last year because of the huge crop. It was selling for $2.27 last July. By election day, it was down to $1.35, one reason Dewey lost the big corn States. It went up a bit after election, but this week broke below election day figures. The story is about the same on other commodities. Butter in Kansas City dropped from 92 to 67 cents. Eggs have dropped from a high of 51 to 39 cents. Butterfat has dropped from last year's high of 85 to 55 cents, but is up slightly from election day figures.

All this is the story, not of what is going to happen, but of what has happened in the Kansas City territory. The farmer is not broke, but the readjustment has been more violent than expected. Buying power, necessarily, will be affected. The tremendous Government expenditures for shipments abroad and rearmament should tend to put a floor under the decline. If it does, farm sections can weather it. If it doesn't, and the decline continues, it could vitally affect future national economic prospects. Much is heard of keeping the buying power of labor up to keep prosperity, but the buying power of the farmer is just as important in the economic picture.

With such a picture already at hand, it would seem obvious it is time for Washington to show caution, at least, in its thinking and acting. They still talk of inflation controls when, except possibly on rents and a few other spots, inflation is as dead as $3 corn or the dodo bird. Everyone, seeking more spending for this or that purpose and more taxes, is claiming a mandate from the people for his particular pet projects. The facts are, if there was any mandate in the close election, it was that a majority of those casting votes trusted Truman for the future more than they did Dewey.

Both parties promised prosperity. No one wants a debacle. Much of the program being pressed upon Congress might be all right in a period of a rising, expanding economy. But the sharp readjustment, to put it mildly, that has already come in farm commodities should be signal enough, both to the administration and to Congress, to slow up a bit in their thinking, and more important, in their spending on new programs that will increase the governmental load year by year for all time.

If the picture of the country as a whole is looked at realistically, it is a time for tax cutting, not tax increases. It is a time when wage-raise sprees can't be justified, desirable as they might be. All the billions we are spending for defense and building up our armament will be wasted if the Nation's economy is not kept sound. That is the foundation on which the future has to be built.

Americans Have Suffered the Tortures Inflicted on Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Thursday, February 10, 1949

Mr. O'MAHONEY. Mr. President, that Cardinal Mindszenty, whose tragic fate at the hands of the dictatorial Communist Government of Hungary is shocking the whole world of free men, is not an isolated case, and that similar sufferings and torture have been inflicted upon and have been endured by American citizens, was revealed last year by the manner in which the same authorities in Hungary extorted false confessions from two American citizens, Mr. Paul Ruedemann and Mr. George Bannantine, officials of the Hungarian subsidiary of the Standard Oil Co. of New Jersey.

On October 7, 1948, the Department of State issued a press release in which it was asserted on behalf of the Department that Mr. Ruedemann and Mr. Bannantine had solemnly affirmed that the alleged confessions were wholly false and had been extorted from them under duress.

These two Americans were arrested in the dead of night, thrown into dungeons, subjected to torture for 5 days until their physical being could no longer withstand the treatment to which they were subjected, and, having been "broken" by this treatment, they signed confessions only as a means of escape. Returning to the United States, both men repudiated the confessions.

Their experience is so similar to that which Cardinal Mindszenty has been obliged to suffer that I believe a way should be found to reveal the full story of their sufferings to the people of the United States and the world. I ask unanimous consent to have printed in the RECORD the press release of the Department of State issued on October 7 last.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

DEPARTMENT OF STATE,
October 7, 1948.

Mr. Paul Ruedemann and Mr. George Bannantine, American officials of MAORT whose release from custody by the Hungarian authorities was the subject of the Department's press release No. 782 of September 27, 1948, have now returned to this country, and supplementary information, which they have already made known to the press, is avail-

able concerning the circumstances of their recent detention.

With regard to the so-called confessions which have been attributed to them by the Hungarian authorities, Mr. Ruedemann and Mr. Bannantine have affirmed that these statements were, in fact, prepared by the Hungarian police, that the contents of the documents are wholly false, and that they copied and signed these confessions only under duress. The two men were placed separately in solitary confinement in underground cells for the first 4 days and were subjected to long periods of questioning at all hours of the day and night. On various occasions they were required to stand with their faces against the wall and arms upraised until they collapsed. During this time, they were permitted very little food and sleep.

The arbitrary detention of these American citizens, the unfounded allegations made against them, and the improper treatment which they received while in custody, are characteristic of the methods employed by police states, where the rights and dignity of the individual are, in practice, ignored.

Atomic Development

EXTENSION OF REMARKS
OF
HON. BRIEN McMAHON
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, February 10, 1949

Mr. McMAHON. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD three articles, one entitled "How Many Bombs?" from the Washington Post of February 2; one entitled "A Question Properly Raised," from the Washington Star of February 6; and a third entitled "Kiss of Death," from the Washington Post of February 10.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Post of February 2, 1949]

HOW MANY BOMBS?

Senator McMAHON has come courageously to grips with the most vexatious problem of public policy respecting atomic energy. Should the American people be told, he asks, how large a stock pile of atomic bombs we have and how fast we are producing them? Although he did not reach a definite conclusion in his speech Monday before the Economic Club of Detroit, the public is indebted to him for an intelligent and piercing discussion of the issues.

The burden of Senator McMAHON's argument is on the side of frankness. He acknowledges that any disclosure to the American people also would inform the world, including our potential enemies, of our atomic strength. But this would cut two ways. If our supply and production rate of bombs are great, these data would be a convincing testimonial to our power. By the same token they would reassure the American people, many of whom, mystified by the secrecy, are wondering whether we have got any bombs at all. Finally, such data would lend weight to the proposals for international control of atomic energy that no amount of talk or demonstrations could give.

If, on the other hand, the stock pile is small, then that is a fact of immense importance to our own military preparations. It is possible, for example, that because of the cloak of secrecy we are overestimating our own strength. We are, as Senator McMAHON says, "like a general who must train his troops without knowing how many rounds of ammunition they will be issued." It is scarcely possible for Congress to legislate intelligently on other aspects of defense without knowing whether the weapon on which we are placing much of our reliance is actually what it is cracked up to be. And no citizen is in a position to appraise the budget without knowledge of the number of atom bombs we have.

What has been building up since Hiroshima is a secrecy psychosis on atomic energy encompassing many matters not justifiably secret. The unfortunate effect of this psychosis is to make many persons, including legislators, wash their hands of atomic energy as something remote and forbidding. It will also encourage those who think the bomb should be banned like poison gas. Secrecy is a severe deterrent to sensible inquiry and review of our performance on atomic energy. As the new chairman of the Joint Committee on Atomic Energy, Senator McMAHON could help reverse this trend by reinstituting the policy of open hearings that prevailed during the evolution of the McMahon Act. With a revised policy on atomic secrecy, there should be no need for hearings in camera except in a very limited area. A fundamental consideration for the commitee and Congress to remember is that the broader the range of secrecy invoked, the greater is the danger of a backfire.

[From the Washington (D. C.) Star of February 6, 1949]

A QUESTION PROPERLY RAISED

Under the law the Atomic Energy Commission is made responsible for policies restricting information which, if divulged, might impair the national interest. Information regarding the number of atomic bombs that have been manufactured and the rate of production is restricted. It is a closely guarded secret. But the Commission could of its own volition choose to declassify such information and make it publicly available.

No such proposal has been made by Chairman Lilienthal or the Commission. But Mr. Lilienthal and Senator BRIEN McMAHON, chairman of the Joint Congressional Atomic Committee, have raised a sort of rhetorical question as to whether the policy of secrecy in such fields is either bad for our potential enemies or good for us. They have not attempted to give the answer. But they are not convinced that secrecy is the answer, insofar as long-time public policy is involved.

There is much to support this doubt. But it seems to the Star that the only way to get anything like a convincing answer is to submit the question, with all its broad implications on domestic as well as foreign policy, to authorities in science and government, and find out what such considered opinion might be. Something of a start in this process has already been made by Senator McMAHON in asking the advice of the Joint Chiefs of Staff. It is not the sort of question that anyone should attempt to answer by off-the-cuff opinion.

It is to be doubted that Chairman Lilienthal or the Atomic Energy Commission would ever undertake the responsibility of an independent decision. The arguments in favor of secrecy might easily outweigh those to the contrary. But Mr. Lilienthal is absolutely right in continuing to stress the disadvantages of secrecy in a democracy which, as Senator McMAHON has put it, leaves Congress legislating in a vacuum on matters concerning atomic energy and even on matters relating to adequate national defense. In the purely scientific field of atomic energy development there is continuing disadvantage in a secrecy which forbids the free interchange of ideas and the resulting stimulation of thought.

[From the Washington (D. C.) Post of February 10, 1949]

KISS OF DEATH

If disclosure of the number of atomic bombs in this country is a good idea, it is worthy of consideration irrespective of what the Russians say about it. The administration and Congress ought to keep this in mind as they review the latest Soviet demands before the Security Council. For the Russians apparently have seized upon Senator McMAHON's suggestion of last week as a part of their new and transparent resolution on disarmament. This resolution, calling for destruction of atomic weapons without effective international control of atomic energy, was succinctly described by United States Delegate Austin as "succotash."

Certainly the Russians would like to know how many atomic bombs this country has. The figures might be of some help to them in planning their own military structure. But this is a minor, incidental, and totally irrelevant factor in the equation. Secrecy puts American defense at a disadvantage. Even if a few Pentagon planners know the facts, they are not known to Congress, which controls the purse strings. Congress, it seems to us, must have this information in order to appraise military expenditures and provide for a realistic defense. Anything else means voting in the dark. To be sure, information to Congress would become public property. What of that? The effect of the release would be to reassure Americans and friendly nations as well as to serve notice on the Russians that this country has the wherewithal of action. Nothing in history has been more responsible for wars than uncertainty—uncertainty of what the other fellow will do and what he has. The A bomb is a matter on which the fullest possible information is basic not only to sound public policy but also to the whole concept of strategy.

Unfortunately, there has been a sort of pressure on legislators and the administration to demonstrate their anticommunism by lining up against anything the Russians favor. This was noticeable during the political campaign when some legislators were confronted with the number of times they had voted on the same side as Representative VITO MARCANTONIO. Are we going to let the Russians make us intellectual eunuchs? It would be ridiculous to allow such irrational and timorous considerations to govern atomic data. Whether information about the production of atomic bombs should be released is a question to be decided strictly on the basis of how it will affect national security. The fullest security calls for the release of all nontechnical information. Indeed, one might surmise that the Russians hope, by the devious methods of Soviet dialectics, that in calling for the disclosure of such facts they will induce this country to keep them secret and thereby impair its own real defense.

The National Health Problem

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Thursday, February 10, 1949

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the RECORD an article regarding the

national health problem, from the New York Times.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RAPPLEYE DEFENDS PREPAID MEDICINE—COLUMBIA DEAN CLASSES IT WITH OTHER SOCIAL-SECURITY NEEDS, BUT LAGGING BEHIND THEM

The development of adequate programs for comprehensive prepayment medical care has been slow and largely unsupported by the organized medical profession, whose policies are determined by persons primarily concerned with retaining the status quo, Dr. Willard C. Rappleye, dean of Columbia University's Faculty of Medicine, declared in his annual report, made public yesterday.

"Because of present-day economic problems, it is impossible for many families to pay for unpredictable and uncertain illnesses," Dr. Rappleye pointed out. "The principle of prepayment insurance is now well established. This principle must be applied to medical services, as it has been to hospital care, unemployment insurance, old-age pensions, and various other phases of social security. While many elements of group practice are now emphasized in most medical schools, the young physician upon graduation still finds little or no chance to practice medicine in the cooperating manner he has been taught. For most graduates the only opportunity lies in individual, competitive practice."

NEED FOR INTEGRATION

The dean emphasized that one of the major problems of over-all medical care today was to achieve closer integration between methods of practice in a community and the objectives of medical education. "Medical students," he added, "are being trained today for community medical services, with emphasis upon preventive medicine and comprehensive medical care for the entire family."

"It is generally believed," he said, "that modern medical services cannot be fully provided by the individual physician working alone, since no individual can possibly master all fields of medical care. Specialization and cooperative responsibility for the care of the individual is frequently required.

"Hence, the growing emphasis upon group practice as the modern and most satisfactory method of medical care. This, however, does not shift the major responsibility from the family and the personal physician. In fact, the basic element of any group practice must be the family and the personal physician working in collaboration with specialists."

The failure of the Eightieth Congress to establish the National Science Foundation was "a great disappointment," the dean said, expressing the belief that "there is need for a central coordination of basic policies in relation to governmental support of research."

BASIC RESEARCH STRESSED

"While grants for specific purposes, whether from Government, foundations, industry, individuals, or other sources, have much merit, it is absolutely essential to the future of the country, as far as research and the training of scientific personnel is concerned, that money be made available for the general support of the universities, where future generations of professional workers are trained," he continued. "Today universities are the major source for supplying men for the basic research so necessary for future progress.

"With the increasing cost of medical education and the need for advanced training in a wider range of related activities, proper financial support of medical schools is an investment to insure their fullest contribution to public service in the future."

On the problem of obtaining medical officers for the armed services, the dean emphasized the importance of not letting induction of medical officers interfere with the proper training of the physician.

"Young men," he said, "should be permitted to complete their hospital training before they are called into the service. In this way the Army, Navy, and Air Force would have better medical officers than were the men to be drafted at the end of their internship. If men were taken at the point of completion of hospital training, the supply of properly qualified medical officers could still be maintained."

Dean Rappleye added that "the inducements of the military services can be made much more attractive through better professional opportunities and the development of sound plans for progressive advancement of medical personnel."

TVA After 15 Years

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1949

Mr. MORSE. Mr. President, I ask to have printed in the Appendix of the RECORD an editorial from the New York Times entitled "TVA After 15 Years."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TVA AFTER 15 YEARS

In a little over 15 years the Tennessee Valley program has grown from a dream to a great achievement. Under TVA the valley now produces 15,000,000,000 kilowatt-hours of electricity, as contrasted with about one-tenth of that amount in 1933; per capita income in the valley has risen from 40 percent to 60 percent of the national average; the people of the valley now pay 6.3 percent of the individual income taxes of the Nation, as contrasted with 3.4 percent in 1933; the Tennessee River has been made navigable to Knoxville; improved fertilizers and farming practices have helped to save the wasting land; new industries, big and little, have come in; the initiative of the people has had a chance to show itself. These are some of the gains of which TVA has a right to boast in its fifteenth annual report, made public on the last day of the old year.

There may never be unanimous agreement as to the financial aspects of TVA's operations. The Authority pays sums in lieu of taxes, but it does not carry all the burdens of a private corporation. On the other hand, it is now earning a net return of 4¼ percent on the average net power investment of $405,000,000. It is doing this by selling power at reasonable wholesale rates. The great savings to private consumers are found in the low rates made available by municipalities and cooperatives using TVA power. Yet these distributing agencies have a combined net income of 20 cents on each dollar of revenue. If we assume that the Tennessee River had to be developed as a unit, and that no private agency could or should have done this, we must admit that a great and necessary task has been accomplished, efficiently, honestly, and without deliberate or careless waste.

TVA had a heavy load to carry during the Second World War, and it carried that load superbly. We now know that when its facilities seemed insufficient during the final war years this was because a huge block of power was being diverted into the secret atomic project of Oak Ridge. This one service alone, made possible by the record-breaking construction of new dams, would have justified TVA. Now we face the problems of other possible river authorities, and they are not simple. What TVA has done is to show that they can be solved in a democratic way, with few or none of the evils of a centralized bureaucracy.

President Truman's Interest in the Development of Africa

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Thursday, February 10, 1949

Mr. JOHNSON of Colorado. Mr. President, for a long time I have advocated that western Europe turn to the development of the great continent of Africa as an outlet for their surplus energies. I am not speaking of exploitation; I am referring to development for the benefit of all. If I had my way, every cent of our Marshall plan money would go to Africa, where it would be used to produce the foods and fabrics western Europe must have. I repeat, I am not advocating the exploitation of Africa, I am urging that this great continent be brought into its proper perspective as the key to a rounded-out economy for the world.

In this connection, I ask unanimous consent to insert in the Appendix of the RECORD an article from the pen of Lt. Earl W. Mann, a World War I hero, a former Colorado legislator and a regular contributor to a popular Colorado colored paper, the Colorado Statesman.

This Republican statesman says, "Keep your eyes on Truman." The article is well worth reading.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KEEP YOUR EYES ON TRUMAN

(By Lt. Earl W. Mann)

The adjustment of relations between peoples of this and other hemispheres is going to be a most interesting problem. This column urges those interested in affairs directed toward this end to follow President Truman's program and our congressional activities.

A recent news release relating to our administration's interest in the possible development of Africa was interesting, and augurs a new and intelligent approach toward processing of human affairs. "Explore but not exploit Africa" appears to have been given deep consideration. Venture capital might well give serious thought to this, as this vast continent contains natural resources beyond man's comprehension and appraisal—only awaiting development and proper plumbing by American skill and ingenuity, if and when those capable of such can divest themselves of Negroitis, or racial jitters.

The cold war now being conducted between the so-called democracies and the Russian bear, in an endeavor to rehabilitate Germany, as each sees it, is proving costly, as an experiment, in American dollars and cents, the American taxpayer realizing that the cost of policing war-torn nations, in-

cluding billions in dollars and gifts, in an endeavor to restore economics and culture, might not prove as valuable, measured in terms of reciprocity, as might be the development of new territories.

Our board of national directors is coming around to the sane conclusion that the true course of human history is determined not by what happens in the skies but by what takes place in the hearts of men.

It has been suggested that the United Nations be replaced by a world government, with every human being a citizen. To make this possible, the great powers must remove imperialism from the photograph. The United States must lead the people of the world in the bold experiment. How ironical that at this moment of unparalleled international unrest we find a President, representing the Democratic Party, being looked to to effectuate a fuller emancipation of humanity, as set forth in the great immortal Abe Lincoln's second Gettysburg Address. The arena of social unrest now being occupied by the bellicose South, as well as communistic Russia.

A BLENDING OF CULTURES

Will Durant is quoted as having said: "The greatest problem of Western civilization is that it is breeding from the bottom and dying from the top." What an electrifying effect and influence to a high degree would be the bringing about of a fellowship between the peoples of the African Continent, and the peoples of America. It would mean the erasure of the days of the slave traffic, when Americans developed the Southland through the toil of the helpless black. It would be an admission that black and white can meet on equal grounds, and upon equal terms. I trust this will go beyond the discussion stage.

The social problem of the future I consider to be, how to write the greatest individual liberty action with a common interest in the natural resources of the world, and an equity of all in the benefits of our combined labors and ingenuity.

By what form of institutions these objectives can most effectively be attained is debatable. Personally I have faith in our great prescription as applied to the affairs of a world government—the Constitution of the United States.

To render the economic and social transformation we seek, either possible or desirable, an equivalent change of character must take place both in the uncultivated herd, who strangely comprise the majority, and those of the so-called upper crust, referred to as the cultural.

There are those who will frown upon any movement designed to upgrade the Negro, and other non-Caucasian peoples. I submit that interest in the ultimate good is at present so weak a motive in the generality, not because it cannot be brought into being, but because the mind is not accustomed to dwell on it as it dwells from morning to night on things which tend only to intimate and personal advantages. The deep-rooted selfishness which forms the general character of the existing state of society is so deeply rooted only because the whole course of existing institutions tends to foster it.

One million mulattoes, the offspring of the iniquitous slave traffic has brought no harm to America or its institutions, other than a mental attitude of those unequipped to accept progressive changes. That such an experiment would doom the great white race to obliteration, cannot be sustained. Has not peaceful commercial intercourse proven advantageous to the colonial powers? The choice between Russia and communism, versus Africa and her possibilities of contribution to civilization should cause no belated choice. May God direct and guide our President.

The Sorge Spy Ring

EXTENSION OF REMARKS
OF

HON. HAROLD O. LOVRE

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. LOVRE. Mr. Speaker, by unanimous consent I herewith present for printing in the RECORD a case study in international espionage in the Far East, which is prepared for release by the National Military Establishment. I think this report should be of vital interest to all of the Members at this time, and is well worthy of being read by all Americans who are interested in the way that free government operates.

The report follows:

THE SORGE SPY RING—A CASE STUDY IN INTERNATIONAL ESPIONAGE IN THE FAR EAST

1. THE CHINA PHASE

(a) Introduction: A powerful ring of Soviet spies was uncovered in Japan just before Pearl Harbor. Probably never in history has there been a ring more bold or more successful. Although most of the principals are dead, some are still at large. They can be expected to be secretly busy with their trade at this very moment in the capitals of the world.

The famous Canadian spy case during the recent war is the best-known current example of Soviet espionage. Compared to the Sorge case in Tokyo, however, the Canadian affair was an amateur show. Yet many of the principles of Soviet espionage first publicized in the reports from Ottawa are corroborated by the information at last available on the Sorge ring in Tokyo.

Though the work of Dr. Richard Sorge and his companions belongs to history the lessons of their work should serve as a clear warning for today and the future. They concern not just the intelligence officer but every good citizen. Some of their implications are frightening. One begins to wonder whom one can trust, what innocent comrade or loyal friend may suddenly be discovered as the enemy. He may have any face.

For nine productive years a daring and skillful band of spies worked in Japan for their spiritual fatherland—Soviet Russia. Despite their vigorous activity and enormous successes they went unsuspected and so undetected. Led by Dr. Richard Sorge, a German Communist posing convincingly as a loyal Nazi, this ring of spies almost succeeded in committing the perfect crime. Their discovery came through malicious accident and through no error of their own.

While the personnel of his ring varied from the time of Sorge's activities in China till he was operating in Japan, a surprising number of men whom he had recruited originally for work in China became the core of his ring in Japan. Dr. Sorge, the head of the ring, and Ozaki Hozumi, his chief lieutenant, worked as spies for the Soviet Union in both China and Japan from 1929 to 1941. With the shift of major Soviet concern to Japan after the Japanese invasion of Manchuria in 1931, Dr. Sorge was ordered to cease his Shanghai operations, to go to Tokyo and to set up a completely new network. Starting from nothing in a country which he never before had even visited Dr. Sorge was able to develop the most complete and successful espionage operation in Japanese history.

Sorge lived on intimate, trusted terms with the German Ambassador and his staff; Ozaki Hozumi, his lieutenant, had a similar close relationship to Prince Konoe, thrice premier. From these perfect sources they drew their masses of information on every subject from politics to war and transmitted their intelligence to the U. S. S. R. by concealed radio, by courier and through the Soviet Embassy. Their primary intelligence targets were Japanese plans and intentions for attack on the Soviet Union. After June 1941 this question became overpowering. As the German armies raced into western Russia, as great Soviet military formations were smashed and destroyed, reinforcement from the Siberian garrisons became vital. But the Red army could not weaken their Siberian defenses if the Japanese Army soon would attack. Sorge was able to assure them there would be no attack: the Siberian divisions were entrained for the west and appeared on the western front for the successful defense of Moscow.

Sorge transmitted an enormous number of carefully analyzed intelligence reports from Tokyo to the Red army's fourth bureau over the years of his work. The nature of his reports and the method of their transmission will be discussed later in detail. Briefly, Sorge was able to keep the Soviet Union fully informed on Japanese military and industrial capabilities and intentions from 1933 to 1941. The Red army always knew the status of current Japanese war plans, and could make their own plans and dispositions accordingly.

The members of the Sorge ring were arrested in October 1941, but not before they had completed their primary mission. Two of the most prominent leaders died in prison and lesser figures got long prison terms. On the morning of November 7, 1944, Dr. Richard Sorge, German, and Ozaki Hozumi, Japanese, were hanged for their great services to the Soviet Union. If Stalin has not posthumously granted them the most distinguished decoration of his country he is niggardly indeed.

It is astonishing that despite their deep suspicion of foreigners, their alertness to the remotest suspicion of espionage or Communist sympathies, despite the insularity of their country forcing couriers to enter or leave only well guarded ports, neither the Japanese civil police, the gendarmerie (Kempeitai), the special higher police (Tokkoka) nor any other Japanese security agency ever had the remotest suspicion of Sorge or any one of his gang of 16 men and women. They were betrayed by a prominent Japanese Communist, Ito Ritsu, now member of the party's central committee. He had a grudge against a minor member of the ring, never suspecting how loyally and dangerously she was working for the cause. It is ironical that this Judas is a trusted leader of the Japan Communist Party in postwar Japan.

The Sorge case concerns the individuals who composed the ring as much as what they discovered and how they operated. Because it is as important to understand the minds and motivations of such spies and traitors, a considerable portion of this account will be devoted to descriptions of people. The questions of what and how cannot well be separated from the question of who.

(b) Richard Sorge, head of ring: Richard Sorge, brilliant leader of this ring of spies, was born in Baku, in southern Russia, October 4, 1895. He remained alive for 49 years. His father was a German engineer working for a German oil firm in the Caucasus and his mother is said to have been Russian. While Richard was still an infant his parents went to Berlin where the boy had a normal German education and grew up a patriotic son of Imperial Germany. He seems to have been impressed quite young, however, with the memory of his parental grandfather, Adolf Sorge, secretary of Karl Marx at the time of the formation of the First International.

Like many other patriotic students, at the beginning of World War I, Richard Sorge volunteered as a private, was wounded on the western front, and after long hospitalization was discharged. In 1916 he reenlisted and was wounded a second time, this time on the eastern front. During his periods of convalescence and after the war he studied at the Universities of Berlin, Kiel, and Hamburg, taking the degree of doctor of political science at Hamburg in 1920. For the next 2 years he worked variously as a school teacher and a coal miner and then in 1922 began to write for newspapers and magazines. Nominally, this remained his occupation till the Tokkoka arrested him in October 1941. But even when he was teaching or digging coal he was doing his best to convert his pupils and his fellow miners to the tenets of Karl Marx.

During the war, while he was hospitalized, influenced in part by memories of his grandfather and in part by the then current Russian Revolution, Richard Sorge had begun the systematic study of Marxian literature and had converted himself. Immediately upon the formation of the German Communist Party in October 1919, Sorge joined the Hamburg branch. One may recall both that many German soldiers who had served on the eastern front returned to their defeated country converts to the Communist cause and that Hamburg was a major center of German Communist activity. Possibly Sorge's maternal ancestry also slanted his thinking towards Russia. In later years he had a fluent command of Russian, and it is likely that he first learned the language from his mother. He was a natural linguist in any case, and by the time he had become established in Japan he could converse easily in French, English, Russian, Japanese, and possibly Chinese.

Physically Sorge was a big man, tall and stocky, with brown hair. His brow was creased and furrowed and his face was lined. As a Japanese acquaintance remarked, from a glance at his face you could tell he had lived a rough, hard life. There was an arrogance and cruelty to the set of his eyes and the line of his mouth. He was proud and overbearing, well-liked and deeply admired by those whose friendship he desired, but ruthless toward others and frankly detested by them. Many of his Japanese press colleagues saw him as the typically swashbuckling, arrogant Nazi and avoided him. He was quick-tempered, a hard drinker, and liked variety in his women. In addition to having a wife in Russia and another, a school teacher in the United States, he is known to have been intimate with some 30 women in Tokyo during his years of service, including the wife of his chief foreign assistant and the mistress of this same assistant. And yet despite his philandering, his bad temper, and his bouts of drunkenness he never betrayed himself. For example, though he lived on the most intimate terms with the members of the German Embassy staff, and drank heavily with them over a considerable period of years, none of them ever suspected that he knew a word of Russian.

Sorge began his professional Communist career in 1924. By that time he had made such an excellent reputation among German Communists and was so respected by Soviet leaders that he was summoned to Moscow. He resigned from the German Communist Party, joined the Russian and became an agent of the Comintern, at that time a body with considerable force in world Communist affairs.

Among Sorge's sponsors to the Russian Communist Party and the Comintern were Dimitry Zaharovich Manuilsky, still member of the Central Committee of the Russian Communist Party, and Soloman A. Lovosky, currently Deputy Commissar of Foreign Affairs under Molotov, and also a member of the Central Committee. Naturally, even after he joined Red Army Intelligence his Comintern friends maintained their personal interest in him. It is reasonable to assume that Stalin too knew of Sorge's operations, since they were so valuable and completely unique. After the Japanese arrested Sorge, he is reported to have boasted that Stalin was personally acquainted with his work and that if a Soviet-Japanese accord were yet to be made, Stalin would effectuate his release.

For 3 years Sorge was busy for the Comintern at their Moscow headquarters, presumably learning the business, but in 1927 he went abroad to begin his hazardous career of field agent. Using the cover of an obscure German magazine, he spent 2 years in the Scandinavian countries and Great Britain as a special representative of the intelligence and organization bureau of the Comintern. His job was to collaborate with the local Communist parties in the collection, evaluation, and transmission of information on labor problems and Communist activity. In part his job seems to have been to give advice and encouragement to local Communist organizations.

These were the early days of Soviet intelligence activity, and the Russians were giving their intelligence agents the dual mission of espionage and party activity. Sorge became convinced of the error of this practice, and upon his return to Moscow in 1929 made strong representations that it be ended. He pointed out that where Comintern and Soviet intelligence agents were associated with local Communist Party officials, if the latter should be arrested the Comintern agent would be pulled in, too, and the whole intelligence net would be broken. He urged that intelligence and party activity be divorced completely, and that intelligence agents abroad be instructed to have nothing to do with the local Communist parties.

Perhaps his superiors in the Comintern were not sympathetic to these suggestions. Red Army intelligence was, however, Sorge requested relief from duty with the Comintern and transfer to Red Army intelligence, and the request was granted. For the remainder of his dangerous life he was attached to the Fourth Bureau of the Red Army General Staff, the supreme intelligence agency of the Soviet Army.

The change in the roles and relationships of the Comintern and the Soviet Government over the years has often puzzled outsiders. An understanding of them is of great importance to an understanding of current Soviet espionage methods. The alleged suppression of the Comintern in 1943, supposedly to win American friendship and supplies at a critical period during the war, is better understood in the light of Sorge's testimony. In the dreary years after his arrest Sorge came to talk freely and frankly both of his activities and the principles of Soviet coduct. The case had been broken. Others had betrayed every secret, and Sorge seems to have found relief from his melancholy life in a Sugamo cell by talking lengthily with his captors.

(c) Dominance of Russian Communist Party over Comintern: Sorge's testimony as to the identity of the Russian Communist Party with all other national Communist Parties is a useful refutation of the claims of the innocents who persist in viewing such organs as the American Communist Party or the Japanese Communist Party as separate entities. Among other things, Sorge said:

"The Russian Communist Party has become more influential than the guidance section of Comintern. Today the actual spearhead of the Communist Party labor movement is the Communist Party in Russia. Formerly the guidance section of the Comintern was independent in every respect. It consulted the leaders of the Russian Communist Party only occasionally on special problems. Later those consultations became more frequent until today (1942) it is no longer possible for the leaders of the Comintern to act independently of the Russian Communist Party * * * as they once did under the leadership of Zinoviev. Unity between the guidance section of the Comintern and the Russian Communist Party was achieved when the superiority of the Russian Communist Party was recognized.

"* * * But of course this extraordinary position of the Russian Communist Party is not a permanent one. If Communist parties gain power in other countries the center of gravity will again shift from the Soviet Union to the Comintern. The preeminence of the * * * Russian Communist Party is temporary. Nevertheless, for the past 10 years today (1942) and for the next decade its preeminence cannot be questioned.

"* * * The shifting of the * * * leadership of the revolutionary labor movement from the * * * Comintern to the Russian Communist Party can be traced in my own career. All of my activity at first was connected with the Comintern. Later I came to work directly under the Soviet Union. This change did not mean that * * * (the) members of my group had alienated ourselves from the Communist movement as a whole. It meant only that we had transferred our activity from an international movement to * * * the development of the Soviet Union. This activity has worked for the economic and political stability * * * and the defense of the Soviet Union from * * * outside attack.

"* * * It must be remembered that my intelligence work in China and Japan was entirely new and original. * * * This is particularly true about Japan, because I was the first man and the only man ever able to carry out this kind of an assignment successfully for such a long period of time. All of my orders and instructions came from the Fourth Bureau of the Red Army. The Comintern gave me no orders."

Somewhere along the line Sorge developed a profound interest in the Far East. Although he had not previously studied or been trained in Asiatic affairs he became convinced that China and Japan should become the area of his specialization. Soon after his return from northern Europe, and his transfer to the Red Army's Fourth Bureau, Sorge was directed to go to Shanghai to help in developing and then to direct a China intelligence net. The expulsion of Borodin and Galen, with their followers, and the arrest, imprisonment, and execution of numerous Communists, both Russian and Chinese, throughout China during the previous year must have badly shaken the Comintern's net as well as that of the Red Army. Sorge's recommendations that the Soviet intelligence agent should have nothing to do with a local Communist Party group must have had a particular appeal to the directors of Red Army intelligence just at this time because of the disaster which had overtaken their agents who had been identified with the Communist wing of the Chinese Nationalist Party. Sorge proceeded to China strictly ordered not to associate with the Chinese Communist Party and not to engage in any Communist activity of his own. His primary mission was to secure intelligence on Japanese activity, intentions, order of battle, and operations in China. His secondary mission concerned strictly Chinese affairs.

(d) Sorge in Shanghai: Sorge went to Shanghai in January 1930, with the cover of correspondent from the German Soziologische Magazine. Shanghai was a free and easy place, all sorts of odd characters were drifting around and seemingly it wasn't

thought essential to have a substantial cover to operate there successfully.

Three agents of the Fourth Bureau went to China together: "Alex" (not otherwise identified), Dr. Richard Sorge, and a certain Weingart, a German wireless operator. After about 6 months Alex, the chief of the mission, left, presumably to return to Russia, and Sorge became head of the ring, whose headquarters were at Shanghai but which covered most of China, being especially active in Hangchow and Nanking, Canton, Hankow, Kaifeng, Hsian, Peiping, and in Manchuria. Sorge himself traveled extensively, read widely and deeply on Chinese and Japanese politics, history, and culture, studied the two languages and came to be unusually well-informed on Asiatic affairs. He was a formidable agent.

Sorge recruited and developed a ring of spies in China. We know the names of 16 of them, but probably there were more. Three principles which guided them are noteworthy: (1) While the group was highly cosmopolitan there seems not to have been a Russian among them. (2) While every member of the group was either a Communist Party member or strong sympathizer, they avoided association with the Chinese Communist Party. (3) They did not function as a group, and few of the members knew who the others were, or even were aware of their precise mission or who they were working for. They knew they were working for the cause, but not the chain of command.

Some members of the ring are identified today only by their first names or by cover names, such as "John," "Paul," and "Jacob." We know that Jacob was an American journalist, but no more. The four Chinese members we know only by the common Chinese surnames of Chang, Wong, and Li. The five Japanese; one German, named Max Klausen; and an American woman we know well.

(e) Agnes Smedley, American-Soviet spy: This American, Miss Agnes Smedley, has been one of the most energetic workers for the Soviet cause in China for the past twenty-odd years. She was one of the early perpetrators, if not the originator, of the hoax that the Chinese Communists were not really Communist at all but only local agrarian revolutionists, innocent of any Soviet connections. This tall tale has had enormous effect in molding American opinion in China, both private and official, and has bemused American writers for 20 years. Miss Smedley in her five books and innumerable articles, other Communist writers, and numerous liberal innocents have continued to spread this story till today high American Government officials find it difficult to believe any other. It should be noted also that Miss Smedley's writings are used as source material by most writers and commentators on China, many of whom think she might possibly be a Communist sympathizer but nonetheless feel that she is one of the few writers on China who has plumbed the depths of truth, because for so long she has lived with and thrown in her lot with the suffering Chinese. The harm has been done, but perhaps it could be mitigated if she is now exposed for what she is, a spy and agent of the Soviet Government.

Miss Smedley worked closely with Dr. Sorge as a member of his ring from late 1930 until he left China. Presumably in the past she had been a Comintern agent, and we do not know whether she had transferred to Red Army intelligence, as had Sorge, or whether by some special arrangement she continued with the Comintern and yet worked with Sorge. In the light of Sorge's strong stand on the necessity for separation of Soviet intelligence and Comintern-Communist intelligence, however, it is likely that Miss Smedley, too, had been transferred.

The climax and greatest achievement of Sorge's career was his work in Japan, but several of his Tokyo associates first joined Sorge in Shanghai, and they deserve careful description. Without at least Ozaki Hozumi and Max Klausen, Sorge could never have made his smashing success in Japan. He met and developed these men in Shanghai.

Sorge's most valuable single associate in Japan was to be Ozaki Hozumi, a well-known journalist and commentator on Chinese affairs. Years later Ozaki was to have the distinction of preceding Sorge in death by half an hour, the only other member of the ring to share the gallows with him.

(f) Ozaki Hozumi, Sorge's major assistant: Ozaki Hozumi, second son of a journalist from Gifu Prefecture, was born on May 1, 1901. His father moved the family to Formosa to become editor of the Taiwan Nichi Nichi Shimbun, and it was in Taihoku that Hozumi grew up and finished middle school. He later attended and was graduated from the Tokyo first high school (college) and the law school of Tokyo Imperial University, taking his degree in 1925. Any graduate of "Ichi-Ko" and "Teidai" could know that his classmates would become leaders of Japan's business, professional, and governmental world. The men of the class of 1925 at Teidai, while not yet at the top by 1940, would be holding positions of great responsibility throughout Japan, especially in the bureaus and ministries of the Imperial Government. Any young man with the brilliance of Ozaki Hozumi was bound to make and keep many close friends who would know almost everything there was to know and who would be glad to share their knowledge with their trusted confidant. If such a man turned traitor his country's secrets would flow in a steady stream to the enemy. Ozaki was that traitor.

Following his graduation from Tokyo Imperial, Ozaki spent a year of postgraduate reading, chiefly in economics and sociology. Then, following in his father's journalistic footsteps, in May 1926, he joined the staff of the Tokyo Oshai Shimbun. He was transferred to the Osaka Asahi in November 1927, and was sent to Shanghai as a special correspondent of this great paper in 1928. He remained in China for 3 years, during which time he met and worked for Sorge, returning to Osaka in 1932. In the autumn of 1934 he was transferred again to Tokyo, where he joined an Asahi staff research group devoted to a study of Oriental affairs, the East Asia Problems Investigation Society (Toa Mondai Chosa Kai). He came to be known as one of Japan's leading experts on China affairs and wrote widely on this subject in a variety of magazines. He often appeared in English in Contemporary Japan, and was admired for his contributions to the Institute of Pacific Relations, especially after he had attended the Yosemite conference of that body in 1936 as one of the Japanese delegates.

In July 1938 Ozaki resigned from the Asahi to become unofficial adviser to the Cabinet (Naikaku Shokutaku) under Prince Konoe. With the fall of the first Konoe Cabinet, in January 1939, Ozaki resigned this post, but in June he became unofficial adviser (Shokutaku) of the Tokyo office of the South Manchuria Railway, with which he remained until his arrest in 1941. Being an empire more than a railroad, the SMR conducted extensive research on all things Manchurian, and on all such Russian and Chinese matters as affected Manchuria. Ozaki's SMR assignment was invaluable to a man who had a particular need to learn of Japan's plans and capabilities for a war with the Soviet Union.

1. Party sympathy develops: Ozaki originally developed his interest in the Chinese and his hostility to Japanese militarism while he was a boy in Formosa. While he was in college in Tokyo he began reading widely in Japanese leftist literature, which was published in considerable quantity after the First World War, and then taking up the German philosophers, was fascinated by them. He was deeply moved by the first mass arrest of Japanese Communists, in June 1923, when he was 22 years old and a university student. After the great earthquake 3 months later he was greatly disturbed by the arrest of the whole family of Morisaki Genkichi, who ran the Agrarian Movement Society (Nomin Undosha) and by the cold-blooded murder of Osugi Sakae, the anarchist leader, and his common-law wife and nephew by a gendarme (Kempeitai) captain. At the university he began studying Marx, Engels, Lenin, and many books on China. Gradually his sympathies drifted toward communism and so to the Soviet Union, although he never became a member of any Communist Party. In Japan we find, as they found in Canada, that party sympathy is enough to develop a high-class agent and spy. Party membership is not necessary, and the counter-intelligence officer should not be led astray in his search for the enemy by questions of party cards.

After Ozaki reached Shanghai he soon became associated with a left-wing Chinese literary group, the Creation Society (Sozo Sha), to whose magazine he contributed under pseudonyms. He also became associated with leftist-minded Japanese students at the East Asia Common Script School (Toa Dobun Shoin) and with the Chinese Communist Youth League. Through these contacts he came to know the advisers and leaders of the Chinese Communist Party in Shanghai.

Now and then Ozaki visited the Zeitgeist Bookshop on Soochow Creek, in Shanghai, and became well acquainted with the proprietress, a Mrs. Wiedemeyer. Late in 1929 or early in 1930 this woman introduced Ozaki to Miss Agnes Smedley, at that time correspondent for the Frankfurter Zeitung. From this meeting, dates Ozaki's career as a Soviet agent, though it was some time before he himself was aware that such a change had occurred. Since it was Miss Smedley who recruited Ozaki, it is reasonable to assume that she had recruited other Soviet agents before and has recruited many others since.

A deep and genuine friendship quickly developed between the Japanese journalist, Ozaki, and the American Communist journalist, Agnes Smedley. Ozaki met Miss Smedley at many places besides the book shop, and as they exchanged ideas and discovered the depths of their mutual understanding Miss Smedley told Ozaki that she was a Communist. Since he had already reached the conclusion that he, too, was a Communist in spirit he gladly agreed to her suggestion that they exchange information. From his Asahi and other Japanese connections Ozaki had much to tell Miss Smedley that the Communists would want to know. Presumably what Miss Smedley had to tell Ozaki was for his private ear.

2. Ozaki meets Sorge: In the fall of 1930 a Japanese member of the American Communist Party, Kito Ginichi, who had come to Shanghai via Annam, became a frequent caller at Ozaki's office. How Kito discovered Ozaki we do not know, but it is reasonable to assume that Miss Smedley was the connecting link. Almost from the start Ozaki knew that Kito was a Communist. Soon after Kito's first visit he asked Ozaki if he would like to meet an American journalist named Johnson. Ozaki put him off without a definite answer and consulted Miss Smedley, who cautioned him sharply against any further mention of this American. Some days later, however, Miss Smedley reopened the subject and said she herself wished to introduce Ozaki to Johnson. She arranged the meeting at a restaurant on Nanking Road, and over a leisurely dinner Ozaki talked with a tall, stocky man who spoke English with a European accent. Although Ozaki had not been told that Johnson was

a Comintern agent he assumed as much since he knew both Miss Smedley and Kito were Communists. It was not till 6 years later that Ozaki learned Johnson's real name. In 1936 when Ozaki returned from America as a Japanese delegate to the Yosemite Conference of the Institute of Pacific Relations a Dutch delegate introduced him in Tokyo to Johnson. The Dutchman called him Dr. Richard Sorge, however.

Obviously Sorge had been fully satisfied with Ozaki's loyalty through the checks and recommendations of Miss Smedley and Kito, for at their first meeting Sorge asked Ozaki to collect and supply him with information on the internal Chinese situation and on Japanese policy toward China. Ozaki consented without hesitation. His consent was not connected with any specific knowledge of the Comintern or of the group with which he was to be associated. As for the Fourth Bureau of the Red Army General Staff, he never heard of it till after his arrest in 1941 when the police interrogators began asking him about it. He was completely indifferent to all matters of organization. He agreed to help Johnson because he was convinced that he would be doing something worth while in cooperating with an intelligence group connected in some way with the Soviet Communist International.

From this time until he left Shanghai in February 1932, Ozaki met Johnson and Miss Smedley two or three times a month at various restaurants or at Miss Smedley's apartment. Ozaki did not have assignments on specific subjects, but rather the three friends engaged in lengthy discussions of current news, to which Ozaki was able to contribute the Japanese point of view, as well as an acute and analytical mind. He had a very wide knowledge of Asiatic affairs, and through his Asahi connections could give information on an extensive amount of current topics. Following these discussions, Sorge would come to final conclusions which he would incorporate in reports sent back to the U. S. S. R. As will be seen, this practice came to be more clearly developed after he reached Japan. Ozaki knew nothing of other Caucasian members of the Sorge group aside from Miss Smedley. He couldn't decide whether Miss Smedley ranked above or below Johnson, although he believed that Sorge was the more important since he acted with more authority. Among his Japanese friends in Shanghai, he was aware that three—Funakoshi Hisao, Shanghai Mainichi reporter; Kito Ginichi; and Mizuno Shigeru, student at Toa Dobun Shoin—were involved with the ring, but he had no precise knowledge of their activities. Actually, in addition to these men, there were two other Japanese members. These were Kawai Teikichi, reporter for the Shanghai Weekly, and Yamagami Masayoshi, correspondent for Rengo Tsushin. These men will be described later in connection with their work after Sorge was established in Japan.

Ozaki himself introduced Kawai to Sorge, who took him into the group on condition that he sever all connections with his Communist associates. After the Japanese attack on Manchuria in 1931, Sorge asked Ozaki to get some trustworthy agent to investigate conditions there. Kawai Teikichi was his choice. Miss Smedley already knew Kawai. In 1932, when Ozaki was recalled to Japan by the Asahi, he recommended Yamagami Masayoshi, the Rengo man, as his substitute, but Yamagami refused to serve and Funakoshi Hisao, reporter for the Shanghai Mainichi, took the post.

3. Ozaki returns to Japan: When the Asahi ordered Ozaki back to Osaka, Sorge wanted him to quit his job and stay in Shanghai, but Ozaki pointed out that if he left the Asahi, his chief information source and hence his major usefulness would be lost. After he returned to Japan, he had no communications with Johnson, but he did correspond with Miss Smedley. When Miss Smedley wrote, asking him to meet her in Peiping, he left at once, sailing from Kobe on December 25, 1932. Miss Smedley wanted him to join a new intelligence agency which she was organizing in North China, presumably to cover developments in Manchuria, but Ozaki refused, and after recommending Kawai Teikichi in his place, returned to Japan. He took with him the translation rights to all of Miss Smedley's books, and ultimately published her autobiographical novel, A Daughter of the Earth, in Japanese as Onna Hitori Daichi Wo Yuku (A Woman Walks the Earth Alone). He used his pen name, Shirakawa Jiro, with which he had often published leftist articles in Shanghai. For more than a year he did not hear from Miss Smedley, who was in a sanitarium in southern Russia. In the summer of 1934, however, she wrote him again, and on her way from America to Shanghai in September of that year she stopped to see him in Japan. By this time Ozaki was Sorge's major assistant in Tokyo. Sorge warned him that it was dangerous to correspond with such known Communists as Miss Smedley; it might well arouse police suspicions where none existed and so bring about the betrayal of their whole operation. Ozaki never communicated with Miss Smedley again, and perhaps to this day she wonders what happened to her much-prized friendship with Ozaki Hozumi. She does know, however, that he died for their common cause, in the service to which she recruited him back in Shanghai nearly 20 years ago.

Ozaki was a prolific writer, and became extremely well known in Japan as an expert on Chinese affairs. His many signed articles in Central Review (Chuo Koron) and his five books on China, the last, Strength of the Great Powers in China (Ajia Ni Okeru Rekkyo No Chikara), published in 1941, give no hint of his Communist sympathies. It is amazing that a man could feel so deeply on the subject of China, Japanese militarism, and communism, could write so much and so widely, and yet never betray himself to the vigilant Japanese censors and thought police.

(g) Max Klausen, radio operator: The rest of Ozaki's story belongs to his activities back in Japan. There is one more member of the Sorge ring of China days, however, who must be mentioned before Sorge's transfer to Tokyo and his prolific work there is described.

When Sorge reached Shanghai in 1930 he found another German, Max Gottfried Friedrich Klausen, also an agent of the Fourth Bureau, who had the simulated rank of major in the Red Army. On this basis Sorge must have rated at least as a colonel. Klausen had come out from Moscow the year before and already had had considerable experience as an operator of secret radio stations. That was to be his role for the rest of Sorge's active life, and in Japan Klausen was to become Sorge's chief communications link with the Soviet Union.

Klausen was a heavy-set, coarse-featured German, not well educated, and the last conceivable suspect as a successful agent of the Red Army. One knew that Sorge and Ozaki were brilliant, whether one liked them or not, but Klausen was not the type of man even the suspicious police were likely to associate with the brilliant journalist, Richard Sorge. Acually Klausen was never the intelligence operative; his role always was in communications.

Max Klausen was born in February 1899 on an island off the coast of Schleswig-Holstein, the son of a poor shopkeeper and bicycle repairman. His mother died when he was only three. After finishing school Max first helped in his father's shop, and then was apprenticed to a blacksmith while attending a trade school in the evenings. Here he laid the foundations of a very considerable mechanical ability which in the end would build for Sorge a radio transmitter so small it could be carried in a brief case and yet so powerful it could send from Tokyo to Vladivostok with the greatest of ease.

In 1917 Klausen was conscripted and served in the German Signal Corps, being assigned to a radio unit on the western front. After his discharge in 1919 he wandered through a number of unrelated jobs, including that of guard at a reform school, until in 1921 he began going to sea out of Hamburg. It was at Hamburg, spiritual home of both Sorge and Klausen, that the latter was converted to the Communist cause. The defeat and postwar confusion, heavy Communist infiltration into the seamen's unions with their propaganda and agitation, unemployment and despair, all left their mark on this stolid young man. In 1927 he joined the Hamburg branch of the German Communist Party.

1. Klausen embraces communism: Part of Klausen's later account of his experiences is worth repeating: "During my early youth I had no interest in political affairs, but after my enlistment in the army I met many soldiers, particularly among my immediate superiors, who were imbued with communistic thought and who were engaged in Communist propaganda. Army life * * * was favorable to the spread of the doctrine. Thus, the young men in our group were gradually attracted to the ideology by our seniors. * * *

"When the war was over, after many of the seniors left the barracks, Communist sentiment was on the wane * * * it had been the wish of my father that I return home to my job with the blacksmith. The second influence in my political life was this master, who was a follower of the Volks Party. Under his guidance I became a Communist sympathizer.

"In 1922 when all mechanics throughout the country went on strike, I was working aboard a steamer. As a Communist sympathizer I became a picket. All sailors at that time were members of the seamen's section of the All German Transportation Labor Union, which was one of the official organizations of the Social Democratic Party. Of course, I, too, was a member of the union. But in 1922, when the German Seamen's Union was formed by Communist elements, I joined.

"Germany was in an extremely difficult economic condition, with more than 6,000,000 unemployed. The government was entirely at a loss what to do * * * I came to feel that the only doctrine which could save the German people from their misery was communism. When I visited Soviet Russia aboard the S. S. *Neptune* and witnessed the fine equipment of Russian industry, I became firmly convinced that communism would promote the happiest society in the world. Since by this time the German Communist Party had been organized as a legitimate political party, I made up my mind to become a member and to engage in Communist activity. Upon my return to Hamburg from this voyage, I applied for membership in 1927.

"My application was not accepted immediately. For the first 6 months I was listed as a marine-cell member. I was assigned as a lecturer to argue the party platform with sailors on my ship. After my initiation I was examined by Karl 'Lesse,' the leader of the union. Having passed the test I formally became a member of the Communist Party."

Klausen must have made an excellent impression for sincerity and devotion to party principles. Only the next year a Soviet operative known to Klausen only as George, upon the recommendation of Lesse, invited him to join an international espionage group as a radioman. Klausen readily accepted the invitation, and in February 1929 he went to Moscow, where he joined the Fourth Bureau

of the Red Army General Staff as a radio operator.

Klausen received only a brief indoctrination, and then was ordered to go to Shanghai to serve as radio operator for the bureau's China unit. Before leaving Klausen received a ticket to Harbin and $150 in American money. He was shown a photograph of a man called Mishin, who was to be his Shanghai contact. He was directed to go to the Palace Hotel in Shanghai, sit in the lobby with a newspaper in his left hand and a pipe in his right. When the Mishin of the photograph came up and spoke to him he was to give the password, "Regards from Erna."

2. Klausen's radio and contacts: In due time Klausen sat in the lobby of the Palace Hotel and gave Mishin Erna's regards. He then went with Mishin to the latter's home, where he was given two rooms on the third floor, and received instructions from Mishin in radio technique. Finally, Mishin took him to meet the head of the China unit, a German named "Lehman," who also used the alias of Grevitch. Lehman told Klausen that he was to replace a renegade Pole, named Goble, who had seceded from the group. From this date to 1933 Klausen worked in various parts of China under the command of Lehman, then of Alex, presumably a Russian, of Richard Sorge, and finally of Paul, who previously had been subordinate to Sorge.

Together Constantin Mishin and Max Klausen built a shortwave radio receiving and sending set and maintained contact with another station known as Wiesbaden. This was the same station which subsequently received his signals from Tokyo. Klausen never was positive whether "Wiesbaden" was Vladivostok or whether it was Khabarovsk, but believed the former was the case. Considering that later Moscow was designated as "Munchen," the alliteration suggests Vladivostok. It is noteworthy that in this operation as well as the later one in Japan, the geographical and national cover of Germany and Germans was used throughout. Even the Russian language was never used, and before coding messages always were written either in German or English.

After getting the Shanghai set in operation Klausen assembled the parts for another set and sent them to Harbin in the care of a French diplomat, who kindly smuggled them up there. In August 1929, Klausen himself went to Harbin to assemble the set, and at the Hotel Moderne he met another agent named "Benedict." Benedict introduced Klausen to the chief of the Soviet agents in Harbin, "Gloemberg-Ott." An American vice consul, Tycho L. Lilliestrom, allowed "Gloemberg-Ott" to use two rooms of his residence, and it was there that Klausen set up his illegal radio set. There is some reason to believe that Lilliestrom also supplied information to his guest.

Klausen was able to get back to Shanghai in October 1929, where he continued with his illegal radio activity under the cover of his work as a garage mechanic. In January 1930 Lehman directed Klausen to go to the Anchor Hotel, where he would meet a friend. This friend turned out to be Josef Weingart, a German, whom Klausen had known earlier in Hamburg, and who had just come to China to join the group. A few days later Weingart introduced his old friend Max to Dr. Richard Sorge. Here began an association which finally was to carry them both into Tokyo's Sugamo Prison.

After his return to Shanghai Klausen moved to a boarding house where a widow, Mrs. Anna Wallenius, a white Russian, was living. She was then 31. Her husband had died 4 years before, and she had been making a living first as a seamstress and subsequently as a practical nurse at the Shanghai Isolation Hospital. Both she and her late husband, a well-to-do Finnish tanner, brother of the Gen. K. Martti Wallenius, of the Finnish Army General Staff, who headed a Finnish military mission to Japan in 1937, had suffered cruelly in the Russian revolution. Like most other "whites" they managed to reach China with little more than their lives, and Anna never recovered from her bitter and intense hatred of all things Bolshevik.

3. Romance of Max and Anna: Anna little guessed when she first met the new boarder that she was also meeting an ardent Communist and Soviet spy. She took Max for a good, steady automobile mechanic with a decent income. Poor woman, she fell in love. Max too seemed to have loved her well, for in later years he submitted not only to many inconveniences but to downright danger to his career with the party in order to keep her with him. Here was a strange union of personal love with mutual hatred of each other's ideals. That it lasted through the years, through terrors and dangers and prison, is testimony to its strength and power.

Anna became suspicious of Max's conduct only a few days after they had been married. (She was his common-law wife for several years before he was allowed to legalize the union.) He constantly went on unexplained errands at night but he quieted her fears by assuring her he was active in an anti-Nazi society. It was not until 1931 or 1932, a year or two after their marriage, that she discovered the headquarters of this anti-Nazi society was in Moscow. By then she couldn't bring herself to leave Max.

Years later Klausen told the Japanese court that Anna had never lost her hatred for communism. She had consented to help him only out of fear of punishment from Moscow, and also because he continually regarded her with valuable and desirable presents. For example, he gave her a $2,000 fur coat, expensive dresses, and frequent small-denomination United States bills. Answering the court's question as to whether their marriage had borne fruit, Klausen said neither love nor money could persuade the woman to become pregnant by a Soviet spy. Through the years Anna complained bitterly that Max had married her because he needed her for camouflage. "News correspondents like Sorge can afford to remain single," she said, "but a businessman like Max needs cover." She scoffed at what she called her husband's dreams of paradise. The court gave considerable weight to this testimony in passing sentence.

Klausen worked in various Chinese cities as directed by his chief. He put up sets in Canton and Mukden, in addition to those in Shanghai and Harbin. For some reason he was unable to raise Wiesbaden from Canton. In August 1933, Klausen left Mukden, via Harbin, for Siberia and the long train ride to Moscow. Originally he was directed to travel with a specified woman agent but Max refused point blank to travel with any woman but his Anna, and finally he was permitted to take his wife instead of the other woman. Anna thought they were bound for Germany, a belief corroborated by their receipt of German passports in Harbin. On the first night they were in Moscow, however, the Klausens were robbed of all they possessed, including their passports. Perhaps the fourth bureau was doing a little checking. In any case Max soon appeared in the uniform of a Red army officer, which he continued to wear as long as they were in Moscow.

4. Klausen joins Sorge: After a 6-week vacation at Odessa, Klausen entered a radio school for advanced training. Suddenly he was transferred out of the school and ordered to one of the German republics on the shores of the Volga as punishment for a record of inefficiency in China. It will be remembered that this was at the beginning of the Russian purges, when thousands of Communists were passing from honor to disgrace overnight, and then as mysteriously being restored to the good graces of the party. It seems that Klausen was a victim of the same hysteria.

For nearly 2 years Klausen remained in this provincial center, mending shoes, plowing fields, and taking part in party propaganda programs. In the spring of 1935 he was recalled to Moscow by order of General Voroshilov to meet Lehman, Sorge, and Weingart, all of whom he'd worked with in Shanghai. Sorge was in search of a good radio operator to replace an incompetent he had with him in Tokyo. He invited Max Klausen to join him. Later Klausen told the Japanese court, "From childhood I had heard nothing but evil of Japan. I detested especially Japan's invasion of Manchuria. Therefore, I gladly consented to go work for Sorge there." He soon set off to join Sorge, who had been working in Tokyo for nearly 3 years.

2. SORGE ORGANIZES HIS RING IN JAPAN

(a) Sorge goes to Tokyo: In China Dr. Sorge's primary intelligence mission had concerned Japan. Probably when they first sent him to Shanghai the directors of the fourth bureau had him in mind for later operations in Tokyo. Having successfully completed his apprenticeship, Sorge now was ready to undertake the most difficult assignment in the gift of the Red Army.

Richard Sorge returned to Moscow in December 1932, and received orders to proceed to Tokyo to organize and operate a completely new espionage ring. Although the Japanese were still in the early stages of their campaign to conquer Manchuria they already had invaded the Soviet sphere of influence. Japanese and Russian antagonisms were old and deep. Japanese ambitions for Siberian territory were common knowledge. Japanese forces had evacuated Vladivostok only a decade before, but perhaps they felt stronger now. What were Japanese intentions and capabilities? As Japanese troops approached and finally reached the Soviet-Manchurian border there always was the possibility of armed explosion. Did the Japanese Government or the Japanese Army intend to precipitate and exploit such explosions into general war?

Sorge's mission was to discover the answers to these questions and to find new answers as conditions changed. In 1933 in the midst of the first 5-year plan and the bitter internal struggle over forced collectivization, the Soviets were in no condition for war with Japan. Subsequently, with the rise of a powerful Nazi Germany there was the constant possibility of a war on two fronts. Perhaps in Tokyo, Sorge could discover the answers to the questions of both German and Japanese intentions. In 1941 he did.

Sorge's job was to paint the big picture. Any Japanese information which he could discover on order of battle, troop movements, or military installations and equipment would be welcomed. His primary mission, however, concerned intelligence at the highest level, the top secret plans of the Japanese Army and Government.

Sorge laid down four conditions for this assignment which were accepted by his superiors: (1) He was to have no relations of any kind with the Japan Communist Party or its known members. (2) He must be supplied with a Caucasian assistant neither Russian nor German. (3) He must be supplied with a high-level Japanese assistant. (4) He must have as little contact with the Soviet Embassy as was conceivably possible, which meant that except in emergencies he would use his own channels of communication.

(b) Sorge establishes cover: Sorge left for Berlin in May 1933 to establish his cover. In Germany he secured assignments as

special correspondent in Japan for the Frankfurter Zeitung, the Bergen Kurier, the Technische Rundschau, and the Amsterdam Handelsblatt. He applied for membership in the Nazi Party, which had just seized power under Adolf Hitler, and his credentials were accepted without question. How he secured these excellent covers remains a mystery. The key newspaper was the Frankfurter Zeitung, whose Shanghai correspondent was a concealed Communist and Soviet agent, Miss Agnes Smedley. It is possible that some editors of this well-known paper were conniving at the appointment of Communist agents.

Having just seized power the Nazi Party and the Gestapo had not yet acquired the efficiency and thorough national coverage they were to develop later. Nevertheless, there must have been a Soviet agent in a responsible post at Gestapo files. When a check was made in 1941, highly derogatory information was turned up at once, yet in 1933 Sorge's applications for party membership and for travel abroad as a correspondent were unchallenged. In due course, after he reached Tokyo, he received his Nazi Party card. Seemingly, in the following years until 1941 when Berlin received a frantic inquiry from the Gestapo man in Tokyo, it never occurred to anyone to run a file check on Dr. Richard Sorge. Even when he was appointed to a post in the Tokyo Embassy in 1939 his party card was considered sufficient evidence of his loyalty. The lessons of this experience are obvious.

With his Nazi loyalties established and having an excellent journalistic cover, Dr. Sorge proceeded to Japan via the United States and Canada. In America he met with some American agents of the Soviets before catching his ship at Vancouver, British Columbia.

Dr. Richard Sorge first reached Yokohama on September 6, 1933. There seemed nothing unusual about this German journalist and the water police quickly let him ashore. Not long afterward Sorge found a house in Tokyo, at No. 30 Nagasaka-machi, Azabu-ku, Tokyo, a good neighborhood, and settled down to covering Japan for his various newspapers. He made himself known at the German Embassy and the German Club and was readily accepted by the German community as well as by his colleagues of the press.

(c) Comintern moves Sorge's assistants: Meanwhile, that extraordinary international organization, the Comintern, at the request of the Red Army, began picking up unsuspected agents and moving them around the world. The evidence regarding world-wide Comintern card lists and controls produced at the Canadian spy inquiry is corroborated by the evidence of the Sorge trial. The Red Army needed some spies in Japan of a certain type and category. In due course the Comintern agents in France and the United States received orders. Men who were complete strangers to each other and who had never heard the name of Sorge began packing their bags for Tokyo. While others came along in due course, the two key figures were Branko de Voukelitch and Miyagi Yotoku. Voukelitch traveled from Paris, Miyagi from Los Angeles.

(d) Branko de Voukelitch, Yugoslav Communist: Branko de Voukelitch was a Yugoslav, living in Paris with his wife, Edith, later described by Miyagi as a "dull woman, good only for cover." De Voukelitch was tall and heavy-set, had brown hair and carried himself in such a manner as to give the impression to Japanese that he was a German. Branko was born in Serbia in 1904, where his father was an officer.

After finishing high school in Zagreb he studied art for a time and then entered the University of Zagreb to take up architecture. After 2 years, in 1926, he went to France, abandoning the arts for law at the University of Paris. Before completing his course, however, he went to work for the Compagnie Generale d'Electricitie. It was during this time that he met Edith, a Danish woman of whom we know little, and married her.

De Voukelitch became interested in Marxian movements during his student days in Zagreb. In 1924, he was arrested as a member of the Zagreb Marxist Student's Group. From about the year 1925 he participated in the Croatian independence movement (against Yugoslavia), which had the support of Communist elements. It was not until January 1932, however, that he formally became a Communist. He had met some former comrades of the Zagreb Marxist Students' Group in Paris and through them joined the party. It is not clear whether this was the French or the Yugoslav party.

In March 1932, de Voukelitch's Croatian friends introduced him to a mysterious Baltic woman, Olga, who persuaded him to join a so-called Red international intelligence organ in Paris. Note that this joining of the party and his becoming a Soviet agent were hardly separated in time. The Soviets seem able to use men as agents who either are not party members at all, and yet who are willing to make every sacrifice for the party's cause, or who hold party cards on which the signatures are scarcely dry. The previous interests and prejudices of the man concerned rather than formal party allegiance seem to be far more important in determining his selection. These facts should sharpen American concern with United States employees who show sympathy with the party and yet who have never joined it.

De Voukelitch first heard that he would be sent abroad from an unnamed Russian Jew, who told him he was to be assigned to duty either in Japan or Rumania. Having received permission from Olga to take his wife with him on this mission, he sent Edith to Denmark for a short course in physical education to give her a legitimate occupation should she need to cover when they got abroad. As it turned out her occupation as housewife was sufficient to disarm Japanese suspicion.

De Voukelitch received his travel orders to Japan in October 1932. He was appointed special correspondent in Tokyo for the French picture magazine La Vue and for the Yugoslav daily Politica. Branko, Edith, and their small boy sailed for Marseilles on December 30, 1932. Proceeding along the tourist route through the Red Sea, and stopping briefly at Singapore and Shanghai, the new journalist and his family landed at Yokohama on February 11, 1933. After staying temporarily at the Imperial Hotel, de Voukelitch found a place at the Bunka apartments in Hongo-ku, probably the best apartments in Tokyo, now used as a United States Army billet.

1. De Voukelitch establishes himself: Since Sorge had not yet arrived de Voukelitch had time to get started on his newspaper career, free of the need to engage in improper activities. He had been told how to get in touch with Bernhardt, Sorge's radio man, however, and net him as Olga had told him to do. After Sorge reached Tokyo in the fall Bernhardt introduced Voukelitch to him. At the first meeting Sorge used the name of Schmidt, an odd precaution since Branko knew he was there to work for him, and in any case both being journalists they were bound to meet at press conferences and other places where Branko would learn his true identity. The reactions of these men at their first meeting, and their conversation have not been recorded.

This was a long term project, and Sorge was in no hurry to get started till his machine was functioning smoothly. He needed agents, a considerable net of them, adequate radio and courier communications, a darkroom and good outside contacts.

The German Embassy was Sorge's major target, but he had no more immediate entree than any other German journalist and less than many since he did not represent the all-powerful DNB agency. But through the man's wife he did know an assistant German military attaché, Lt. Col. Eugen Ott, then on duty in Nagoya with a Japanese artillery regiment.

Ott was out of sympathy with the Nazi program, but he went along with the orders from his Government. He had only arrived in Japan in 1933, being transferred out of Germany by higher ranking officers who feared for his safety in the Nazi purges then under way. Whatever Ott knew or thought about Germany, he knew almost nothing about Japan, and he delighted to find in his new friend Richard an extraordinary fund of information on things Japanese, on Japanese politics and trends, as well as sage advice, When Ott made his next grade and was stationed in Tokyo his friendship with Sorge deepened and their meetings came to be more and more frequent. It may be assumed that the good will of the hausfrau for her husband's friend did him no harm when it came to receiving invitations to social functions.

Very early, then, Sorge began his campaign for acceptance at the German Embassy. Simultaneously he developed his ring. The De Voukelitch family moved out of the Bunka apartments in November to a private house in Sanai-cho, Ushigome-ku. Sorge needed more privacy. Branko, an enthusiastic amateur camera fiend, had a darkroom built in his house for the furtherance of his hobby. Subsequently, documents were photographed there and microfilm was prepared for transmission to Shanghai or the Soviet Embassy. It was at this house that Bernhardt built his clumsy radio transmitter during April and May 1934.

(e) Miyagi Yotoku, artist and spy: The Comintern continued to move their men across the world to aid their man Sorge. The exact process whereby the Comintern supplied men to the Red Army is not known in the Sorge case, although it has been presented with considerable clarity in the Canadian spy case. While it is possible that Olga worked for the Fourth Bureau, and so that De Voukelitch was recruited directly for Red Army intelligence, Miyagi Yotoku, in Los Angeles, had no connections with the Fourth Bureau. Clearly, he was recruited by the American Communist Party and the Comintern, though he came to be an agent of the Fourth Bureau. Miyagi never knew precisely for whom he was working. It is most significant that Miyagi, Ozaki, and many others had but the vaguest idea as to what agency they worked for. All they seemed to need to commit treason was the general knowledge that the Communists wanted their services and that in some manner their information was being relayed to the spiritual homeland of the Communists.

The name of Miyagi Yotoku must be added to those of Sorge, Ozaki, De Voukelitch, and Klausen to complete the list of the top-level operatives in Tokyo. Miyagi, a Japanese who had lived in the United States since 1919, and who was a member of the American Communist Party, was the Comintern's selection to meet Sorge's conditions on assistants: one of foreign nationality, neither Russian nor German (De Voukelitch), and one a Japanese. This was Miyagi, not Ozaki, who later developed as the primary Japanese agent. Sorge personally brought Ozaki into the gang later, but Miyagi was the man he was supplied. Miyagi, too, was invaluable, although considering his previous history it seems strange that Red Army intelligence should have thought of him as a particularly useful agent. Perhaps they were so limited in their choices among unsuspected Japanese that they had to take what they could get.

Miyagi Yotoku was a native of Okinawa, born February 10, 1903. Like many Okinawans, his father migrated, first to Davao and then to California, where he worked on a

farm near Los Angeles. The senior Miyagi returned to Okinawa in 1920 and died in 1938.

The boy, Yotoku, was brought up by his maternal grandparents. After finishing elementary school in 1917 he entered a teacher-training institute, but was forced to quit in 1919 because of illness. He had tuberculosis, which was to plague him for the rest of his short life and finally to shorten his days in prison.

Miyagi joined his father in California in June 1919, and for 2 years went to a school near Brawley to learn English. For the next 4 years he was attending art schools first in San Francisco and later in San Diego, being forced to interrupt his work by that bothersome lung. He graduated from the San Diego Art School in 1925, but worked on a farm near Brawley for about a year before he could put his art training to much use. From November 1926 until 1933 Miyagi ran a restaurant, the Owl, in Los Angeles' Little Tokyo, in partnership with several Japanese friends: Yabe Kenden, Matayoshi Jun, Kochi Shinsei, and Nakamura Koki. He began to paint on the side, and to his pleasure soon made enough from his pictures to support himself independently of the restaurant. In the summer of 1927, he married Yamaki Chiyo, a woman who figures little in this record.

Miyagi's bachelor quarters were inadequate for his married life, and soon he and his bride went to live at the Los Angeles home of a Japanese farmer, Kitabayashi Yoshisaburo. Years later Mrs. Kitabayashi was to become a minor member of the Sorge ring and the unwitting means of the betrayal of the whole group.

In the case of each of these agents the question of motivation as well as of action is of great importance. After his arrest Miyagi testified freely. His testimony portrays him as a rather confused young man of strong social conscience but of uncertain belief. Yet despite this uncertainty a Comintern agent had but to ask him and he gave up his security in Los Angeles to go to Tokyo to betray Japan, to risk, and then to lose his life.

1. Some of Miyagi's testimony: "There was a time in my boyhood when I was a pure and simple nationalist, but even then I detested the tyranny of the Japanese bureaucracy. Doctors, lawyers, bankers, and retired officials were wont to come * * * from Kagoshima, and they became money lenders and exploited the local farmers. I detested these people because my grandfather taught me never to bull the weak. Likewise he taught me Okinawa history, comparing * * * [our] glorious period * * * with the present semicolonial status. * * * I believe that my grandfather's severe criticism of this * * * tyranny and of the poverty of the Okinawa people first turned my mind to political questions."

In America, Miyagi had many discontented friends, and with them he began to read Marxian literature. Of this period, he said, "I do not say that I was not influenced by my friends and by the books which I read, but I was more affected by what I saw: The inconsistency of American capitalism, the tyranny of the governing classes, and, above all, the inhuman discrimination against the Asiatic races. I came to the conclusion that communism was the cure for all these ills."

It will be noted that Miyagi arrived in California at the height of the anti-Japanese agitation as well as during the period of the Russian Revolution. It is likely that he suffered keenly from the discrimination against all Asiatics, but especially against Japanese, then common in the State of California, and in turn looked to the embattled armies of Lenin and Trotsky as the hope of a free and happier society.

Although Miyagi did not join the Communist Party in those early days, he was close enough to it to know a great deal about its activities. He and his friends at the Owl Restaurant organized a study group in 1926 to discuss social problems. The parallel with the Canadian study groups is striking. After the second or third meeting they were joined by some Communist leaders—Takahashi (FNU), an American professor of Russian whose name is reported as Herbert Harris, and a Swiss called Fister. These men gave lectures to the earnest group. Gradually other Communists came to attend the meetings, but there was also an increase of non-Communist members. By this time the informal study group had become a club with the name Society of the Dawn (Reimei Kai).

The club split in 1927 in a dispute between Communist and non-Communist members. The Communists left to form a new association, the Class War Society (Kaikyu Sensen Sha), but Miyagi, who had not yet wholly become a Communist in his own thinking, remained with the Reimei Kai. The Kaikyu Sensen Sha expanded to become the Labor Society (Rodo Kyokai) in 1928, and began publishing a magazine, Class War (Kaikyu Sen), and a weekly news sheet, Labor News (Rodo Shimbun). The California branch of the American Communist Party set up a Los Angeles headquarters at about this time, and the Labor Society (Rodo Kyokai) joined at once. Soon afterward, when a Japanese section of the American Communist Party was organized in San Francisco, Labor News (Rodo Shimbun) came to be published there.

Miyagi had a good general knowledge of all these developments, but hung on the outside. He joined his first Communist-front organization in 1929 when the Proletarian Arts Society was formed by Akagi Tetsu and a Yoshioka under the auspices of the Labor Society (Rodo Kyokai). Many of the members were his friends, such as Kemmotsu, editor of Labor News; Mrs. Kitabayashi, his landlady; and his wife, Chiyo.

Political activity by foreigners in the United States aimed at the change and overthrow of American institutions was an illegal act. Kemmotsu Teiichi and Kobayashi Isamu were arrested in San Francisco and Horiuchi Tetsuji and Yamaguchi Einosuke in Los Angeles in 1929. The American Communist Party sent Yano Tsutomu from New York to continue their work. The Japanese section of the party, however, was very seriously disrupted in 1930 when a large number of Communists were arrested during the party's general meeting at Long Beach. Seven of those arrested were deported to Hamburg, under guaranty of the German Ambassador, instead of to Japan. Miyagi believed they made their way to Russia once they had reached Germany. Although these deportations broke up the Japanese section of the party it was reconstructed in 1931, and although all Japanese were welcomed a special drive was opened to get Nisei members who could legally take part in political movements. Among the new members joining the American Communist Party at this time were Miyagi Yotoku and Mrs. Kitabayashi.

2. Miyagi ordered to Tokyo: Miyagi had been a formal member of the American Communist Party for a little over a year when Yano and another Comintern agent, whose name is unknown, called on him. They asked him to go to Tokyo for a month to serve as a Comintern agent. Nothing was said about the Red Army. It is clear that Yano was an agent of the Comintern, although possibly the man with him represented the other branch. They told Miyagi to call on a Comintern agent then in Los Angeles named Roy for instructions. Possibly this was the same Roy, an East Indian member of the Comintern, who served with Borodin in China in 1927. Miyagi seems to have made an early call, but he put off his departure from month to month because, as he said, he was busy with his painting. Probably, also, he was reluctant to leave his home in the United States and to risk the dangers of Toyko. There was nothing in his record to present him as a heroic figure or even as a potentially dangerous spy. Perhaps that was why he was selected from the many Japanese Communists in California.

Finally in September 1933 Roy demanded that Miyagi start off at once. Roy promised, either ignorantly or to hasten him along, that he would be back in Los Angeles in no time. Roy gave him $200 for expenses and a $1 bill which he was to show to a man who would meet him in Toyko carrying another note with a consecutive number. He was to watch the want ads in the Japan Advertiser. When he saw one asking for Ukiyoe, he was to answer it. If the man he met through the advertisement had this other dollar bill he should follow his instructions.

Miyagi could postpone his duty no longer and soon left for Japan. Since he was expecting to return soon he left all his personal possessions, as well as his wife, Chiyo, in America. He was never to see them again.

Miyagi reached Tokyo in October 1933. Although they had yet to meet together, all of Richard Sorge's gang of top-level spies were now in Japan. Miyagi settled down to adjusting to the life of Tokyo which was entirely new to him, while he daily read the Japan Advertiser. De Voukelitch finally inserted his ad from December 14 to 18: "Wanted to buy Ukiyoe." Miyagi answered the advertisement and a few days later Branko de Voukelitch and Miyagi Yotoku met for the first time at the advertising agency Issui Sha, and compared dollar bills. Neither man has left account of their feelings and hopes at that meeting. Certainly they must have known the dangers they faced, and while they could not have foreseen clearly each might have guessed that the man he met that day would die at Sugamo Prison.

(f) Early days of the ring in Tokyo: The chief links in the ring were now established: Dr. Richard Sorge, the leader; Branko de Voukelitch, the "neutral" press contact man; Miyagi Yotoku, the innocent Japanese artist; and a shadowy and inept figure, the radio operator Bruno Vendt; alias Bernhardt. The task now was to create a simple means of communication within the ring, and to establish Japanese and other contacts who would assure a flow of worth while information. The Soviet Embassy could be counted on to pour out a stream of information on Japan; Sorge's group would have to produce something different and better.

De Voukelitch introduced Miyagi to Sorge near the end of November 1933, at the Ueno Art Gallery. At first the conversation was general, but after four or five meetings Miyagi realized that Sorge's assignment was intelligence rather than Communist propaganda, and that he was expected to help. When Sorge made a formal proposal in January 1934, Miyagi consented with some reluctance. His Communist affiliation had prepared him abstractly for work for the Soviets but his previous experience had not prepared him practically or psychologically to become an agent in Japan. His account of his hesitation is interesting:

"It was some time before I could decide to join Sorge's group. If I had been in the United States my position would have been different, but what would be the position of a Japanese working in Japan? Especially, was this not a contradiction of myself since I had been interested in racial emancipation? I made up my mind to participate, however, when I realized the historical importance of the mission, since we were helping to avoid war between Japan and Russia. At first I meant to get out of the business as soon as I could find someone to replace me, because I had no training for this kind of work. As time went on, I realized that there was nobody who would be willing to do the job. So I stayed on, although I knew well that

what I was doing was illegal and that in wartime I would be hanged."

Both Miyagi and Ozaki satisfied their consciences in their betrayal of their country by argument that they were working secretly to avert a war which would be a catastrophe for both Japanese and Russians but which could be avoided only by flow of significant intelligence on Japanese war plans to the Soviet Union. By corollary they came to the conclusion that if war came despite their best efforts the fundamental interests of the common people would be served by a Soviet victory.

Sorge's immediate contacts were through normal press channels. He had come to Japan with letters of introduction to Japanese prominent in government service, such as Shiratori Toshio, a career diplomat who years later was to be a defendant at the Tokyo War Crimes Trials, and Debuchi Katsuji, another career diplomat with long and friendly experience in the United States. Sorge's Nazi Party membership was sufficient to give him entry to the German Ambassador, Herbert von Dirksen, and to other officials at the Embassy, while his own qualities proved sufficient to assure that he would be invited to return.

1. German contact established: As Col. Eugen Ott rose to major general and from assistant military attaché to military attaché and finally to ambassador, Sorge's access to the best German information in Japan became established. Ott found Sorge's information and advice invaluable and needless to say the fourth bureau in Moscow, through Sorge, found Ott's information even more invaluable. With the passage of years Ott came to show his official documents quite freely to Sorge, to exchange views and to keep him informed. Similarly, the military attaché, the air attaché, the naval attaché, and the Gestapo chief attached to the Embassy from 1940, Col. Joseph Meissinger, came to trust and rely on Dr. Richard Sorge. Only the naval attaché seems to have doubted him, and not on any suspicion of Soviet loyalties but because he didn't like him. Naturally, it took many years for Sorge to arrive at this incredible position of trust at the German Embassy, but by 1939 he had covered the full route. After the outbreak of the European war Ott designated Sorge as press attaché of the embassy, putting him on the German pay roll, and giving him the strength of official position. Most mornings after Sorge had pounded out the press releases on the progress of the war in Europe, he joined the ambassador over late breakfast. Sorge had much to give the ambassador in the way of Japanese gossip and fact, and in turn the ambassador had much to tell Sorge. He showed Sorge the instructions from home and his proposed replies. Having the ambassador's example so did the other chief members of the mission, the officer closest to Dr. Richard Sorge, Soviet spy, being none other than Colonel Meissinger of the Gestapo. On occasion Sorge memorized the essentials of these documents and conversations, and sometimes he recorded the documents with his ever present camera. Like de Voukelitch he was an incorrigible amateur camera enthusiast.

After 1939, with his office at the German Embassy, and in effect a part of that embassy's intelligence organization, Sorge's position was perfect for learning everything about Japan, its capacities and intentions, that was known to Japan's ally, Germany. There was much unknown to the German allies, however, and this information Sorge had to gather in other ways. After the signing of the Tripartite Pact on September 27, 1940, however, the Japanese Army and Navy General Staff discussed their problems far more freely with appropriate members of the German Embassy. These embassy officers frankly asked Sorge for his opinions. Indeed, Sorge had been a primary architect of that Axis pact. General Ott had felt so indebted to Sorge for his work in the development of the Tripartite Pact that he intended to have Sorge present at the official signing in Tokyo. Hitler's special representative, Dr. Heinrich Stahmer, who had come over from China to complete the treaty, however, objected, and Sorge was not present. Stahmer had no suspicions of Sorge's integrity. At most he must have been jealous of sharing credit with a relatively unknown and minor figure. There is nothing more ironical in the history of the Sorge ring, however, than Sorge's part in bringing on the Tripartite Pact which inevitably hastened the war and Ozaki Hozumi's part, related later, in establishing the Imperial Rule Assistance Association.

This highlighting of Sorge's successes skips over his early and most difficult years when he was slowly establishing himself and his ring. As newspaper correspondents Sorge and De Voukelitch attended the press conferences of the foreign office and the board of information, had friendly access both to Japanese and foreign press circles where there was always a great deal of general information to be picked up, and indeed had trustful friends in various consulates and embassies. De Voukelitch was particularly successful in his outside contacts. He was very close to the Reuters man, James M. Cox, who had ready access to the British Embassy before he jumped from a window at Kempeital Headquarters in July 1940. By 1938 De Voukelitch had become a Havas man himself, acquiring more standing and more contacts. He heard the prevalent views and news of the French Embassy either directly or through his colleague, chief of the Havas Bureau, Robert Guillain. Since each embassy was working hard to collect information on Japan, as well as to keep in touch with the views of their home governments, Sorge was able to gather and evaluate the views of the German, American, French, and British Embassies in Tokyo. Naturally, only at the Germany Embassy could he get documentary evidence and secret plans, but the information from the embassies opposed to the Axis served as a very useful check against the conclusions reached by the Germans.

2. Branko and Edith de Voukelitch: Most of the records of the interrogation of de Voukelitch are lost, and it is not possible properly to assess his contribution to the ring. It is possible that de Voukelitch showed greater courage under pressure than any of the others, since even in the extant material and the summaries of the procurators, which we have in full, not much information is attributed to him. His early death in prison raises the question of torture. He was only 41 when he died, and the record does not show that he was physically below par before his arrest. It is very possible that he was firm in his refusal to talk, and was treated accordingly. Miyagi's quick death can be explained by his tuberculosis, but why did de Voukelitch only live to January 13, 1945?

Sorge sharply criticized de Voukelitch and all of his assistants excepting Ozaki in talking with the procurators and the police. Perhaps he hoped to help them by minimizing their work, but it is more likely that his words were a reflection of his own arrogance. He had this to say to Branko:

"De Voukelitch came to Japan for the express purpose of becoming a member of my intelligence group. At the same time he was, like myself, a press correspondent, to cover his espionage work. While I found my newspaper work irksome because intelligence was my real job, de Voukelitch spent more and more effort on his reporting and repeated to me everything he heard with no sense of discrimination. He left all evaluation to me."

Edith de Voukelitch was a dull sort of woman, and Branko soon tired of her. After playing around the Tokyo bars he finally met a Yamazaki Yoshiko, and fell in love with her. She spoke English fluently and seems to have been quite attractive. She soon became Branko's mistress, and according to the Japanese police was not indifferent to the attention of Dr. Sorge. Presumably, Branko did not learn of this lapse.

Edith and Branko separated in July 1938, and Yoshiko came to live with him. Branko persuaded Edith to divorce him; the divorce became effective on December 18, 1939, and Branko married Yoshiko in January 1940. It seems that this was a liaison of romance and passion, and that Yamazaki Yoshiko had nothing to do with espionage, or even any suspicion that it was going on. The Japanese Higher Special Police convinced themselves of this. In making such judgments they were not likely to err on the side of kindness.

There is no doubt that Edith de Voukelitch came to Japan knowingly as a Soviet spy, within her limits helped her husband, and through him helped Dr. Richard Sorge in espionage for the Red army. She left the ring not because of disillusionment with communism and the U. S. S. R., but because her husband, Branko, preferred to live with another woman.

Edith was not permitted to leave before Sorge had received permission from Moscow. Presumably she made pledges which the Soviet authorities felt were adequately binding before they allowed her to leave the ring and Japan. The accounts of her pay-off differ Just before she sailed "Serge" from the Soviet Embassy gave Klausen $500 for her, but he never delivered the money. This was the cause of a violent quarrel between Max and De Voukelitch. A Japanese police report claims, however, that the Russians already had paid her off with $5,000 to which Sorge had added $1,000 on his own responsibility while Klausen had added a bit more.

(g) The Japanese agents: Miyagi only learned gradually about the other members of the Sorge group. Although De Voukelitch had introduced him to Sorge he had no definite knowledge that Branko was a member of the gang until 1936 or 1937, when he met Sorge at De Voukelitch's house and saw Branko photographing documents. At Sorge's request Miyagi went to Osaka in 1934 and arranged for a meeting between Sorge and Ozaki in the park at Nara, but he had no idea how deeply Ozaki was implicated till after Ozaki had come up to Tokyo. Klausen had been in Japan for 3 years when Miyagi first met him at Branko's home. When Klausen said, "I've known about you for several years," Miyagi connected this statement with Sorge's talk of radio messages and deduced that Klausen was the wireless operator. It seems that Sorge did not inform any of his associates, aside from Klausen who knew and perhaps De Voukelitch, that they were working for the Red army. Miyagi never knew exactly where the information went. At first he thought the group was connected with the Comintern's intelligence bureau. After Sorge began to stress the gathering of military information he guessed they were working for the Red army, too, but he never asked. Sorge offered to pay all of Miyagi's expenses but Miyagi refused. He had brought savings of $3,000 from the United States and believed he could make a living selling his paintings. He only took money from Sorge to pay subsidiary agents working under him.

Personally and through his subagents, Miyagi collected information from common gossip, the press, the Official Gazette (Kampo) and magazines. A large share of his gossip and military information came from Taguchi Ugenda and Corp. Koshiro Yoshinobu respectively. He made his general reports verbally, but those on specific subjects, such as the possibilities of attack on Russia, he presented in written Japanese. When a report seemed especially important he had it

put into English before submitting it to Sorge.

1. Ozaki, Miyagi, and colleagues: While Miyagi had been assigned to Sorge as his chief Japanese agent, it was soon apparent to Sorge that Miyagi had no opportunity to make those contacts in high places which were essential for the success of the mission. In a country as carefully guarded against foreign investigation as prewar Japan, even low-level informants were useful. But Sorge needed someone to function at a level with the Japanese Government analogous to his own operations with the Germans. Quite naturally he thought of Ozaki Hozumi for whom he had respect and admiration, and he sent Miyagi to recruit him. Presumably, Sorge did not take this step without receiving the previous permission of the Fourth bureau.

A stranger calling himself Minami Ryuichi, who later revealed himself as Miyagi, called on Ozaki at the Osaka Asahi offices in the early summer of 1934. Minami said that an old friend from Shanghai wanted to meet him again. Ozaki was nervous at conversing with a man who made such disturbing allusions in the crowded Asahi offices, and so invited Minami to dinner at a Chinese restaurant that evening. At dinner Minami revealed that the friend was Johnson, and arranged for the two to meet casually at the deer park in Nara on the following Sunday. In this open place, where conversations were unlikely to be overhead, Sorge explained that the Russians had first centered their activity in Shanghai after the Chinese Nationalist Revolution. After 1931, when Japan invaded Manchuria, however, the Russians considered Japan more important than China. Therefore, Sorge had been transferred to Tokyo and he asked Ozaki's help. Ozaki agreed at once, just as he had earlier in Shanghai.

Ozaki had only a vague idea of Sorge's organization over the years. He knew Miyagi, of course, and from him heard that the group had a radio operator and a photographer. He once met the radio operator at Sorge's home, but only knew him under the nickname Miyagi had given him: Debuko (Fatty). He never met the photographer, de Voukelitch. Later another member of the gang, Guenther Stein, whose activities have not yet been described, met Ozaki as Sorge's deputy. Ozaki and Stein met about four times before the latter left Japan for good in 1938. Ozaki had known Mizuno Shige, Kawai Teikichi, and Funakoshi Hisao from China days, and he himself added some minor figures to the group.

Between them, Miyagi and Ozaki drew in 10 lesser Japanese colleagues either by appealing to their Communist sympathies or by offering financial support. They acted with great caution in selecting candidates. That their judgments of character were sound is proved by the complete security in which the ring operated over the years.

3. THE OUTER RING

While Sorge was in Japan he received specific instruction on intelligence targets. He received his general instructions, however, before he left for Moscow in August 1933, and while he was in Moscow again for 20 days in 1935. The subsequent outbreak of the European war changed the specific but not the general questions. Overriding all was the problem of whether Japan planned to attack the Soviet Union, and if so what were her capabilities. The following eight points, derived from Sorge's replies to his interrogation, cover these targets:

1. Japan's policy relative to the U. S. S. R. following the invasion of Manchuria. Did Japan intend to attack the U. S. S. R.? After 1939 this target became overriding.

2. Organization, armament, order of battle of the Japanese Army and air force, with special attention to military preparations in Manchuria.

3. Japanese-German relations. The Soviet Government early estimated that close German-Japanese relations were inevitable, to the detriment of the Soviet Union. Increasingly after the signature of the anti-Comintern pact heavy emphasis was placed on this question.

4. Japan's policy and activity in China.

5. The development of Japan's relations and policies toward the United States and Great Britain. Before the Manchurian incident the Soviets seemed to have estimated that Japan might attack the U. S. S. R. with support from the United States and Great Britain. Subsequently this question became closely related to Japan's capabilities for attack on the U. S. S. R. as related to her war in China and her program of southward advance.

6. Detailed observation of the role played by the Japanese Army in political affairs, since the Soviets estimated that foundamental foreign policy would be based on army decisions.

7. Systematic observation of the operations and growth of Japanese heavy industry, as well as its branches in Manchuria.

As will be told Sorge amassed an amazing amount of material on these questions, and at the most critical time was able to inform his superiors that Japan did not intend to attack the U. S. S. R. but instead would move south. He served, however, as a high level evaluater of information, not merely as a transmitter of undigested facts submitted to him by his agents. After gathering together facts, opinions and estimates from a wide range of sources, the German Embassy, the British Embassy, and the American and French Embassies and the Dutch Legation, the Japanese War Ministry, the Imperial Cabinet, common household gossip, the press and magazines, Sorge sorted them out. Often he asked the opinions of Ozaki and Miyagi. Having come to a conclusion, usually he would test it by conversations with the German Ambassador, a major general, and the military, air and naval attachés of the Embassy. He had a high respect for their judgments since they were professional soldiers charged with evaluating just such information for the guidance of the German government.

Meanwhile, De Voukelitch would be discussing the same problems with his newspaper friends who had access to the American, French and British Embassies, who were well informed themselves and who could often get a semiofficial view from their diplomatic contacts. Only after he had milked dry every source, had weighed and counter checked did Sorge write his careful dispatches to Moscow. Some of these he sent out over his radio circuit, some on microfilm by courier to Shanghai, some to the Soviet Embassy.

(a) Precautions used by Sorge ring: Sorge limited his own contacts in the ring to de Voukelitch, Ozaki, Miyagi, the radio operator, who was Max Klausen after 1935, and from the period 195 to 1938 to Guenther Stein. He met these people frequently at restaurants and bars like the Rheingold, the Fledermaus and Lohmeryer's, or at his own home. For years these meetings could be held naturally since three of the group were journalists with common professional interests.

It was only after 1940 when police surveillance became more rigid that Sorge began meeting the men secretly. When they met at Sorge's home the members of the ring had to adopt the usual practices of changes of cabs at distant addresses, while Sorge manipulated his porch light as an all-clear signal.

Klausen met de Voukelitch mostly at the latter's home, but sometimes at Japanese restaurants where they pretended that the meetings were accidental. They carried films, messages or money in nearly empty cigarette packages. The receiver would ask for a smoke. Thereupon, the other would offer his packet containing the films. When de Voukelitch returned the pack after taking a cigarette, Klausen would say, "Keep it. I've more." It was all very natural and easy.

Some of the precautions observed by the group, chiefly relating to the radio, were tabulated by Klausen as follows:

1. All members must have a rational occupation as cover.

2. Members must have no traffic with Japanese Communists or Communist sympathizers.

3. The radio cipher must be altered by the use of different scramble numbers with each sending.

4. The transmitter must be dismantled, packed in a case and moved after each operation.

5. Messages must be sent from different locations, never from any one house over a long period.

6. Liaison with Moscow men must be carried out in the utmost secrecy with no mention of names on either side.

7. Each member must have a cover name. Real names must never be mentioned in radios or conversations.

8. Place names must be disguised in code, such as Wiesbader for Vladivostok and Munchen for Moscow.

9. Documents must be destroyed immediately after they have served their purpose.

10. Never under any circumstances must a Russian be admitted to the circle.

1. Ozaki's technique: Similarly, Ozaki discussed his technique and listed the following nine precepts as a guide for any intelligence agent:

"1. Never give the impression that you are eager to obtain news. Men who are engaged in important affairs will refuse to talk to you if they suspect that your motive is to collect information.

"2. If you give the impression that you have more information than your prospective informant he will give with a smile.

"3. Informal dinner parties are an excellent setting for the gathering of news.

"4. It is convenient to be a specialist of some kind. For my part, I am a specialist on Chinese questions, and have always received inquiries from all quarters. I was able to gather much data from men who came to ask me questions.

"5. My position as a writer for newspapers and magazines stood me in good stead.

"6. Because I was often asked to lecture in all parts of Japan I had an excellent chance to learn general trends of local opinion.

"7. Connections with important organizations engaged in the collection of news are vital. I was affiliated with the Asahi Shimbun and later with the South Manchuria Railway.

"8. Above all, you must cultivate trust and confidence in you on the part of those you are using as informants in order to be able to pump them without seeming unnatural.

"9. In these days of unrest you cannot be a good intelligence man unless you yourself are a good source of information. You can achieve this only after constant study and wide experience."

(b) Klausen comes to Japan: Sorge early decided that "Bernhardt" was not suitable for the delicate Japan assignment. In the summer of 1935 he went to Europe, nominally to renew his contract with the Frankfurter Zeitung, but actually to attend the Comintern congress of that year in Moscow, to report to his superiors and to receive their instructions.

He went to New York on his regular German passport, but while there a man called at his hotel room with a new passport already visaed for the U. S. S. R. Sorge went directly to Moscow; it is not clear whether he went to Berlin at all, but presumably he must have gone to maintain his cover. In

Moscow he interviewed his associate of China days, Max Klausen, and selected him to replace the disgraced Bernhardt. Sorge then returned to Japan, one story says by air on the first junkers flight from Germany to Tokyo.

Max Klausen, the radio operator, received his travel orders in July 1935 from the Chief of the Fourth Bureau, General Olitsky, and from the Chief of the Far Eastern section of the Fourth Bureau, "Kalin." In September he bade farewell to Ann, who was to meet him later and started out with three passports in different names, one Italian, one Canadian, and one his own German passport. These changes of identity seem to have been intended to escape the interest of counterintelligence agents while he was traveling in Europe. Klausen described this part of his trip as follows:

"There are hundreds of passports of different countries at headquarters. All are genuine because they have been duly purchased by the Soviet Government from their rightful owners. Only the names and photographs are false. Before my departure I received instructions as to the use of the passports and was given $1,800 in United States currency. I proceeded to Le Havre via Leningrad, Helsinki, and Stockholm. At the Swedish capital I purchased an American seaman's certificate and set out for New York aboard the *Boston*. Upon my arrival I had my own German passport renewed at the German consulate and booked in at the Hotel Lincoln because I had been instructed to do so. There I received a call from a man who said his name was Jones. Jones asked me if I needed money. I refused the offer. I did not discover whether he was a member of the Soviet Embassy or a member of an intelligence group."

Klausen arrived in Yokohama aboard the *Tatsuta Maru* on November 28, 1935. He had intended to continue to Shanghai, where he expected to meet Anna, marry her and bring her to Japan. He was short of funds, however, and had to postpone that trip.

Anna had a very frightening time in Russia before she managed to get to Shanghai, but her experiences do not affect the main Sorge story. It was not until July 1936 that Max was able to meet her in Shanghai, give marriage notice at the German consulate, and then return in August to marry her. He took Anna back to Tokyo, where she served as a minor and somewhat unwilling member of the ring.

1. Klausen establishes cover: Before their separate departures from Moscow, Sorge and Klausen had arranged to meet on Tuesday evenings at the Blue Ribbon Bar near Sukiyabashi, Tokyo. On the day after Max got to town, however, they chanced to meet at the German Club. Naturally, they passed this off as their first introduction, but were spared any further pretense of not knowing each other. Klausen replaced Bruno Vendt and settled down to making himself a cover.

At first Klausen tried to set up an export-import business, but this failed. Then he established the firm of M. Klausen Shokai (M. Klausen & Co.), with offices in the Karasumori building, Shiba-ku, Tokyo. M. Klausen Shokai made and sold printing presses for blueprints, as well as fluorescent plates, and almost immediately began to make money. Among their customers were such firms as Mitsubishi, Mitsui, Nakajima, and Hitachi, as well as munition factories, the Japanese Army, and the Japanese Navy. While Klausen was manufacturing machinery from the Army's blueprints, Sorge was getting the finished blueprints of the Imperial Government. By February 1941, Klausen had done so well that he reorganized his firm as a joint stock company capitalized at Y100,000, of which he contributed Y85,000. He even established a branch at Mukden, with a working capital of Y20,000. In fact, Klausen was doing so well, and making so much money, that his earlier convictions of the perfection of communism were shaken, especially as Anna was always poking fun at his dreams of pie in the sky when she wanted fur coats now. But in the meantime his business not only was a personal cover but also a perfect cover for the financial transactions of the ring. He bought and sold abroad, and there was nothing irregular in his reception of drafts from New York or San Francisco or Shanghai for his bank account.

(c) Guenther Stein, British journalist: Guenther Stein, a member of the ring, is a man about whom too little is known. Stein was a German Jew who seems to have become a British citizen. There is a possibility that now he is an American. He represented the Berlin Tageblatt as a correspondent for a time, but in 1936 came to Japan as correspondent for the British Financial News. His specialty was economic and financial affairs, and his small book, Made in Japan, often is used as an authoritative source of prewar Japanese commerce and industry. During World War II Stein was a war correspondent in China based in Chungking. Late in 1944 he was one of a group of six who visited Yenan, and one of two correspondents whose accounts of Communist China were published as books. His Challenge of Red China, McGraw-Hill, 1945, has the outward appearance of the thoughtful reporting of a serious, objective analyst who is neither pro nor anti-Communist, but who only wants to discover the underlying truth. His book has had a great deal of effect in perpetuating the legend that Chinese Communists aren't Communists and aren't in any way connected with the Soviet Union, a legend started and kept alive so much earlier by Agnes Smedley. Like Miss Smedley, Guenther Stein was a Soviet agent, and one can be certain that neither of them was publishing the truth about Chinese Communists.

Because he was no longer in Japan when they arrested the members of the Sorge ring, the Japanese police didn't go very deeply into Stein's antecedents and complicity. That he was a top level member of the ring is clear, but we do not know how he got into it. Klausen suggested that Sorge recruited Stein after he arrived in Japan, but the speed with which Stein put his home at Klausen's disposal as a radio station makes it likely that he was a party to Soviet espionage before he met Sorge in Japan. We know also that Stein made at least one courier run to Hongkong in 1937, and that sometimes he served as Sorge's deputy in dealing with Ozaki.

Guenther Stein had a woman friend, a Swiss correspondent, Margit Gatenberg, whom he married in Hongkong in July 1938. Sorge testified that "because she was a friend of Guenther Stein we did things for her, and indirectly she did things in favor of our work." It appears that she supplied information to Stein, who passed it on to Sorge, but she seems to have acted knowingly. Sorge went on to testify (when) "she stopped at Yokohama on her way to Hongkong to marry Guenther Stein" (I had de Voukelitch meet her at the ship), "although I don't remember the details. I believe it was because I didn't want to talk to her myself * * * I did meet her just for a moment (however) at a foreign office banquet held at the New Grand."

1. Stein transferred to China: After Stein left Japan for good in 1938 Sorge was ordered to have no further contact with him. Consequently, although both men were in Hongkong in 1939, when Sorge was on a courier run, they didn't meet. As Sorge said, "I didn't meet him, although I had heard from other correspondents that he was in the city."

While this could mean that Stein had broken from his Soviet connections, such is an unlikely interpretation. Sorge and Ozaki were ordered to have nothing further to do with Miss Smedley too, after they were working in Japan, although Agnes was heading a Soviet espionage ring in Peiping and was working as faithfully as ever for the cause. The chances are that since Stein's work took him away from Japan he was separated from further connection with the ring in Tokyo, as a security measure, but that he continued to help the cause in Hongkong and every other place that he moved. Whether his romance with Margit, compounded of journalism and espionage, developed into a lasting marriage is not known.

4. THE JAPANESE AGENTS

Sorge had rings within a ring. The outer ring consisted of the principals; Sorge, Ozaki, de Voukelitch, Miyagi, Stein, and Klausen. Sometimes Sorge dealt directly with each of these men, although often he dealt with one through another. He was trying, of course, to reduce the number of contacts to reduce the risks. For example, on at least four occasions he dealt with Ozaki through Stein. and similarly he dealt with Stein through de Voukelitch and with de Voukelitch through Stein. On occasion his contact with Miyagi was through Ozaki and on occasion this contact was reversed and he dealt with Ozaki through Miyagi. Although he knew her, Sorge seems not to have dealt directly with Stein's friend, Margit Gatenberg, but instead she funneled her probably modest bits of information to Sorge through Stein. Similarly, Anna Klausen received her orders through her husband, and Edith de Voukelitch was dealt with through her husband, Branko.

Within this outer ring were two lesser rings, one maintained by Ozaki and one by Miyagi. The members were not entirely unknown to each other, but where possible they were kept separate. This was the strictly Japanese part of the Sorge ring at the popular level, as contrasted with Ozaki's high-level contacts in the Government. Ozaki and Miyagi met each other easily, since Mrs. Ozaki, who never once suspected her husband, wanted their daughter to receive painting lessons. Every Sunday Miyagi called at Ozaki's house to instruct this daughter in the gentle art of color. Most naturally the growing friendship between her husband and this artist, and his frequent social calls were nothing to arouse the suspicion of Mrs. Ozaki or of anyone else.

(a) Lesser rings of Ozaki and Miyagi: The Japanese in Ozaki's ring were: Funakoshi Hisao, member of the China Research Institute; Kawamura Yoshio, of the Manchurian Daily News; Kawai Teikichi, former China correspondent, member of the China Research Institute, and latterly employed by the Japan Reclaimed Paper Co., Ltd.; and Mizuno Shige, formerly a student in Shanghai and employed in Kyoto.

Those in Miyagi's little ring were: Kitabayashi Tomo, a Seventh Day Adventist and teacher in a sewing school; Koshiro Yoshinobu, a soldier; Dr. Yasuda Tokutaro, physician; Taguchi Ugenda, having minor contacts at the War Ministry; Yamana Masazane, expert on agricultural affairs; Kuzumi Fusako, employed by the Social Mass Party (Shakai Taishuto) but with access to the Cabinet Information Bureau; and Akiyama Koji, who worked as a translator, for pay, and not for the cause. In addition, both Ozaki and Miyagi had many friends and contacts whom they exploited, but none of these belonged to the ring.

While perhaps none of these people were essential to the success of Sorge's mission of discovering Japan's war plans, they did help a very great deal. What they learned was screened through either Miyagi or Ozaki, and subsequently assessed by Sorge in his conversations with experts at the German Embassy. To see the Sorge case in its fullest ramifications it is necessary to know of these

lesser spies, to understand who they were and why they turned traitor.

There is a thread common to most of their lives: residence abroad. The exaggerated claims of Japanese militarists as to their benign conduct in China could not be concealed from Japanese who lived there or from others who live in America and read the papers. These people were both antimilitarist and pro-Communist; they seem to have believed that the one was a corollary of the other. The readiness of these Japanese subjects to commit treason may surprise those who have believed that the Japanese people possessed a unique and fanatical patriotism which permeated the whole nation. Since in the famous Canadian spy case presumably loyal Canadian and English citizens as simply and as readily agreed to betray their countries on behalf of the Soviet Union, no parallel can be drawn between the repressions of militaristic Japan and the freedoms of democratic Canada and England as breeding grounds for disloyalty. The common mind of the Japanese, Canadian, and English traitors, however, was a fanatical faith in the perfection of life and intention in the Soviet Union.

The following is a description of the lesser individuals of the Ozaki and Miyagi rings within the Sorge ring.

(b) Funakoshi Hisao, China operator: Funakoshi Hisao, who served as a China representative of Dr. Sorge until his arrest in 1942, was a newspaper reporter. He had been born in Okayama Prefecture in 1901, and left Waseda University in 1925 without graduating to go to Tsingtao. By March 1927, he had reached Shanghai as a reporter for the Shanghai Mainichi, but soon joined the staff of the news agency known as Rengo Tsushinsha, becoming manager of their Hankow and Tientsin branches successively. For 2 years, from 1935 to 1937, he represented the Yomiuri Shimbun in Tientsin. From 1938 to 1941 he was an unofficial adviser to the headquarters of the Japanese Army at Hankow. Obviously, such a man was in an excellent position to get information on Japanese order of battle, troop movements, intentions and capabilities in China.

Funakoshi became interested in communism in Shanghai, where he was a member of Ozaki's discussion group in 1929. Note again the parallel to the later Canadian study groups. In 1930 he joined the secret Communism Research Society (Kyosan Shugi Kenkyu Kai) of which Kawai Teikichi was a fellow member. In March 1932, Kawai asked him to replace a Yamagami Masayoshi as liaison man between Japanese groups and a Soviet spy ring. Funakoshi seems readily to have accepted this invitation, so Kawai introduced him to Dr. Richard Sorge and Miss Agnes Smedley, who were then active in Shanghai espionage. For the next 6 months Kawai met Sorge every 5 days to pass on the information he had collected. When Sorge was recalled he introduced Funakoshi to "Paul" to whom this Japanese reported regularly till his transfer to Hankow in February 1933. From Hankow Funakoshi continued to supply information on the Japanese Army, through another Japanese, Nozawa Fusaji. In November 1936, Funakoshi established the China Problems Investigation Institute (Shina Mondai Kemkyo Jo) to which such Soviet agents as Nakanishi Ko, now a member of the House of Councillors, and Osaki Shotaro made monthly reports. The Japanese police learned of Funakoshi from members of the Sorge ring. They arrested him in Peiping on January 4, 1942, where he was still operating his China Problems Investigation Institute. Sentenced to 10 years' imprisonment after trial in Tokyo. Funakoshi died in jail on February 27, 1945.

(c) Kawai Teikichi, China adventurer: Kawai Teikichi, who had introduced Funakoshi to Dr. Sorge, was born in 1900 and was graduated from Meiji University in 1925. He constantly moved from job to job, never holding any one very long. In March 1928, he went to China, where he managed to hang on as a reporter for the Shanghai Weekly from 1930 to 1932. He ran a book shop in Tientsin for a time in 1933, but then started on his round of jobs again. For a time in 1939 he was employed by an Army intelligence agency, the Osako special duty organ (Osako Tokumu Kikan). He returned to Japan in 1940, where Ozaki got him a job with the Japan Reclaimed Paper Co., Ltd. (Dia Nippon Saiseishi KK).

Kawai became a Communist at Shanghai in 1928. He joined the Leftist Literary Society (Sayoku Bunkensho Kai) whose members coincidentally were chiefly members of the Communism Research Society (Kyosan Shugi Kenkyo Kai). In this group among others he came to know Komatsu Shigeo, Hidaka Tameo, Tejima Hiroo, Funkakoshi Hisao and Mizuno Shige. The last two men worked in the Sorge ring until the end.

When Kawai joined these men in forming the Sino-Japanese struggle group (Nishi Toso Domei), very naturally he came under the suspicion of Japanese police agents at Shanghai. Kawai moved to Peiping until the heat was off. He was back in Shanghai in 1931, and while working in a second-hand book store he received instruction on the proper collection and assessment of military and political information from Mizuno Shige, Hadaka Tameo, Tejima Hiroo, and Sakamaki Takashi. In October 1931 he met Ozaki, who introduced him to Sorge and Miss Smedley, who soon added him to their group. Sorge sent him to Manchuria which the Japanese Army had just invaded, to gather military information. From this time Kawai was very active in North China and Manchuria, living variously in Harbin, Mukden, Peiping, and Tientsin, and passing a great stream of information to Sorge, to his successor Paul, to Ozaki and to Ozaki's successor, Funakoshi Hisao, at Shanghai and to Miss Smedley in Peiping. For a time he worked closely with Chinese spies.

Kawai returned to Tokyo on a trip in 1934 and saw Ozaki, who seems to have become his idol. Since Kawai's connections with the Chinese spies had ended and he had no known connections with Communists, Ozaki felt he could be sent back to Tientsin safely. He returned to Tokyo again in 1935, however, and worked for Miyagi for a time before being sent back to China. His final homecoming was in 1940.

When he was in Japan, Kawai was chiefly useful as a source on Japanese nationalist movements, having had such connections himself as a young man. He was much more useful in China.

Miyagi's judgment of Kawai is interesting. He told the procurator, "Kawai was introduced to me by Ozaki. He was a China adventurer (Shina Ronin). Whenever he was short of money he ran to Ozaki, who gave him cash * * * because of Ozaki's important position and the high caliber of the men who called on him, I thought it might embarrass Ozaki to have Kawai dropping into his office. After consulting Sorge, I suggested that henceforth I look after Kawai. Sorge approved and told me to train the man to work for me. I gave him ¥60 and ¥100 every month. By May 1940 I had discovered that Kawai had no firm convictions, so I sent him back to Ozaki.

"I could not trust Kawai fully because the standard of his comprehension of communism was low and because his private life was scandalous. He seemed to admire Ozaki tremendously, however. * * * I made many attempts to find him a job, but the man hated work. In the end Ozaki placed him in the paper company in May 1941."

Kawai was arrested on October 22, 1941. He was sentenced to 10 years' imprisonment, but was released on October 10, 1945, and now is at large.

(d) Mizuno Shige, high-caliber lesser spy: A higher-caliber man among these lesser spies was Mizuno Shige, who was born in 1909. After graduating from middle school in Kyoto, he entered the East Asia Common Script School (Toa Dobun Shoin) in Shanghai in 1929. Almost immediately he became involved in Communist groups. By October 1930, he had helped set up a cell of the Chinese Communist Party at the school and took a leading part in a student strike. In December he was detained for 10 days by the Japanese consular police for distributing pacifist handbills to some Japanese naval cadets, and in January 1931, he was expelled from the school.

The Sorge group must have been keeping a watchful eye on all potential Japanese Communist agents. Mizuno met Ozaki in October 1930 and the next April was introduced to Kito Ginichi, the Japanese Communist from America, by a Formosan Communist. Kito sounded him out and seems to have been satisfied, for in May 1931, Kito introduced Mizuno to Dr. Richard Sorge. Soon thereafter, Mizuno was gathering military and political information for the Sorge ring. His work was sharply interrupted, however, when he was arrested in August 1931 by the Shanghai police and handed over to the Japanese consulate. He was deported to Japan, not for espionage but for Communist agitation at his school, where he had been active even after his expulsion.

In Japan, Mizuno was employed by the Ohara Social Problems Research Institute (Ohara Shakai Mondai Kenkyo), possibly a Communist cover organization. He renewed his friendship with Ozaki there after Ozaki returned to the Asahi. He was arrested again in 1936, charged with taking part in the attempted reconstruction of Japanese Communist Party. Apparently the police didn't have much of a case against him, for he soon was out, went to Tokyo and got a job with the Oriental Society (Toyo Kyokai). In Tokyo he teamed up again with Ozaki, who introduced him to Sorge in January 1937 and to Miyagi in July. Thereafter he worked continuously for the Sorge ring, gathering news on social and political questions in general and on the Kyoto region in particular. His subsequent employment in the Showa Study Society (Showa Kenkyu Kai) from 1938 to 1939, and his part in the compilation of a yearbook for the Great Japan Youth Association (Dai Nippon Seinen Dan) assisted him in his work for Sorge. In connection with his job he was able to write lengthy reports on the Great Japan Youth Party, the Black Dragon Society, and the reorganization of the old-line political parties in 1940. He it was who reported on the equipment and movements of the Sixteenth Division in July 1939, and One Hundred and Sixteenth Division in August 1940.

Miyagi had this to say of Mizuno:

"I never gave him any money. He was more closely connected with Ozaki, and he had a regular job. If he ran short of money, I think Ozaki helped him out. I wanted to use him for more important work; in fact, I wanted him to take my place in Tokyo in order that I might travel about the country. Sorge and Ozaki, however, did not approve of the idea, so nothing came of it."

Mizuno was arrested on October 17, 1941. He was given a prison sentence of 13 years. He died in Miyagi Prison on March 22, 1945.

(e) Koshiro Yoshinobu, soldier turned traitor: Koshiro Yoshinobu was a soldier, a corporal, the only military man in Sorge's ring. In a country like Japan even a corporal could discover a great deal which is unknown to civilians.

Koshiro was born in 1909, graduated from Meiji University in 1935, and spent most of the rest of his free life in the army. He was drafted in March 1936 and sent to Manchuria. After the outbreak of the China war, in July 1937, his unit was sent to the north China

front and fought at Suiyuan. He made corporal in November 1938 and was returned to civil life as a reservist. Almost immediately, however, he was called up again, was sent to Manchuria and then to Korea, but was back in the inactive reserves in March 1939. He had time enough to get a job in a paper shop, to marry and father a child before he was called up again in July 1941, when he was sent to south China. He was still on duty in China with his unit when he was arrested on April 11, 1942. He was given a dishonorable discharge in January 1943, in order that he might be tried in a civil court. The verdict of that court was 15 years' imprisonment. The court was cheated by the defeat of Japan, and Koshiro was released by order of the conquering Americans on October 8, 1945.

Koshiro became interested in communism while a student at Meiji University through the influence of a neighbor named Kiotake Yasumasa. Years later, in May 1939, while Koshiro was between wars, this neighbor introduced him to Miyagi. (The failure of the Japanese police to arrest Kiotake in 1941–42 seems to indicate that he was dead and so unavailable for questioning.)

1. Treason without hesitation: Miyagi told Koshiro that he was an agent of the Comintern, and asked the reservist to supply information on military affairs and troop movements through his army connections. Koshiro seems to have agreed at once and with no hesitation to commit this treason. Between May 1939 and July 1941, during his short period of civilian life, Koshiro supplied Miyagi with information on the Nomohan battle, the defense plans for Manchukuo, the distribution and equipment of troops and the quality of various weapons. He also secured classified manuals of the Japanese infantry, engineers, and air force as well as other military publications. Miyagi developed such confidence in him that he recommended him to Sorge for designation as a Soviet agent. Sorge approved and transmitted his curriculum vitae to Moscow for consideration.

Miyagi's account of Koshiro gives a clear picture of the treason of this Japanese soldier. He said:

"Koshiro Yoshinobu required no financial help because he lived with his father. I met him in the spring of 1939 after he had been discharged from the army. He impressed me as frank and straighforward, yet reserved. I thought he would become a good helper after training and consulted Sorge as to his future. Sorge agreed to give him about ¥100 a month if he were willing to work for us.

"In May 1939, when Koshiro came to see me, I said, 'If a war should break out between Russia and Japan it would mean a great sacrifice not only on the part of the farmers and laborers of both countries, but also on the part of the whole Japanese people. To avoid such a tragedy that is to say a Russo-Japanese war, I am sending various data on the situation in Japan to the Comintern.' I asked Koshiro if he would help me by telling what he knew about the army and by obtaining military information from his friends. I told him that he would be paid. Koshiro did not say clearly whether he would help; he only smiled and replied that he did not know many secret matters. He declared that I did not have to worry about money because he had savings.

"From that time Koshiro began to tell me things, and I gave him about ¥50 a month. When he took trips for me I paid him more. I intended to train him for a couple of years and then make him an independent member of our group. Meanwhile, I thought it would be convenient to have him employed in some office where he would have access to military information. I thought the War Ministry; if possible the Mobilization Bureau, would be a good place, but before I could arrange it he found a job at the Hakushin Sha through a friend of his father's.

"Of course, I consulted Sorge about my plans, introduced Koshiro to him, and had the boy's curriculum vitae sent to Moscow. To let the headquarters be informed of his share in our business, I always mentioned his name in reporting information which came from him. We called him Miki as a cover name. He was an eldest son, however, with both parents living. Moreover, he married soon after his discharge, and later a baby was born. All of these circumstances made him unsuitable for intelligence work, so I had to change my mind."

(f) Kuzumi Fusako, female Communist: Kuzumi Fusako was one of the two women in the ring in Japan, although there had been several women in China. This woman, born in 1888 in Okayama prefecture and graduated from a girl's high school in 1912, was the divorced wife of a Christian minister and the mother of two daughters. After her divorce in 1920 she became associated with various left wingers and Communists centering around Waseda University, in Tokyo. By August 1921, she became the common-law wife of a leading Communist, Mitamura Shiro, and active in the Communist labor movement. She joined the party in November 1927, and became a member of the Hokkaido District Committee.

Mrs. Kuzumi was in prison from April 1929 until June 1934, along with other Communist leaders. Just before her release she read in the papers of the recantations of several prominent Communists, including that of her husband, Mitamura, so she did likewise. Subsequently, however, she backslid into the Communist movement and was mentally prepared when she met Miyagi in March 1936. Miyagi confided that he was a Comintern agent, and asked for her help. She began to collect information on the February 26, 1936, incident, the Social Mass Party (Shakai Taishuto), the all-Japan Federation of Labor (Zen Nippon Rodo Sodomei), the great Japan Youth Party (Dai Nippon Seinen To) and similar subjects.

Kuzumi Fusako was arrested on October 13, 1941, and received a sentence of 8 years at hard labor. She was released by the Americans on October 8, 1945.

(g) Kitabayashi Tomo, the weak link: Mrs. Kitabayashi was the other woman in this case. She had been Miyagi's friend since his early days in Los Angeles, where she had gone with her husband, Yoshisaburo, in 1920. She had added to her income in Los Angeles by teaching dressmaking, and later found this a useful device for picking up gossip in Tokyo. Mrs. Kitabayashi had joined the Proletarian Art Society in Los Angeles in 1931, along with Miyagi, and soon was persuaded to join the Japanese group of the thirteenth branch of the American Communist Party. Tomo had another type of conversion in 1933, when she joined the Women's Christian Temperance Union and seemingly the Seventh Day Adventist Church. She continued to be friendly with Miyagi, however, and saw him in Tokyo soon after her return alone in 1936. She taught dressmaking in the Los Angeles Seamstress' School in Tokyo until her husband Yoshisaburo, came back to Japan, when she joined him at Kokawa, Wakayama prefecture, in December 1939.

When Miyagi asked her to collect information in April 1938, although she suspected that he was a Comintern agent, she agreed. Her gossip from the sewing classes and the Seventh Day Adventist Church, which she attended, could not have been very important for Dr. Sorge. It seems strange that Miyagi risked disclosing himself to her. Of course, he had known her well in America, and had lived at her home for several years. As it turned out, it was this risk which undid the whole conspiracy. After Ito Ritsu, of the Japan Communist Party accused Mrs. Kitabayashi of being a Communist and a spy, they arrested her and her husband on September 28, 1941. She was the weak link which broke the strong chain and led to the hanging of Sorge and Ozaki.

Yoshisaburo was found innocent, but Tomo was convicted and sentenced to 5 years in prison. She was released, with reduction of time for good behavior, at the end of her term, but has died since the end of the war.

(h) Akiyama Koji, the only mercenary: Akiyama Koji was the only member of the ring who didn't work for love of the cause. According to Miyagi, Akiyama had little interest in causes, and less interest in Miyagi's use of his work. So long as Miyagi kept paying him a modest 60–100 yen a month Akiyama asked no questions and translated into English anything that Miyagi gave him.

Akiyama was born in 1889, and after finishing a middle school in Kanda ward, Tokyo, he taught in a primary school. In 1914 he entered Rikkyo University, but before graduating went to America as an employee of an export firm. In Los Angeles he attended night classes at a high school, at the Los Angeles Polytechnic School, and the California Business College, where he was graduated in 1923. For the next 10 years, until his return to Japan in 1933, he worked in a book shop.

Back in Tokyo, Akiyama had trouble getting a job till he met Miyagi whom he'd known in America. Miyagi offered him a job translating documents into English, which he gladly undertook. He didn't suspect that Miyagi might be passing on these translations to a foreigner until 1938 or 1939, but he wasn't upset then. After all he had to eat, so he kept the job.

Miyagi commented on Akiyama:

"Akiyama was not a suitable kind of man for intelligence work. I never intended to draw him into our group, but I found him useful, for he was ready at hand to translate anything I gave him. He was not interested in social problems, however. I consulted Ozaki in 1939 in hope of obtaining a special translator, but we could not find a satisfactory man. Therefore, I continued to use Akiyama.

"Of course, Akiyama knew I was a Communist, but he never fully understood how secret or important my work was * * *."

Akiyama was arrested on October 13, 1941, and was sentenced to 7 years in prison. He was released on October 10, 1945.

(i) Yasuda Tokutaro, medical informant; Yasuda Tokutaro, a physician, was born in 1897, and was graduated from the medical school of Kyoto Imperial University. While still a medical student he was introduced to Marxian literature by a professor of the university, Kawakami Hajime. He received his M. D. in 1930.

Dr. Yasuda was stimulated leftward by a cousin who raised him, Yamamoto Senji (a labor leader, who was assassinated in 1929), by this Professor Kawakami and by Mrs. Kuzumi Fusako. He first became active in the Communist movement when he joined the Proletarian Scientific Research Institute (Puroretaria Kagaku Kenkyo Jo) and other Communist-front organizations.

Miyagi Yotoku called on Dr. Yasuda in January 1935 as a patient. In March of the next year Kuzumi Fusako told Dr. Yasuda that Miyagi was a Comintern agent, so that when Miyagi asked his help in September 1937, the doctor was quite ready to answer his questions. He was able to contribute information chiefly on the state of medical supplies and gossip on troop movements picked up from his patients.

Dr. Yasuda was arrested on June 8, 1942. He was sentenced to 2 years imprisonment but was given a 5-year suspension of execution. After the war he ran for the lower house of the diet from Kyoto, on the Communist ticket, unsuccessfully, and at this writing is living in Tokyo and reminiscing

of the great days when he was a member of the Sorge-Ozaki ring.

(j) Kawamura Yoshio, Shanghai contact: The only member of the ring about whom almost nothing is known is Kawamura Yoshio. This man, the chief of the Shanghai office of the Manshu Nichi Nichi (Manchuria Daily News), was Ozaki's Shanghai agent. Kawamura was arrested on March 31, 1942, and brought to Tokyo for trial. It was established that Kawamura, then age 32, had been accepted by Sorge as a member of the ring. He was able to supply information on Manchuria because of his job. Unfortunately, however, Kawamura died in jail soon after his arrest, and it was not possible to develop his case with the thoroughness of the others.

(k) Yamana Masazane, agrarian expert: The ring's agrarian contact was Yamana Masazane, son of a Hokkaido farmer. Born in 1902, his formal education ended with primary school. He became a member of the Hokkaido League (Hokkaido Rengo Kai) of the Japan Farmer's Union (Nippon Nomin Kumiai) from which he developed a lifelong interest in agrarian movements. For a time he worked in Manchuria. Through acquaintance with Communist Party leaders, including the present Secretary General Tokuda Kyuichi, he became a Communist and joined the party in November 1927. After being arrested on March 15, 1928, he was sentenced to 5 years' hard labor for violation of the peace preservation law. He joined Kuzumi Fusako after his release from prison, and through her met Miyagi in March 1936. At Miyagi's request he agreed to gather information on rural and agrarian questions. Miyagi describes him as follows:

"Yamana had served a sentence for participating in some Communist affair. He was introduced to me by Kuzumi Fusako soon after he came down from Hokkaido. She asked me to help him find a job. I did not intend to use him in connection with our group except to learn something about Japan's agrarian problems, but after he became connected with the Current Politics Society (Jisei Kai) and began to bring me news about political and economic affairs I started to make use of him. * * * I began to pay him about ¥60 a month, from the spring of 1936 until the beginning of 1938. When he made trips * * * I paid his expenses.

"I tried to find Yamana a regular job but was unsuccessful. He never told me where or how he lived. We met either at my boarding house or at some restaurant in Tokyo. Some time in 1938 I realized that Yamana wanted to cut his connection with me. I wanted to find out why, so I visited his house which I happened to know at that time. I saw at once that he wanted to leave me because of a woman and that I could not stop him.

"Soon after that Yamana found a job with an agrarian union * * * (and not much later) * * * found employment with the Eastern Society (Tohokai). He took many trips Karafuto, Hokkaido, Aomori, Akita, Miyagi, Fukushima, Toyama, Ishikawa, and many other places. I wanted to organize a group of my own with members in Tokyo, Nagoya, Osaka, Kyushu, Hokkaido, and Hokuriku but I couldn't find the proper people. I thought Yamana could be one of them, but he wanted to lead an easy life and I had to give up the idea."

The police arrested Yamana on December 15, 1941. He was sentenced to 12 years at hard labor, but was released by American order on October 7, 1945.

(l) Taguchi Ugenda, minor informant: One of the less useful members of the ring was Taguchi Ugenda, who was introduced to Miyagi by Yamana. Both Taguchi and Yamana were from Hokkaido, and both were members of the Japan Communist Party.

Taguchi, born in 1902, finished the Hokkaido Middle School, studied for a time at the Oriental University (Toyo Daigaku), but transferred to Meiji Gakuin in 1924. Without graduating he left Meiji to go to Sapporo where he joined a labor union affiliated with the Japan Labor Unions Conference (Nihon Rodo Kumiai Hyogigai). He joined the Japan Communist Party in December 1927, a month after Yamana, and was arrested along with Yamana and many other Communists on March 15, 1928. He was sentenced to 3 years' imprisonment, but with time off for good behavior was out by November 1929, when he came to Tokyo and promptly met Miyagi. At Miyagi's request he began reporting on Hokkaido, chiefly on economic matters such as oil, coal, and the food supply.

Miyagi remarked of this agent, "I did not intend to enlist (his) help in the beginning because Kuzumi Fusako described him as a 'formalist' unsuitable for espionage. He had already arranged to set up a peat factory in Manchuria. According to my standards he was not a genuine Communist because he was going to Manchuria to make money. He was always hot after some sort of queer enterprise."

After they had the principals the police soon unearthed Taguchi. They arrested him on October 29, 1941. The court sentenced him to 13 years in prison, but he, too, was released by United States Army order on October 6, 1945.

(m) Nakanishi Ko, postwar Diet member: Nakanishi Ko, Diet member, supposed China expert, former chief editorial writer for Mimpo and leading member of the Japan Communist Party, was associated with Ozaki but does not seem to have been a member of the Sorge ring. He led a Soviet spy ring in China, but his career and his activities so frequently crossed those of the Sorge ring, both in China and Japan days, that it is desirable to describe him here. The records of his trial in Tokyo after 1942 have not been available, so that it is not possible to give a full account of his espionage activities, but a great deal is known from police records and from his own statements since the end of the war.

Nakanishi, who was born in Mie Prefecture in 1910, went to Shanghai after graduation from middle school in Japan and attended the East Asia Common Script School (Toa Dobun Shoin) at which Mizuno Shige was a fellow student. There he joined the Chinese Communist Party's Young Communist League, the Chinese Communist Party and several Communist-front organizations, such as the Japan-China Joint Struggle League (Nishi Toso Domei). Along with Mizuno he took an active part in the Communist-led student strike at his school in 1930, and like Mizuno was arrested by the Japanese consular police for subversive activities. While no evidence is available to prove the point it is reasonable to assume that not only Mizuno but Nakanishi, too, came under the observation of the Sorge ring at this time, and that his first acquaintance with Ozaki dates from this date.

Nakanishi returned to Japan in February 1932, and immediately joined the China Problems Research Society of the Proletarian Science Research Institute, a Communist-front organization. In April he was arrested and detained for 40 days before being released. He then returned to his native Mie Prefecture, where he was active in a secret agrarian reform movement. By June he had gone to Osaka to enter the Ohara Social Problems Research Institute (Ohara Shakai Mondai Kenkyu Jo) to work on labor problems. It will be recalled that Mizuno, too, worked for this society. Nakanishi only stayed with the Ohara organization till November 1933, when he looked around for a new job with wider opportunities.

(1) SMR intelligence agent, secret Communist: The investigation department of the Dairen office of the South Manchuria Railway employed Nakanishi in May 1934 and he continued to work for this organization in various offices until his arrest in June 1942. He served twice in Dairen, once in Tientsin, and most lengthily in Shanghai. Progressively he advanced in rank and pay and responsibility. At this time the South Manchuria Railway, working closely with the Kwantung Army, was investigating a wide range of subjects from the transportation potential of the Trans-Siberian Railway and the capacities of Siberian military bases to the economic and political situation in China. With the progress of the war in China, the SMR extended its offices to the chief cities in occupied China, employing over 1,000 men in the investigation branch alone. Naturally, this organization became a primary target for Japanese Communists, and being staffed entirely by civilians it was easier to enter than the Army intelligence agencies. Out of the 1,000 men about 30 were Japanese Communists either sympathizers or party members, who organized their own investigation body so that the results of the research of this intelligence agency came to be at the disposal of the Chinese Communists and the Soviets. Close liaison seems to have been maintained with both. Recently Nakanishi boasted that he received a secret commendation directly from Mao Tse-Tsung, political leader of the Chinese Communist Party, for his superior espionage work in Shanghai.

Nakanishi took an active part in the China Problems Research Institute, which was headed in Peiping by Funakoshi Hisao of the Sorge ring. It is reasonable to assume that Funakoshi and Nakanishi worked closely together, and that he was in frequent touch with Agnes Smedley, who headed a branch of Soviet espionage in Peiping for a time. It is not believed, however, that Nakanishi was directly a part of the Sorge ring in Japan. Earlier it has been shown that the Sorge group separated itself from all other Soviet intelligence agencies, including former members who were no longer working in Japan, such as Agnes Smedley and Guenther Stein. The fact that the Japanese higher special police decided, after lengthy interrogation, that Nakanishi was not a member of the Sorge ring supports this assumption.

(2) Sentenced to life: One of the lesser members of the Sorge ring informed on Nakanishi Ko. Since Funakoshi Hisao had been arrested on October 22, 1941, while Kawamura Yoshio was not arrested till March 31, 1942, it is possible that the latter was the one to betray Nakanishi, since Funakoshi had full knowledge of him. The Tokyo metropolitan police sent special agents to Shanghai in the spring of 1942 to uncover a large group of Japanese Communists who were suspected both of being members of the Sorge ring and of supplying information directly to the Chinese Communists and to the Soviets. On June 16, 1942, they arrested nearly a hundred men, and held about 20 for prosecution. Nakanishi Ko was one of these who was brought to Tokyo. He was not tried for over 3 years, not until the procurators believed they had secured all the information he possessed. He was tried on September 11, 1945, before the Tokyo district court, the procurator demanding the death penalty for this Japanese subject who had committed treason. On September 28, 1945, the court sentenced him to life imprisonment. This was after the Japanese surrender, however, and Nakanishi was released from prison on October 10, 1945, under the American order for the release of political prisoners.

While Nakanishi was in prison he wrote a 12-volume history of the Chinese Communist

Party, and since the end of the war has become famous not only as an exponent of communism, but as an expert on the Chinese Communists. He had joined the Japan Communist Party and is one of its best-known writers and propagandists. From February 1946 to August 1947 he was chief editorial writer of the newspaper Mimpo, and simultaneously was a director of the China Research Institute. One may recall that before his arrest in 1942 he had been a director of an organization of the same name functioning in Peiping which was a cover for espionage for the Soviets and Chinese Communists. Nakanishi ran for the upper house of the Diet in last April's elections and won a seat in the house of councilors. Currently he is one of the eight Communist Party members in the Japanese Parliament.

(n) Other agents: Possibly some member of the Sorge ring escaped detection yet this possibility seems remote. Once the case had been cracked the Japanese Special Higher Police (Tokkoka) and the procurators who handled it had the most complete opportunity for a definitive examination. They were especially concerned to detect Japanese subjects who might have committed treason, and they thoroughly explored every lead. From the first day of his arrest Miyagi talked freely, and soon everyone with the exception of Sorge and possibly De Voukelitch was telling all he knew. The police had unlimited chances for cross checking, and they did not suffer from a lack of zeal. Anyone mentioned by the members of the ring, or who was known to have associated with the members of the ring, came under suspicion. If not immediately cleared he was arrested and was given a thorough examination. As the case developed men were arrested all over Eastern Asia and brought to Tokyo where attempts were made to connect them with Sorge. In the process many were found to be completely innocent, others to have been naively supplying members of the ring with information without thought of harm, and others to have been engaged in espionage of a wide scale but not as a member of Sorge's ring.

Nakanishi Ko falls into this category. It is not believed that any Japanese connected with Sorge's ring in Japan escaped police knowledge and arrest.

* * * * *

In seeking to connect men now living with Dr. Sorge's activities in Japan it seems well to recall the rigidity with which he avoided all contacts with the Japanese Communist Party and its active members, the success with which he operated for years through keeping his ring small and properly covered so it would not arouse gossip even among those friendly to his cause, and his sharp avoidance of contact with other Soviet espionage agents not assigned to duty with him. It is more than probable that there were other Soviet spies in China, but one would miss the basic principles whereby Sorge functioned so skillfully were he to attempt to connect every Japanese Communist or every Soviet spy with the activities of Dr. Sorge or Ozaki Hozumi. Similarly, it would be an error to assume that personal acquaintance with or even associating widely with foreigners and Japanese who looked upon him as a Nazi journalist. It would be as reasonable to assume that all persons who knew him well were Soviet agents as it would be to assume that Maj. Gen. Eugen Ott, Nazi Ambassador, and Col. Joseph Meisinger, the Beast of Warsaw, were Soviet agents because they looked upon Sorge as their friend and supplied him with so much valuable information. The Japanese procurator and courts went into this question of association with the greatest of care, and it is believed that their assessments of responsibility and innocence were sound.

(f) Couriers: In addition to sending radio messages, Sorge sent a great volume of material by courier, usually in the form of microfilmed documents, chiefly of his own analyses but often actual German or Japanese texts. On occasion some shadowy Moscow man appeared to have made direct contact with Sorge or Klausen in Tokyo, and to have taken away material. But until 1939 liaison with Moscow was conducted chiefly in Shanghai and Hongkong. Most of the members of the group, including the reluctant Anna, served as couriers at different times. In April and July 1936, and again in 1939, Max Klausen took documentary microfilms to Shanghai where he exchanged them for cash and sometimes microfilm, with a stranger who gave a prearranged recognition signal. Once when they projected some of the received microfilm on a wall in the home of De Voukelitch they found the letters from Mrs. Sorge in Russia had been included with the official material.

On these trips, the men found it easy to string the film cartridges on a cord and to hide the improvised belt under their clothing. It was even easier for Mrs. Klausen to hide them. Since she was a former resident of Shanghai, the Japanese police did not think it strange that she should wish to visit her old home from time to time.

In 1937 Richard Sorge took films to Shanghai and Guenther Stein took some to Hong Kong. In October 1937 and again in November 1938, Anna went to Shanghai. Anna refused to go at first, but was persuaded by the threat of punishment by Moscow. Orders for her first trip came from Sorge, for the second direct from Russia. Each time Anna carried about 30 film cartridges, hidden in her seemingly ample bosom. She delivered them to men she met at the Sun Sun Department Store, a bookstore on Bubbling Well Road, in the lobby of the Cathay Hotel and on the sidewalk of Avenue Haig. Each time she received some five thousand United States dollars which she deposited to Max's account with the Hongkong and Shanghai Bank, Ltd. Subsequently, Max transferred the money to Tokyo by bank draft.

By 1939, Sorge decided it was too dangerous for members of his ring to travel to China as messengers. The intensification of the war in China so increased the suspicion and scrutiny of Japanese intelligence agencies that the risks had become disproportionate. Subsequently, with the severance of economic ties between Japan and the United States, it became too difficult to secure funds through American banks. In 1939 Sorge radioed a request for establishment of liaison in Japan. Instructions soon came for Klausen, "Two tickets with higher numbers for 'Fritz'. One with a smaller number for liaison man." Soon afterward, Max found two tickets for the Imperial Theatre in his mail box at the Tokyo central post office. He took Anna to the show, and sat in the lower-numbered seat. In the darkness he passed to his right-hand neighbor 38 film cartridges of photographs of documents from the German embassy. In return his neighbor passed him $5,000.

Klausen's neighbor turned out to be the Soviet Consul in Tokyo. Helge Leonidvitch Vutokevitch. The following April Klausen and Ann attended the All Girls Opera at the Takarazuka Theatre, where Max handed over another 30 rolls of film and received in return $3,000 in United States currency, and Y2,500. Not long after his pleasant entertainment Vutokevitch returned to Russia and was replaced by Viktor Sergevitch Zaitsev, also a Soviet consul, who used the cover name of Serge.

Sorge met Klausen about 10 times, chiefly in Max's offices. He was brief and to the point. Sorge was present at the meetings only once. Klausen recorded the meetings in his diary as, S-TR, for Serge treffen, meaning met Serge. Early in 1941 during one of his visits at Max's office Serge listed the Sorge ring as he himself knew it:

Richard Sorge, alias Ramsey; code name, Fix or Inson.

Branko de Voukelitch, alias Gigolo.

Ozaki Hozumi, alias Otto; code name, Invest.

Miyagi Yotoku, alias Joe; code name, Intelli.

Dr. Woldt; code name, Kommersant.

Victor S. Zaitsev, alias Serge.

Max Klausen, alias Fritz.

Aside from the information on the aliases and code names, this list is significant chiefly as showing what part of the ring was known to the Soviet espionage agent attached to their Tokyo Embassy. It is also significant that this Soviet consul listed himself as a member of the ring.

(g) Money: This extraordinary bold and successful effort cost the Soviet Union practically nothing. Even then they tried to cut down their expenses and in 1940 directed that part of the profits from M. Klausen Shokai should go into the ring. Perhaps they were only wisely trying to forestall the possible apostasy of Max Klausen which his growing wealth might bring about. If so, they failed.

The total cost of the Sorge ring was estimated at about 3,000 yen a month. This was an expenditure of considerably less than United States $1,000 a month to pay for the extremely valuable work of nearly 20 agents. Since, with one exception they all worked for love of the cause and not for money their monthly pay was merely to cover living and travel costs and not to compensate them for their work. Ozaki, for example, never received a penny for himself, and was actually out of pocket, since he supported some of the agents under him. Sorge, de Voukelitch, and Klausen, of course had regular incomes from their work, but still they had extra expenses. Klausen was the treasurer, and about once a year he submitted a statement of income and expenses to Sorge, who had it photostated and a copy sent to Russia. During Klausen's service as treasurer from 1936 till October 1941, he received United States $24,500 and 18,300 yen through the couriers, plus about $10,000 in bank remittances, a total of about $40,000. Certainly the information which Sorge sent after June 22, 1941, was worth many millions of dollars to the Soviet Union. Since it had a profound effect on the Soviet deployment of troops, and hence on the stopping of the Germans at the most critical phase of the war, its total worth is incalculable.

6. REPORTS OF SORGE AND OZAKI

Sorge sent an immense amount of soundly evaluated intelligence to the U. S. S. R. over the years. It would be tedious and unprofitable to list all his reports, even by topics. Under interrogation from memory alone Ozaki described more than 50 reports and Klausen another 50. The decoded radio messages added much greater detail. It is sufficient to indicate the general type of questions studied on which reports were sent to the U. S. S. R. Because of the vastly greater significance the reports of 1941 will be given in some more detail.

From 1933 to 1935 Japanese activities in Manchuria, centering around the Chinese Eastern Railway in which the Soviet Union had a half interest, very naturally were of much concern to Moscow. Based on reports made by Ozaki, Miyagi and then German Ambassador Dr. Herbert von Dirksen, Sorge was able to report that Japan would not fight the U. S. S. R. over the question of the Chinese Eastern Railway, would devote herself to the development of heavy industries in Manchuria and would discuss a nonaggression pact with the Soviet Union. In fact, as Sorge was able to report on the basis of information secured through Miyagi and Ozaki in 1935, the Japanese Government placed more stress on the China problem than on that of the Soviet Union and any possible advance to the north. The German-

Japanese Anti-Comintern Pact of 1936 looked like the real thing, but Sorge was able to report from excellent Germany Embassy sources that although the Germans had wanted a military pact it was being limited to an anti-Comintern pact because of Japanese reluctance to have trouble with the U. S. S. R.

Sorge made full reports on intentions and operations in north China after July 1937, as well as the nature of Japanese mobilization. He transmitted Ozaki's estimate that Japan would fail in her plan to solve her north China problem by a fast campaign and that the war was bound to develop into a long struggle. Throughout the rest of the China war Sorge kept a steady flow of fundamental information to the U. S. S. R.

(a) Sorge paves way for U. S. S. R.-German pact: The European picture was very black in the spring of 1939. The U. S. S. R. had a choice of negotiations either with the Anglo-French or the Germans. After they had learned from Sorge that the Germans had proposed to Tokyo, with the support of Ambassador General Oshima Hiorshi, an alliance directed against the U. S. S. R. and Great Britain, but that the Cabinet, the navy and the Zaibatsu were all opposed to such an alliance and had blocked it, the Soviet government itself entered into the famous, and disastrous, nonaggression pact with Nazi Germany in August 1939. It will be recalled that it was the signature of this pact, securing Hitler's eastern frontier, which precipitated the Second World War by the invasion of Poland.

At the time of the Nomonhan incident, in the summer of 1939, when the Red army and the Japanese Kwantung Army engaged in a full-scale local war, the Red army was able to learn Japanese intentions. They learned what units were being dispatched from what parts of Manchuria, as well as what reinforcements would come from Japan. Above all, they learned that the Japanese Government did not intend to exploit this incident, but intended to settle it locally, and the Russians conducted themselves accordingly. Aside from his sources in Tokyo, Sorge was able to get a good on-the-spot report from De Voukelitch who as a correspondent was taken to Nomonhan as the guest of the Japanese Army. The Japanese assessment of their lessons at Nomonhan, especially their need to mechanize all their forces and develop armored divisions on the German model, was transmitted by Sorge on the basis of information gathered both by the German Embassy and by Miyagi.

Sorge sent a reliable account of Japanese output of munitions, aircraft and motorcars, along with a report on the factories making these materials as well as iron and steel on February 16, 1940. From time to time, he brought these figures up to date. In August 1941 he reported on Japanese petroleum resources, a top secret bit of information of the most vital importance in estimating both Japanese war plans and capabilities. He reported that there was in storage in Japan sufficient petroleum for a two years' use by the navy, half a year by the army and half a year by the nation at large. His sources were the German Embassy and Miyagi.

Nineteen hundred and forty-one was the crucial year. After earlier general reports, on May 20, 1941, Sorge flashed the urgent warning that the Reichswehr would concentrate from 170 to 190 divisions on the Soviet border, and on June 20 would attack along the whole frontier. The main direction of the drive would be toward Moscow. It will be recalled that this attack did occur on June 22. Naturally, thereafter, the answer to the question of Japanese attack from the east became the most vital mission of the Sorge ring. All questions, whether of Japanese-American relations, the war in China or internal politics were subordinated to answering that basic question. Without a sound answer the Red army could not draw on their far eastern army for use in the west, and as the event showed, only a massing of limitless reserves made possible the stopping of the violent German thrusts.

Sorge could not come by the answer immediately, partly because it had not been decided definitely by the responsible Japanese authorities. Naturally, Ambassador Ott was urging the Japanese to enter the war and distract the Russians on their eastern frontier. Sorge was able to report on July 2, immediately after the Imperial Council of that date, that the Japanese Government had decided to push southward into French Indo-China and seize various bases. Meanwhile, while adhering to their neutrality treaty with the U. S. S. R., in view of the possibility of war with the Soviet Union, they would mobilize their whole forces. Late in July Sorge reported that a few troops from the Tokyo-Osaka areas had been sent south, but that to advance into Thailand and Malaya they needed 300,000 men. So far there were only 40,000 men in Indo-China.

(b) Ozaki keeps finger on war pulse: Sorge's estimates of late July and early August, based on information supplied by Ozaki, Miyagi and the German Embassy, showed that 1,000,000 new men had been mobilized, that the great majority had been sent to China or further south, and that only a small proportion were being sent to Manchuria. By the end of August he reported that the German Embassy had lost hopé of Japan's joining in the war against Russia in 1941, and on the basis of Miyagi's information he reported that the Kwantung Army did not want to fight the Red army that year. While the decision might be changed if the Russians were crushingly defeated in the west, reported Sorge, the progress of the German Army had been too slow to encourage the Japanese Government, which was devoting its attentions to negotiations with the United States and to a probable thrust southward.

Sorge maintained a steady watch and report on United States-Japanese negotiations during the summer and fall of 1941. His information was full and accurate, naturally so, since Ozaki was so close to Konoe, the keyman in the negotiations. During early October Sorge reported on the third mobilization, completed in mid-September, and subsequently that men from 25 to 35 years old had been called up. He also reported that the mobilization in December and January would be greater than in the previous year. While he did transmit Prince Konoe's optimistic views, he informed his superiors that the Japanese Navy planned to move south if Japan did not receive a satisfactory reply by the first week in October. The next 2 or 3 weeks will be the most crucial with respect to Japan's advance to the south.

By October 15 Sorge had transmitted his final sober conclusions that the Japanese had decided to move south and that there now was no serious danger of an attack by the Kwantung Army across the Siberian frontier. He felt that his mission was completed, and drafted a dispatch suggesting his recall to the Soviet Union. Klausen argued that this request was premature, and the message was never sent. Three days later Sorge and Klausen were under arrest.

(c) Ozaki's contacts and methods: Next to Sorge, Ozaki Hozuni was by far the most important member of the ring. His death on the gallows with Sorge is somber testimony of his importance. During his years on the Asahi, to which his contributions were prolific, he firmly established his reputation as a China expert. In recognition of his abilities he was transferred to Tokyo in 1934 and was appointed to the East Asia Problems Investigation Society (Toa Mondai Chosa Kai) within the Asahi for the study of China problems. He added to his reputation by numerous signed articles on China affairs in such popular magazines as Central Review (Chuo Koron), to the English language, Contemporary Japan, and by his five books, from China Facing the Storm (Arashi Ni Tatsu Shina) in 1937 to Strength of the Great Powers in China (Ajia Ni Okeru Rokkuo No Chikara) in 1941.

In April 1937 Ozaki became a member of the China section of the Showa Study Society (Showa Kenkyo Kai) sponsored by Prince Konoe Fumimaro. The head of its China section was Kazami Akira, who soon became chief secretary of the first Konoe cabinet in June 1937. Ozaki then succeeded Kazami as head of the China section but he didn't lose touch with Kazami. Immediately after a cabinet meeting to discuss policy on the outbreak of the China incident at Marco Polo Bridge on July 7, 1937. Ozaki called on Kazami at his office. Ozaki warned Kazami that Japan's attitude and decisions would decide whether this affair would develop into a second world war. Kazami refused to take this gloomy prophecy seriously, and remarked, "Our minds are made up, don't worry," so Ozaki went on to see Ushiba, Konoe's private secretary, where he repeated this warning. He then published his convictions in an article, The Nanking Government, appearing in Chuo Koron in September 1937.

By the next summer Japan was hopelessly bogged down in the China War. As a war measure, the foreign office set up a special investigative agency in Peiping to study political, social, and economic conditions of north China. Kazami, now in a more somber frame of mind, wished to retain a China expert in Tokyo as an adviser, and chose Ozaki Hozumi. In this manner Ozaki, secret Communist and Soviet spy, first came to hold official position as unofficial adviser to the cabinet (Naikaku Shokutaku) from July 1938 until the fall of the government the following January. Perhaps because his pessimism coincided with that of the Konoe group he was not suspected of being other than a loyal Japanese.

1. Access to state documents: As cabinet adviser, naturally, Ozaki had access to important state documents, of which he made the best use for Dr. Sorge. Even more important than his official positions was his friendship with two old friends of college days at the Tokyo first higher school. Ushiba Tomohiko and Kishi Michizo were both private secretaries to Prince Konoe, three times premier of Japan. In these two men was centered the "breakfast group," sometimes called the Wednesday group, an informal discussion society of bright young men arcund Prince Konoe. Ushiba and Kishi found it pleasant and informative to invite writers, journalists, professors, and other stimulating persons to dinner to draw out their opinions on current subjects. All conversation was off the record and the baleful thought police do not seem to have listened in. When dinners became inconvenient these men met at breakfast, hence the name "breakfast group." At first the meetings were held twice monthly. From 1939 to the autumn of 1941, they met every Wednesday, giving the group its second name. During the first Konoe cabinet they met at Ushiba's home, but later had breakfasts at the Mampei Hotel. From April 1939 until November 1940, they met at Saionji's home. From then until so many were pulled in by the police that there was no quorum to meet, they assembled at the premier's official residence back of the Diet Building.

After the fall of the Konoe cabinet on January 4, 1939, had deprived Ozaki of his advisership with the cabinet he was appointed an adviser to the South Manchurian Railway and attached to the investigation section of the Tokyo office. He continued to hold this post till his arrest. Since the South Manchurian Railway was interested in every activity in Manchuria and Siberia, Ozaki was in an excellent position to learn

anything that might become known to any Japanese. The railway was closely controlled by the Japanese and Manchurian Governments, so that for practical purposes Ozaki was an intelligence officer of those governments with a special assignment to study Manchuria and Soviet affairs. After early 1940 the information section of the SMR exchanged information freely with the information section of Mitsui Bussan Kaisha, so that Sorge's target of Japanese heavy industry was amply covered.

2. Sources in high places: Although Ozaki used all of his sources for the gathering of information for Sorge, and utilized his intimacy with highly placed friends to obtain documents and news, he never passed on undigested information. He stored up his knowledge, weighed it against other relevant data, and made a preliminary evaluation. He discussed his conclusions with officials, his associates, and friends, and with the members of the Breakfast Club. He presented only final evaluations in answer to Sorge's questions, although from time to time he did borrow some document to be photographed by de Voukelitch before he returned it to its proper owner. Frequently, when some friend would ask his opinion, he asked for the basic documents to study before he could render sensible advice. These documents he often took to his home, and since he was entitled to receive them in line of duty no one thought twice about it. Sometimes, officials like young Saionji Kinkazu would give him top-secret information to get his reaction, because he trusted so greatly his judgment and integrity.

During the trial Ozaki gave the following description of his activity:

"If you ask me for special points of my technique, I would say that my activity was characterized by a total lack of special method * * * my success lay in my attitude toward the job. By nature I am a sociable person. I like people; I can make friends with most people. Moreover, I like to be kind to people. Not only is my circle of friends wide, I am on intimate terms with most of them. My sources of information have been these friends.

"I have never looked for specific information * * * I have formed my own opinion on the subject in hand, formulating in my own mind a comprehensive picture of a general trend on the basis of various reports and rumors. I never ask specific leading questions.

"* * * In these days of political unrest individual news items have little intrinsic value, however important or secret they may be. This is because even important decisions are apt to be changed suddenly. For instance, the government or the army may wish to be stubborn, but external circumstances beyond their control often force a change of heart. Therefore, the important thing is to ascertain the general trend rather than to know exactly what has been said or what has been decided. The only information of importance which I was confident I might obtain in advance was the exact timing of a possible attack on Russia by Japan."

It was Miyagi Yotoku, rather than Ozaki, who devoted himself consistently to the small details, such as activation of divisions, new weapons, troop movements, reports on casualties and the like. A great deal of this information was easy for a Japanese to pick up from gossip in bars, talk in a doctor's office, in a ladies' sewing circle or in a military barracks. While the Red Army was primarily interested in the big picture which Ozaki was painting for them, they did not share his disinterest in specific bits of secret information, and Miyagi kept supplying it through his autonomous intelligence net. Despite his disclaimers at his trial, however, Ozaki, too, supplied such information, as for example, a complete division roster in 1941.

(d) Ozaki assesses world affairs: Ozaki's study of world events had convinced him as early as 1937 that the China incident would develop into a second world war. He believed that this second world war would end not in a redistribution of colonies, as in the case of the First World War, but in a fundamental social change throughout the world. The Communist revolution, he believed, which had started in Russia would reach a decisive stage, even though it could not be expected to reach its final completion so soon.

As for Japan, Ozaki considered the country's economic structure unsound because of feudalistic tradition, poverty of natural resources and the preponderance of military expenditures. Japan would be the first to undergo a fundamental social upheaval, he thought. In the end Japan was destined to clash with England and America. She would be victorious during the first stages of the war, but the victory would be short-lived because of Japan's economic weakness and because of her exhaustion from the prolonged China affair.[1] In the final stage, the ruling classes would be powerless to change the course of the country or to effect its reconstruction. The proletariat alone could save the nation, he believed. He thought that Japan's only proper course was to join with the Soviet Union and with Soviet help change and reconstruct her social and economic system. When Japan had become a Socialist state and when Communist hegemony had been established in China, Japan and China with the Soviet Union could form the nucleus of a new order in East Asia.

(e) Lessons from Ozaki's dreams: These views of Ozaki's on a new order in east Asia are of special interest today. They are useful guides to the thinking of postwar Communists on the same subject. For years the Japanese Government propaganda talked a lot about a new order, and despite the enmity which the Japanese created among the Chinese and others by the violence of their attempts to create a new order there really was considerable appeal in their pan-Asia propaganda. The generous assistance given by Malays and Burmese to the invading Japanese armies is a matter of very recent memory. Today we begin to hear a good deal about a new order and pan-Asianism both from China and from India. The Japanese had a good thing which they spoiled by their greed and violence.

Ozaki conceived of a Communist new order which would include not only the Japanese, Chinese, and Russians but also the Koreans, Malays, Mongolians, the peoples of the Philippines, Thailand, the Dutch East Indies, French Indochina, and India. He dreamed of the day when the peoples of all these countries would unite with the Soviet Union according to the views and practices of Soviet Communists in a Union of Socialist Soviet Republics of the whole of eastern Asia. Ozaki thought that he, himself, would play a leading role in this east Asiatic Communist international. As he said, "I felt that it would be easy to cooperate with and assist the Soviet Union, because fortunately, I had become intimate with the authorities of the Comintern and the Soviet Government structure through my espionage activities with Sorge for the past 10 years."

Ozaki, as a Niakaku Shokutaku, was deeply involved in Prince Konoe's new structure movement, which eventually developed into the Imperial Rule Assistance Association. The role of this Soviet spy as a basic architect of the IRAA is both ironical and a high tribute to the quality of the Sorge ring. Perhaps Ozaki also saw an easier transition from the IRAA to Communist Party dictatorship than from parliamentary government.

[1] This prediction was made by Ozaki during interrogation of March 3, 1942, in the midst of Japan's military successes.

1. One world under communism: Ozaki's single allegiance was to the Communist cause. He recognized no proper boundaries between the various countries or between the various Communist organizations throughout the world. The earth was one world centered in the Third International, which happened to be in Russia. The benefits which the U. S. S. R. might derive from the spread of communism were merited by the assumption of leadership of world communism by the Russian Communist Party and by the Soviet Government. In March 1942, Ozaki declared to the procurator:

"In my long intercourse with Sorge in Japan, I was often requested to give information which had a direct bearing upon the plans for the defense of the Soviet Union. Hence I suspected that the data which I submitted was being used directly by the U. S. S. R. However, this did not disturb my peace of mind because the defense of the U. S. S. R. was one of the duties of members of the International Communist Party. In brief, our group belonged to the Comintern. The Comintern today is almost completely in the hands of the Russian Communist Party. The Russian Communist Party is the central force in the Soviet Government. Thus, in a sense, all three organizations can be considered as one."

It will be remembered that Sorge was an agent of the Red Army, not the Comintern. This was a minor detail as far as Ozaki was concerned. His loyalty was to the Comintern; his channel was Sorge.

Ozaki supplied Sorge with crucial information during the decisive months of 1941. The information was interrelated but for convenience may be classified as relating to: (1) Russo-Japanese relations, (2) Possibility of war between Germany and Russia and (3) Japanese-American negotiations.

(f) Sound estimates by Ozaki: Ozaki's accounts of his reports on these three subjects can be summarized as follows: After the signature of the Soviet-German nonaggression pact in 1939 the possibility of a Soviet-Japanese war became more remote. When the German Wehrmacht invaded Russia in June 1941, however, the danger again became great. Ozaki then concentrated his efforts on learning the details of Japanese mobilization, industrial strength and actual war plans. He paid much attention to troop movements during the general mobilization of July 1941. When the German Army was stuck at Smolensk, however, and the relations between the United States and Japan steadily worsened he learned that some who earlier had agreed to the general mobilization in expectation of an early Soviet collapse had become hesitant about attacking the U. S. S. R. Later about the middle of August he discovered that the Japanese Government had decided against war with Russia. He transmitted this vital information to Dr. Sorge.

Ozaki's close relationship with Prince Konoe's close advisers gave him unsurpassed opportunities to learn the exact nature and progress of Japanese-American negotiations during the summer and early fall of 1941. He reached the conclusions that despite numerous Japanese-American common interests the great disparity between the positions of the two powers was such that compromise was impossible. Although the upper strata of the Japanese political and financial circles were anxious to avoid war, the Japanese people, as a result of violent military propaganda since 1937, were confident that they could successfully win their holy war and were opposed to compromise with the United States and Great Britain. Although the economic situation in Japan as a whole was extremely bad the fighting services, especially the navy, had never been so well equipped. By the beginning of October Ozaki was able to give his considered opinion that Japan would embark upon a major military campaign to the south, which would

include the capture of Singapore. He only erred in his timing, for he believed that Japan would not attack Russia in 1941, but before the year was out would attack southward against the United States and Great Britain. Retrospectively, it is clear that Ozaki made a completely sound estimate of the situation, and the government of the U. S. S. R. was fully informed on Japanese intentions.

7. DISCOVERY AND IMPRISONMENT

(a) Ito Ritsu, unwitting Judas: Dr. Richard Sorge and his group were exposed through no errors of their own. Their operations were faultless; no one ever suspected them. A wretched fellow, a Communist, Ito Ritsu, today one of the four or five most influential leaders in the Japan Communist Party, betrayed them in pain and in jealousy. Even he did not know what he did. Although under suspicion of Communist sympathies Ito Ritsu worked in the investigation department of the Tokyo branch of the South Manchurian Railway, the same organization which Ozaki was serving as special adviser. Then aged 29, he was arrested in June 1941 on suspicion of secret Communist activities. Under guidance of officers of the Tokyo Metropolitan Police Board Ito made full confession, claimed to have erred by his Communist faith, and then began to implicate others. Among those on whom he informed was a woman, Kitabayashi Tomo, whom he had known as a former member of the American Communist Party. He had noted that since her return to Japan she had refused to have any intercourse with Communists and appeared to have become an apostate. But she continuously asked questions on all sorts of matters. Possibly thinking to enlist the aid of the enemy, the police, for the punishment of a party traitor, Ito named this woman as a Communist and a probable spy. It doesn't seem that this Judas had any real reason to think of her as a spy, and certainly he never imagined that she was a member of the most successful ring of spies ever to operate in Japan on behalf of his spiritual fatherland.

The police at once began hunting for Kitabayashi Tomo, and upon finding her, put her on the watch list to develop her contacts. They did not arrest her until September 28, 1941, at Konagawa-machi, Wakayama Prefecture, when they pulled in her innocent husband, too. Mrs. Kitabayashi does not seem to have been a very strong character. She soon confessed, and named Miyagi as her mentor. Miyagi was arrested on October 10. From his attempted suicide and from evidence found in his house the police realized that he was a member of an important spy ring. Much information was picked up from continuous interrogation of Miyagi, a frail, consumptive man who certainly wasn't treated gently. He talked freely. Much more was gathered by using his empty house as bait and picking up all callers. Ozaki was soon uncovered, and by October 14 he, too, was behind bars. Since these men had not established an emergency-warning system, and only met by prearrangement, none of them was able to warn any of the others.

(b) Days of anxiety: Max Klausen went to Sorge's home on October 15, 1941, to discuss a projected transmission to the U. S. S. R. Sorge was disturbed. Miyagi had arranged to meet him on the 13th, but for the first time he had missed an appointment. Ozaki had been supposed to come to the meeting on the 15th but he too didn't show, and both Klausen and Sorge were really worried. Sorge showed Klausen the draft of a dispatch on the Japanese Army's advance in Indo-China, followed by a request for new instructions based on his belief there was no further reason for the group to continue operations in Japan. Klausen thought this message was premature, and returned it to Sorge unsent.

Two days later Klausen again went to Sorge's house, where he found De Voukelitch who also was much disturbed by the silence of Miyagi and Ozaki. On his way home Klausen met an officer of the special higher section of the metropolitan police (Tokkoka), named Aoyama. This meeting upset him greatly. He wondered if it were more than accidental and debated in his own mind whether to burn the documents then in his possession and to bury his transmitter in the garden. Finally, he decided to do nothing, went to bed and to sleep.

The next morning, October 18, while Max was still in bed Aoyama and another police officer walked in and arrested him. Anna was not arrested until November 19. While Aoyama was telling Max to get dressed and come along, other officers were giving similar instructions to Dr. Richard Sorge and Branko de Voukelitch. By October 18, 1941, all the principals of the Sorge ring were in jail and what probably was the most successful and most unusual organization of Red Army intelligence anywhere in the world was completely broken.

Sorge's arrest was a great shock to his close friends, Ambassador Ott and the gestapo chief, Col. Joseph Meisinger. They could only believe that the Japanese had committed another of the blunders for which they were legendary, and they worked hard to get their friend out of jail. There also was a disturbing question: if by some remote chance good Nazi Sorge actually was a Soviet spy where did that leave two highly placed Nazi officials who had trusted in and confided in him for so long? But the obstinate Japanese police were adamant. They insisted that they had the principals of the most dangerous spy ring ever discovered in Japan.

(c) Sorge's uneasy German friends: Ott and Meisinger reported the arrest to Berlin, but tried to minimize their relations with Sorge, so that if by some weird chance the Japanese police were right their reputations wouldn't be hurt too badly. After the turn of the year an agent of German Counter Intelligence, Abwher, in Harbin, heard a somewhat garbled account of the Sorge affair from his Tokyo contact and reported on it to his principals in Berlin. It wasn't till then that the German Government became really disturbed. Then von Ribbentrop sharply demanded explanations from Ott. Ultimately, he replaced him by Dr. Heinrich Stahmer, so that the unhappy Ott sat out the war in Peiping, since he couldn't very well get back to Germany. Meanwhile, in reply to Meisinger's inquiry, Gestapo headquarters in Berlin turned up a complete, adverse dossier on Sorge from his earlier days in Germany, indicating his Soviet connections. Meisinger turned this over to the Japanese, and in some manner managed to save his own political skin. He was still German gestapo representative in Japan when Eisenhower took the German surrender in 1945. He was flown to Poland in the autumn of 1945, charged with commission of atrocities at Warsaw. He is believed to have been hanged.

The Japanese police records show that these persons were arrested in connection with the Sorge case:

1. Those arrested in 1941 and found guilty:

Name	Age	Occupation	Date of arrest
Kitabayashi Tomo	57	Dressmaker	Sept. 28, 1941
Miyagi Yotoku	40	Artist	Oct. 10, 1941
Akiyama Koji	53	None	Oct. 13, 1941
Kuzumi Fusako	53	Company employee	Do.
Ozaki Hozumi	42	Consultant, South Manchurian Ry	Oct. 15, 1941
Mizuno Shige	33	Editor, books published, Sakamoto Memorial Hall	Oct. 17, 1941
Sorge Richard	48	Special correspondent of Frankfurt News	Oct. 18, 1941
Klausen Max Gottfried-Fredrich	44	Manufacturer of fluoroscope plates	Do.
De Voukelitch Branko	38	Assistant, Havas News Agency in Tokyo	Do.
Kawai Teikichi	42	Company employee	Oct. 22, 1941
Taguchi Ugenda	40	Broker	Oct. 29, 1941
Klausen Anna	43	None	Nov. 19, 1941
Yamana Masazane	41	Company employee	Dec. 15, 1941

2. Those arrested in 1941 but found not guilty:

Kitabayashi, Yoshisaburo	61	None	Sept. 28, 1941
Okai Yasumasa	26	Student at Tokyo Imperial University	Oct. 11, 1941
Haga Yu	44	Consultant, International Economic Research Department.	Oct. 12, 1941
Suzuki Kamenosuke	50	Broker	Oct. 13, 1941
Matsumoto Itsuo	21	Member of China Research Institute	Oct. 18, 1941
Takahashi Yu	32	Employee, Tokyo branch, SMR	Oct. 22, 1941
Akemine Miye	32	Consultant, Cabinet Information Bureau	Oct. 25, 1941
Shinozuka Torao	41	Factory owner	Nov. 14, 1941
Takeda Takeshi	39	Laborer	Nov. 24, 1941
Takeda Toshiko	31	None	Do.

3. Those arrested in 1942 and found guilty:

Funakoshi Hisao	41	Member, Peiping branch, Research Institute on China Problems.	Jan. 4, 1942
Kawamura Yoshio	33	Chief, Shanghai branch office, Manshu Nichi-Nichi	Mar. 31, 1942
Koshiro Yoshinobu	34	Company employee	Apr. 11, 1942
Yasuda Tokutaro	45	Doctor	June 8, 1942

4. Those arrested in 1942 but found not guilty:

Tanaka Shinjiro	43	None	Mar. 15, 1942
Kikuchi Hachiro	31	Miyako Shimbun correspondent assigned to the War Ministry.	Mar. 16, 1942
Saionji Kinkazu	37	Former consultant of Foreign Ministry and Cabinet	1942
Inukai Ken	47	Member of the House of Representatives	Apr. 4, 1942
Kaieda Hisataka	35	Employee, Mukden station, SMR	Apr. 11, 1942
Goto Noriaki	44	Employee, Mukden Ry. Bureau, SMR	—, 1942
Miyanishi Yoshio	33	Research Department, Tokyo branch, SMR	Apr. 13, 1942
Isono Kiyoshi	36	Tokyo Asahi Shimbun correspondent assigned to the War Ministry.	Apr. 28, 1942

The police were unhurried about their investigation, although Premier Tojo Hideki kept urging speed. So many of their prisoners talked freely that they had no problem in getting a full picture of the whole case and in separating the guilty from the innocent. Having proved their case, they became concerned with the deeper implications of the spy ring. They wanted to know more than how the spies had operated and what they had found out. They wanted to know what had motivated them, especially the

Japanese traitor. Although Sorge attempted to maintain security, and was most contemptuous of Klausen's turning informant, before 5 months had passed, even he came to talk freely and, seemingly, willingly. All of the quotations from Sorge and Ozaki already used in this account come from this period of interrogation.

The police discovered that Klausen's prosperity had dulled his enthusiasm for the Soviet cause. His growing disillusionment, as well as a heart ailment which had kept him in bed from April to August 1940, made him reluctant to send the radio traffic which Sorge was preparing for him in increasing volume. Until the autumn of 1940, however, he had sent every message. From then on he had begun to cut down and during 1941, transmitted only about a third of the messages. Not being suspicious, neither Vladivostok nor Sorge could check on what was not sent. Klausen did receive complaints from the "Wiesbaden", but he replied that atmospheric conditions interfered with his work. Subsequently, in July 1941, when Sorge gave him the call signal and wavelength of a new radio station with which he was to communicate in addition to the old one, Klausen failed to use it.

Klausen's diary substantiated this testimony. It shows that in 1939 he sent 23,139 word groups, in 1940, 29,179 word groups, but in 1941, the most critical year, only 13,103 word groups. Since Sorge himself sent 40,000 word groups in 1941, however, Klausen's sabotage didn't interfere with the success of the mission.

Because of the evidence of Klausen's change of heart, and because of his free confession, the Japanese court only gave him life imprisonment. To Anna, upon whom they looked as a woman who had worked against her will, they gave three years. She was out waiting for Max when he was released from the Akita prison on October 9, 1945 by order of the U. S. Army.

8. DEATH

Ozaki had never really feared the consequences of his treason. He had always believed that if he were discovered all he need do was die. Actually he found this not so simple. Questions of affection for his family, who had never suspected his treason, and of loyalty to the innocent friends whom he had involved weighed heavily upon him. His confessions were filled with the testimony of a conscience weighted by the guilt of having wronged good friends.

After a full and unhurried investigation the various members of the Sorge ring were brought to trial, separately, in camera. Only the briefest mention of the case was released to the press in May 1942. In this release Japanese Intelligence deliberately connected the accused with the Comintern's net, although they had established that the ring worked for the Red Army. There was no point in telling the Russians all they knew.

Sentences were handed down by the Tokyo District Court in September 1943. Both Sorge and Ozaki appealed to the Supreme Court. Oddly, Sorge and Ozaki both made the defense that they hadn't done anything really illegal. They presented the straw-man theory that they had not used force to acquire their secrets and that they only passed on to Moscow information available to any intelligent man. Sorge summed up his defense thus:

(a) Sorge's defense: "Japanese laws are subject to interpretation, either broadly or according to the strict letter of the text. Although leakage of information may, strictly speaking, be punishable by law, in practice the Japanese social system is not amenable to the keeping of secrets. * * * I consider that in the drawing up of the indictment insufficient consideration was given to our activity and to the nature of the information which we obtained. Data which de Voukelitch supplied was neither secret nor important; he brought in only news which was well known to every press correspondent. The same may be said of Miyagi, who was in no position to obtain state secrets. What may be termed political information was procured by Ozaki and by me.

"I obtained my information from the German Embassy, but here again I consider that little, if any, of it could be termed 'State Secret'. It was given to me voluntarily. To obtain it I resorted to no strategy for which I should be punished. I never used deceit or force. Ambassador Ott and Commander Scholl asked me to help them write reports, especially Scholl, who put much confidence in me and asked me to read all of his own reports before he sent them to Germany. As for me, I placed much trust in this information because it was compiled and evaluated by competent military and naval attachés for the use of the German General Staff. I believe that the Japanese government, in giving data to the German Embassy expected some of it to leak out.

"Ozaki obtained much of his news from the Breakfast Group. But the Breakfast Group was not an official organization. Such information as was exchanged within the group must have been discussed by other similar cliques, of which there were many in Tokyo in those days. Even such data as Ozaki considered important and secret was actually no longer so, because he had procured it indirectly after it had left its secret source."

One is amazed at Sorge's claim, "I never used deceit or force" as though the first could have been true or the second relevant.

The Supreme Court was unimpressed by this logic. Sorge's appeal was dismissed in January, and Ozaki's in April 1944.

It is an interesting and perhaps surprising commentary on the quality of Japanese civil justice to note, however, that in the midst of a bitter war the most dangerous spies ever captured were given the benefit of every protection offered by Japanese law. It also seems surprising that of the nearly 20 guilty men and women only two were sentenced to death, although under Japanese law every one of them had subjected himself to the death penalty.

The following is a list of the convicted prisoners, their sentences and ultimate fate:

Sorge, Richard, death; hanged, November 7, 1944.

Ozaki, Hozumi, death; hanged, November 7, 1944.

Voukelitch, Branko de, life; died in prison, January 13, 1945.

Miyagi, Yotoko, unsentenced; died during trial, August 2, 1943.

Klausen, Max, life; released, October 9, 1945.

Koshiro, Yoshinobu, 15 years; released, October 8, 1945.

Taguchi, Ugenda, 13 years; released, October 6, 1945.

Mizuno, Shige, 13 years; died in prison, March 22, 1945.

Yamana, Masazane, 12 years; released, October 7, 1945.

Funakoshi, Hisao, 10 years; died in prison, February 27, 1945.

Kawai, Teikichi, 10 years; released, October 10, 1945.

Kawamura, Yoshio, unsentenced; died before trial, December 15, 1942.

Kuzumi, Fusako, 8 years; released, October 8, 1945.

Kitabayashi, Tomo, 5 years; released, unknown date.

Akiyama, Koji, 7 years; released, October 10, 1945.

Klausen, Anna, 3 years; released, October 1945.

Yasuda, Tokutaro, 2 years, with 5 years' suspension.

In addition Saionji was found guilty of passing secret information to an unauthorized person, Ozaki, and was given a sentence of 3 years' imprisonment with stay of execution. The court and procurators recognized that Saionji's guilt had been too great a trust in a friend, and not a conscious act of treason.

Although the supreme court had denied their appeals in January and February 1944, neither Ozaki nor Sorge, was informed definitely of the time set for his execution. During the intervening months they were questioned from time to time, chiefly on the wider implications of their conspiracy. While Ozaki was more loquacious than Sorge, both talked quite freely. Both men bore themselves well during these last hopeless days. Sorge had boasted that Stalin thought highly of his work and that if Japan and the U. S. S. R. should reach an understanding, Stalin would secure his release. Such an understanding was never achieved. Ozaki filled part of his dreary days writing many letters to his wife, part of which have since appeared as a best-selling book, Love Was Like a Falling Star (Aijo wa Hoshi no Furu Gotoku).

Finally, the last day came. Early on the morning of November 7, 1944, Ozaki had just finished a postcard to his wife full of solicitation for his aged father. He had no reason to suspect that this day would end any differently from a thousand other days. When the governor of Sugamo Prison entered his cell, however, he knew at once that his time had come. He changed his clothing for a set of clean garments which he had been saving for this day, and composed himself for his final, terrible minutes.

(b) Ozaki is hanged: The prison governor, Ichipima, formally asked the name, age, and domicile of the condemned man. Having officially ascertained that this was the man for whom death had been decreed, he stated that by order of the Minister of Justice, Ozaki's execution would take place that day. He added that if Ozaki wished to leave behind a will he should entrust it to the chief chaplain, a Buddhist priest. Ozaki listened with outward calmness and courtesy and bowed formally in the Japanese manner.

Led by the governor and other officials, Ozaki Hozumi then walked down from death row, across the prison courtyard to the place where stands the small concrete execution chamber hidden by high walls. When the condemned man walked through the only door of this awesome building, he found himself standing in a small anteroom facing a large, beautiful, taper-lit altar to Amidha Buddha. The chief chaplain offered Ozaki tea and cake and inquired who should be notified of his death and how he wished his possessions disposed of. After listening to Ozaki's explanation of his written will and waiting till Ozaki composed himself to listen, the chaplain said:

"Life and death are one and the same thing to one who has attained impersonal beatitude. Impersonal beatitude can be attained by entrusting everything to the mercy of the Buddha."

Then with Ozaki kneeling before the image of the Buddha the chaplain recited the Three Promises of the Great Sutra of Constant Life (Dai Muryoju Kyo). Ozaki listened quietly, burned incense, closed his eyes and bowed. Then he thanked all the officials present for their courtesy and indicated that he was ready.

Ozaki was led around the side of the altar and at once was in a gloomy windowless, bare room, with a gallows standing in the center. He was led across the room to stand beneath the gallows, and the noose was affixed in place. There were no stairs to climb, no platform to stand on. The trap was in the floor immediately beneath his feet.

Ozaki began to recite the simple Buddhist ritual of comfort, Namu Amida Butsu.

When he had recited the phrase twice the trap was sprung. This was at 0933. At 0951, Ozaki Hozumi was declared dead.

The same day his attorney was notified of his death, and when his wife presented herself at the prison all that remained of Ozaki Hozumi, Japanese subject, Communist fanatic and Soviet spy, was delivered to her.

(c) Sorge follows Ozaki: Ozaki's body had scarcely been removed from the execution chamber before the prison governor, Ichijima, was making his final, solemn call on Dr. Richard Sorge in Sugamo's death row. As custom required he ascertained the name and age of the man who stood before him, before formally telling him that according to an order of the Minister of Justice he would be executed that day and was expected to die calmly. The governor asked Sorge whether he wished to add anything to the will which he had written previously concerning the disposal of his body and his few possessions. Sorge replied calmly, "My will is as I have written it." The governor then asked, "Have you anything else to say?" "No," said Sorge, "Nothing else." After this brief exchange Richard Sorge turned to the prison chaplain and other prison officials and said, "I thank you for all your kindnesses." These were the last recorded words of Dr. Richard Sorge.

When he had said these few words, Sorge started on the long walk from death row down to the wide prison courtyard, through the somber gray wall around the death house, and so through its single fatal door. Unlike Ozaki, who had preceded him on that long walk so short a time before, he did not stop before the golden altar. Sorge was led directly into the execution chamber, walking firmly to stand on the treacherous trap door. The noose was quickly adjusted over his head, and without a word or any sign of agitation he was hanged. The trap was sprung at 1020, and he was pronounced dead at 1036.

So ended Richard Sorge, a German, a Communist and an incredibly successful Soviet spy.

9. POSTSCRIPT

Where are they now? Eight are dead: Sorge, de Voukelitch, Ozaki, Miyagi, Mizuno, Kawamura, Funakoshi, and Kitabayashi Tomo. But where are the others?

Presumably Edith de Voukelitch still lives in Australia. Taguchi Ugenda and Yamana Masazane are said to be in Hokkaido, but what they are doing is unknown. Former Corp. Koshiro Yoshinobu and Kawai Teikichi are reported to be living in Tokyo.

Dr. Yasuda Tokutaro moved back to Tokyo in July 1947 from Gifu where he had sought refuge during the war. He talks garrulously of the great days when he was helping that most successful of Soviet spies, Dr. Richard Sorge. Kuzumi Fusako is an old woman now, but probably she's still propagandizing for the cause in the same town where she lives in Okayama Prefecture. Akiyama (Frank) Koji, the only mercenary in the ring dropped out of sight after his release from prison in October 1945.

Guenther Stein and Agnes Smedley are still at large, posing as objective analysts of Chinese affairs and still affecting the formation of American policy by the skill of their writings.

Max Klausen was in Akita Prison and Anna Klausen in Tochigi Prison when the war ended. Under the American order for the release of political prisoners both were let out of jail early in October 1945 and under the care of American officers were reunited in Tokyo. Few knew anything about Sorge at that time, and in any case American-Soviet relations were quite friendly. The unhappy thought that a Soviet spy who had worked against the Japanese might later work against the United States had not occurred to many Americans.

Max was ill and very weak from beriberi and much in need of medical care. Soon after he reached Tokyo he called at the Soviet Embassy where he was welcomed and given money. What he told them of his apostasy and free confession, or what they told him in praise and admiration for his highly successful work can only be imagined. For a time Max and Anna lived in the country, in Saitama Prefecture, not far from Tokyo. In December 1945, Max received permission to go to Karuizawa for treatment by his prewar German physician. He made two calls on this doctor, and then returned to Tokyo with Anna, where they lived in a small apartment. No American has seen him officially since that time in early January 1946. In late February 1946, the Japanese man who had shared quarters with Klausen in Saitama Prefecture received a letter from Max saying that he intended to return to the country when the weather became warmer. Apparently Max was referring to the cold of the Siberian winter, however, for by early March the word got around that Max and Anna had gone to another country. How warm their welcome in the homeland of all Communists was can only be guessed. Sorge's contemptuous remark that even though Klausen escaped the noose in Japan if ever he got back to the U. S. S. R. he would be taken care of may be recalled. If Max and Anna are living securely in the Soviet Union today they must be under a constant strain to maintain an agreed-upon story explaining why Max got life while Dr. Sorge was hanged. Perhaps to prove his zeal and loyalty Max was let for some other country and some other post where his skill and experience in secret telegraphy will be useful to the Soviets.

Those men whose only guilt was that they trusted a friend too well are seared for the remainder of their lives by their innocent contact with the members of the Sorge ring. Even though they were proved wholly innocent, men like Inukai Ken will never escape periodical suspicions that possibly, just possibly, they knew what they did. There are other loyal, liberal-minded Japanese in responsible positions in Tokyo today who shudder at the mention of the names of Sorge and Ozaki and who hope never to hear of the case again. They suffered too intensely from the blast.

There are other Japanese not a part of the ring, but who were part of other rings, like Nakanishi Ko, or who simply were Communists who glory in the Sorge case, who try to develop a legend of Ozaki, the patriot murdered by militarists and Fascists. Since no factual account of the Sorge case has yet been published in Japan it is easy for such men to perpetuate such a fanciful tale.

The oddest postwar item of the Sorge case is that the men who betrayed them all 6 years ago, Ito Ritsu, now is a member of the central committee of the Japan Communist Party, a leader of the Youth Action Corps (Totsugekitai), admired, respected, and followed by thousands of the faithful. Can it be that the Japan Communist Party and the Soviets do not know who really betrayed the ring and so killed Richard Sorge and Ozaki Hosumi?

A Middle Way for the Middle West

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Howard A. Cowden, president and general manager of Consumers Cooperative Association. CCA is a fine American institution and Mr. Cowden one of America's leaders in the field of economic democracy.

A MIDDLE WAY FOR THE MIDDLE WEST

Fellow Americans, this broadcast marks the beginning of a great effort at the crossroads. Tonight, from North Dakota to Texas, from the Mississippi River to the slopes of the Rockies, the members of cooperative associations, nearly half a million strong, are talking together, thinking together, and planning action together. Thousands are meeting now, in small gatherings, to hear this address, and to start a great crusade to win new members and friends.

The round-up campaign—an annual event—would build toward a better world, by building better cooperatives all across the land and thereby building better communities. During the next several weeks, neighbors will meet and talk with neighbors about their common problems. They'll talk about some of the pressing problems of our time—about how farm prices are starting to fall, on the one hand, and how the costs of farm supplies are starting to rise, on the other. And the members of farm co-ops are beginning to wonder what this fact, which has such a familiar ring about it—harking back, as it does, to the beginning of the depression in the late twenties—they're wondering what falling farm prices and the rising cost of farm supplies will mean to them in terms of their own futures. They're wondering if they're going to be whipsawed into ultimate bankruptcy, as millions were in the thirties, by an ever-widening gap between prices they receive and the prices they pay.

Well, during the weeks of the round-up, this will be unquestionably one of the prime topics of conversation, as neighbor talks with neighbor and co-op member with co-op member . And they can talk, too, about the solid accomplishments of their cooperatives—how they're a bulwark to a solvent agriculture. And they'll ask nonmembers to come in and share the fruits that result from working together.

As co-op members, they've got a lot more confidence in themselves and their neighbors than they had a short 20 years ago. They won't be talking of what they hope to accomplish cooperatively some distant day in the future, but what they've done this past year. In the past 20 years they've built strong local cooperatives. They've federated these into Consumers Cooperative Association, the largest cooperative wholesale in the world in production, processing, and distribution of petroleum. Last year they purchased $54,000,000 in goods and services through CCA, and in doing that they saved themselves $3,300,000 in a single year. It was their way of lowering the cost of farm supplies and keeping agriculture in balance with industry, and in doing that every one of hundreds of thousands of individuals played a part. Cooperatives give to the little fellow, the man of ordinary means, the stature of a Goliath.

To make these benefits of cooperation more tangible, let's convert that $8,300,000—which farmers saved through cooperation—into some of the things farmers spend their money for. For example, that sum is enough to buy 69,000 electric washing machines. It would buy 55,000 running water systems, or enough to put running water into one-third of the farm homes of the State of Kansas. It would pay all the salaries of all the rural teachers in a State the size of Kansas for more than a year. It would pay for 225,000 tons of fertilizer. It would do all these things or—it would make eight millionaires. And I shall leave to this audience to answer the question:

Which is more socially useful, 69,000 washing machines in that many homes, or $8,000,000 in the hands of eight men?

It used to be thought that farmers could get along pretty well simply tending to the business of running their own farms. But like many other ideas of the past, that one has faded under the pressures of history. There is a vast world of interests, the fluctuations of which affect vitally the operation of farming, as they do the lives of every one of us. And so today, farmers are wondering if the cold war in Berlin, China, and Indonesia will erupt into a Third World War. They're wondering if the struggle of the great powers for Middle East oil may not touch off another world conflagration. They're wondering if the Ruhr, the industrial heart of Europe, is going to be turned over again to the industrialists who financed Hitler and lifted him to power. All of these arenas of crisis affect the farmer every day of his life. The individual, working alone, is helpless in all these matters. But working as a part of a world-wide cooperative movement, he has a strength and an influence far greater than is generally realized.

For example, the world-wide cooperative federation—a federation that embraces people and cooperatives in all lands of the earth—is an adviser to the United Nations. That means that the farmers of the Midwest, through their co-ops, have a seat in the world's highest council, and a means thereby of influencing that council's decisions by their views.

Some of the stands taken by farmers through their representatives on the United Nations are indeed far reaching. For example, the world cooperative federation is seeking to have the oil of the Middle East—one of the world's most notorious trouble spots—put under a United Nations agency or authority. Time and again, tensions developed through the struggle between powers for control of this oil-rich area have brought the world to the brink of war. Is it too much to ask—for the sake of peace—that this struggle be ended, and that the Middle East oil resources be internationalized and thereby shorn of their capacity to provoke conflict? It is the simplest, most logical solution, and one that surely will be realized in our time, in our quest for peace.

Cooperative administration of trouble spots like these is being more and more frequently proposed as the answer to the central problem of our day—the problem of war or peace. Cooperatives have recently proposed that Germany's industrial Ruhr be organized on a cooperative basis, a proposal which has been carried to the White House and which is being championed editorially by newspapers and columnists. The plain fact is that the individual need no longer wring his hands helplessly in these trying times; he has only to unite with his neighbors in the world-wide cooperative movement to become an influential citizen of one world and to exercise an influence far beyond what he could wield working alone as an individual.

Our world is progressing toward a higher and higher degree of organization—that is the lesson of the events of the past 30 years. The question is, will this higher degree of organization be in the interests of peace and democracy, or will the resultant be either of the twin tyrannies of fascism or communism? I firmly believe that here in the Middle West, with our cooperatives, we are developing a middle way between big business on the one hand and big Government on the other—a middle way that will keep our economic system democratic and thus make political democracy a continuing possibility.

The lesson of cooperatives is that they provide a framework within which people can learn the techniques of working together toward their common interests. This is the essence of democracy itself—which is based on the idea that the clash of interests between man and man, and between ideal and ideal can be worked out in the meeting place under democratic procedures. But while we have had democracy for over 150 years, we have yet to apply it on the broadest possible scale. And that is the basic significance of the tremendous growth in recent years of the people's cooperatives—it is a growth which means that the thousands of people who daily join cooperatives are training themselves in democratic procedures and techniques—are learning to work together with their neighbors toward the solution of common economic problems.

Because it is through the patient, give-and-take of democratic group action—a process of which cooperatives are the very symbol—that the ordinary people of the earth will find a common peaceful solution to the vast issues of our time.

No government and no civilization perishes which maintains faith in the people. And it is this faith that the people themselves have the capacity to solve their own problems—political, economic, and otherwise—through democratic action—that is the central ideal of cooperation.

When I was preparing to leave Prague, Czechoslovakia, last September, one of the top leaders of the European cooperatives said to me:

"The cooperators of my country regard the co-ops in the Middle West as the bright spot in the cooperative movement of the western hemisphere. Furthermore, we regard all of you as the outstanding leaders in the whole world in the cooperative production and distribution of petroleum. We are following everything you do closely, for we regard your leadership as encouraging and inspiring."

As I said good-by to him and took a plane for London I felt more keenly than ever before the great responsibility that you and I have to the millions of cooperators around the world, and to hundreds of thousands of nonmembers in the Midwest who have not yet realized the great opportunity that is ours.

One of the great philosophers of the cooperative movement, who was thrilled on reading our twentieth annual report, wrote me at New Year's time: "I take this occasion to convey to you, to your directors, and to your expanding membership my thanks for what you are doing for the sake of the civilization in which I am living. This means not so much for me but for my children's children."

The story is told of an old man who was interrupted in his work of planting an apple tree by a questioning youngster.

"Why are you planting an apple tree, granddad?" he asked. "You'll not live long enough to eat any of its fruit."

"Because," said the old-timer, "when I was a boy I had apples to eat."

We of the cooperative movement are planting apple trees. We're working for today and for tomorrow also, and for the days when, to us, there shall be no tomorrow. We're working for our children, and our children's children. We're working for that fairer land and that better day of which we dream and which we are certain will come.

What we are building here is not an institution to make richer a handful of men already too rich and too powerful, but an institution that will help lift living standards for the people of a great area; an institution that will be representative of the ideals of thousands upon thousands of people, an institution into which has gone not only the labor but the thinking of untold numbers, an institution that may help correct some of the inequalities in our economic and social system and thus create a better nation and a better world in which this and other nations can live in peace and security.

Now To Pay the Fiddler

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. GROSS. Mr. Speaker, there is no question in my mind that we have reached a cross road of determination in this country in dealing with the Federal debt, expenditures, and taxation. No single problem, with the exception of world peace, is more important at this hour to every man, woman, and child in this Nation than economic stability, and this is irrevocably tied to debt, expenditures, and taxation. Already we have seen a loss of several billion dollars, as represented in farm income, and the end is not yet. On the other hand, we are told by the administration that there must be even greater spending and even higher taxes. Over all is laid the heavy and menacing hand of a Federal debt of more than $250,000,000,000. Not a single program has been laid down by the administration for the liquidation of this debt, and there is no reason to believe, as of this date, that any specific legislation will be offered for that purpose. Debt reduction thus will continue to be offered as a political campaign fairy tale. In connection with the foregoing I desire at this time, Mr. Speaker, to offer an excellent editorial as published recently in the Bremer County (Iowa) Independent, published at Waverly, Iowa:

NOW TO PAY THE FIDDLER

We listened in amazement to President Truman's message to Congress. We waited in vain to hear something definite about cutting down the enormous expenses of our Federal Government. Instead we heard the President boldly suggest spending many more millions and call upon Congress to find ways and means to raise $4,000,000,000 more in taxes every year. Just where are we going to stop?

In 1937 it took all of the income of all the people in two States, Pennsylvania and Missouri, to pay the cost of running our National Government for 1 year. In 10 years that cost had mounted to where in 1947 it took the entire income of all the people in 25 States to pay the cost. The Government budget jumped from eight billions in 1937 to forty-two billions in 1947. Now we're headed still higher into the stratosphere. Just how much further can this go before the Government takes over everything and everybody?

Make no mistake about it—national debts and high taxes are the greatest danger Americans right now face so far as their personal liberties are concerned. If the cost of our Government continues to go higher and higher it won't be long until our freedom of enterprise is gone. After that our other freedoms can well be lost in rapid succession. It is no exaggeration to say that the hope and prayer of the Communists in this country is that our Nation will come to adopt enough socialistic follies to deplete our Federal Treasury and invite the kind of national bankruptcy now prevailing in China.

If you think such a thing can't happen in this country, talk to anyone who has been in England within the last few months and learn how far that country has moved in the direction of taking away the freedom of the

individual. History shows that every great nation which fell, did so because its government grew so big and heavy that the people could no longer stand up under it. It is a terrible thing to contemplate, but the reality is now before us. Some one of these days when the workers in our Nation's industries suddenly find their pay checks cut still further because of increased withholding taxes; when farmers and businessmen find their income taxes mounting still higher, a lot of people are going to realize that now at last the time has come to start paying the fiddler.

Enemies of human freedom have lots of clever ways to promote their evil designs. Their clever, sentimental appeals and schemes for the Government to spend more and more money will always find support. Yet adoption of these schemes means heading our country toward bankruptcy and some form of dictatorship as certain as night follows day.

President Truman has made his choice. The idea of cutting Government expenses to make possible a reduction in taxation and lowering the national debt is out the window so far as the administration is concerned. One last hope remains. That hope is that our representatives in Congress will insist upon a drastic reduction in the cost of running our Government machinery. Unless all of us act to let our representatives in Washington know how we feel about more Government expenses and still higher taxes we are headed for President Truman's bureaucratic utopia.

The time to pay the fiddler is at hand.

A Reasonable, Uniform, American, Old-Age Pension

EXTENSION OF REMARKS
OF
HON. TOBY MORRIS
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. MORRIS. Mr. Speaker, I have today, introduced into the House of Representatives a bill that I believe should be of tremendous interest to the Congress. I believe further that this bill is of tremendous interest to the people of the United States. This bill, Mr. Speaker, would provide a uniform American old-age pension to all citizens of the United States who could meet the following qualifications.

First. Applicant should be 60 years of age or older.

Second. Applicant's personal income should be less than the amount making it necessary to file a Federal income tax return.

Third. If not native born, applicant must have been a fully naturalized citizen for at least 10 years before date of application.

These are the three simple qualifications. They are so easily understood that any further explanation of them seems to be unnecessary.

The amount of the pension provided in this bill will be uniform in all of the States, and uniform in all parts of the various States. We believe, Mr. Speaker, that whatever amount of benefit in the way of assistance or old age pension, or other benefit provided by the Government, for citizens, should be uniform. Certainly there should be no disparagement or discrimination because of the State in which the citizen happens to reside.

Many of us have long deplored the fact that under our old-age assistance the amount of benefits was determined by a State matching system. Thus, even today where the Federal Government is matching some of the States up to a maximum of $30 per month, it is at the same time only matching up to less than half that amount in other States. This system, in our opinion, Mr. Speaker, is wrong. Why should not a citizen of any given State receive from the Federal Government the same amount in either old-age assistance, old-age pensions, or any other benefit, as a citizen of Colorado, California, or any other State?

To us the answer to this question is obvious. They should be treated with equal justice in all the States. Their grants should be uniform. The bill I am speaking of will provide a uniform American old-age pension. It will provide the same amount of pension in each and every State. It will provide the same amount of pension for all citizens eligible to receive the pensions.

AMOUNT OF PENSION $60 PER MONTH

We consider this amount reasonable. We believe the aged citizens would desire us to keep the pension modest in order that it would not involve too great a tax burden on the country. We are aware also that the Government is facing heavy demands for funds for national security, aid to education, foreign aid, and many other pressing matters. We believe that all of these should have proper consideration. With regard to our proposed pension for the elders, we think it is as equally important as almost any other subject on which the Congress shall be called to legislate. Certainly the welfare and security of our own mothers and fathers is of vital importance to all of us and to the welfare of our Nation.

THE AMOUNT IS NOT TOO MUCH

First. I am confident the committee will find that $60 per month is not too much pension. It is not too much for the Government to provide in the light of the obvious need of our elder citizens. If we should pay them anything at all we should certainly pay at least this much. Should the committee find the situation justifies a greater amount, say $75 or even $100, and so reports, giving its good and sufficient reasons, I shall certainly be pleased to go along with such a recommendation.

Second. Figures and facts are being assembled as to the cost of this proposed legislation. We are certain that our economy will not only stand it but will definitely be improved by it. We expect to put such figures and facts in the RECORD later.

May I state again, Mr. Speaker, that I do believe, and most sincerely, that if the Government has any responsibility at all in this field of providing security for our deserving elder citizens then it does have the full responsibility of providing sufficient security to enable the citizens to live according to reasonable American standards.

We have committed ourselves to this responsibility. We have entered the field. We are up to our necks in responsibility. The need and the emergency of the situation is really frightening when we consider the sad plight of millions of our citizens. I cannot overemphasize the extent of the emergency. Millions right here in America are, on this cold winter's day, in February A. D. 1949, ill-housed, ill-clad, ill-fed.

BIPARTISAN SUPPORT

This program has united, bipartisan support. It is not a matter of partisan politics at all. Democrats, Republicans, or members of any party are subject to old age, hunger, cold, the need for proper medical care, and so forth. No, Mr. Speaker, these exigencies respect neither persons, parties, races, nor creeds. They are basic problems of all of our people. We are happy therefore that we can present a completely united program insofar as parties are concerned. We invited all Members of the House who were interested in better old-age pensions to confer with us in preparing this program. We did not ask any Member about his party affiliation or his stand on any other issue now pending before this body or which hereafter may be introduced. We reduced this matter to its actual size as an American issue, and we are trying to deal with it strictly on its merit alone. We do have completely united bipartisan support for this program. In fact, I myself do not know, among our many sponsors, how many are Democrats and how many are Republicans. What is more I do not wish to know. I am anxious that there shall be not even the slightest vestige of partisanship in this matter. Pensions for the aged constitute an all-American problem. Let us deal with that problem with an all-American concept. Let us deal with it with statesmanship. Let there be no partisanship.

We are still extending the opportunity for all Members of the House who desire to do so to affiliate with us in this united program for better pensions. We want each and every Member who favors a reasonable pension to take the place of old-age assistance to join hands with us in our friendly, fair, and bipartisan effort to enact such a bill. We believe that there is a strong majority of the Members in favor of such legislation. Many of us have openly declared our position in this matter both on the floor of Congress and at home with our constituents. We are going to redeem those declarations by doing our best, in this Eighty-first Congress of the United States, to enact such legislation. We shall follow fair and friendly methods and we shall welcome the aid and cooperation of every Member that shares our views.

CALLS FURTHER ATTENTION TO THE BILL

The bill, Mr. Speaker, will doubtless be referred to the Committee on Ways and Means. I trust it will have early

and continued consideration. Not because I have introduced it, Mr. Speaker, but because it does deal with a most urgent national problem. Furthermore it represents not merely my interest in this pressing problem, but to just as great extent, it represents, I believe, the interest of every Member of this House who shares with me the conviction that our deserving elder citizens should have an honorable, a reasonable, a uniform, American pension, and that they should have it now.

Trinity River Flood-Control Project

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 9, 1949

Mr. TEAGUE. Mr. Speaker, with work progressing rapidly on the reservoirs under construction in the upper Trinity River Basin, it becomes more imperative that the surveys and investigations by the United States Engineers be completed in the middle Trinity River Basin in order that authorizations and appropriations from Congress may be secured. I have appeared with other members of the Texas delegation before the Appropriations Committees in Congress, requesting sufficient funds to carry out this necessary flood-control work and I will continue to do everything within my power to expedite these projects.

The Ennis Labor Council of Ennis, Tex., is very much interested in having work begin on the Chambers Creek Lake project of the middle Trinity River Basin. I sincerely trust that the soil-conservation work, now being accomplished, will soon be concluded as the soil must be held in place before the flood-control structures will prove of lasting benefit.

In May 1948 Chambers Creek and other streams in this area were at their highest flood level in years and the losses of this flood together with a more recent overflow amounts to hundreds of thousands of dollars to the people of this area. These losses can be avoided and we will continue to work for an effective flood-control program for the middle Trinity River Basin.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following communication received from the Ennis Labor Council and signed by its president, Mr. B. C. Roberts, and the council's secretary, Mr. H. M. Cloud:

At a regular meeting of the Ennis Labor Council representing the union organizations in the city of Ennis, Ellis County, Tex., which have a combined membership of over 1,000 members, the following motion was adopted:

"That the following resolution be sent by the secretary to Senator TOM CONNALLY, Senator LYNDON B. JOHNSON, and Congressman OLIN E. TEAGUE for their attention and whatever action may be possible on their part.

"'*Be it resolved*, That the United States Senate and the House of Representatives be requested to take prompt action so that the Trinity River flood-control program may be carried out with dispatch and that the Chambers Creek Lake project be given top priority.

" 'That there is now a serious shortage of water in the area to be served by the Chambers Creek Lake project and that at least three cities and numerous towns and villages surrounding said project will be greatly benefited thereby and that it is imperative that the water supply in the area be increased without delay and that the project as outlined by the Corps of Engineers of the United States Army is the most feasible method of remedying the serious shortage.'

"Adopted at a regular meeting of the Ennis Labor Council January 10, 1949.

"B. C. ROBERTS,
"President of the Council.
"H. M. CLOUD,
"Secretary of the Council."

Hall Survey Indicates the Bonus Issue Will Face Congress Again Whether We Like It or Not

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, 15 years ago Congress approved the Adjusted Compensation Act and men who fought in World War I received their long-awaited bonus. They were paid off by Uncle Sam at a time when the United States was suffering from the worst depression in history.

I was a bank teller at the time; I remember the long lines of veterans with Treasury checks in front of my paying and receiving window. I remember how great was their need for these extra dollars, which went to cover unpaid bills and to buy necessities which the veterans lacked. That first bonus put the majority on their feet.

Today, 4 years after World War II, little has been said thus far about the bonus as it applies to the new veteran. Times being relatively good, and up to the present, at least, the Nation enjoying pretty full employment, we have not heard much of the subject. It definitely is not as near the fore as some subjects I could name.

I jumped the gun last year and called upon the House to keep the promise we made in the GI bill of rights to make the loan guaranty payable to World War II veterans who could show need.

Of course, I was immediately assailed as a Treasury raider and called all kinds of names for daring to suggest that justice be done the veteran. So I decided to list the bonus question in the Hall survey. I wanted a clear picture of just how people in my section feel about it.

As you know, I asked the clear, direct question, "Do you want me to vote for or against a national bonus for World War II veterans?" The results appear as follows:

PERCENTAGES

Question No. 6. "Do you want me to vote for or against a national bonus for World War II veterans?"

	For	Against
Triple Cities area	56.1	43.9
Rural	61.1	38.9
Broome	57.1	42.9
City, Norwich	57.7	42.3
Rural	47.0	53.0
Chenango	51.4	48.6
City, Oneida and Canastota	28.3	71.7
Rural	45.4	54.6
Madison	38.5	61.5
Over-all district	55.1	44.9

When you consider that very little favorable comment on the bonus subject finds its way into any articulate news organ, and that practically no mention has been made of it by veteran leaders, you will be the more surprised to view these percentages. It should be noted that the over-all picture of my district shows a preponderance in favor of the World War II bonus.

Nor can all those who voiced their opposition to this proposal be classed as dead against it. Ever so many qualified their disapproval as only temporary. "Later on," they wrote, "the boys will need their bonus more than they do at present."

There is considerable justification for their stand. Another 5 years may see a depression; heaven forbid. Then, the flood of a billion dollars in veterans' bonus payments through the channels of trade will certainly help things. Perhaps their contention to delay paying the bonus is reasonable.

My contention was and still is that many veterans could have started out in business or bought homes as soon as they were mustered out of service. They would not now find themselves out of work or in jobs they do not like. They would not be living in some of the rats' nests that they are compelled to call homes into which the housing shortage forced them.

Unfortunately the hue and cry from a few selfish big shots poured cold water on their getting anywhere with the loan guaranty in the GI bill.

But the folks up my way have spoken, and they favor the bonus. They back up my position and I shall continue to be an advocate of this proposal.

My immediate energies, however, are going to be directed to a pension for World War I vets. These are the forgotten men. They have been pushed around long enough.

Now they are reaching middle age. I dare say they average between 55 and 60. The time is ripe to give them a break. With this in mind, I hope Congress recognizes the necessity of passing the Hall pension bill for World War I veterans.

Nobody is going to scare me by yelling "liberal" because I go all out for the veteran. Nobody is going to turn me from my determination to see the veteran get a square deal. Enough voices have been silenced already who spoke in his behalf.

Wait until the big vet organizations start rolling with their campaigns to give the ex-doughboys and GI's their just deserts. Then you will see a lot of red faces. Then a lot of Johnnies-come-lately will climb on the bandwagon and clamor to take the credit away from the rest of us who have never been afraid to take a stand.

Education and Federal Aid

EXTENSION OF REMARKS
OF
HON. CLARE MAGEE
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. MAGEE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address entitled "Education and Federal Aid," delivered by me before the Brightwood Lions Club, of Washington, D. C., Wednesday, February 9, 1949:

EDUCATION AND FEDERAL AID

Diogenes once said: "Education is a controlling grace to the young, consolation to the old, wealth to the poor, and ornament to the rich."

I believe, as you believe, that the three great institutions in our land are the church, the home, and the school. The church is the common meeting ground for united worship, where a few moments may be spent in turning our thoughts from things material to things spiritual. Upon every strictly moral issue, the church is found upon the side of right. I believe again in the sanctity of the home. It is the fountain spring of life, the altar of hope. From the hearthstone of the home are born the pure emotion of the family relationship. The home has been the bulwark of every nation. Since the beginning of time, man and savage beast have fought to protect it. Savage ancestor living in his dugout or gilded king in his resplendent castle have died to protect its portals.

Yet as strongly as I feel for these institutions, I cannot but believe that the school often wields the greatest influence of the three upon our youth. The home may be torn by strife. It may be a hovel where true love does not abide between the parents; and where existence is not pleasant for the children. The church may fail in its attempt to attract the youth. The school, however, compels attendance in the formative period of the child's life. The teacher has control more waking hours per day than does the parent. In the school are taught the fundamentals of life, the history of the great, and the knowledge of centuries of the best that man has strived for and won.

The public-school system is a great asset. It is the most precious heritage of a free people; but I wonder how many of us have ever paused to consider the rough road the human race has traveled to attain it.

There was a time when only the aristocracy were allowed to think. They made the laws, decreed the form of religious worship, and executed the rules and mode of life. The king or ruler was a supreme being and all power emanated from him. He claimed to be the representative on earth of heavenly powers. Laws were not only made by him. They were executed at his dictation. In those early days, if a crime had been committed, they would take the accused to a deep body of water, bind his limbs together, tie his arms and throw him in. If he drowned, they said he was innocent. If he fought himself to shore and safety, they said that he was possessed of the devil; that he was guilty; and he was speedily executed.

The ruler held his power by the aid of superstition and ignorance. But now and then some individual used his mind and questioned the status quo. He dared to raise his voice against these injustices. He sought to know the truth, believing as Plato did, that "truth will make you free."

Liberty has ever followed education and neither was born in a day. That men might have education and liberty, thousands of heroic souls have lain in dungeons, have felt the thumbscrew, and witnessed the terrible torture of the gibbet.

We can think of how Pericles, who built the city of Athens, was disgraced and destroyed and how he had to go to the Forum and plead for the life of his wife, Aspasia; and how finally she and her son were both executed on order of the government.

We think of how Phidias, the right-hand man of Pericles, and the greatest sculptor the world has ever seen, was executed for blasphemy for putting the picture of his patron on a sacred shield; how he was dragged behind a cart to the place of execution and his body later thrown to the wild beasts.

We think of Socrates, who was almost a divine teacher and one of the great Grecian philosophers, whose only crime had been to deny the existence of the seven gods who were supposed to rule over the destinies of Greece. Instead he taught that there was one Supreme Being, that he was a just and merciful God. Socrates was charged with heresy and with corrupting the youth of the city. He was brought before the Heliaea, the most important court of Athens, and tried before a jury of 500 and by a small majority found guilty. He was sentenced to die by drinking the fatal hemlock. During the 30 days that elapsed between his sentence and day for execution, he was beseeched by his pupils and friends to flee the country. He was given a chance to deny all he had said, but Socrates believed that truth was greater than life itself and on the appointed day he drank the potion with a calmness of spirit that astounded his countrymen. Among his pupils was a young man who had to flee the country to save his own life. However, in a few years he returned and picked up the cudgel of truth that had been laid down by his teacher, and today the name of Plato stands foremost among the great philosophers. He in turn taught Aristotle, another great teacher, who avoided execution for heresy only by fleeing for his life.

We could also mention Hippocrates, Herodotus, and others as among the great searchers after truth, men who believed in what we later have chosen to call democracy. They were all criminals before the law. They all suffered humiliation and were exiled or executed.

We see the Man of Galilee, onto whose temples was pressed the crown of thorns and into whose hands were driven the nails of hate merely because he taught of the brotherhood of man and attempted to portray a new civilization.

We see the Dark Ages, with its night of a thousand years, when men forget to smile; when initiative died and enterprise ceased; when the world produced no literature or no inventions.

We see the world awaken again with the great struggle at the Valley of Runnymede, when the embattled barons marshaled their forces and held King John at bay. We see gained from that conflict the English bill of rights, which forms the nucleus of our own Constitution.

We see Columbus discover a new nation and receive as his reward a prison term, being liberated only when death filed his chains and set the captive free.

We see Galileo teaching the Copernican theory and his own discoveries relative to the movement of the earth and planets. We see him charged with heresy and forced on his bended knees to deny the truths that he had taught or be burned at the stake. Legend has it that as he arose he said: "Yet the earth does move"; and for this insolence he served 3 years in a dark dungeon.

These men were the great teachers. To these men and countless thousands more we owe a debt of gratitude for breaking down the iron curtain of superstition and ignorance.

Some years ago I witnessed an exhibit of man's industrial and social progress. I saw the advance he had made from the birch canoe in which our savage ancestors floated about to the modern steamship that turns her brave prow from New York harbor and sails across 3,000 miles of billowy water within five short days. I saw the advance that had been made in weapons—from the club with which half-civilized men beat other men into subjection; from that club to the flintlock, the caplock, and to the Big Bertha of the First World War, capable of hurling balls of steel for dozens of miles. I saw the protective armor from the turtle shell and porcupine skin to the shirts of mail and ships and tanks of steel. I saw the musical instruments from the tom-tom to the great pipe organs. I saw the paintings from the daub of yellow mud to the masterpieces of Michelangelo; and sculpture from mud-constructed horrid images to the beautiful statuary of the present. I saw the books of antiquity written upon the skins of wild beasts, books written upon the shoulder blades of sheep, books written by crude etchings in the sands and by designs upon totem poles; from all these to the splendid volumes that adorn the libraries of today. I witnessed the advances that had been made in agriculture, from the crooked stick and sharpened stone with which our ancestors furrowed the soil, up to the gang plows; from beating the grain from the hull up to the great combines.

Education has ever been the beacon light of civilization. Education is the difference between the United States and the Fiji Islands. It is the difference between the wastelands and the garden; between the forest trail and the modern highway. It is the difference between the thatched-roof cabin and the steam-heated home; between the oxcart and the automobile; between the crooked stick and the modern implements of agriculture.

As a poetic figure once expressed it: "Education weighs the stars and analyzes the sunbeam. It reads the testimony of the rocks. It bridges the yawning chasm. Education takes the pen and writes the poem. It takes the brush and paints the canvas. It takes the chisel and creates from the rough block the finished statue."

On the effects of education, Lord Brougham once said: "Education makes a people easy to lead, but difficult to drive; easy to govern, but impossible to enslave."

Several years ago I had occasion to be traveling about the rural sections of Cuba. We came finally to a small village. Some distance from the road was a large mansion in a setting of beauty. Lined along either side of the road were thatched-roof and one-room cottages. Children, emaciated and only half clad, played about. As we stopped the car, they came to us begging for pennies or gifts. Inside the homes were no floors excepting the bare ground and practically no furniture or chairs. The driver of our car stated that the owner of the large home was mayor of the village; that he owned all the land, stores, and other property; that all the inhabitants were in his employ and that they were allowed only enough to barely subsist upon. Here we saw an example of the continuation of ancient serfdom.

Not many months thereafter I read where a revolution had started in Cuba. Peculiar to say, it was not started by the people whom

we saw nor by their kind. It started with the students in the University of Habana. And so it has always been. It is the students who have dared to think, who have been the leaders in progress and civilization.

Education, like civilization, can never remain static. It will grow and expand or it will decline and die. Our public-school system is facing a crisis. Education is facing its hour of decision.

In my judgment, education is a national problem, while remaining a function of the States in actual operation. It is as much a national problem as are defense, flood control, agriculture, and the numerous other functions of the Federal Government.

May we, in sincerity, contend that the Federal Government should be interested in soil conservation and better farm practices, in better livestock, in social security for our citizens, yet be unconcerned about the education of our youth? Is it logical to say that the Federal Government may embark on a pension or assistance program for the aged, and yet turn a deaf ear to youth in its thirst for knowledge?

Shall we be more concerned about the quality of our livestock than we are in the quality of our teachers? Shall we continue to spend billions to raise the standard of living in Europe, and yet forget the sacrifices which our teachers are making in this land of ours. Our teachers, as a class, have never received a salary commensurate with the other learned professions. We have seen situations in this country where the janitors at the schools received a higher monthly wage than did the teachers, and today many ditch diggers receive a higher rate per hour. It is a sad commentary on our national life that members of a noble and honored profession are unable to lay aside something for the ordinary misfortunes of life; that they must face old age with fear and uncertainty.

While we are spending billions on the One World idea, there are those who say that not one cent should be spent to make education a one-nation function. Are not citizens of each State also citizens of our Nation? Do they not move freely about and across State borders just as goods are moved in commerce? Let no man or no organization tell me that the effects of illiteracy in one State are not felt throughout our land.

A little while ago, we saw the Federal Government spend millions of dollars in its Operation Haylift to save starving and freezing livestock. I do not recall that the National Association of State Chambers of Commerce took any exception to this great act of mercy. Nothing was said by them at that time concerning States' rights and Federal encroachment. For years we have taken tax moneys collected from all the States and used it when an emergency arose or when disaster struck in a few sections. The chambers of commerce and newspapers in the affected areas were crying for Federal aid; yet these same people raise the cry of "Federal encroachment" the very minute someone suggests Federal aid to our public schools.

There is nothing new in Federal aid to education. It began with donations of land from the public domain to endow the land-grant colleges. Later came Federal appropriations in aid of agricultural education and vocational training. We are witnessing generous appropriations for the education of veterans. In all these years there has never been one scintilla of evidence that any State has sacrificed any portion of its sovereignty or that the Federal Government has attempted to dictate or supervise the type or manner of instruction.

In both World Wars a staggering number of young men were rejected because of educational deficiencies. I have heard it said that we were too strict in the intelligence tests. I know from personal experience in both World Wars that this is untrue. In each war men had to be screened again because so many were unable to understand simple military commands. Separate units were formed for those of lower intelligence and they were given special instruction at added cost.

Our last decennial census showed that 10,000,000 adults had less than a fifth-grade education. Millions of children are attending no school. Millions are receiving inadequate instruction because of the inefficiency of the teachers. More than 350,000 teachers left the profession between 1940–45. More than 1,000,000 children are attending schools in districts where annual expenditures are less than $500 per classroom. A survey in 1939–40 revealed that there were systems so poorly financed that they spent less than $100 per classroom, while the best-financed systems were spending about $6,000 per classroom.

The ability of the States to support education varies widely. In 1945 the income per capita ranged from $556 in one State to $1,595 in a certain other State. For the same year, the amount of income behind each child of school age ranged from $1,974 in the one State to $9,005 in the other State. I say to you that there is no sane or logical argument why a child's opportunity for a full education should be dependent upon the circumstance of where that child was born.

How do our expenditures for education compare with certain expenditures for nonessentials? During the school year of 1944–45, we spent $2,600,000,000 for the operation of our schools, including teacher hire. In the calendar year of 1944 we spent $2,700,000,000 for tobacco and $7,100,000,000 for alcoholic beverages. In a recent year crime alone cost our taxpayers $15,000,000,000; and it goes without saying that an overwhelming majority of those now serving in our penal institutions are poorly educated.

The best figures available show that both Britain and Russia are spending a higher proportion of their national income on education than are the people of the United States. It was acknowledged a few years ago and may still be true that the rate of literacy in the Soviet Union is higher than that in the United States.

There was a time when commerce between the States was negligible. Each community was a unit unto itself. Individuals lived and died in the locality of their birth. These were the days of the oxen teams or of the horse and buggy. Commerce was mainly a system of barter. Mastery of the three R's constituted a well-rounded education.

We know the great difficulties that confronted the founding fathers in their efforts to form a federation of States—the National Union. People were jealous of their rights. They wanted local self-government. They feared dictation from a central authority, which, at that time, seemed far removed. But I am thankful that today we are one Nation, indivisible; that we are an economic unit; that we are fast approaching the goals laid out by our Federal Constitution; "that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." Let us ever remember that these aims were not directed toward or for the inhabitants of one State or one section, but to the entire Nation.

I am glad that a majority of us now accept the principle that wealth should be taxed wherever found and the revenue expended wherever needed to promote the general welfare of our people. Our children of today are citizens of the Nation, rather than of a particular State. Let us treat them as such; and let us treat those who instruct them as such.

The first report of the President's Commission on Higher Education contains the following statement, with which I am in full agreement:

"The Federal Government assumes responsibility for supplementing State and local efforts in military defense against the Nation's enemies without; surely it may as justifiably assume responsibility for supplementing State and local efforts against educational deficiencies and inequalities that are democracy's enemies within."

We Could Slip Into Socialism While Hating It

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Saturday Evening Post:

WE COULD SLIP INTO SOCIALISM WHILE HATING IT

After the election returns were in, the Post raised the question, Did we buy socialism with Truman? Some readers are still bending our ear with complaints that we were unfair not only to President Truman but to the American people. Of course, these optimists assert, neither Mr. Truman nor the American people want socialism, and we were practically indecent to say such a thing. What we said was that, although neither the President nor those who voted for him want socialism, the essence of socialism is what we are very like to get. Now we have the President's state of the Union message, the so-called economic report, and the inaugural address. The defense rests.

According to Mr. Truman, Americans have "abandoned the trickle-down concept of national prosperity * * * (and) believe that wealth should be created for the benefit of all." What this seems to mean is that, instead of the benefits of a dynamic imaginative free-enterprise system trickling down to all classes, including the laziest man on the street, the ordinary man is now to get his trickle from the Government, which, according to the President, must see that every American has a chance to obtain his fair share of our increasing abundance." Since the only way the Government can see that one man gets his fair share is to take something away from another man, it is obvious that $6,000,000,000 in new taxes will be cheap in comparison with what will have to be taken from Peter if Paul is to get what he thinks is his fair share.

Apparently foreseeing that when the Truman New Deal gets to rolling, there won't be much to trickle down from American industry, the President is ready with a recommendation that whenever the steel industry doesn't produce enough to satisfy the bureaucrats' idea of ample production, the Government shall finance or actually build competing plants. Having all but crippled the industry's sources of new capital needed for improvements and expansion, the Government, under the whip of the CIO economists, threatens to mow down free enterprise with subsidized competition.

The costs of medical care and social security are to be raised to new heights, on the theory that American medical care, the best in the world, can be improved if it is made as much as possible like medical care in France and England, where it is terrible. "Building costs must be lowered," but apparently by charging them up to Uncle Sam rather than by insisting on modifications of the make-work, slow-down, and stand-in practices of the building trade-unions, which have raised wages enormously and reduced production

per man to new lows. The proportion of rental housing must be increased, and to tempt private enterprise into this field, rent control must be extended and strengthened. To keep everybody in line, the Government must exercise control over the allocation of materials.

Despite all the lip service to private enterprise, the President's program leads straight to socialism, as must any program which rests on the assumption that the Government is responsible for the economic welfare of every citizen, that the Government must give him federalized medical care and subsidized housing, underwrite farm prices and dictate the minimum which people may accept as wages and how much they shall be permitted to retain as profit, in the unlikely event that the concept of profit can survive such a hodgepodge of mothering. The people didn't vote for socialism; they voted for Mr. Truman. Mr. Truman probably doesn't want socialism, but he has allowed a lot of CIO planners to talk him into a scheme of things which, if permitted to run its course, adds up to socialism, however the poor misbegotten thing is christened.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a timely, appropriate, and forceful statement made yesterday by Hon. Dean Acheson, Secretary of State, directly on the dastardly trial, conviction, and sentence of Cardinal Mindszenty, and also broadly on the vicious Communist attack on all religious denominations:

ACHESON TEXT ON MINDSZENTY

The trial of Josef Cardinal Mindszenty, on whom the Hungarian Government has now imposed a sentence of life imprisonment, confirms the Government and people of the United States in the views expressed by the Acting Secretary of State on December 29, 1948. By this conscienceless attack on religious and personal freedom, as well as by the persecution of Lutheran Bishop Lajos Ordass and other respected church leaders, the Soviet-controlled Hungarian authorities seek to discredit and coerce religious leadership in Hungary in order to remove this source of moral resistance to communism.

In their conduct of the case of Cardinal Mindszenty, the Hungarian authorities do not appear to have omitted any of the usual methods practiced by a police state. Such proceedings constitute not the administration of justice but wanton persecution. They have evoked universal condemnation, and the Hungarian Government must bear full responsibility for its action.

The cases of Cardinal Mindszenty and other Hungarian church leaders are not isolated developments. During the past 2 years, with governmental power entirely in the hands of the minority Communist Party, the people of Hungary have been increasingly denied the exercise of fundamental human rights and freedoms. Parliamentary opposition, an element indispensable to the democratic process, has been ruthlessly eliminated, the totalitarian controls of state and party have been laid like a deadening hand on every phase of daily personal existence, and the Hungarian people have been divested of any real independence.

The people of the United States, and without question, peoples of other freedom-loving nations, are sickened and horrified by these developments and fully comprehend the threat they constitute to free institutions everywhere.

Same Old Arguments Against CVA, MVA

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial published in the East St. Louis (Ill.) Journal, of Tuesday, February 8, 1949, in reference to the forces at work attempting to block development of the Columbia River Valley and Missouri River Valley on the lines of the Tennessee Valley Authority.

The editorial follows:

THE SAME OLD ARGUMENTS

As was to be expected, the usual forces have quickly alined themselves against the President's proposal for a regional development of the Columbia River Valley on the lines of the Tennessee Valley Authority.

They are hauling forth all the old arguments for opposing Government power developments. These range the gamut from unfair competition with private utility companies to socialism. Three Republican Governors of Pacific Northwest States have come out in opposition to the President's recommendation for the Columbia Valley.

All the arguments have been heard before in the case of the TVA. And all of them now tend to ignore actual experience in the Tennessee Valley, or try to write it off as not applicable. Actually the case of TVA is a strong argument for similar developments elsewhere—in the Columbia Valley, in the Missouri Valley, and in the St. Lawrence Valley.

And what is the experience with TVA? The area is many times more prosperous than it was before TVA made power available; the people are better off, and so is local business; industries have come to the valley that could not possibly have come without TVA. Even the private utility companies, which feared they would fail or be taken over by public power, are doing better today than ever before.

Furthermore, in the case of the Columbia Valley, the President's proposal is in large measure just a consolidation of work that has been going on without coordination for years. That includes the reclamation of land, on which the Federal Government has already spent millions in the Columbia area. It also includes work that has in the past been done by the Army Corps of Engineers, the National Park Service; the Fish and Wildlife Service, and other Federal agencies.

What the Columbia Valley program will actually do is bring more electric power to the Pacific Northwest, which needs it even more urgently than most of the rest of the country. It will speed the growth and industrialization of the area. And it is a job that private industry cannot undertake, because of its magnitude.

Far from opposing it, the governors of the Pacific Northwest should welcome the program—even if they are Republicans.

Civil Rights

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. HÉBERT. Mr. Speaker, since it has become apparent that subterfuge and chicanery are the most desirable weapons of accomplishment of some individuals high in administration circles, it becomes more necessary than ever for those of us who decry such tactics to be more alert than ever.

The desire for socialism and centralization of government in high government levels becomes more evident with the passing of each day. The determination to impose so-called, though misnamed, civil rights on the people of America, particularly those of us who live in the South, lends itself to any method which will do the job. Judging actions of the past we must recognize that there are no limits to which some individuals will go to attain their end. It all seems to be conducted under the rather dubious policy that the end justifies the means.

In this connection the editor of the Plaquemines Gazette in Louisiana, has written a most interesting editorial alerting the Nation to the dangers which lurk in the shadow of what appears to be high ideals and lofty purposes. It is a most provocative editorial and one which justifies careful reading and mature consideration. The time has gone when such suspicions or fears can be cast off with the thought that it cannot happen here. There are far too many things happening every day about us which only a short time ago we thought could not happen here but they are happening.

Here is the editorial:

[From the Plaquemines Gazette, Pointe-a-la-Hache, La., of February 5, 1949]

UN USED IN CONSPIRACY AGAINST UNITED STATES—MRS. ROOSEVELT'S HUMAN RIGHTS DECLARATION FOLLOWS JOE STALIN'S PATTERN FOR DICTATORSHIP

Much agitation has been carried on for the so-called civil-rights program by certain political groups and political aspirants to attract racial and religious minority voting groups, particularly in the North and East.

On December 5, 1946, Acting President Truman issued Executive Order 9808 establishing the President's Committee on Civil Rights, in which he stated as the basis for his order, without foundation in fact:

"Whereas the action of individuals who take the law into their own hands and inflict summary punishment and wreak personal vengeance is subversive of our democratic system of law enforcement and public criminal justice, and gravely threatens our form of government."

As a matter of fact, during that year there was only one lynching of a Negro in the entire United States; whereas there were scores of acts of violence and the wreaking of personal vengeance by organized union groups which were specifically exempt under the very terms of the antilynching bill introduced as an administration measure and as a part of the so-called civil-rights program.

By that order the President created a committee to be known as the President's Committee on Civil Rights, and he directed all departments and agencies of the Federal Government not only to furnish complete information called for, but "the services of such persons as the committee may require in the performance of its duties," and required the committee to make a report to the President in writing.

The committee made its report to the President, which was published by the United States Government Printing Office in Washington in 1947. The report of the President's Committee on Civil Rights is in book form of 175 pages and is entitled "To Secure These Rights."

The report stated that the Federal Government was hampered by inadequate civil rights statutes, and added: "We must provide the Department of Justice with the tools to do the job" (the FBI).

The first part of the report deals with the ideal of freedom and equality, in which such statements as these are made in an attempt, evidently, to place it on a high plane:

Page 4: "The central theme in our American heritage is the importance of the individual person.

"This is the conscious recognition of a basic moral principle: All men are created equal as well as free.

"We abhor the totalitarian arrogance which makes one man say that he will respect another man as his equal only if he has 'my race, my religion, my political views, my social position.'

"We can tolerate no restrictions upon the individual which depend upon irrelevant factors such as his race, his color, his religion or the social position to which he is born."

Page 6: "It is the purpose of government in a democracy to regulate the activity of each man in the interest of all men," (in a democracy).

In speaking of American heritage of freedom and equality, the report says:

Page 4: "We still have their ideological remnants in the unwarrantable 'pride and prejudice' of some of our people and practices."

In dealing with the proposed civil-rights program, the committee states:

Page 100: "We cannot afford to delay action until the most backward community has learned to prize civil liberty and has taken adequate steps to safeguard the rights of every one of its citizens."

This is a statement similar to the one found in the Communist Yugoslavian Government pamphlet on the subject of its law against racial and national discrimination, in which it is stated that that law was the most effective weapon that government had in bringing about its real democracy against certain of its backward people.

Besides the fact that this same antidiscrimination law is found in the Yugoslavian Constitution, it originated with the Russians, and is found in article 123 of the U. S. S. R. Constitution (Joe Stalin's all-races law), which provides that "equality of rights of citizens of the U. S. S. R., irrespective of their nationality or race, in all spheres of economic, government, cultural, political, and other public activity is an indefeasible law."

This is the law which Joe Stalin used to make himself the supreme dictator of Russia, because it gave him absolute power over all Russians. Yet, we know what kind of equality and rights Russians have.

In the President's Committee report at page 110, the Committee indicates doubt of the constitutionality of any congressional act to enforce their civil-rights program, but suggests that under the United States Supreme Court ruling in the *Missouri* v. *Holland* case in 1920 "that Congress may enact statutes to carry out treaty obligations, even where, in the absence of a treaty, it has no other power to pass such a statute. This doctrine has an obvious importance as a possible basis for civil-rights legislation."

At page 111, the President's Civil Rights Committee Report says that a strong argument can be made under the precedent of that case for Congress to take separate action to achieve the purposes set out in article 55 of the United Nations Charter designed to secure "respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion."

The President's committee further states that, "The Human Right Commission of the United Nations is at present working on a detailed international bill of rights designed to give more specific meaning to the general principle announced in article 55 of the Charter. If this document is accepted by the United States as a member state, an even stronger basis for congressional action under the treaty power may be established."

Under the United States Constitution it takes two-thirds of all Senators present to ratify a treaty, and such treaty becomes the supreme law of the land.

It is significant to note that administration bill to carry out President Truman's message on his civil rights program to the United States Congress on February 2, 1948, Senate bill 984, provides, section 2 (c) "That this act was enacted as a step toward fulfillment of the international treaty obligations imposed by the Charter of the United Nations upon the United States as a signatory thereof to promote universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race or religion."

This bill failed of passage in Congress.

It is evident that the political proponents of this so-called civil-rights program realize that these are matters strictly reserved to the States of the Union for regulation, but that they are seeking to manufacture alibis for the Federal Government to create a police state to destroy the liberty and freedom of the people of the South in particular, and of all the country as well. So it fell to the lot of Mrs. Eleanor Roosevelt to use her position on the United Nations Committee to carry out their conspiracy.

Mrs. Eleanor Roosevelt, leading spirit in the ADA, radical New Deal political organization, is the United States member on the committee which drafted The Declaration of Human Rights for the UN, and you will see the similarity in the language of those sponsoring the so-called civil-rights program, which the President's committee indicated would somewhat depend on the document to be drafted by the United Nations, if accepted by the United States as a member state, as a basis for congressional action under the treaty power.

In the January 1949 issue of the American Bar Association Journal, page 32, etc., the text of the document approved by the Assembly in Paris on Universal Declaration of Human Rights is given at length. Following are some of its provisions:

Article 2 provides that "everyone is entitled to all the rights and freedoms set forth in this declaration, without discrimination of any kind, such as race, color, sex, language, religion, political or other opinion, national or social origin, property, birth, or other status."

Article 7 provides: "All are equal before the law and are entitled without any discrimination to equal protection of the laws. All are entitled to equal protection against any discrimination in violation of this declaration and against any incitement to such discrimination."

Note the use of the word "incitement," which would be a restriction on freedom of speech and goes much further than any provision in Senate bill 984 providing for the so-called FEPC.

Both the Russian and Yugoslavian laws prohibit "incitement or advocacy" of racial or national exclusiveness or discrimination and is made punishable by law.

Article 13 provides: "Everyone has the right to freedom of movement and residence within the borders of each state."

Note that this provision would nullify all state laws on segregation of races regarding movement and residence within the borders of any state, and also note particularly that the ratification of this provision by Congress would become the supreme law of the land and would preclude Congress from thereafter enacting any laws restricting immigration of any foreigners, regardless of how undesirable the immigrants may be, whether from communistic Russia or any other foreign country. This means, of course, that our country would be over-run by undesirable immigrants and would make for much trouble in the future and eventually the destruction of our American institutions and government.

Article 16 provides: "Men and women of full age, without any limitation due to race, nationality, or religion, have the right to marry and to found a family. They are entitled to equal rights as to marriage, during marriage, and at its dissolution.

"Marriage shall be entered into only with the free and full consent of the intending spouses."

If two-thirds of the United States Senate ratify the United Nations universal declaration of human rights, including this article, it would become the supreme law of the land and would nullify every State law prohibiting marriage of whites and colored or any other legal regulations regarding marriage.

In the final analysis, under article 7, which prohibits incitement to such discrimination, and article 16, which guarantees the right of free marriage between races, if it came to pass that the United Nations human rights declaration became the supreme law of the land, if a father refused his consent to his white daughter marrying a Negro, or even if a white girl refused to marry a Negro, because he was a Negro, they would be violating both the incitement-to-discrimination article and article 16 guaranteeing free racial marriage.

It appears very evident that the purpose of the United Nations' declaration on human rights, engineered largely by Mrs. Eleanor Roosevelt, fits into the pattern of the civil-rights program in Congress and in the very evident campaign of hatred against the South by certain northern and eastern politicians to play up to racial minorities. This constitutes a grave threat and an emergency which is, in fact, right on top of us.

We submit that it is a challenge to the outstanding newspapers and leaders of every southern community, and of the entire country, to expose this hidden conspiracy in the work of Mrs. Roosevelt, and her United Nations universal declaration of human rights, and in the so-called civil-rights program directed particularly against the people of the South, which, in time, would virtually destroy the American way of life throughout the country, because it would lead inevitably to absolute regimentation and dictatorship and to the certain destruction of the liberty and freedom of the American people.

Will two-thirds of the United States Senators vote to ratify Mrs. Eleanor Roosevelt's conspiracy, through her United Nations committee, against the United States of America?

Library Demonstration Bill

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. BURNSIDE. Mr. Speaker, since my State of West Virginia ranks forty-sixth in expenditure per capita for library service, forty-sixth in number of volumes per capita, and forty-seventh in circulation, I am much concerned about the library demonstration bill, H. R. 874 and H. R. 1411, now before the House Committee on Education and Labor. Sixty-two percent of the people in West Virginia are totally without library service, 51 of 55 counties do not have county-wide library service and 15 counties have no library service at all. There are in the State of West Virginia 1,200,000 people without library service. I believe the bills under consideration would be genuinely effective in improving such deplorable conditions. It is our farm families that suffer most from such a woeful lack of library facilities. I take the case of my own State merely to illustrate. The situation is not confined to the State of West Virginia.

Today in the United States 35,000,000 people are without library service. Of this number, 32,000,000 live on farms or in small villages.

An additional 35,000,000 Americans have inadequate library facilities.

Out of 3,070 counties in the United States, only 808 have county-wide library service. More than 600 counties—roughly, one out of five—are without any kind of public library within their boundaries.

WHAT IS BEING DONE ABOUT IT?

Some States provide library service to rural areas by using bookmobiles—libraries on wheels—which take books from a central library to outlying districts. At the present, more than 400 of these traveling libraries are taking the pleasures of the public library to farm families in 38 States. Ohio, Georgia, and South Carolina each operate more than 25 bookmobiles. Nine other States have at least 10 traveling libraries to serve rural areas.

The first traveling library dates back to 1905, when a horse-drawn "book-wagon" was used by the Washington County, Md., free library to take books to families in the county. Vehicles used as bookmobiles today include station wagons, small panel trucks, school busses, Army ambulances and trucks, and passenger cars.

Generally speaking, bookmobiles make their rounds once or twice a month. Some leave books at regular distributing stations—post offices, country stores, filling stations, homes, or churches—where it is convenient for patrons to select reading material. Other traveling libraries stop at designated places on certain days, where they are greeted by eager readers of all ages. Some bookmobiles give door-to-door service to homes and schools along the route.

Progress has been made in rural library service in many States, but a great deal remains to be done. To help provide library service to the millions of farm families and others without it, the American Library Association, working with State library groups, is sponsoring a public library service demonstration bill in the United States Congress.

The objectives of the library demonstration bill is to stimulate State and local interest in libraries. The bill will not immediately set up a library in each area without one, but it will demonstrate what can be done to get permanent library service for those areas. For example, a "sample" library will be established in a county or region where there has been no library service or where the library facilities are insufficient to serve the public properly. The library will serve the residents of the demonstration area for a certain period of time, probably a year. After the trial period is over, citizens in the area will vote to determine whether to maintain the library by local taxes.

The library demonstration bill provides for State supervision. States will receive Federal grants to assist them in conducting a demonstration program, but there will be no interference with local groups in carrying out the program.

FARM GROUPS ARE BACKING THE LIBRARY DEMONSTRATION BILL

The Farm Bureau Federation, the National Grange, Farmers' Union, and Associated Women of the Farm Bureau Federation, are among groups solidly behind the library demonstration bill. Representatives of these groups testified for the bill when it was before congressional committees in the Eightieth Congress. They have adopted resolutions in behalf of the bill, and many State and local farm groups have been active in rallying support for it.

The library demonstration bill was passed by the Senate last year without a dissenting vote, but it did not receive a final vote in the House of Representatives.

Development of the Missouri River

EXTENSION OF REMARKS
OF
HON. RICHARD BOLLING
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. BOLLING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a brief quotation from the Hoover Commission task force on natural resources in regard to the Pick-Sloan plan in the Missouri Basin. This quotation was published by the Denver Post:

Present estimates are that the construction of projects for the development of the Missouri River will cost nearly $6,500,000,000. One of the unanswered questions concerning development plans is whether there will be sufficient dependable water for purposes of navigation, flood storage, irrigation, water supply and power development.

It is nothing short of a calamity that there should be grave uncertainties on this score at this late date. * * *

After sharp clashes over plans for development of the Missouri Basin, the Corps (of Engineers) and the Bureau (of Reclamation) announced complete agreement on the Pick-Sloan plan. Analysis of that plan reveals the fact that it contains many projects which previously had been subjected to devastating criticism by one or the other agency. The compromise consisted for the most part of a division of projects, each agency agreeing to forego criticizing projects assigned by the agreement to the other.

National Citizens Conference on Civil Rights

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. HOLIFIELD. Mr. Speaker, I wish to call the attention of the Members of the House to the National Citizens Conference on Civil Rights, which will be held in Washington on February 15 and 16. This conference is being held under the auspices of the Civil Liberties Clearing House of Washington, D. C. The sponsors of this particular conference are people of high character, unquestioned American patriotism, and responsibility. A list of these prominent sponsors follow: Mr. Roger Baldwin, Rabbi Roland Gittelsohn, President Mordecai Johnson, Mr. Clarence E. Pickett, Bishop William Scarlett, Mrs. M. E. Tilly, Dr. Channing Tobias, Rabbi Stephen S. Wise, and Mr. E. Raymond Wilson.

The sponsors have secured some famous American citizens as speakers at their 2-day conference. On Tuesday morning, February 15, the Honorable Paul A. Porter will address the conference on the subject of Government and Civil Liberties. In the afternoon Dr. Ernest O. Melby, dean of the school of education of New York University and chairman of the National Citizens Council on Civil Rights will address the group on the subject of Academic Freedom. There will be other speakers whose names are yet to be announced, and there will also be section meetings and panel meetings on different subjects, all pertaining to the subject of civil liberties. The closing address will be made by Morris L. Ernst, a member of the President's committee on civil rights, and his topic will be civil liberties today and tomorrow.

I am sure that it will be profitable for any Member of the House who can find the time, to attend one or more of these meetings.

At this point, Mr. Speaker, I wish to enter into the RECORD a copy of a letter from the President of the United States addressed to Mr. E. Raymond Wilson, the chairman of the National Citizens Conference on Civil Liberties, a letter which

endorses the meeting which they are to hold on February 15 and 16:

THE WHITE HOUSE,
Washington.

Mr. E. RAYMOND WILSON,
Chairman, National Citizens Conference on Civil Liberties, Washington, D. C.

MY DEAR MR. WILSON: Please accept my best wishes for a successful gathering of the National Citizens Conference on Civil Liberties which will be held in Washington February 15–17.

We must provide a solid foundation for the future growth of our country. Of great importance to the present and future generations of America is the development of a program of civil liberties guaranteeing to all people the heritage of freedom which we have received from the founders of this Nation. A free system can endure only when there is freedom of opinion, expression, and conscience.

Your conference has a great responsibility in formulating the kind of program which will give added strength to the principles of freedom which have come down to us from the fathers of the Constitution.

Very sincerely yours,

HARRY TRUMAN.

Now, Mr. Speaker, I wish to call attention to another conference which is being called on February 11 and 12 by an organization which calls itself the Legislative Assembly and Rally To End Discrimination and Segregation. I think it is fair that the membership should know that this latter group is composed of a very peculiar assortment of sponsors. Among the sponsors of this group are people who have confessed that they are members of the Communist Party. In addition there are other member-sponsors in this group who have historically followed without deviation the Communist Party line. Beside these first two groups there are undoubtedly innocent people who have been persuaded to join in the sponsorship of what many of us believe is a worthy objective, to wit the ending of discrimination and segregation and the protection of civil rights.

I wish to call attention to one name which has been included in the list of this latter organization, the name of Mrs. Mary McLeod Bethune, the president of the National Council of Negro Women. We all know and admire this venerable Negro lady for her worth-while accomplishments in the field of humanitarianism. Mrs. Bethune, in an article which appeared in the Washington Star on February 3, 1949, announced that she had withdrawn her name as a sponsor to this particular conference. In withdrawing from this conference, which is to be held on February 11 and 12, Mrs. Bethune stated in her letter to Dr. J. Finley Wilson, the national chairman of the assembly and rally, that when she originally agreed to be a sponsor, she was under the impression that the rally was to be held under the auspices of the Improved Benevolent and Protective Order of Elks. But after seeing the full list of sponsors, Mrs. Bethune wrote Dr. Wilson as follows:

There are a number of names listed thereon who have allowed themselves or their names to be associated with activities and organizations with whose methods and purposes I am unable to agree.

Mr. Speaker, I have made this statement for purposes of clarification in view of the stated objectives of the two conferences and in view of the fact that they are being held within a space of 6 days of each other.

Civil Rights

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. ADDONIZIO. Mr. Speaker, the question of civil rights and the elimination of racial and religious prejudices too often engenders bitterness and acrimony on both sides. Miss Josephine Italiano, of Orange, N. J., is devoting her talent for song-writing to the promotion of understanding and good will among our citizens.

Miss Italiano's efforts are described in the following article from the Newark Evening News:

HOBBY: SONG WRITING

An Orange woman who seeks to lessen prejudice through a better understanding of democracy believes she found her medium when she turned to song writing.

A principal clerk in the Orange tax assessor's office, Miss Josephine M. Italiano, of 399 Lincoln Avenue, wrote her first composition, a march, in 1943. Last week she composed her twenty-fourth, another march, dedicated to an unbiased America.

"America, We Are at Your Side" is the title of Miss Italiano's latest march. Her first, also arranged as a hymn, is called "Heroes of the U. S. A." Sandwiched in between are a number of patriotic and other songs.

She has had most of her compositions published at her own expense, and in the case of the "Heroes" sent 1,500 copies to overseas military personnel, paying the postage.

Miss Italiano's first piece, inspired by America's fighting men and women in World War II, was introduced by the Orange High School Glee Club and played at USO clubs in this country and abroad. Military camps heard it, and President Roosevelt, through his secretary, Miss Grace Tully, thanked her for a copy, which he called "splendid."

Miss Italiano's crusade against intolerance is relentless. She offered her music to a New York publisher once, and he suggested she change her name to sell her compositions. He thought her name too "foreign" for local consumption.

Miss Italiano did not change her name. And she promises many more songs.

The stirring words of Miss Italiano's latest march are as follows:

AMERICA, WE ARE AT YOUR SIDE

United we stand in this land of the free,
So proudly we hail our liberty,
No matter what race, color, or creed
We join our hands in unity.
Uncle Sam we salute you with pride,
America, we are at your side,
On land, on sea, and in the air
Whenever you call we'll be there.
The freedoms we share we will fight to keep,
Our Stars and Stripes will forever be
Waving free and gallantly—
America, we shout with pride,
America, we are at your side.

Steel and Tubular Goods

EXTENSION OF REMARKS
OF
HON. WESLEY A. D'EWART
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 10, 1949

Mr. D'EWART. Mr. Speaker, the present system of distributing tubular steel goods required for oil exploration and development has resulted in a very serious shortage of these materials in the State of Montana. Oil and gas explorations in Montana have been seriously retarded.

The situation has become so critical that the State legislature, hoping to attract attention to our plight and secure a correction of the situation, has adopted the attached house joint memorial.

The memorial was prepared following hearings at which the operations of the gray market in steel products and the shipment of large quantities of steel pipe and casing to foreign oil fields were listed as among the principal factors contributing to the shortage in Montana. Montana operators who would ordinarily drill six or seven wells this year will be able to drill only one or two. Operators who require less than carload lots have no opportunity to buy from regular suppliers.

Unless this situation is corrected and additional allocations of steel pipe and casing are made to Montana operators, Montana's oil industry will be unable to continue the development of our vast oil and gas resources.

The House Joint Memorial No. 5 of the Montana State Legislature is as follows:

House Joint Memorial 5

Joint Memorial to the President of the United States, and to the Honorables JAMES E. MURRAY and ZALES N. ECTON, Senators from the State of Montana, and MIKE MANSFIELD and WESLEY A. D'EWART, Congressmen from the State of Montana, for appropriate action to alleviate the shortage of tubular goods and steel necessary for the development of Montana's oil and gas resources, and for the end of discrimination against Montana by the shipment of steel and tubular goods to foreign countries for the development of oil and gas resources in such foreign countries, and the end of the gray market in steel

Whereas there are vast undeveloped oil and gas resources as well as vast proven oil and gas fields in Montana; and

Whereas during the past 3 years explorations for oil and gas in Montana have been seriously curtailed and hampered due to the difficulty, and sometimes impossibility, of obtaining the casing and pipe necessary and required for such development work in proven and wildcat oil areas; and

Whereas this situation has resulted in what has been termed the "gray market" and exorbitant prices for steel tublar goods; and

Whereas the ratio of oil discoveries and development of new production has been in almost exact proportion to the amount of pipe and casing obtainable and used; and

Whereas the steel industry is unable to furnish tubular goods in sufficient quantity to meet the needs and demands of Montana producers in the ordinary channels of trade because of the desire of certain interests to exploit foreign oil resources at the expense of development within the borders of the

United States, and has permitted and caused the exportation of thousands of tons of vital steel for the use and development of the oil fields of Saudi Arabia and in other parts of the world outside of the borders of the United States; and

Whereas the situation is retarding the explorations and development of Montana oil and gas resources: Now, therefore, be it

Resolved, by the House of Representatives of the Thirty-first Legislative Assembly of the State of Montana (the Senate concurring), That we respectfully urge the President of the United States and Montana's representatives in the Congress of the United States to take appropriate action to remove any discrimination which may exist against the oil operators of Montana, to the end that an adequate supply of tubular goods be made available in the regular channels of trade, and that conditions be corrected which retard the exploration for oil and gas within the borders of the United States and the State of Montana, so that the "gray market" in steel will not be necessary or possible; be it further

Resolved, That copies of this resolution be forwarded by the chief clerk of the house of representatives to the President of the United States and to the Honorables JAMES E. MURRAY and ZALES N. ECTON, Senators from Montana, and the Honorable MIKE MANSFIELD and WESLEY A. D'EWART, Representatives in Congress from Montana.

Abraham Lincoln, Founder of the Republican Faith

EXTENSION OF REMARKS
OF
HON. ARTHUR H. VANDENBERG
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. VANDENBERG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of the address which I delivered in Detroit on February 10 at the Lincoln Day dinner.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, fellow Americans, tonight we remember Abraham Lincoln, the immortal founder of our Republican faith. We rededicate ourselves to his country, his party, and the common welfare for which he died. In his spirit we sustain liberty and equality under law which make the American way of life the most precious heritage on earth. Our pledge is to destiny, American style.

I waste no time on recent accidents. Our need is to work in the vineyard; not to sob at the wailing wall. Suffice it to note, in November retrospect, that our Democratic friends, as bewildered as we, found themselves fulfilling St. Mark's prophecy, "the stone which the builders rejected has become the head of the corner." Meanwhile, in our stunned and chastened but highly vocal melancholy, we find ourselves sustained by the promise in the Psalms that "the meek shall inherit the earth." I hope we also recall that Heaven helps those who help themselves. There is a job to be done and we must do it.

I present my compliments to the distinguished Governor of New York from the old-home State of his birth.

I present my compliments to the unpredictable gentleman from Missouri—the most famous one-man tornado in the history of political hurricanes. As President of our United States, I wish him luck. But here is a significant fact. This same President who spent six soap-box months telling the American people how the Republicans had ruined them, opened his address to Congress with a complete confession to the contrary. His first official sentence was: "I am happy to report that the state of the Union is good." When I recall how bad he said we were at every whistle stop on the map, my consolation is Lincoln's assurance that you can't fool 'em all the time.

The state of the Union is relatively good. But it could slide from pretty good to pretty bad if the administration should really try to do all the new things and raise all the new taxes necessary to meet all the new expenditures and to mobilize all the new bureaucrats required by all the new promises made in the recent Democratic blitz. You couldn't possibly pay for the recent Democratic national platform with a budget of less than $60,000,000,000 a year; and you couldn't run that kind of a country except with all your economic freedoms in a strait-jacket.

But don't let that keep you awake nights. They won't even try to keep all of these promises. But they'll try enough to make the country thankful that an alerted Republican Party continues to be full of health and vigilantly on guard.

That's where our new job starts. The Republican Party must prove by its works that it knows what it takes to preserve the American way of life—to serve the common welfare and save it from special privilege—to answer human needs without sacrificing human liberty—to preserve solvent, mass prosperity—to restore public thrift to a place of respectability—to conserve both the family budget and the public Treasury—to avoid forever the omnipotence of the "police state" or the "welfare state" in which man becomes the servant and not the master of his government—to sustain our blessings and to deserve the public trusts.

There stands the challenge. We have met it before. We can meet it again. But we can only meet it by proving to young America that here is the party which preserves its precious inheritance; and by proving to the veterans of two world wars that here is the party which conserves the things for which they fought. These are the facts. It is our job to make them throb.

The Republican Party largely built the foundations upon which this Nation has erected the most fabulous economy of all time—6 percent of the earth's population controlling at least 40 percent of the world's income. It largely built the foundations of this free, competitive economy which has produced incomparably the highest wage and living standards anywhere on earth for the uncommon man who is privileged to call himself American. The name of Lincoln certifies that it was born to protect human rights for all without discrimination—and the areas under its normal political control are where these boons best flourish. The name of Lincoln also certifies that it is the party of the Constitution—and I am not conscious that it has ever wavered.

It is our task to put history in gear with the unfolding requirements of our time, and to make Republican achievement for mass America repeat itself.

An inevitable question now intrudes: Should Republicanism be a liberal or a conservative party? Frankly, I do not believe there can be any such categorical identification. Try it, and you will find yourself impaled on the horns of rival definitions. Try it, and you will soon be arguing words instead of realities.

What is a conservative? At one point the dictionary says "one who seeks to prevent loss, decay, or injury and who protects and preserves." In that sense I want my party to be conservative. I want it to respond to the deepest instincts of our Republic. But at another point, the dictionary says a conservative is "one opposed to change or progress." In that sense I do not want my party to be conservative. If it is static it will die. It will promote and not prevent decay for itself and its country. This is not a static country nor a static age. For example, there was nothing static in the vision of those Detroit motor pioneers who dared to think in terms of radical change when they created the techniques of mass production. Yet they were the greatest conservers of their time. They operated within free enterprise. They enriched the American way of life. Conservatives, in the right sense, are not at war with progress. They are its most vivid allies.

What is a liberal? He may be an earnest soul, unimpeachable in his fidelity to the roots and anchors of the American system, who wants the maximum measure of life, liberty, and happiness for our total people. In that sense I want my party to be liberal. On the other hand, he may seek the substitution of socialism for free enterprise, and paternalism for individual responsibility. In that sense I do not want my party to be liberal. I am not interested in equality of servitude. Going still further, his liberalism may be a shoddy cloak for communism dedicated to the violent overthrow of our free institutions and to the degradation of free souls. In that sense I not only do not want my party to be liberal; I want it to be relentlessly hostile, vigilantly militant, and uncompromising even with red herrings.

Where does this leave us? I answer for myself. I want the Republican Party to be the common denominator of sound conservatism and sound liberalism. I want it to travel down the high center road. I think that is its assignment. As Edmund Burke once said: "Virtuous discretion is what keeps governments faithful to their ends."

Let me borrow Lincoln's familiar analogy. When asked how long a man's legs should be, he replied: "Long enough to reach the ground." I want the Republican Party to be conservative enough to save every time-tried fundamental upon which the unique and precious character of Americanism depends, ever faithful to the admonition of the prophet Isaiah: "Look ye to the rock whence ye are hewn." But within these landmarks, I want the Republican Party to be liberal enough to march with the times, to dare new answers to new problems, and to use the power and strength and initiative of Government to help citizens to help themselves when they confront problems beyond their resources and control.

I want the oak to stand. I want the branches to grow.

Let me illustrate. The private banking system of this country was shattered in the early thirties—needlessly shattered in my view, but shattered none the less. Banking confidence struck zero. Today banking confidence is complete and impregnable. Why? At least one of the overriding reasons is that Federal bank-deposit insurance intervened, and at substantial Republican insistence. It was a new device. It was so liberal that even President Roosevelt at first bluntly sought its rejection. Yet it was conservative because it conserved private enterprise in banking—and no legislator has ever been bold enough to propose its repeal. It was a bridge upon which the Nation strode to safety. I want the Republican Party to be the conservative builder of such liberal bridges when necessity requires.

Let me illustrate again. There is vast propaganda today for socialized medicine. I think it would destroy precious personal relationships in the American way of life, produce wholesale mediocrity in the skills which serve the sick, and saddle us with a new and appalling bureaucracy. But this does not require me to blind my eyes to the existence of a crushing and well-nigh universal sick problem in the lives of millions of our citizens. It is a problem that must be met. But

we have a choice of methods. One is voluntary and therefore typically American. The other is involuntary and therefore typically bureaucratic. The latter is socialized medicine. The former is cooperative medicine. I expect the American people and the Republican Party to choose the former. I want my party to look at the great, humanitarian, cooperative effort of the Blue Cross, for example, which represents cooperation and not compulsion. It comes to finest fruition here in Michigan where one of four of our people already thus have cheaper and better protection than they would ever get from socialized medicine. Probably two out of four of our Michigan people are covered by this or other voluntary plans. I expect the Republican Party to offer cooperative legislation to encourage these voluntary plans within the States. Thus it will liberally conserve the public welfare in the best American tradition. Thus it will not create more problems than it solves. Thus it will build another bridge.

Certainly a better bridge is necessary between capital and labor. For either to harm the other is suicide. Take-home pay is of vital concern to millions of workers. Take-home dividends are just as vital to other millions whose savings and investments built the factories and bought the tools and hired the "know-how" without which labor would walk the streets. It is equally true that the factories, without workers, would be futile brick and mortar. The point is, united they stand, divided they fall. I do not want the Republican Party to be the exclusive partisan of either. I do not want it to be left or right. I want it to earn the fair-play confidence of both. I want it to be the bridge. Only thus can it serve the public interest which is paramount to both.

On July 30, 1945, I wrote the Secretary of Labor suggesting a top-level labor-management conference to hunt this middle ground. The President approved. The call was signed by top leaders in labor and business. The official agenda opened with four sentences from my letter. I stand on those sentences tonight:

"Responsible management knows that free collective bargaining is here to stay and that progressive law must continue to support it and that it must be wholeheartedly accepted. Responsible labor leadership knows that irresponsible strikes and subversive attacks upon essential production are the gravest threats to the permanent success of labor's bill of rights. The American public knows that we cannot rebuild and maintain our national economy at the high levels required by our unavoidable necessities if we cannot have productive peace instead of disruptive war on the industrial front. American government knows that social statutes are futile except as they largely stem from mutual wisdom and mutual consent."

For various reasons the conference failed. But that is beside the point. The point is that here was formal recognition of this common interest which I stress tonight. I hope this common interest will be the Republican Party's goal.

Neither big business nor big labor nor big government should be our special client in writing or rewriting these laws. The total welfare of all labor's rank and file, the total welfare of all private enterprise, and the total public interest in industrial peace and equity under law and order—these are the constituents who should be confident of our equal and impartial consideration. The united welfare of the whole labor-management relationship is more important to both than the special interest of either one. I want the Republican Party to be conservative enough and liberal enough to build this bridge. And thus I wish it in all things.

Mr. Chairman, my radio time is pressing; and I must now turn briefly to foreign affairs.

We have won two wars. But there is no peace. The basic reason is clear. The Politburo in Moscow has refused it to us and to other independent peoples everywhere. Instead we face aggressions. We face violent libels against our own democracy. We confront a Communist conspiracy of conquest against free governments, free men, and free souls. Among other things, the mistakes of Yalta and Potsdam thus come home to roost. Our own national security is inseparably involved. In such a cause there can be neither appeasement nor surrender.

It should not be necessary to speak in such terms. This cold war could end in 20 minutes, Soviet Russia being willing, in deeds as well as words. We ask nothing of her except the right of independent nations to live and let live according to their own free choice in their own domains. We pose no threat to Russia's free exercise of this authority for herself. We have even offered to guarantee her against Axis resurgence for 50 years. Let our attitude be plain—particularly to the Russian people who surely must crave peace as much as we. We offer friendship on a two-way street. We will scrupulously observe every obligation we have taken in the Atlantic Charter and under the United Nations. We want no territory. We ask no reparations. We will join in universal disarmament—including atom bombs—under dependable disciplines against bad faith. Despair of honorable peace shall never be chargeable to us.

But we can take nothing for granted. We have learned some painful lessons which we dare not ignore. Where deceit is taught as a diplomatic virtue, one must watch for booby traps and ambush. Only actions speak dependably. Pending the precious day of voluntary peace, we shall look to our own national security and we shall keep our powder dry. We shall support collective security and justice through a United Nations which we shall strengthen in every possible way in the spirit of its universal hopes. We shall join other congenial nations in regional security arrangements inside the United Nations Charter but outside the Soviet veto. Within the limit of our means, we shall continue existing plans to help other free people to help themselves to rise again and stand on their own feet. We shall be relentless against subversive Communist treachery wherever it rears its ugly head. When I say, "we," I am speaking of the predominant Republican record.

These things we shall do in the name of our own security and freedom in a world too small for isolated safety. We shall do them with an eternal prayer in our hearts that international common sense and fraternity may soon be the world's alternative reliance. We shall do them in the name of peace—and the best calculated chance to get it. In this quest we are making profound progress. I believe we shall succeed.

During the last 2 years, when the Presidency and Congress represented different parties, America could only speak with unity, and therefore with power, through some instrument of liaison. So-called bipartisan foreign policy provided the connecting link. It did not apply to everything—for example, not to Palestine or China. But it did apply generally elsewhere. It helped to formulate foreign policy before it ever reached the legislative stage. Otherwise it would not have worked. Let's be clear about that. It was not a carbon-copy process. There are outstanding Republican trade-marks in every act that Congress passed. It was a meeting of minds. Thus we achieved substantial unity. Our Government did not splinter. It did not default. It was strong in the presence of its adversaries.

Without this liaison, I hate to think where we and the world would be today. I shall be forever proud of the notable Republican contribution to this end. We demonstrated our dependability. I shall be forever proud that the Senate Foreign Relations Committee upon 47 key occasions found common ground, unanimously voted 13 to 0, and presented a united front to this distraught world. In this regard, the Eighteth Republican Congress was the best in history—Presidential campaign oratory to the contrary notwithstanding.

Now the Washington scene has temporarily shifted. The Executive and the congressional majority are of the same party. Theirs is now a united authority within itself. The Republican minority is once again the loyal opposition, charged with an obligation to hold the administration to strict accountability for what it does—to see, on the one hand, that our foreign policies are sound and firm, and to see, on the other hand, that we do not overextend ourselves or overpromise others.

Some say this means the spirit of bipartisan foreign policy is dead. Some say that certain recent unfortunate events—like the Democratic raid on Republican representation on the Senate Foreign Relations Committee—have pronounced its obituary. That is not my view. The form of things, to be sure, has changed, and responsibilities and initiatives have shifted. But the basic need remains. It will be a sad hour for the Republic if we ever desert the fundamental concept that partisan politics shall stop at the water's edge. It will be a triumphant day for those who would divide and conquer us if we abandon the quest for a united voice when America demands peace with honor in the world. In my view nothing has happened to absolve either Democrats or Republicans from continuing to put their country first. Those who don't will serve neither their country nor their party nor themselves.

Mr. Chairman, the limitations on my time have forced me to a very sketchy presentation of only a few of the problems critically confronting our American judgments. I would like to leave with you the over-all impression that I am proud tonight to stand up as a Republican. We are called to as great responsibilities as we have ever faced. We are needed by the Nation. Through tolerant consultations we shall weld our own victorious unity into great and vital public service, and into popular confidence and trust. I hear 1950 calling. May the Lincoln spirit be our impulse and our benediction.

A Forward-Looking Republican Party

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, February 14, 1949

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address on the subject A Forward-Looking Republican Party, delivered by me on February 12, 1949, before the Lincoln Club, Louisville, Ky.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is a great honor to be invited to speak to The Lincoln Club of Louisville, Ky. It is also a great responsibility to address you because these are days in the life of the Republican Party when we must engage not only in critical analysis of Republican mistakes but also in constructive building of a great party which will represent and protect the common good.

I do not ask you to agree with my analysis of some of our party's problems. I never ask audiences to agree with me, but I do ask them to think with me about the various issues of government which I endeavor to

raise for consideration in my speeches. It is easy for a politician to win audience approval or at least avoid audience disapproval if he says nothing in a speech but uses a lot of words accompanied by sound and fury in saying it. Unfortunately, too many Republican speeches have been like that and I suggest that Republican platitudes are part of the explanation for our party's not being in control of the affairs of our Government today.

Our defeat on November 2, has in no way changed my determination to continue to do whatever I can to help build public confidence in the Republican Party so that our party will be entrusted with the executive and legislative responsibilities of our Government. I am as convinced today as I was before the election that a Republican victory on November 2, 1948, was needed if we are to protect constitutional government in America and bring to our national administration the efficient farsighted statesmanship which I think it so sorely needs and which the election of a Republican President would have given it.

There is room in the Republican Party for broad differences of opinion on specific issues. In fact, one of the great strengths of our party is to be found in the fact that we have made great progress in our party over the years by hammering out on the anvil of conscionable compromise the differences of opinion which have existed from time to time between conservatives and constitutional liberals within our party. We Republicans have always recognized the importance to sound Republican government of making steady middle-of-the-road progress within the checks and balance system of constitutional procedures. Conservatives and liberals alike in the Republican Party have rejected the technique of the Democratic Party of circumventing constitutional procedures whenever the Constitution stood in the way of some end sought by the Democrats. One need mention only a few incidents to illustrate the point. Yalta and Potsdam stand out as clear examples of circumventing the treaty-making procedures of the Constitution. The price we are paying for those mistakes is a dangerous threat to the peace of the world.

It was at Yalta that Korea was sacrificed on the altar of Russian communism. It was at Yalta that concessions were made to Russia in Asia which never would have been approved by the Senate of the United States had those concessions been submitted as a part of the settlement of the peace through a treaty as they should have been. It was at Potsdam that the Berlin crisis was born. It needs no argument to prove that the Senate of the United States would have at least asked for a corridor into Berlin and would most certainly have insisted upon a clarification of our rights, prerogatives, and jurisdiction in Berlin.

It has been difficult to get the American people to fully appreciate that the Democratic administration has been willing to circumvent the Constitution as was attempted in the court-packing plan of a few years ago. It has been more difficult at times to get people to understand the danger of that policy of the Democratic Party to their rights as individual citizens and to their daily living.

It sometimes seems that to many people the Constitution is but a mere document of empty words. Something to be praised in the abstract but not to be practiced in fact. Too many fail to see that it is a dynamic, living set of principles which grants them their political rights and economic freedoms. Thus they were not too alarmed or at least not as alarmed as they should have been over the Court-packing plan or a proposal to draft men into private industry at the whim of the President and in the name of government direct them to be transferred from point to point in this country and required to work under the instructions and orders of private industry for the profit dollars of private employers. Too frequently the people have not seen the basic conflict between the highly discretionary, arbitrary, and capricious procedures of the Democratic administration and the provisions in this country of principles of government for which we Republicans have fought—namely, government by law in accordance with the liberalism of the Constitution.

Many people call me a liberal, but my liberalism consists of putting into practice the liberalism of the Constitution. It is that type of constitutional liberalism which I am convinced the overwhelming majority of the young Republicans of America, and I believe the rank and file of Republicans of all ages, really desire to put into practice.

Thus tonight I propose to address you briefly on the subject, the new crisis in the Republican Party. At the outset I would stress that, irrespective of what differences may exist in the Republican party, the leaders of that party, conservative and liberal alike, have a responsibility now of trying to weld together a sound program of constructive legislation—a program which will convince all groups within our society that we are the party which seeks to protect the legitimate interests of all segments of our economy without becoming the political tool of any economic pressure group. We must convince the American people that we are striving against the development of political alinements in this country based upon economic class consciousness. Nothing will wreck more quickly or more completely political and economic democracy in America than the development of political alinements based upon class conflict. If I were a member of the Democratic Party, I certainly would be greatly concerned with and deeply disturbed over the rapidity with which the Democratic Party is fast becoming a class-conscious party in America.

The Democratic Party is bound to slip on its own promises. Therefore, we must prepare our party now to stand for a program which will restore the confidence of the American people in forward-looking statesmanship. My campaign experiences in the 1946 and 1948 congressional campaigns have left me with a deep-seated conviction that the overwhelming majority of the rank and file of registered Republican voters of this country are much more forward looking in their point of view as to what the Republican Party should stand for than are many of our Republican leaders who in the Eightieth Congress followed a legislative course of action which cost us the election on November 2, 1948.

In the campaigns of 1946 and 1948 I gave a great many speeches for the party. In fact, in the 1946 and 1948 campaigns I gave more speeches across this country for the Republican party than any other member of the Senate who, himself, was not a candidate for office in those campaigns. In the 1948 campaign I traveled across this country speaking in behalf of the Republican National Committee before many audiences which were greatly concerned over the issues of labor, agriculture, cost of living, taxes, education, and war or peace. I believe that every man who holds high office in the Republican party has an ethical duty to do whatever he can to help win elections for the Republican Party. Until we can place our party in control of both the White House and the Congress, we cannot demonstrate to the American people that we can be counted upon to meet in the people's interest the many issues which are causing the worries that are troubling all citizens these days. I am particularly critical of those so-called liberals in the Republican Party who in times past have accepted high office from the Republican Party, have enjoyed the benefits that the party gives them through their offices, have accepted committee assignments in the Congress of the United States from the Republican Party and then have sulked in their tents during a campaign. In fact sometimes some of them have even gone so far as to bolt their party because their party has not accepted in toto their views on every subject.

Republican conservatives and liberals alike have an ethical duty to work together in campaigns in an endeavor to elect a Republican administration in this country. I recognize that one's intellectual honesty makes it necessary for him on occasions to remain silent rather than support an individual or an issue which in his honest opinion cannot be reconciled with either the best interests of the party or of the country. However, that's quite a different thing from doing what some Republicans, both conservatives and liberals, have sometimes done in recent campaigns—namely, injure their party's chances at election by either bolting their party or failing to cooperate in a campaign.

Of course, some of you may ask how consistent are you in living up to the principle of political ethics which I have just enunciated? Haven't you at times in the Senate of the United States refused to support the recommendations of the Republican policy committee of the United States Senate? I plead guilty to that charge, if charge it is. I most certainly have at times voted contrary to the recommendations of the Republican policy committee of the Senate. I shall continue to refuse to support the recommendations of the Republican policy committee of the United States Senate whenever in my judgment the facts do not support those recommendations. It should be self-evident to every Republican that the voters in Oregon did not send me to the United States Senate to let the chairman of the Republican policy committee, be he BOB TAFT or any other Republican, cast my vote for me. They sent me to the Senate to vote for issues on their merits in accordance with the facts as they are presented.

I shall always vote with the chairman of the Republican policy committee whenever he and his committee can demonstrate that their recommendations on an issue are sound on the merits and are not based primarily on partisan strategy. It needs to be emphasized that the Republican policy committee of the United States Senate is not the Republican Party. The Republican Party is composed of millions of rank-and-file registered Republican voters of this country. I shall always be willing to take my chances any time with those voters when it comes to my honest differences of opinion with recommendations of the Republican policy committee of the Senate as to what are sound Republican policies and principles.

We will never build a strong Republican Party in the Congress of the United States unless and until the Republicans in Congress demonstrate to the American people that we are willing to subordinate partisan and political strategy to the merits of needed legislation. In fact, in the Eighty-first Congress I think we should proceed without delay to offer constructive legislation needed in the fields of labor, agriculture, taxation, education, veterans' affairs, conservation, reclamation, civil rights, and improved policies in foreign affairs plus legislation on many other issues which are causing such great concern to the American people. It is my hope that Republican strategy in the Eighty-first Congress will not be a defensive one trying to block the advance of the party of the opposition.

As a so-called liberal Republican, I would raise the question tonight; What role should liberal Republicans—and there are many of them—play in the Congress now settling down to the serious business of considering vital legislation on domestic and international affairs?

Some of the advice coming to me through the mail suggests that we join the Democrats because on some basic issues we have no significant differences with the Truman administration. Others blame us for losing the

election because of this so-called me-too attitude, and urge us to fall in line with the ultraconservative elements in the Republican Party.

Either course would spell ruin to the two-party system as we know it today, and would certainly relegate the Republican Party—whose first great standard bearer was Abraham Lincoln—to oblivion.

The task of modern, liberal Republicans in the present Congress is twofold: To revitalize the party and to mobilize its forces behind a forward-looking program; secondly, to guard against unsound legislative proposals or existing devices endangering the rights of free Americans and our free-enterprise system. Let me explain why I feel that this is so.

Republicans need to remember that competition is the dynamic force of a free-enterprise system. Dynamic competitive principles must also be applied by the two major political parties in the contest for votes. The criticism directed at those of us who are fighting for a more modern, forward-looking Republican Party, to the effect that we are proposing a "me too" political course of action, overlooks some basic principles of competition.

In the economic life of our free-enterprise system, a successful businessman is always alert to the public's interest in and approval of the merchandise of his competitor. He does not refuse to stock more up-to-date goods when he discovers such goods are filling his competitor's store with purchasers. Rather, he tries to secure better quality goods that will fill more economically the needs of the buying public.

The analogy has its limitations, but does help to focus attention on the fact that the supporters of reaction in the Republican Party need to learn much from business if they hope to satisfy the voters' wants. Their "me too" charge against liberal Republicans is but an alibi for their own lack of appreciation of the needs of our people.

Significant steps have already been taken by a group of forward-looking Republicans in the Senate to modernize the party.

One of their first moves was the attempt to revamp the party leadership in the Senate so that it would no longer stand as a symbol of reaction and defeatism. In that fight I was happy to join with Senators AIKEN, TOBEY, IVES, LODGE, SALTONSTALL, KNOWLAND, FLANDERS, SMITH of New Jersey, BALDWIN, YOUNG, GURNEY, and THYE in the effort to inject new blood into the party organization.

While Senator LODGE, our candidate for the position of chairman of the Republican policy committee in the Senate, was beaten two to one, two encouraging facts should be noted: The composition of the policy committee was revised to give representation to the more modern point of view, and clear notice was served that the liberals would stand united as a general policy in the effort to shake off the cloak of reaction in which the "old guard" would garb the Republican Party.

We gained our point that contests for party office in the Senate should be decided by secret written ballot. We agreed that for the next 2 years the Republicans in the Senate should devote their major effort to making a record which will permit them to go to the people in 1950 without apology.

We recognize that the greatest organizational need of the party is to change the trend of registration among young people from the Democratic to the Republican Party. This means that the liberal forces shall insist that the national and State party organizations alike give increased opportunities for party positions and public office to young Republicans.

On the broader front, the role of the Republican liberals is also beginning to take definite shape. Let us list some of the measures already dropped into the legislative hopper by Senate Members of this group.

A glance at the CONGRESSIONAL RECORD for the first few days of the present session of Congress makes it clear that the liberal wing of the Republican Party is actively sponsoring bills which make more secure the basic rights and freedoms of the American people.

Four members of this group joined with other Senators in proposing that the Congress prohibit discrimination because of race, color, faith, national origin or ancestry—a measure that has had the overwhelming approval of Members of Congress but has failed of passage because of a Democratic minority.

Three of them sponsored a bill to raise the minimum wage to 75 cents an hour. Others again introduced the Federal aid to education bill. No less than four of them are active in backing the bipartisan effort to amend the Constitution so that the voters of this country may have a more direct voice in the election of President and Vice President.

Several of us, in keeping with our pledge to reform the rules of the Senate so that majority rule may prevail, introduced resolutions calling for amendments which would eliminate the filibuster; and we have continued to press for the earliest possible consideration of these proposals.

Among other measures that might be mentioned as part of the liberal program are bills to expand the coverage and benefits of the Social Security Act, to liberalize the admission of displaced persons, and to provide facilities for a labor extension service.

Labor legislation that is fair to both employers and unions, and in the public interest, will be supported by the liberal Republicans. It is encouraging to read that the administration appears to agree with those of us who urged the repeal of the Taft-Hartley Act and the simultaneous enactment of a revised Wagner Act.

In these early days of the Eighty-first Congress it is no visionary prediction to assert that Republican liberals will be found initiating legislation that will, in the best Lincoln tradition, place human rights above property rights. As constitutional liberals, they will fight against reactionaries on the one hand and leftists on the other.

They will support Government aid for improved health facilities and medical services, without adopting the socialistic principle of making the doctors employees of the state. Better housing legislation will be high on their list. Aid to scientific research is another objective liberal Republicans will sponsor.

Inflation controls without police-state methods, a tightening of the laws regulating monopolies, a more equitable Federal tax policy, a far-sighted program of development and conservation of our natural resources, a long-range program of farm-price supports which will remove the causes of consumer criticism but at the same time protect farmers from violent price fluctuations—all are matters which Republican liberals will work for.

Many Republicans—but not enough to outvote the reactionaries in their own and the Democratic Party—have sponsored these reforms in the past. More of them will be found on the liberal, the human side of these issues in the days ahead.

In the field of international relations, every effort will be made to maintain a strong bipartisan foreign policy, so ably fostered by Senator VANDENBERG, for the past 2 years the Republican chairman of the Senate Foreign Relations Committee. The United Nations must be strengthened, for without a strong world organization the armament race will mushroom to such proportions that essential domestic legislation will have little chance of being realized.

The Senate Republican liberals are receiving increasing support. More and more registered Republicans and independent voters are appreciating that the way to make progress on domestic issues and on the international front is to make our capitalist economy and political democracy work through the safeguards of our constitutional form of government.

I think that Senator VANDENBERG in his Detroit speech presented very effectively the challenge which faces the Republican Party when he said:

"The Republican Party must prove by its works that it knows what it takes to preserve 'the American way of life'—to serve the common welfare and save it from special privilege—to answer human needs without sacrificing human liberty—to preserve solvent, mass prosperity—to restore public thrift to a place of respectability—to conserve both the family budget and the Public Treasury—to avoid forever the omnipotence of the police state or the welfare state in which man becomes the servant and not the master of his government—to sustain our blessings and to deserve the public trust."

So far as I am concerned, sound legislative principles must be applied equally and without discrimination to both labor and industry. In this instance one sound principle is that labor legislation must be designed to protect the legitimate rights of both labor and industry and thereby protect the public welfare. One of the issues of the 1944 campaign for the United States Senate was my stand for the equalization of the Wagner Act. Contrary to the opinion of some who have yet to read the constructive proposals I made in the Senate for an equalization of rights under the Wagner Act, I delivered on my pledge to fight for fair labor legislation in the Congress. I am continuing to carry on that fight by advocating a substitution for the Taft-Hartley Act in the form of legislation which revises the old Wagner Act in those ways necessary to make it a fair and workable piece of labor legislation.

No extended comments need to be made about the loss of the labor vote. Everyone knows now that the Taft-Hartley Act was a terrific political liability to the Republican Party. In vain some of us in the Republican Party argued in the Senate that if the Congress passed the Taft-Hartley bill, without removing its unfair, unworkable, and unconstitutional sections, the party would hear about it at the ballot boxes of America.

Here again, Thomas Dewey is not to blame for the loss of the labor vote. He pointed out in his speeches that as the facts were presented showing existing injustices, he would support amendments. Some of us who were campaigning for Dewey assured many labor audiences that we would propose specific amendments to correct what is now generally recognized by employers and the general public as well as labor to be necessary in order to have a fair and just labor law. However, too many workers were afraid they could not count upon a Republican Congress to correct a wrong which it never should have committed in the first place.

It was most unfortunate that during the campaign many farmers developed the notion that the Republican Party will not take those steps necessary to maintain the purchasing power of the farmer. As I said many times during the campaign and repeat now, the Republican party recognizes that the standard of living of American workers, of American businessmen, of men and women in the professions, and of our consumers generally depends upon the purchasing power of the American farmer. The reason for that is an obvious economic fact. We are basically an agricultural economy in the sense that when the purchasing power of the American farmer falls below the standard which permits him to maintain himself in health and decency, the inventories of American business back-

log. Unemployment then walks the streets of America and a depression is the inevitable result.

No one can deny that there are inequities in the support price program and that some changes are needed in that program in the interest of the farmers as well as the interest of the public at large. One cannot talk to a farm leader of any of the national farm organizations who will not tell you that there is a need for a revision in the program. However, the need for revision is in the interest of making the program more economically sound so as to lift from American farmers the criticism and resentment that is developing among some consumer groups of the country as a result of some of the inequities and abuses which have developed in the program.

Nevertheless, we cannot deny the fact that too many farmers became confused about the farm issue in the campaign and voted against our party on November 2. We must demonstrate in this session of Congress that the Republican party stands for a sound and fair Agricultural Adjustment Act.

To my great surprise, in campaigning for Dewey, I found that many small-business men were impressed with Truman's arguments that continued prosperity could best be assured through a Democratic administration.

We have an obligation to our party to make perfectly clear that we are not an antibusiness party. In speech after speech before labor audiences during the campaign I stressed the point that the standard of living of American workers depends upon a successful operation of our capitalistic system. The soak-the-rich philosophy which characterizes the thinking of many so-called liberals cannot be reconciled with the public interest. The soak-the-rich attitude is but another example of class-conscious bitterness which we must guard against in America.

The notion that special privilege, through big business and American monopoly, controls the Republican party is without foundation in fact. Unfortunately, we cannot escape the political reality that too many Americans believe that our party is controlled by big business. Whenever special privilege, be it in the form of big business or labor or agriculture or the pressures of any other economic group in this country, ever seek to foist upon the American people a legislative proposal which is not in the interest of the common good, we must make clear that the Republican party can be counted upon to oppose it.

Likewise, we must make clear that we stand for a legislative program which will protect the legitimate rights of business as well as of labor and the farmer and the professions and all other economic groups. Take, for example, the need for a complete revision of our tax laws in this country. Such a revision is necessary if we are to encourage venture capital in this country to invest in productive enterprise which will create new jobs and new wealth out of which we can obtain the new tax dollars to meet the tremendous obligations of Government which will be with us for years to come.

Any system of confiscation through taxation which has characterized many of the tax proposals of the Democratic Party in recent years truly threatens the economic welfare of the people of this country as a whole and of each economic segment within the country. Likewise, a tax-reduction program which is not based on a sound revision of existing inequities in our tax structure will always cost our party dearly at the polls as it did on November 2, 1948.

The future of the Republican Party, as I see it, will have further defeats unless the party can unite its forces in support of a sound, middle-of-the-road program of constitutional liberalism. Such a program will be unacceptable to the leftists who seek to destroy our capitalistic economy and set up economic statism; it also will be opposed by the political and economic reactionaries—and there are too many in both major political parties—who stand for a laissez-faire economy and a return to the normalcy of the boom-and-bust cycle of the 1920's.

The election has demonstrated, in unmistakable terms, that these extremist philosophies are not favored by the American people. It is plain, therefore, that constitutional liberals within the Republican Party have a real opportunity. They must offer a program based upon the view that one of the primary objectives of the American system of representative government should and must be to protect the economically and politically weak from the exploitation of the economically and politically strong. Such a program, however, must be achieved within the framework of a private-property economy and in accordance with the legal principles and guaranties of the Constitution, including its precious Bill of (human) Rights. I offer such a Republican philosophy to you as being one which keeps faith with Republicanism of Lincoln.

Lincoln Day Address by Hon. Kenneth S. Wherry, of Nebraska

EXTENSION OF REMARKS
OF
HON. KENNETH S. WHERRY
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. WHERRY. Mr. President, I ask unanimous consent that there be printed in the RECORD an address on the anniversary of the birth of Abraham Lincoln, delivered by me at the Illinois Republican Lincoln Day dinner, at the La Salle Hotel, Chicago, Ill., Saturday evening, February 12, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman and fellow Americans, this is indeed a happy occasion. It is inspiring and encouraging to meet with you men and women who have come from all parts of Illinois to honor the man of the ages and to rededicate yourselves to the principles so peerlessly advocated and practiced by the immortal Lincoln.

It is especially fitting that we do honor to Abraham Lincoln in Illinois for it was here he grew to manhood. Here, in the heart of America, he found the surroundings and the wholesome conditions that shaped and fashioned his rugged Americanism. His Americanism was developed as the pioneer, the rail splitter, the storekeeper, and the frontier lawyer. It was given full expression as he became the debator, the legislator, the President, and finally the great emancipator.

It was here in Illinois that Abraham Lincoln left many cherished memories, landmarks along his career, signposts that have guided the people of your State and the Nation in carrying forward the best Government on earth.

To New Salem, to Springfield, and to other places in Illinois come visitors from all parts of the world, to see first-hand where Lincoln lived and where he performed his many deeds of righteousness.

Lincoln lived in a fateful time. He was called to provide leadership in an hour when it was desperately needed.

Again, fellow Americans, our Nation is in an hour of crisis. All around us there are signs, hard realities, that we are reaping the whirlwind of years and years of rudderless and wasteful misgovernment. Let us be completely frank about it. Let's face up to the facts. What has happened since the November election?

Our country is confronted by drastic price dislocations. Producers are being demoralized by falling prices. These falling prices are not being fully reflected to the consumer. The unemployment roll is mounting, 700,000 more were added during January.

In the minds of businessmen, laboring men, and all our people, these unsettled conditions have caused doubt, apprehension, and grave concern. And, they have called a halt to the progress this country was making under the constructive legislation passed by the Eightieth Congress.

During the 2 years of the Republican Eightieth Congress, our ship of state was kept on an even keel. There was a check on the reckless programs of the Truman administration.

That Congress pulled our country out of a tailspin by sound, constructive actions. It rescued America from the brink of catastrophe, and placed us well on the road to a solid and lasting prosperity. But, we Republicans failed, miserably failed, to sell the accomplishments of the Eightieth Congress. We let President Truman and his associates smear, belittle, and misrepresent the Republican program. Some of our leaders have alibied for Republican defeat, but, fellow Republicans, we can't escape the hard fact that we did not slug it out toe to toe with the demagogues.

Had we fought it out in the Lincoln way, point by point, up and down, across the country, there would be a Republican President in the White House today, and we would have a Republican Congress cooperating with him in carrying forward the work so well advanced by the Eightieth Congress.

Think back a little. Mr. Truman's campaign methods are still fresh in our minds. In the cities he promised to slash prices. In the farming areas he promised to raise prices. He promised to labor bosses a complete repeal of the Taft-Hartley Act, restoring them to uncontrolled power and a return to jungle warfare in labor-management relations.

The farmers of Illinois well remember the opening campaign speech of Vice President ALBEN BARKLEY at the State fair in Springfield. He told his farm audience the Democrat Party was responsible for $40 cattle and $30 hogs. He mournfully warned that if a Republican President were elected farm prices would go down. There he told the farmers of America that if they wanted $40 cattle and $30 hogs they had better vote the Democrat ticket.

But now, only 3 weeks after the inauguration of Mr. Truman and Mr. BARKLEY, I ask you, how are the Democrat campaign promises working out? Top-grade cattle are bringing less than $25 per hundredweight, hogs have hit a new low of $20. Market writers tell us farm prices are demoralized, collapse is the way they describe it. Corn, wheat, oats, rye, soybeans, lard, and other farm products have plunged downward. Was this the benefit expected by farmers when they voted for Mr. Truman and Mr. BARKLEY in November?

Is it any wonder that farmers, and the people generally, are frightened, in the face of the Truman demand for more and more taxes and more spending?

President Truman has submitted to the Eighty-first Congress a spending budget of forty-two billions, the highest in all peacetime. However, that is only part of the story. He has also recommended new domestic programs to be financed out of general tax funds. He has further asked for new and expanded social-welfare programs to be financed by deductions from the worker's pay and from the income of business establishments.

Competent experts estimate that if these programs are authorized, it will immediately require a total annual budget in excess of $56,000,000,000. Is it any wonder that the American people are shocked and alarmed? Is it any wonder that there is hesitancy to venture into new enterprises, under this prospect of unbearable taxation?

There is a limit to the kind of government that pushes our national economy into insolvency and brings in its wake catastrophe for us all. Taxes now are at the saturation point. Twenty-seven cents out of every dollar every American spends goes to meet the cost of government, Federal, State, and local.

Every schoolboy knows that taxes are a drag upon prosperity. We all know that the power to tax is the power to destroy. This affects all of us, all of the American people. The Federal Government could confiscate all personal incomes above $25,000 a year, and the resulting revenue would scarcely make a dent upon the total expenditures of Government.

To saddle heavier taxes upon business firms, generally, simply means the burden must be passed on to the consumers, who, in the final analysis, pay all taxes. The Truman administration simply does not face up to the elementary fact we cannot survive as a nation if our people are taxed out of existence. They seem to think our national economy can stand anything.

An example of the administration's irresponsibility for the public finances is the action taken this week by the Democrat majority to evade the provision of the Legislative Reorganization Act which requires a spending ceiling to be fixed by Congress on or before February 15 each year. With only the weakest of excuses, the Democrat majority voted to delay until May 1 their decision on the 1949 legislative budget.

By that time many of the appropriations will have been authorized and be in full force and effect. There will be no limit on the amount of money the administration can spend. It will mean that this Government will continue deficit spending, which is in direct contradiction with the fiscal policy of the Eightieth Congress, which balanced the budget for the first time in 16 years.

New Deal administrations have been in power for 16 years. Have they solved our national problems? Remember how the economic planners ordered the killing of our little pigs. Remember how they ordered the plowing under of every third row of cotton. Remember how they devalued and rubberized the American dollar, and remember how they poked their noses into every nook and cranny of our economy with crisis and emergency power abjectly voted by rubber-stamp Democrat Congresses?

During World War II, our tottering economy was bolstered by tremendous military expenditures. Accumulated farm surpluses and commodities of all kinds were swiftly consumed in the maw of war. The problem no longer was one of surpluses. It was how to get more and more goods quickly. Our national economy rested upon temporary and artificial props.

Since the war our economy has been largely sustained by Government purchases for national defense and buying of food, steel, building materials, and countless other materials for the friendly freedom-loving countries of the world. In Europe alone we have poured out more than $25,000,000,000 in cash and goods.

In its eagerness to furnish goods and materials to foreign countries your Government has been taxing you to buy grain and other supplies outside the United States. They have taken your money to buy crops from third-party countries for the needy countries in Europe. Even as prices for American farm products are now tumbling, your Government at Washintgon has continued this policy. Last July wheat was declared a surplus farm commodity, yet in the face of farm prices below parity, and despite the millions of dollars being spent by this Government to take surplus crops off the markets, this administration recently approved a grant of $55,000,000 to England for purchase of Canadian wheat.

So the New Deal administrations failed to solve our problems before the war. They were unsolved during the war, when artificial props sustained our economy. And, now, in their attempt to solve them, they are tearing down the constructive work of the Eightieth Congress. Today the same unsuccessful solutions of the past are still their program. As a remedy they still cling to the theory of a planned economy on an international as well as a national scale and are leading America further across the line into state socialism.

Right now the administration is pressurizing the Eighty-first Congress to undo the sound checks placed in the Reciprocal Trade Agreements Act by the Republican Eightieth Congress. The President wants absolute power, the power of a dictator.

We Republicans believe in reciprocity in foreign trade, but we want it done in the American way. We want final authority reserved to American business and the American people through their Congress. Under the absolute power over tariff making, voted to the President by past Democratic Congresses, all tariff protection for American industries and American labor has well nigh been bartered away.

The full and disastrous effect of this sell-out of America's interests was not noticeable during the war, because in that period foreign trade came virtually to a halt. But with the recovery of foreign countries imports are steadily rising and some of our American industries are being driven to the wall by foreigners taking their American market.

The Republican Eightieth Congress, looking forward to the time when realistic, worthwhile foreign-trade agreements must be made, amended the law to provide standards for negotiations by the President with foreign countries. We provided that when he exceeded those standards the President must report his reasons to the Congress.

Now it is proposed by the administration to restore the law as it was before the Eightieth Congress. American industries and American farmers under that proposal would be completely at the mercy of self-anointed foreign trade planners in the administration.

And while we are on the subject, let me make an observation which, I believe, is not generally understood by the American people. At this very time we are subsidizing foreign countries to process, fabricate, and manufacture goods to be sold in the American market at prices with which American business cannot possibly compete. Ladies and gentlemen, this is being done with the taxpayers' money.

Another piece of legislation that is being forced by the Truman administration in order to satisfy the pressure groups is socialized medicine.

How many people who voted for Mr. Truman understood they were voting to give the Government bureaucrats another opportunity to snoop into the personal affairs and relationships of the American people with their family doctors?

This is not a matter of a few million dollars. It is a multibillion-dollar program to control the family doctor and to control and subsidize the medical treatment of our people in hospitals across the land. Our America has the best health record of any major nation on earth. Our governmental agencies now are giving constructive aid in research and guidance in the direction Government should properly take in the interest of the people's welfare. But now the Truman administration demands that we swing further down the road to national socialism and an all-powerful state through outright socialized medicine.

And, fellow Americans, this administration is just trying to kid you, you are not going to get free medicine under their proposal, socialized medicine is not free.

Another example of the administration's bungling attempt to solve the problems before us is its demand for outright repeal of the Taft-Hartley Act.

The sordid length to which this administration will go to satisfy a pressure group is most vividly portrayed in the battle over the labor-management legislation. In one fell swoop the administration sought to repeal the Taft-Hartley Act in its entirety, wiping out all the protections afforded for the rank and file of workers; their right to join or not to join a union free of coercion and intimidation, and their right to control their unions.

The administration sought to repeal that provision of the law requiring officers of labor unions to file affidavits that they are not Communists, before they can be heard by the National Labor Relations Board.

The administration submitted a bill to the Congress to repeal the authority given in the Taft-Hartley Act for the President to obtain court injunctions against strikes that jeopardize the national health and welfare. This measure has received the condemnation of the American people. We were all shocked to learn that the President believes he has all the powers he needs as President of the United States, so-called inherent powers, to protect the Nation against paralyzing strikes. If this be true, why did not President Truman exercise such power 2 years ago instead of rushing to Congress to ask for special legislation to deal with the Nation-wide railroad strike impending at that time.

Fellow Americans, we live in a country governed by laws, laws that spell out the rights and limitations of the Government. In America, no man has the right to say: "I am the law."

It is futile to discuss these matters in lofty and hopeful phrases. The language of the day is to call a spade a spade. I make no attack upon the character or patriotism of President Truman. But I do challenge the policies for which he stands, and I shall fight them with my last ounce of energy, because they are ruinous for my country.

And I could go on and on, discussing with you the fatal defects of the program offered by this administration to solve our national problems. Summed up, it is always and in every case a planned economy headed up by an all-powerful group of men in Washington. But, fellow Republicans, national socialism has never worked in any country where it has been tried. It won't work here. It is neither progressive nor liberal. It is reactionary because it takes away from the people their liberties and their freedoms.

Lincoln knew that the people might be led astray for a time, by false hopes and false promises. But he had an abiding faith in the people; faith that in the end they would make the right decisions. He offered no easy way of life. He did not offer security from the cradle to the grave. He knew, as you and I know, that socialism does not provide free anything. A socialistic program has to be paid for by everybody, through direct taxes or indirectly, in their cost of living.

Lincoln knew that the strength, the prosperity, and the happiness of the people depend upon their initiative and genius, and not upon any small group of planners in Washington. The American people will not long endure the chains of control by bureaucrats in Washington as a price for security.

All history reveals that where the people were deceived by promises that the Government would supply all their needs, freedom vanished under the heels of dictators. Mankind has gone forward only to the extent that men have been inspired to obtain greater freedom for the individual. Our progress as a nation has been made by preserving the

people's sovereignty over their own Government, and not by letting the Government become their master.

One of the main reasons Great Britain went socialistic was the apathy of her people. They had gotten to the place where they just didn't care. Have we reached that stage in America? Do we realize that we are losing our freedoms and our liberties?

Lincoln said: "At what point then is the danger to be expected? I answered, 'If it ever reaches us it must spring up among us. It cannot come from abroad. If destruction be our lot we must ourselves be its author and finisher as a nation of free men. We must live through all time or die by suicide.' "

Fellow Americans, if we are going to heed the warning of Abraham Lincoln, now is the time when we must get out and fight for a strong, free America, and the principles for which the founder of our party gave his full measure of devotion.

Our party is not split wide open. Anyone who says so is doing a disservice to our party and to our country. The rank and file of the Republican Party are united to preserve our freedoms and our liberties. If there be any split whatsoever, the split is in the party's leadership. This is the time for our party leaders to close their ranks, show courage, and not yield to expediency, and compromise with the forces that would plunder our American heritage.

We must know and recognize, as Lincoln knew and recognized: The weak cannot be made strong by making the strong weak. The financial stability of our Government must be made secure.

We have got to find ways to market our crops and manufactured goods and not depend upon artificial Government controls that lead to the loss of our liberties. We must increase production to maintain a high national income.

We must have a realistic foreign-trade policy in which there is true reciprocity. We cannot afford to sell out American industry and labor as has been done by the Truman planners. We must stand on a fair labor-management legislative program. We cannot go back to jungle warfare.

We must maintain a true two-party system. A bipartisan foreign policy does not become bipartisan at least until it reaches the water's edge. Our foreign problems should be taken up in the Halls of Congress and be debated and discussed and thoroughly weighed by the Congress and the people before they are put into force and effect. To do otherwise is to make a me-too party out of the Republican Party and destroy the two-party system in America.

We must expose to the people the shameful result of a foreign policy that has delivered millions of people in Europe and Asia into the hands of Soviet Russia. We must explode the inconsistency of spending billions of dollars to rebuild western Europe, while Asia is allowed to become our Achilles heel and goes by default to Communist domination. We must see that responsibility is firmly fixed upon those who betrayed our people in secret agreements with other nations.

There have been too many commitments made by our Government in foreign affairs before consulting the Congress and the American people, and we are paying for those commitments in higher taxes, higher prices, and the imposition of police-state methods that threaten our very American way of life. Our party demands a rock-ribbed American leadership. We want leaders in this crucial hour who will say with Lincoln:

"There are good, patriotic and able statesmen, whom I greatly would support if they would now place themselves on Republican ground, but I am against letting down the Republican standard a hair's breadth."

That is the kind of leadership that will not barter away our American heritage of opportunity and freedom of choice.

That is the kind of leadership wanted by millions and millions of Americans—both Republicans and Democrats alike.

That was the sound American doctrine of Abraham Lincoln, our first Republic President. That is the sound, American course which lies open to us today. With that kind of leadership we will serve our country and go forward to victory. Let's be Republicans.

Lincoln Day Address by Hon. Leverett Saltonstall, of Massachusetts

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague, the senior Senator from Massachusetts [Mr. SALTONSTALL], at the Middlesex Club dinner on Lincoln's Birthday, February 12, at the Hotel Statler, Boston, Mass.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Today is Abraham Lincoln's one hundred and fortieth birthday. Annually we Republicans celebrate it all over the country.

In the year 1949 it is particularly significant to us because last November 2, when his party expected to win the Presidency, carry the Congress, and elect a Republican administration here in Massachusetts, we were defeated. We received the worst licking in Massachusetts that we have ever suffered. There is no sense trying to duck that issue. There is no use in recriminations. There is no use blaming any individual or individuals. We simply did not have enough players on our team to win. But we cannot be downhearted. There is too much to do.

There was never a greater need for an alert, aggressive minority in State and Nation than there is today. When difficult problems face us we need a healthy opposition. Dire predictions of a dead Republican Party just don't stand up. Do you realize that in the Nation, out of 49,000,000 votes cast, a total shift of less than 30,000 votes in three States—California, Ohio, and Illinois—would have made Dewey President? That certainly does not call for black pessimism.

But it does call for a careful study of why we didn't win when we expected to. You and I have listened to so many reasons as to why we lost that it would take many pages to enumerate them. Hindsight is always easier than foresight.

But the job ahead of us is clear. We must plan now to work out what it is necessary for us to do to gain victories in 1950 and 1952. That job cannot be done by merely fighting among ourselves.

We may be split today in our points of view, but let us argue them out so we can gain our immediate objectives. In the State that means a Republican administration and a Republican legislature in 1950; in the Nation it means a Republican Congress in 1950 and a Republican President and a larger Republican majority in 1952.

Abraham Lincoln, whom we honor tonight, said, "With public sentiment nothing can fail; without it nothing can succeed." How are we going to obtain the confidence of "public sentiment"? Our platforms have been framed in the best interests of the people, but the people don't believe we are going to live up to them. To obtain public confidence when we accept a Republican platform, we must scrupulously live up to our commitments.

I received a letter just last week from a Massachusetts lady which expresses so well what we Republicans, in my opinion, stand for that I now quote a paragraph from it. It represents the hopes and aspirations of people all over the United States of America. She said:

"I know you are aware of the concern of millions as to where we are going and what is the end. People want health, homes, jobs, education for everyone, but they want capital for business, freedom from excessive taxes, intelligence and economy in government spending, honesty, people of ability and fitness for positions of responsibility. They want peace, freedom from fear, and only those people in our country who appreciate our way of life and want to make it always better; not undermine it."

I do not personally know this lady. She wrote me some of her troubles and in the course of them she made this statement. I use it as my text tonight because it expresses what I believe is the philosophy of the Republican Party.

The average American citizen is moderate. He is neither a radical nor a conservative. He is a progressive in the best sense of the word. He wants more opportunity, more freedom, and yet more security. He wants peace in the world that will make these things possible. Our party must convince public sentiment that we do not want to turn the clock back and become the party of "stand-pat conservatism"; the party of a laissez-faire doctrine that the welfare of the individual is no concern of the Government. On the other hand, we don't want to be known as the party which promises everything and is associated with the word "gimme."

We must convince the voter that we are the party that will carry forward the great American tradition of opportunity and freedom; the great American tradition that we cannot spend more than we have and we cannot expect to get something for nothing.

In carrying forward this great tradition we want always to remember that it cannot be accomplished unless people have health, live in good homes, are well educated, and have jobs.

We do not want socialism. We do not want Government in business. We want Government to regulate our business, if necessary, but not control it. We want Government help in the development of our natural resources where those natural resources are too great for us to develop without the help of Government direction and credit. We want in all these programs, where Government plays a part, adequate, efficient, and economical service of Government for the individual, but never dictatorship of the individual by Government.

In our opposition to the present administration in Washington we have the opportunity to point out the pitfalls, to correct the excesses, and to direct public sentiment to our position.

If Government policies discourage saving, discourage business from risking new capital on untried ventures, we will cease to go forward with the new inventions that have constantly improved our standard of living.

The latest invention—television—has gone forward at a greater speed than any previous invention. More improvements in television for its greater use by more people have become a reality more quickly than in the case of the telephone, the electric light, the automobile, and the airplane. Think of the new jobs this means for our people, the new opportunities to get ahead.

Jobs in American industry and American agriculture have been built up by the initiative and the imagination of our citizens.

Just in my lifetime our country's population has increased by 80,000,000. That increase has come about because people not only here at home but all over the world have recognized that in the United States lies the greatest opportunity for higher wages and a better standard of living. Only by keeping that hope alive can we continue to enjoy the life that is now enjoyed in the United States of America.

The policies we adopt must be those which we believe will add to this standard of life, will actually help the individual, not harm him.

The specter of communism is too real in the world today to allow any consideration which might, under the guise of sugar-coated pills, offer gilded panaceas of prosperity and so bring down chaos on our heads. That is what the leaders of that ideology hope for. That is what we must guard against.

The American people are wise. They are thoughtful and resourceful. They love freedom. Their sons and their parents have died for freedom. The party that convinces "public sentiment," to use Lincoln's words, is the party which they will join and for whose candidates they will vote.

In 1939 when I first became Governor of our State I said to our legislature, and I repeat now:

"It is the duty of government to provide first for the man at the bottom of the hill—to build soundly and constructively so that our economic buildings will not crumble. We must make certain as we climb the hillside that government is serving each and every individual. Democracy is not a government of the few but a government of all. Let us be ever mindful of the rights of every citizen. It is the encroachment upon and the gradual taking away of these rights which lead to dictatorship."

The record shows that since Lincoln's inauguration the Republicans have held the Presidency 56 years; the Democrats 32 years. The Republicans held the leadership in those 56 years because they were able to harmonize the fundamental interests of those who made up the whole community—the farmers, the workers, the housewives, the businessmen. All felt that they were adequately and fairly represented. They knew that measures that benefited one group by injuring another group would not make for success at the polls. Good prices for farm products meant that farmers would vote Republican. Good wages with a full dinner pail meant better standards of living and greater prosperity. A fair chance for success stimulated the man of vigor and imagination to risk his savings in new ventures. He knew if he succeeded he would have a good chance of keeping a fair proportion of his earnings.

Policies are of no avail unless there are able men to carry them into effect. Leaders cannot build themselves up without obtaining the confidence of the people. They must have intimate, first-hand knowledge of just what the average person is thinking and wanting. This can only be done by meeting and talking with just as many of our citizens as possible. It can only be accomplished by going out and getting the information first-hand.

We Republicans are not good self-advertisers. We are guilty of not keeping before the people the many benefits for which we have been responsible.

In Massachusetts under Republican leadership we have pointed the way in the fields of education, labor, housing, welfare, and public health. Just to mention a few: Our department of public welfare was started under Calvin Coolidge. Our old-age assistance was started under a Republican administration in 1930. Our State was the first in the Nation to adopt a minimum-wage law in 1912. In 1908 our State adopted the first workmen's compensation law. We have many firsts in education. Thirty-seven years ago our State first passed a public housing act—the first in the country—but it was declared unconstitutional. We had then to amend our constitution before it became a reality.

So, I assert that here in Massachusetts we Republicans have not only been abreast of the trend toward greater government service for greater numbers of people but we have often led that trend.

Our trouble has been that we have let the Democrats take too much of the credit. Perhaps you'll say the Democrats have done it by outbidding us. They have certainly outadvertised us.

Just talk with a leading cigarette producer or tooth-paste manufacturer. If he stops advertising his product in every way possible 24 hours a day he knows that his sales will drop off and his competitor who does advertise will beat him to the sale.

We who are in Government today are building this country for the youth of tomorrow. If our policies are to be successful they must be put forward by men and women capable of kindling the enthusiasm and attracting the confidence of their neighbors. In my opinion, the whole basic philosophy of a political party is the confidence of your neighbor. It is he and she who cast the votes.

We particularly want to make it possible for more young people in our communities to take part in our local public affairs. They are the citizens of tomorrow for whom we are building our country of today. We need their enthusiasm; we must have their legwork. It is they who must push our doorbells; who must get to know the people in our communities. We can do this if we are willing to recognize that they are all-important to the future of the Republican Party.

But, they have got to have something to do and be recognized if they do the job. Have we allowed them to take an active enough part in our committees? I feel definitely that we have not.

Should we continue to encourage them to form their own organizations as separate from our regular organizations? Today in any one community we may well see beside the local Republican Committee a Young Republican Club, the Republican 21-Club, and perhaps a Young Men's Republican Club and a Young Women's Republican Club, all functioning under different leadership. If we are to be successful they must all be united and working together.

There are lots of jobs in our towns and in our cities besides members of the legislature or State-wide officers. There are members of the city government. There are all sorts of civic organizations.

We should encourage in every possible way the participation of our youth in all forms of civic activity. We should encourage it as Republicans. We should give way as far as reasonably possible to the promotion of youth in the civic life of our communities. That is one field in which I believe Republicans can well take an active part to build the Republican Party.

Here in Massachusetts we have a greater diversity of foreign-born and first-generation Americans than any other State in the Union. I am proud of that fact because it clearly carries out the tradition of our founding fathers. In the last census the population of Massachusetts was just over 4,300,900 of which 2,400,000 were born in another country or are the sons and daughters of a parent born in another country.

Have we done all that we can to try and see if they are becoming members of the Republican Party? Have we encouraged them to work with us in our committees and in our civic activities? I know in a great many cases we have, but I want to stress and stress strenuously that I do not feel we have made enough effort in their behalf. We want their leaders as candidates in local, State, or national offices.

I hope that we in Massachusetts will make a renewed effort to become acquainted with all of our citizens regardless of their origin. They all have a common interest in our Government and that common interest must be preserved.

Now, in radio parlance, "May I take you to Washington?" There we find a Democratic President, a Democratic-controlled Congress with a vibrant Republican minority. Believe me, in the month that the Senate has been in session I have heard more politics discussed than even in the height of the preconvention days of last spring. But, underlying politics, we all realize that we have some mighty difficult problems to work out in the best interests of all our citizens.

Head and shoulders above every other problem is that of obtaining peace in the world. Everyone with whom I have talked wants the United Nations to succeed. No one wants us to withdraw from the United Nations, but does everyone realize that the United Nations was established not to make peace but to preserve the peace that would be made by the nations that had been fighting one another? Perhaps that which discourages us most with the United Nations comes from the fact that we forget this vital point.

So, within the Charter of the United Nations we are trying to build up our greater national security and that of other peace-loving nations. Early we accomplished a pact with the Latin-American countries. Now there is under negotiation a North Atlantic pact. This will be again drafted within the Charter. This will be carefully, thoughtfully debated in the Senate. We all want to make mighty certain where it will lead us before we sign ourselves up to new and vital commitments to our security and welfare for many years to come.

In the meantime we have pushed forward our aid to Europe, to China, to Greece, and to Turkey. We are growing more optimistic about the success of the ECA program. We realize that unquestionably it will have to continue for a year or more. In my humble judgment, if we drop it today, we will throw away all the benefits we have accomplished in the past year. So I want to vote for a continuance of the ECA. I hope the proposition that is finally submitted to us will be fair, will be practical and within our resources.

We are terribly disappointed as to what has happened in China. We may be disturbed about our rate of progress in Japan. It seems to me that we must adopt a watchful wait-and-see program in China today. Let us hope that our historic friendship with China may be continued in a manner that will be helpful to both our great countries.

But, if our plans of helping other nations to help themselves are to be successful, we must remain strong. We must be prepared to supply enough of our young men and of our money to keep our armed services strong and well-equipped. That does not mean that we want war or even expect war. We hope that by spending some $15,000,000,000 this year to keep 1,600,000 men in our armed services that no one will want to go to war with us.

I saw the camps at Buchenwald and Dachau within a few hours after they were taken and before the piles of human dead had been removed. I saw the atomic bombs exploded at Bikini Lagoon. I have seen the cold war in Trieste and in Berlin. As a member of the Armed Services Committee of the Senate I am kept informed of present-day military problems throughout the world. I know the respect with which our armed services are held.

It is familiar to all of us that our industrial strength makes any nation think twice before they dare attempt world war III. This is the attitude of mind that we want to maintain in order to make peace a reality and to permit the United Nations to become a functioning body to maintain world peace. That is the problem that lies over every other problem in our National Capital today.

At the moment you read daily of the squabbles going on in the Labor and Public Welfare Committee of the Senate. I have heard of no one who does not want a labor-management law that is fair to everyone. I have heard of no one who does not believe that collective bargaining is an underlying function of our industry in the United States. Our problem is to resolve fairly the different points of view. What management believes may be fair to them, labor leaders do not think is fair to them. What labor leaders want, management believes is impractical. How much Government interference and in what manner the Government should interfere by regulations is another question on which both sides have varying points of view. What is fair to the public is still a paramount problem that must be solved.

I have confidence that out of it all will come a law that is fairer to those who work in industry than is the Taft-Hartley law in all its aspects and a law that is fairer to management than the Wagner Act in its original form. Over it all is the question of Government participation. There is a universal feeling that the public must be protected from stoppage of industries that concern the welfare of each and every one of us.

I hope to be able to vote for an equitable solution of these questions. I am repeatedly asked about how I am going to vote on some of these problems. What I wish to bring to your attention is the fact that at the moment there is no actual proposal before the Senate. The only bill which has been submitted is now before the Labor and Public Welfare Committee of the Senate. Until the committee reports its recommendations, neither I nor any other Member of Congress can definitely state how we are going to vote on specific issues that will be presented to us.

Much of the President's message on the state of the Union concerned further participation of Government in its relation to our private lives. I believe that our people expect more service of their Government today. I believe that Government participation in unemployment benefits, old-age assistance, education, housing, health services must be constantly reveiwed to see the benefits, the services, and the security that our citizens expect are provided.

If the President's recommendations were all put into effect, the expenses of the Federal Government, it is estimated, would jump from forty-two billion to over sixty billions of dollars a year. Where would the money come from to pay such a bill? So, I believe that the Republican policy in Congress must be a constant review aimed at making fair and reasonable the benefits that we now provide.

Old-age assistance levels must be brought up to date. Unemployment-compensation levels must be scrutinized. Maternal aid must be made realistic in the light of present-day costs of living. When these things are provided for, we turn to Federal aid to education, housing, and health.

I personally believe that our people do not want us to disregard these services. At the same time, the position of the Republican Party must be to make progress wisely and carefully in order to keep within our ability to pay.

I personally hope that we can go forward with a reasonable program of greater security, more education, more housing, and greater health without increasing our tax burden. In fact, I hope we can eliminate some of the nuisance-excise taxes we now have.

The Hoover Commission will soon come forward with detailed recommendations for streamlining our Government to assure more economical and efficient operation. I cannot too strongly stress the necessity of maintaining in the hearts and minds of us all the optimism that comes with personal savings and the stimulation that comes with new ventures. Unless this optimism and stimulation are constantly with us, business ceases to go forward. Our country becomes static. Only by keeping our industrial and agricultural machine going through the initiative and imagination of our citizens can we hope to have the life, the working conditions, and the greater security that are desired by every thoughtful American.

It may well be that in our approach to these issues we Republicans have tried to appeal too much to reason and too little to human emotions. I am convinced the longer I have been in Government service that voters are governed more by their emotions than by their reason. Yet their emotions are fundamentally based on common sense and what is best for the welfare of the average individual. As Republicans, whether we are in a public office or not, we must examine what it is that people want; we must determine whether this desire can properly be fulfilled by Government; but in doing so we must never be hypocritical. We must never allow Government to make promises it cannot keep. Our program must be built on solid foundations. But it cannot be sold—it cannot capture the imagination and arouse the emotions of the men and women who vote—unless we appeal to those emotions. Every project that is put forward by the majority party in State and Nation must be carefully examined by the minority party to determine our position.

If we base our opposition along the principles that appeal to the average man and woman of America, if we can convince them we stand for no special interests, we have no selfish motives, we will gain the confidence of Mr. and Mrs. United States and their children. We will become the majority party in 1950. We will win the Presidency in 1952.

Let me close with the words of Abraham Lincoln:

"The dogmas of the quiet past are inadequate to the stormy present. The occasion is piled high with difficulty, and we must rise with the occasion. As our cause is new, so we must think anew and act anew."

Report on Economic Conditions

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. O'MAHONEY. Mr. President, three important witnesses appeared on Friday at the public hearings of the Joint Committee on the Economic Report to testify with respect to the legislative recommendations made by President Truman in the report submitted to Congress at the beginning of the session. They were Mr. Raymond M. Foley, Housing and Home Finance Administrator; Mr. Tighe Woods, Housing Expediter; and Secretary of the Interior Julius A. Krug.

Much interest is being displayed in the effort of the committee to develop through testimony a well-rounded view of the economic conditions in which the country now finds itself. Summaries of parts of the testimony submitted last week have already appeared in the RECORD. I ask unanimous consent that the summaries which I have prepared of the testimony of Mr. Foley, Mr. Woods, and Secretary Krug be printed in the Appendix of the RECORD.

There being no objection, the summaries were ordered to be printed in the RECORD, as follows:

STATEMENT BY RAYMOND M. FOLEY, HOUSING AND HOME FINANCE ADMINISTRATOR

The national housing policy should be founded on certain basic principles: (1) every American family should have the opportunity of acquiring a decent, safe, and livable home; (2) our private enterprise system must do most of the job. The Federal Government must do everything it can, consistent with sound public policy, to make that possible; and (3) we must strive our utmost to keep the home-building industry operating at a high level to eradicate or minimize the violent fluctuations that have characterized this industry in the past.

In the furtherance of this policy I have presented my views on new legislation which has the following objections: (1) enunciate a national housing policy; (2) authorize Federal aid to cities for slum clearance; (3) reactivate and expand the low-rent public-housing program; (4) provide assistance for the improvement of frame housing; (5) authorize a comprehensive program of research into both the economic and technical espects of housing; and (6) introduce a series of amendments to the National Housing Act designed (a) to stimulate the production of a greater number of homes in the lower-price brackets, (b) to aid the formation and operation of cooperative housing organizations, particularly for the veteran, (c) to continue the present system of mortgage insurance on rental housing, and (d) to make the Government facilities for secondary mortgage market operations more effective in stimulating the production of lower-price sale and rental-housing and cooperative-housing projects.

Our supply of housing now as in the past may be characterized by the phrase, "Too few of any kind, and too many that are too poor." Human values have been wasted and undermined as a result of inadequate housing. Although the ability of the housing industry to expand its output from 142,000 to 930,000 in only 4 years has been a most gratifying performance, it is high time we cease limiting our housing horizon to our achievements in the past. There have been violent cyclical fluctuations in production; since 1920, production of housing in nonfarm areas has ranged from a peak of 937,000 units in 1925 to a low of only 93,000 units in 1933 and back to about 930,000 units in 1948. During the decade between 1930 and 1939 employment in on-site residential construction ranged from a high of 668,000 to a low of 150,000. The depression low was more than 77 percent below the peak of the decade. Thus instead of being one of the important stabilizing elements in our national economy, home building has actually fluctuated more violently than any other major segment of economic activity.

The extent of our needs can be judged from the estimates that between now and 1960 between seventeen and eighteen million units must be built or rehabilitated. In order to stimulate greater production of good and livable homes in the lower-priced brackets, we must continue to employ liberal

Federal financing aids. Building costs, especially those of building materials, have risen substantially and reached an all-time high in September 1948. By December lumber prices were still three and one-half times as high as in August 1939, and four of the seven basic material groups (brick and tile, plumbing and heating, structural steel, and the classification other materials) were still in their peak. The average hourly rate of earnings on private building construction in November 1948 was at a new all-time high of nearly $1.94 an hour, 108 percent above the 1939 average of slightly over 93 cents an hour. It may be noted that in the 2-year period, October 1946–October 1948, the index for average hourly earnings on private building construction increased 25.8 percent (from 174.1 to 219.1 with 1935–39=100), while the index of wholesale prices of building materials increased 51 percent (from 134.8 to 203.5 with 1926=100).

On the basis of late 1948 trends, experts from both Government and industry now predict a lower level of housing production in 1949 than in 1948. This downward trend occurred not because of any slackening in housing requirements, nor because of any shortages of manpower or materials, but because housing, more than most other consumer necessities, has been pricing itself out of the mass market.

STATEMENT BY TIGHE WOODS, HOUSING EXPEDITER

The critical shortage of rental housing accommodations, which still exists in the 600 defense-rental areas throughout the United States is one of the major shortages contributing to inflation in our economy. If we abandon rent control suddenly we would have a rent increase of at least 50 percent. Although the shortages of rental accommodations are probably most severe in the larger cities, the shortage of rental units is general throughout the Nation. At present Federal rent control operates in 1,150 of the 3,069 counties of the Nation. All available evidence points to the fact that the demand for rental housing has not been reasonably met in most communities. In the entire United States during 1948, only about 17 percent, or less than 160,000 of the 930,000 nonfarm dwelling units started were rental-type units. The outlook for new permanent nonfarm dwelling units to be started in 1949 is about 875,000, less than the present unfilled need for rental units alone in the 91 cities surveyed. If 17 percent of the new units started in 1949 are offered for rent, the total for the entire United States would not be enough to satisfy the need for rental housing in three or four of our larger cities.

All of these facts point toward the need for extension and strengthening of rent control. To this end I recommend the following: (1) Rent controls should be extended for a 2-year period beyond the expiration date of the present act. (2) In order to curb the growing black market in over-ceiling rents the Housing Expediter should be given authority to bring treble damage actions for willful overcharges, apply criminal sanctions for willful violations of the act, and regulate evictions. (3) Permanent dwelling units in hotels and housing units not rented for a 24-month period should be brought back under rent control. (4) Units created by conversion should be decontrolled only upon order when the conversion results in additional self-contained family units. (5) The Housing Expediter should be authorized to recontrol areas and establish controls in new areas where this is warranted by the national defense program or other changing conditions. (6) Where rent advisory board recommendations are not approved by the Housing Expediter, the case should be reviewed by the Emergency Court of Appeals only upon complaint filed by the Board. The time for review of board recommendations by the Emergency Court of Appeals should be extended from 30 to 60 days. (7) The provision for voluntary leases should be dropped because this provision was originally based upon the assumption of a rapid termination of controls, which is no longer true. There is ample provision in the law and regulations for justifiable rent increases. (8) All new residential construction for rental or for sale should continue to be offered to veterans of World War II and their families on the same preferential basis as required in the present law.

It is the policy of the Housing Expediter to see that landlords get rent increases where they are justified. Seventy-three percent of applications for rent increases received since July 1947 have been approved. Rent control itself should last only as long as we fail to reach a reasonable balance in the supply and demand of housing. To reach this balance quickly, we should concentrate on rental housing in multiple units. If total supply of manpower and building materials cannot be expanded rapidly enough to produce more than 1,000,000 units a year, I would recommend temporarily the discouragement of the construction of single family units for sale by a deliberate tightening of credit and risk insurance requirements for homes and by giving additional incentives to builders of multiple-unit structures.

STATEMENT BY JULIUS A. KRUG, SECRETARY OF THE INTERIOR

Our high level of economic activity results in a higher rate of consumption of natural resources than ever before. While a beginning has been made in stock piling raw materials needed for national security, we have not yet as a Nation faced the need for equally aggressive measures to assure the continuing supply of raw materials required for a dynamic and expanding economy.

In 1949 the Nation is still as much as 10-percent short of the electric energy that users are demanding. At least 16 States are affected. National reserve generating capacity shrank to less than 5 percent in 1948, less than a third of what the industry counts as adequate reserve. The production of aluminum, which depends on substantial quantities of electric power, is at least 30 percent short of demand. Today the aluminum industry operates at only about half World War II capacity. Seventy percent of the hydro power, on which the aluminum industry depends, is provided by the Federal Government. Other vital industries unable to obtain adequate power include ferro-alloys, abrasives, and phosphate fertilizer. The Nation is 40 percent short of phosphate-fertilizer needs.

In all probability our needs for electric energy will double in the next 10 years or sooner. Generator capacity must increase by 80,000,000 kilowatts by about 1965 if the true needs of the country are to be met. Certainly in the next 15 years, at least, 30,000,000 kilowatts of hydroelectric power should be developed by the Federal Government and another 10,000,000 by private utilities and other power systems. The combined efforts of both public and private agencies are indispensable toward overcoming this critical electric-power shortage.

Excess capacity of oil is zero today, compared wtih 1,000,000 barrels a day reserve capacity with which we entered World War II. Proved petroleum reserves within our continental borders are destined to diminish in the near future. The Federal Government should undertake its responsibility for rapid exploration of the reserves remaining on public lands and the continental shelf. This requires immediate legislation. The Federal Government should also foster the early development of a synthetic liquid fuels industry and encourage more adequate conservation laws in some States.

Supplies of natural gas cannot begin to meet consumer demand despite adequate reserves of natural gas because gas distributors cannot get the steel pipe needed to bring the supplies from the fields to the consuming markets. Today the waste of flared gas amounts to at least one-fifth of the annual well output.

With the coal industry serious problems are being neglected, leaving aside the recurrent problems of labor relations. These include: (1) Wasteful mining practices which leave 1 ton of coal in the ground for every two removed; (2) the need for producing large amounts of synthetic fuels from coal that will substantially increase annual mine output within 25 years or less; (3) expansion of work of Government and industry on underground gasification of coal, development of synthetic liquid fuels from coal and oil shale, methods of treating coal or altering it in order to increase the economies of using coal where consumers would otherwise substitute oil and gas. In order to prevent wasteful mining practices it may be desirable to impose a tax on each ton of coal mined and rebate the tax to those producers who follow proper mining practices.

Material shortages seriously affect the expansion of energy supplies. Because of the shortage of aluminum conductor, over 20,000 miles of poles on REA cooperative distribution lines are standing without wire. In 1939 aluminum conductor could be obtained in 3 to 6 months from the date of placing an order. Today, delivery dates are 4 to 5 years. The shortage of aluminum will not end until new power generating plants are built. Federal power systems have also been short of steel and insulators for transmission towers. Federal hydro projects that would provide for 30,000,000 kilowatts of capacity over the next 15 years should be planned and scheduled now.

Conservatively 4,000,000 tons of line pipe will be required by the gas industry alone during the next few years, and this estimate does not allow for the filing of additional applications. Allocations are clearly needed to assure priority of line pipe for the distribution of oil and gas to those areas where the need is most pressing.

Steel supplies for maintenance, repairs, and general operating purposes at the mines have likewise been inadequate. Altogether about 400,000 tons of warehouse steel per year, or between 33,000 and 35,000 tons per month, are required by all of the mining industries. How long the mines, most of which are small, can continue operations without relief is problematical. Unless our industrial momentum is maintained, we must expect a slowing down of economic activity, and the slowing down will be disproportionately larger than the shortages of steel for the industries affected because of the cumulative effect. Allocations of steel will have to be continued and extended.

Manganese, 30 percent of which is imported from Russia, and chromite are both scarce materials currently being sought for the Government stock pile. In addition to the amount that went into the stock pile, there was a deficit of 180,000 tons of manganese which was made up by the steel industry drawing down industry stocks. Imports of manganese for 1949 will fall short of the industry's requirements by about 200,000 tons.

The outlook for iron ore is more favorable. In the long run, the large reserves of low-grade taconite iron ore hold real potentialities, but the program for the ultimate construction of commercial plants for the benefication of taconite will require several years and large expenditures.

Rural Electrification

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, February 14, 1949

Mr. KEFAUVER. Mr. President, I wish to call the attention of the Congress to a statement made on February 1 before the National Rural Electric Cooperative Association by John R. Steelman, the assistant to the President. Mr. Steelman carried to the convention, in New York, a message from the President, pledging continued support of the rural electrification program which has brought light to so many millions of farms in our country.

Mr. Steelman's speech should be read by every American for it states clearly and concisely the importance of the rural electrification program not only to the farmers, but to the people in the cities as well. As Mr. Steelman said, "The benefits of rural electrification extend far beyond its direct effect upon farm families. It means security for the farm family, but it means just as surely increased security for the urban family."

He called for continuation of the program to extend electrification to every section of our country that can benefit from it.

I ask unanimous consent that the address be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. President, ladies and gentlemen of the National Rural Electric Cooperative Association, it is an honor and a privilege to be with you tonight when you are making your plans for the coming year. I am sure these plans will be successful. I wish success to your newly elected officers and to the membership as a whole.

In carrying forward your program, through cooperation with the Rural Electrification Administration, you are demonstrating the value of teamwork, in providing a more abundant life for millions who live in the rural areas of our great country.

Before I left Washington the President gave me a special message which he asked me to read to you tonight. He asked that I convey to you his personal greetings and commendations. This is the message:

"The record of the National Rural Electric Cooperative Association has been one of great service to the country. Only 13 years ago electric power was out of the reach of most farm families. Because of the expense, a glance backward discloses, only one out of every nine farms had electricity. Today, the record shows that 7 out of every 10 farms are electrified. This has been made possible through your cooperation with the Federal Government.

"It will continue to be the policy of this administration to provide loans as rapidly as funds are required to extend electrification to rural areas of our country, thorugh the creation and extension of cooperatives on a sound basis.

"I am confident that the Government will continue to have the cooperation of the National Rural Electric Cooperative Association to the end that we may work together to improve the standard of living of farm families and thus to extend the benefits of our democratic way of life."

The President has a deep interest in speeding up electrification of the rural areas of our country because he knows that where the power lines stop, progress comes to a dead end.

He knows that the electric lines which carry power across the Nation are pumping lifeblood into our democratic, free-enterprise economy.

Electricity links the city and the farm in a thousand ways that give the brotherhood of man new meaning. It has been a force in welding many different groups in our national life into one democratic whole.

When I was a boy in Arkansas, I knew the hardships of farm life without electricity.

Today, on most of our farms, life is far different—and better than it was in those days. And nothing has helped more than electric power to improve living conditions.

The flick of a switch makes it possible for the farm family to hear the news broadcast from Washington, New York, London, or Berlin. Today the farmer's dairy and his silo and his home may operate by power. No longer is it necessary for the farm wife to spend long hours churning up a pound or two of butter.

The REA program not only has brought light to the farm, but has lightened the physical work load of countless men and women of rural America.

I know that most of you here tonight are familiar with the struggle to reach this point in our progress toward the goal of electricity for every section of America. For, to a great extent, it has been your struggle. The story of our great achievement in the rural electrification program, and your part in it, is a story of which you can well be proud.

Let's turn back for a moment to the time of the five- or seven-light-bulb household—you remember, one light bulb in each room. Home owners would add more lights only after careful consideration of whether they could afford them. And a house with a floor plug was a real showplace.

The rule-of-thumb estimate for power needs was made on the basis of one light bulb per room for each average home. The power-company rates were based on the fact that it took a lot of users to pay for a mile of operating line.

Naturally the growth and development of these power companies centered near towns and cities, and their lines served as connecting links between urban areas. There was little incentive for power companies to build lines just to bring small amounts of power to scattered homes out in the country.

Rates for electricity were high. Consumers with electricity had to be frugal in using it.

We had a kind of vicious circle. New lines were not built and rates were kept high because little electricity was used on the farm. And electricity was not used on the farm because the lines were not there and because rates were too high.

I am happy to say we have done something about breaking that vicious circle.

Many of you here tonight are using more electricity in your own homes than 25 to 50 homes consumed when the custom was one light to one room.

In the midthirties the United States, the most progressive country industrially in all the world, was one of the most backward of the major nations in the vital matter of extending electricity to rural areas.

Only one farm out of nine in the United States had central electric service. In contrast, one farm out of every six in the Province of Ontario had electricity, and in the Scandinavian countries half of the farms were electrified. In Japan and Germany the record was still higher. In those countries, only one farm out of 10 was without electricity. And in Holland, nearly every farm enjoyed the benefits of electric power.

However, the American people, recognizing the obvious benefits of electrification, wanted something done about the situation. In 1936 we set out to do something. The Congress passed a law to aid in bringing electric power to farm homes. This law provided for a self-liquidating loan program of $410,000,000 over a 10-year period.

Actually, the Congress increased the authorization to more than twice that amount in the course of the decade. And during the past 2 years, the loans approved for rural electrification have amounted to more than all of the loans approved from the beginning of the program to the end of the war.

As a result of these investments, America has moved forward to a leading place among the nations providing rural electrification. Today, in contrast to our previous record of only 1 farm in 9 with electricity, we have only 3 farms in 10 without it. President Truman's budget request for the fiscal year 1950 will make it possible for power lines to be brought to many thousands more of our farm homes. If the program moves on schedule, the next few years will see the great job of extending electricity to rural America nearly complete.

We are all aware of the contribution of the REA program to the economic and social welfare of the 8,000,000 farm people who are enjoying its benefits. The farmer not only uses power to pump water for his livestock, and to operate machinery, but his wife can enjoy the efficiency of the deep freeze, the electric washing machine and dishwasher, the sewing machine, the vacuum cleaner, and the electric iron. It is now possible for the farm family to have home movies, and radio and perhaps television. Electricity can cook the dinner, heat the bath water, move the hands of the clock, and do a thousand and one other jobs to relieve farm families of much of the drudgery which has been their lot in the past.

Electricity has brought greater diversification to farming enterprise. It has resulted in the development of rural industries. For example, the home and local processing of agricultural raw materials is rapidly increasing as a result of the greater use of electric power. Last year more than 10,000 small rural industries served by REA-financed lines, offered part-time employment to farm people in processing agricultural commodities close to the point of production.

The benefits of rural electrification extend far beyond its direct effect upon farm families. It means security for the farm family, but it means just as surely increased security for the urban family.

When the farmer buys electric fixtures for his home, a vacuum cleaner, a radio, or electrically-operated milking machinery, he is increasing the market of the manufacturer in Schenectady, or Detroit, or Birmingham. The effect goes still further, for the electric appliances and machinery bought by the farmer use steel, aluminum, textiles, and countless other products of the mines and mills of every part of our country. This development, therefore, has brought a substantial market not only for the end products but also for the basic materials which go into their manufacture.

This has been a stimulus to our free enterprise system and has provided employment for thousands of workers. In turn, the increased pay rolls have added their weight to the purchasing power of the people for goods and services of all kinds—including the products that come from the farm.

In addition to all this, rural electrification has brought expanded earnings to the power companies.

That the investment in rural electrification has been a good one in dollars and cents can hardly be questioned.

Furthermore, the rural-electrification program, based on loans, is not a burden on the taxpayer, for it is a sedf-liquidating program. I might add that this is a unique loan program, for in 13 years we have never had a default by any rural electrification cooperative.

The administration policy on rural electrification is a matter of record. The President's message to you tonight carried a pledge that electric power will be carried to every part of rural America as promptly as possible.

The initial phase of extending electric power lines should be completed within the next few years.

We now face the problem of strengthening the system already in operation. I know that you are much concerned about this phase of the program, for already all of the older cooperatives are confronted with the problems of rebuilding their lines to meet the increased growth in consumer demand. A sizable portion of the funds which the President has requested for the coming fiscal year should be used for this purpose.

Even when we reach our goal of building adequate lines into every section that needs them, the job of rural electrification will not be finished. For in addition to needing longer and stronger lines for transmission of power—we need more power.

Power shortages began to affect the rural electrification program soon after the war. Today they are a serious threat to it. Some power suppliers have found it necessary to refuse delivery of additional power to rural lines, and in many cases the suppliers have asked the co-ops to find new sources of power. Some suppliers, to meet the heavy demands on them, have been forced to curtail service or to cut off service during peak periods. The lack of power already has slowed up rural electrification in many areas.

The record of REA in the coming year, measured by demand for electricity, should be the best in the history of the program. This, to a great extent, depends on the sufficiency of materials for line construction and on the supply of power.

To meet these needs in the next fiscal year the President has recommended that the Congress make a new loan authorization for rural electrification of $350,000,000. Together with an unobligated 1949 loan authorization of $119,000,000, this will provide $469,000,000 for the fiscal year 1950.

The President also has called for expansion of our public power program. In his recent economic message to the Congress he discussed the present shortages of electric power, and he pointed out that our long-range needs require enormous expansion of existing capacity. Of course, he was not talking specifically of rural electrification, but of all the power needs of our vast industrial-agricultural economy.

We are meeting tonight in the most brilliantly lighted city in all the world. But there have been times when it was necessary to dim these lights because of the shortage of power for essential industries.

Brown-outs and dim-outs may help to get by in emergencies. But we cannot depend on them to supply the long-run power needs of our economy—on the farm, in commerce, or in industry.

We must develop new sources of power. We must harness our vast natural resources to serve the needs of our people. This can be done by pushing forward plans of development such as the St. Lawrence waterway and power project, the Bull Shoals project on the White River in Arkansas, the Missouri Valley project, the creation of the Columbia Valley Authority, and the Central Valley of California project. Here again we must have broad vision in harnessing our great rivers for power. In meeting the needs for power we must be sure at the same time that we consider and meet our other needs for irrigation, flood control, and transportation.

The lessons we have learned from such programs as REA, Bonneville, and the Tennessee Valley Authority, should guide us in these developments, to the end that they will advance our economy, and by paying for themselves will be no burden to our taxpayers.

Each of these projects, like rural electrification, will prove to be a multiplier of benefits and opportunities in the economic life of our Nation.

This Nation's ability to use electricity has always been underestimated. That is the biggest difficulty we have had in the development of our power resources. There has been the constant and plaintive refrain, "What are we going to do with all that power?" In the past, this complaint was worked to death every time the Government planned and constructed a hydroelectric or other type of power plant.

We have been told over and over again that it was unsound to build lines to bring electric power to the farm and that we couldn't afford to do it. The truth of the matter is that we couldn't afford not to do it. And we have proved it.

Our difficulty seems to be getting everyone to agree on the enjoyment of prosperity. Somebody is always afraid of it.

But certainly those of us here tonight know it is worth while to bring the benefits of electricity to all in our country who are now without it.

I know that your association is going to keep up the fight to do just that.

Rural electrification has turned on the lights in millions of homes throughout America.

But there are still other millions of homes where those lights are needed.

We take pride in the use we have made of electricity up to now. This pride must be matched by our determination that we shall not relax our efforts until its benefits are available for all our people and all their needs.

Stalin Is Willing To Talk

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a thought-provoking editorial entitled "Stalin Is Willing To Talk," from the Great Falls (Mont.) Tribune of February 2, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STALIN IS WILLING TO TALK

While there has been an obvious tendency in American press discussions to discount all statements from Moscow, and particularly those which reflect a more peaceful tone, any statement from Prime Minister Stalin that he is willing to discuss a peace pact between his government and that of the United States cannot rightly be brushed aside as having little significance.

Statements from the Soviet dictator have been rare, although statements from his diplomatic spokesmen have been so constant as to amount to an international harangue. There is not even an undertone of this in Stalin's statement that he has no objection to a meeting with President Truman, and that Moscow is willing to join with Washington in measures leading to gradual disarmament.

If effective measures in this direction could be agreed upon, they would obviously be of benefit to both the United States and Russia, and to all the rest of the peoples of the world as well.

It is pointed out from Washington that there has been no official Soviet approach for a Truman-Stalin meeting. But in contrast to many previous statements of lesser Soviet diplomats reflecting belligerent aggression, the tone of Sunday's statement by Premier Stalin is one of reasonable conciliation. If we were to completely discount all such statements, there would be little hope of ever progressing from belligerence toward peace.

President Truman made the American position and the projected course of the American Government clear in his recent inaugural address.

It would be premature to attempt to predict what might result from a talk between Stalin and President Truman at this time. But there is always the possibility that the Stalin policy is actually being shaped for that long-awaited change of direction.

Henrik Shipstead's Vote Against the United Nations

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Henrik Shipstead Is Proudest of His Vote Against the UN," from the Minneapolis Tribune of February 9, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HENRIK SHIPSTEAD IS PROUDEST OF HIS VOTE AGAINST THE UN

Just as Henrik Shipstead, former Senator, was prepared to take a trip to Central America on a freighter he visited with his former secretary, Walter Mickelson. Walter reports in his New Ulm Journal that he never saw "Ship" looking better as he set out in search of "the Four Freedoms and the Atlantic Charter."

Walter says Henrik claims the proudest vote he ever cast was against the United Nations Charter. He is convinced history will vindicate him—if it hasn't done so already."

What about today's world situation? Walter got this reply: "Read my speeches. Everything I said was going to happen is happening. And we haven't seen anything yet." No longer "hired to do the worrying for the people of Minnesota," Walter says Henrik is busy catching up on his rest.

Government Action in Strikes

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Government Action in Strikes," by William H. Davis, which appeared in the New York Times of February 12, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOVERNMENT ACTION IN STRIKES—PLANT SEIZURE PROGRAM ADVOCATED FOR POST-INJUNCTION PERIOD

To the EDITOR OF THE NEW YORK TIMES:

Your editorial of February 8, Power of Seizure, opens up a chance to clarify the deep confusion that has surrounded the question of how to handle emergency strikes.

Your editor is wrong in thinking that there is a choice between the procedure I proposed to the Senate Labor Committee and the method of action now provided by the Taft-Hartley Act. My proposal deals with a national emergency that persists after the cooling-off period has ended and the Taft-Hartley injunction is no longer available.

The injunction procedure of the Taft-Hartley law is limited to the 80-day cooling-off period. If the dispute survives that 80-day period the court must withdraw its injunction; the workers are free to strike. There is no safeguard for the imperiled health and safety of the public except that the President is required by the Taft-Hartley law to tell Congress about it and make any recommendations he may see fit.

RECENT STRIKE RECORD

I should suppose that anyone who lived in New York through the recent costly longshoremen's strike, which, after the Taft-Hartley 80-day injunction period had expired, tied up our shipping, embargoed freight shipments on the railroads and prevented ERP shipments, would understand that. Similarly, in the west coast maritime dispute last year, the 80-day period of the Taft-Hartley injunction was followed by a strike which lasted 3 months. In the atomic energy dispute at Oak Ridge the 80-day period ended without settlement and a strike was prevented only by the high-level assumption of responsibility in the council of the American Federation of Labor.

My suggestion to the Senate committee deal with the real and final emergency after the cooling-off period had expired without settlement of the dispute. I quite agree with you that it is poor practice "to invoke a wholly fictitious government ownership through the power of seizure." I think government ownership by act of the Executive should be absolutely shunned; that seizure in the sense of taking permanent possession of and title to the properties should be entered upon only by act of Congress.

My suggestion, very well reported by Louis Stark, was, first, that the President, having publicly declared a national emergency imperiling the national health and safety and having reported this to Congress and pending final congressional action to end the emergency, should have the power, declared by act of Congress, to take possession and make use of the property for public welfare and to call on all of the officers and employees of the enterprise and any other citizen of the United States having suitable qualification to carry on the essential services on an emergency basis. It is the ancient common-law idea of the posse commitatus.

There are many, many ways in which such an emergency might be finally determined. Whether permanent Government ownership would be the proper course could not be foretold. If it did become necessary, I suggested that the procedure should be by exercise of the power of eminent domain, with just compensation according to the fifth amendment to the Constitution.

COMPENSATION DURING USE

I emphasized that even during the period of emergency use just compensation should be made and that it would include the wages to be paid to the workers as well as the money to be paid to the owners for the use of the property, so that a board would need to be set up by the President to assess just compensation to employees as well as to employers.

The important points are, it seems to me: (1) That the injunction procedure of the Taft-Hartley Act is not a safeguard in a real emergency but only a means—and, incidentally, a very poor means—of establishing a temporary cooling-off period; (2) that the citizens of the United States are entitled to know that a real safeguard has been provided that will be ready whenever the national health and safety are really imperiled by industrial strife; (3) that instead of arguing about the emergency powers of the President and of the Congress, respectively, the Congress ought to provide a statutory framework within which the President can take emergency action to temporarily safeguard our health and safety; and (4) the final disposition of the controversy, if the parties finally failed to agree, should be left to the specific action of Congress in the particular case.

WILLIAM H. DAVIS.

NEW YORK, *February 8, 1949.*

An Instance of International Cooperation

EXTENSION OF REMARKS
OF
HON. HARRY P. CAIN
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. CAIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which recently appeared in the Seattle Times which ably describes an outstanding instance of international cooperation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Seattle Times of Sunday, January 16, 1949]

NATIONS PULL TOGETHER SO EVERYBODY'S HAPPY

The recent conference here of fishermen and fishing-vessel owners with the International Fisheries Commission provided new reminder of one of the world's outstanding instances of international cooperation. Representing the United States and the Dominion of Canada, the Commission's purpose is to conserve halibut resources of Canadian and American waters of the North Pacific Ocean.

For years, the Commission has administered these halibut fisheries on a scientific basis, through mutual agreements between the two countries, so that the fishing industry might prosper and make a nutritious seafood available for public consumption, without depleting the halibut run of this ocean area. It is safe to say that no cooperative effort between two nations has been more productive of good will or more successful in fulfilling its purpose.

The Commission's work has also been a striking instance of cooperation within an industry. All the elements of the fishing fleet of this State, British Columbia, and Alaska have participated in the program, to their mutual advantage. The results have been outstanding. A fishery resource that once was threatened with extinction has been restored and preserved for the utilization of generations to come. The waters of the North Pacific Ocean now produce three-fourths of the world's entire supply of halibut

Seattle can take much pride in the fact that two Seattle men have been foremost in furthering this movement. Miller Freeman, Seattle publisher, was one of its first supporters, and an early chairman of the Commission. His work has been carried on by Edward W. Allen, Seattle attorney, also a former Commission chairman. This community, as well as the fishing industry, owes these two leading spirits and their associates in the Commission's activities a great debt of appreciation.

Trial and Sentence of Josef Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Monday, February 14, 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorials from several Boston newspapers regarding the persecution of Cardinal Mindszenty.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Boston Post]

BOSTON EDITORIAL COMMENT ON PRIMATE'S TRIAL

THREE BRAVE MEN

The anger that burns in the free world today against the petty hoodlums of an archgangster, who, in their People's Court, have maltreated a Christian prelate whose "offense" was that he troubled the consciences of his persecutors, must touch off the watchfires of freedom.

If the whole free world fails to heed the warning and is not aroused to the true nature of the dark design threatening the comity of good men, then there is no hope.

Cardinal Spellman sounded the warning in his sermon last Sunday. The evil that the Communists in Hungary have trumped up against Cardinal Mindszenty is not contained in the broken vessel that is Hungary. It spills over into the free world, staining the hearts and aspirations of men of all races and creeds. It is not only the Catholic faith that is menaced. It is religion that is under attack—all religion assailed by the robots of the godless.

It is difficult to find it in one's heart today to pray for the enlightenment of the perverted minds and wills of those who have condemned Cardinal Mindszenty to life imprisonment on a trumped-up charge. Yet Cardinal Mindszenty would have it that way. And Lutheran Bishop Lajos Ordass, imprisoned by the Communist regime in Budapest, would have it that way. So, too, would Archbishop Stepinac of Yugoslavia, whose arrest and imprisonment set the pattern for these travesties of justice.

Longfellow, the gentle poet of a happier day, wrote a phrase to fit the deed and the hour: "Whom the gods would destroy they first make mad."

This madness is the calculated warping of the minds of men. It is designed to take from mankind the universal solace in their hour of need—their religion, their faith, their hope, and their consolation, which would compel them to rely only upon the witless despair of the here-and-now, a despair capable of such an abomination as that which seeks to humble and destroy the prelate of a great church.

In our season of woe we of the free world can find consolation that such mighty warriors for faith as Mindszenty, Ordass, and Stepinac have gone before us to show the way and demonstrate the courage of the most precious convictions.

[From the Boston Traveler]

CARDINAL MINDSZENTY

Of course Cardinal Mindszenty is guilty of the one thing that really matters to the brutalitarian government of Red Hungary. He is guilty of a gallant stand for human freedom, a noble stand for religious freedom, an unfaltering stand for justice, decency, and human mercy in human relations. Of course he is guilty, this spokesman for an overwhelmingly Catholic people where the Reds are in the saddle only because Russia keeps them there. He would be unworthy of his exalted trust if he were not guilty.

Physically he is a broken man. The Reds know that and they know any eyewitness from the world of freedom would report the fact. That is why the members of the American and British legations were denied admission to the trial. It would not do to have such witnesses of a bowed figure, tortured by incessant grilling, tortured by days of sleeplessness, very probably tortured by drug injections that numb the mind and paralyze the will. In matters such as this, secrecy is the tribute that falsehood pays to truth.

The bigwig of the Hungarian press calls together the foreign correspondents. "You should make it clear that he is actually very weak and pitiful. You should try to make plain that he is not a hero of freedom," are his instructions.

Very weak, no doubt, weakened as he has been by physical and mental torture. Pitiful, no doubt, to those who can feel pity. But like Archbishop Stepinac in Tito's prison, he remains imperishably a hero of freedom. Cardinal Mindszenty is a great prince of the church. Those princes of the spirit that follow the Master who was very weak and pitiful upon the cross have often paid this awful price. Cardinal Mindszenty is of their immortal company.

[From the Boston Globe]

THE TRAGEDY AT BUDAPEST

That behind the iron curtain there should rise a swelling chorus of voices defending the trial of Cardinal Mindszenty is good evidence that the Hungarian Government knows its conduct of this case was not what a court trial should be. True justice needs no defense, it speaks for itself. No observer will doubt that the cardinal was tried, not upon the charges enumerated in the indictment, but rather for the qualities of leadership that had raised him to eminence in his church, for the gift of good counsel that had won him the respect of his people, and for the staunchness of heart that had forbidden him to betray his flock.

Of all the bewildering and confusing reports that came out of the courtroom in Budapest during these few days, none has been more curious than the language of the indictment itself and its use of a word officially translated as "continually." The cardinal was accused of a continually committed crime of trying to overthrow the government, of a continually committed crime of treason. But is not continually what we would call constancy? And is not constancy—constancy to ideals and principles which we hold dear, which the Hungarian Government fears—the real crime for which Cardinal Mindszenty now must pay the penalty?

[From the Boston Herald]

HUNGARIAN SAVAGERY

The treason trial of Joseph Cardinal Mindszenty has turned out to be even more criminal a farce than was at first expected. Not only has the Hungarian primate been tried on obviously trumped-up charges, but he was also compelled to testify against himself. For no reasonable person can suppose that the cardinal's confessions were bona fide even though they were uttered by his own lips.

The manner in which the venerable cardinal has been induced to acknowledge crimes of which he could not have been guilty is not known. There have been reports of physical torture, of hypnotic drugs, and of combined physical and mental constraints. But the method is not important. The deed itself is an outrage against human decency.

The cardinal's integrity is still intact. He cannot be held accountable for his acts or statements under these circumstances. But every Christian and, indeed, every person who values his dignity as a man, has been done an irreparable injury by the cardinal's persecutors. We have all been shamed through the Communists' acts.

The Herald has expressed the belief in previous editorials that the treason trial would eventually backfire and that any temporary political gains resulting from it would be more than offset by the new hatreds and distrust it caused. We hope that quite specific retribution will fall on the perpetrators of the recent abuses against the Cardinal's person.

The twisting and misdirection of a prisoner's mind is at least as vicious a crime against humanity as any for which Nazi and Japanese have been hanged since the end of the war.

[From the Boston Daily Record]

SENATORIAL DUTY

Joseph Cardinal Mindszenty, the Roman Catholic prince-primate of Hungary, may take his place this month among the martyrs.

This is the month of the prelate's "trial" on Communist charges of treason, espionage, and black-marketing transactions.

These are not accusations that could be regarded seriously, even by Communists.

They are so alien to the cardinal's consecrated calling, and to his known character as a moralist and humanitarian, as to be utterly preposterous.

And the motive for them needs hardly to be stated.

They are a part of the Communist war on religion—a war that is being waged with savage severity against Catholics because their church, under the inspired leadership of Pope Pius XII, has been the most effective opponent of world communism and the diabolical evils of Marxian atheism and economic enslavement.

Cardinal Mindszenty has not suffered persecution alone.

In his own country—where 60 percent of the people are Catholics—more than 600 priests and "religious" have been imprisoned.

Catholic schools have been forcibly secularized.

Church properties have been confiscated.

In Yugoslavia, the eminent Archbishop Stepinac lies immured in a Communist prison.

Hundreds of Franciscans and other members of holy orders have been slaughtered, jailed, or driven into exile.

In Poland and neighboring Catholic nations, similar outrages have been perpetrated behind the iron curtain.

Nor is it only Roman Catholics who have endured these immolations.

Months ago, Bishop Ordass, the Lutheran primate of Hungary, and a group of lesser Lutheran dignitaries were arrested.

In Rumania, all Protestants sects have been put under restraints amounting to proscription.

And on behalf of Hungarian Jews have come pathetic protests that their people are listed by the Communists as "class enemies"—protests sponsored by Dr. Bela Fabian, former member of the Hungarian Parliament and of the board of the Jewish community in Budapest, and by Dr. Bela Varga, canon of the Roman Catholic Church, former president of the Hungarian National Assembly and president of the National Hungarian Committee in Exile.

The arrest of Cardinal Mindszenty, under circumstances as brutal as these, evoked horror and indignation.

Mr. Robert Lovett, the American Under Secretary of State, denounced the charges against the primate as patently false and his imprisonment, with 13 alleged accomplices, as a sickening sham.

Representations have been made to Hungary by the Governments of Aire, Belgium, Australia, and Canada.

At a recent meeting of the British Labor Party, Mr. Herbert S. Morrison, the lord president of the British Council, spoke in terms of abhorrence.

"The arrest," he said, "during the Christmas holiday of all times, of Mindszenty, prince primate of the Catholic Church in Hungary, has shocked the whole free world. * * *

"It is further inescapable evidence that the Communists do not intend to rest until they have liquidated every vestige of freedom in the countries under their control."

What the British Labor Party leader said is incontestably true.

It expresses an issue which our Government, as the patron of non-Communist peoples, cannot ignore. The White House and the State Department may be deficient in courage or enterprise.

But they are not the whole Government.

On January 10, in a statement published in the CONGRESSIONAL RECORD, Senator HERBERT R. O'CONOR, of Maryland, suggested an appropriate course.

Referring to the arrest of Cardinal Mindszenty, and presenting other particulars of the Communist persecution of religion, he said:

"I respectfully suggest that the Senate Foreign Relations Committee investigate this serious situation and report upon its find-

ings for the information of the United States Senate and of the entire Nation."

Obviously, the Senate should—without hesitation and without delay—proceed according to Senator O'CONOR's appeal.

By no choice of our own, we are inextricably engaged in a global and costly struggle with communism.

The struggle involves our own survival as a free people.

In so desperate a contest it well behooves us, in the manner of our devout forefathers, to seek the help of God.

And, by our own actions, to deserve it.

[From the Christian Science Monitor]

ANOTHER RED "TRIAL"

The court proceedings in Budapest against Cardinal Mindszenty and six codefendants have followed the familiar pattern of the tragic farces the Communists call "trials." These affairs are not to determine the guilt or innocence of the accused. They are designed rather to dramatize "confessions" and persuade the public. As usual, they fail to persuade many people outside the "iron curtain's" smothering grasp.

Indeed, al' such caricatures of justice are bound to arouse free men anew. One joins in protest against them without necessarily assuming the innocence of the accused. For such methods so muddy the waters that the truth is almost impossible to come by. In the present case, as usual, confessions which could have been obtained under torture or drugging have little meaning except where they fit with known facts * * *

Cardinal Mindszenty, either because he was acting as agent of the Vatican or because of his personal feeling, has been unbending. Some Hungarian Roman Catholics have even charged him with making political blunders. The issue which apparently precipitated his arrest was his insistence that the state revoke its law secularizing the church schools. Whether he went beyond the legitimate defense of religion and engaged in political activities that could be called treasonable this Communist "trial" does not prove.

The chief judge, in sentencing the cardinal to life imprisonment, declared: "We have seen here a trial of an organization against the Republic, carrying on royalist activities and black marketing foreign currency, which had nothing to do with religion. But when the judges themselves take the attitude of prosecutors, when totalitarianism is unable to tolerate any opposition, and when court proceedings are surrounded with an atmosphere of terrorism, the non-Communist world will have to draw its own conclusions as to where political activity ends and religion begins. And surely it will say, "We have seen here no trial but a travesty on justice."

ANTI-DEFAMATION STATEMENT

On behalf of the Anti-Defamation League of B'nai B'rith and in my own behalf I express to you our firm support of the American principles you so eloquently enunciated in your sermon on Sunday, called forth by the trial of Cardinal Mindszenty. As Jews we know only too well the ravages which come from violations of basic dignity and freedom. Our sympathy goes out to Cardinal Mindszenty in his suffering and we join with you in prayers for him.

MEIER STEINBRINK,
National chairman of Anti-Defamation League.

(The above was addressed to Francis Cardinal Spellman of New York expressing the sentiments of the league on the case of Cardinal Mindszenty.)

Condon's "Trial by Newspaper" Condemned by Scientific Analysis

---

REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. HOLIFIELD. Mr. Speaker, I wish to call to the attention of the Members of the House the scientific study which appears in the current issue of the Scientific American magazine. The study is a scientific analysis of the treatment of the famous Dr. Condon case by nine newspapers of New York City. It is especially valuable because of its impartiality and its objectivity. It proves beyond a shadow of a doubt that public opinion can be influenced by biased reporting.

Critical students of propaganda have realized this fact for a long time. However the average newspaper reader does not stop to analyze the average newspaper story for bias. Unless proper weight is given to pro-and-con treatment of public events or public controversies in the press, the reader can be deceived with or without specific intention on the part of an editor or a newspaper reporter.

This is forcibly demonstrated in this analysis which shows that the reviving or repetition of, for instance, a "pro" treatment, can overly influence the reader unless it is balanced by a similarly emphasized "con" treatment of the same subject.

In the case analyzed, which concerns the vicious campaign to assassinate the character of Dr. Edward U. Condon, head of the Bureau of Standards, it is interesting to note that the reporting of this incident was weighted overwhelmingly against Dr. Condon. It is also interesting to note that the most objective treatment of the Condon case was given by the nonsensational type of newspapers, such as the New York Times, the Herald Tribune, the New York Post, and New York Star.

The sensational headline type of newspapers are revealed to be guilty of having treated the Condon case in such a manner as to emphasize the news stories which were critical of Dr. Condon. This was accomplished by reviving and repeating adverse stories disproportionately. Another important factor in this prejudiced treatment was the omission of news items which were favorable to Dr. Condon, or by printing such stories only once and by obscure placement, in the biased papers.

This analytical article unfortunately will not receive wide coverage because of its scientific nature, and possibly because many newspapers would not be enthusiastic in publicizing their biased and prejudiced manner of treating the news.

This article graphically portrays the danger of "trial by newspaper" to the thoughtful person, and sounds a note of warning to people who are objective in their thinking, and who fear the power of propaganda in a highly literate society. It emphasizes again the danger which is inherent in great newspaper and radio chains, where identical treatment of public issues is ground out in assembly line fashion, to millions of readers and hearers.

In recommending to the Members of Congress a careful study of this analysis, I wish to point out that the merits or demerits of the Dr. Condon case are not considered by the six scientific analysts who made this study. This group of scientists were Nobel prize winner Harold C. Urey of Chicago University's Institute of Nuclear Research, Brown of Chicago University, Lauritsen of Cal Tech, Morse of M. I. T., Pegram of Columbia, and Warner of Carnegie Tech.

The study made by these highly respected scientists is completely objective and analytical, and I recommend it to the members of this body as a valuable example of propaganda analysis.

Mr. Speaker, under unanimous consent to extend my remarks in the RECORD I include at this point an article from this morning's Washington Post, which deals with this subject in a fair and impartial manner:

ASK SAFEGUARDS FOR WITNESSES—SCIENTISTS SAY HOUSE PROBERS TRIED CONDON BY NEWSPAPER

Six leading scientists said yesterday that House Un-American Activities Committee charges against the atomic scientist, Dr. Edward U. Condon, resulted in a trial by newspaper which must not be repeated.

In a public statement addressed through Scientific American magazine, to Vice President Barkley and House Speaker RAYBURN, they urged Congress to set up a minimum charter of rights to protect persons under congressional investigation.

The scientists based their conclusions on a study of the way in which the Condon episode was handled by nine New York City newspapers from March 1 to October 31, 1948. They said the papers "constitute the principal source of news for nearly one-tenth of the United States population."

They decided to undertake the survey, they said, "in view of the peril of our civil liberties represented in this extra-legal institution of trial by newspapers."

The scientists were the Nobel prize winner Harold C. Urey of Chicago University's Institute of Nuclear Research, Harrison Brown of Chicago University, Charles Lauritsen of California Institute of Technology, Phillip M. Morse of Massachusetts Institute of Technology, George B. Pegram of Columbia University, and John C. Warner of the Carnegie Institute of Technology.

"The findings provide a plain measure of the hazard to which a citizen's good name may be exposed through the medium of the press when a committee of Congress fails to observe the elementary rules of fair play which protect his rights in all other procedures under our common law system of justice," they said.

Condon, Chief of the Commerce Department's Bureau of Standards, was accused by an Un-American Activities Subcommittee of being "one of the weakest links" in the Nation's chain of atomic security.

He flatly denied the charge and repeatedly demanded, but never was given an opportunity to answer in person. Condon later was approved by the Atomic Energy Commission for access to top-secret information.

The Democrats recently reorganized the House committee after political control of Congress changed hands. Chairman JOHN S. WOODS (Democrat, Georgia), has pledged that all persons haled before the committee will get a fair hearing. He has indicated Condon will get that privilege.

The scientists said the results showed the committee's reckless, vague, and unsupported charges got far more space than statements in Condon's defense by his colleagues and distinguished and responsible individuals.

"Dr Condon has never been permitted by the committee to testify in his own defense," they said. "Thus the committee brought and prosecuted its charges against Dr. Condon exclusively through the medium of the press."

They said the committee's charges were almost the only basis for 90 percent of the stories damaging to Condon.

"These reckless assertions, carrying the weight of congressional authority, received not only wide but repeated publications; no less than 57 percent of the derogatory materials appearing in the news columns consisted in mere repetition of the committee's baseless charges."

DAMAGING STORIES STRESSED

They said that five of nine New York papers gave damaging stories about Condon far more emphasis than stories in his defense.

"Significantly, these five newspapers outweigh the other four in circulation by nearly three to one," they commented. "That the smear stuck is indicated by the continued high ratio of derogatory statements which attaches to Dr. Condon's name in the latter part of the period studied, long after his official clearance by the Atomic Energy Commission. * * *"

They pointed out that, as a result of the old committee's activities, Congress has before it legislation which would establish rules covering the procedures of investigating committees without limiting their authority.

The legislation would give an accused person a chance to present his side of the case, to call his own witnesses, and to cross-examine witnesses testifying against him. Witnesses also would be entitled to legal counsel.

It also would bar news photographers, newsreel and television cameras, and wire recorders while witnesses were testifying.

"These principles," the scientists said, "would seem to constitute a minimum charter of rights for the protection of persons whose reputations would otherwise be seriously damaged by the publicity which attends a congressional investigation.

"We strongly urge that these proceedings be adopted by Congress in the present session to guide the future conduct of investigations by the committees of the House and Senate."

NEW YORK PAPERS GAVE PREPONDERANCE OF SPACE TO STATEMENTS PRESENTING PHYSICIST IN FAVORABLE LIGHT, SURVEY DISCLOSES

New York newspaper statements were preponderantly favorable to Dr. Edward U. Condon in spite of a barrage of derogatory material issuing from the House Committee on Un-American Activities, 90 percent of which consisted of vague and unsupported charges.

These are among the findings of a content analysis study of the New York City press by Columbia University Bureau of Applied Social Research published in the current issue of Scientific American.

The bureau studied press reports on the case for and against the Bureau of Standards scientist published from March 1 to October 31, 1948. It covered a period commencing with the first charges of the committee to three months after the Atomic Energy Commission had cleared Dr. Condon.

Taking the New York press as a whole statements favorable to the accused scientist were most numerous. Of 3,909 statements analyzed, 745 or 19 percent were unsympathetic to Condon and 971 or 25 percent were sympathetic. Notable was the wide range of difference from newspaper to newspaper. This is shown on the table published by Scientific American.

	Pro	Con
Times	65	35
Herald Tribune	64	36
Star	63	37
Post	57	43
World-Telegram	50	50
News	49	51
Mirror	47	53
Sun	43	57
Journal American	18	82

The space analysis made no attempt to ascertain what proportion of pro and con statements would have adequately reflected the news about Condon originating in all sources during the period. It was expressly stated that "the fact that a paper may have reported more unfavorable than favorable events is not in itself necessarily a sign of bias."

Newspaper methods of reprinting initial charges in such cases worked against Dr. Condon, the bureau found. If statements on Condon had been limited to new material (without any background reviving initial charges) the pro and con score would have been 416 to 301 instead of the actual score of 695 to 631 in the nine papers.

CALCULATED ON IBM CARDS

The sumary of the study emphasized (1) variation in proportion of pro and con statements from one to another paper; (2) Condon support was most adequately reported in Times, Tribune, Star, and Post and given little attention in the other papers; (3) reviving background material had the effect of building up the case against Dr. Condon but did not build up defense; (4) papers reported the committee's promise to give Condon a fair hearing more frequently than they reported failure to do so.

The study was made by taking all press stories in the nine New York newspapers. They were then broken down into independent statements about the case. Then the strictly neutral statements were eliminated from analysis. The rest were put into various pro and con categories. This permitted the number of statements to be calculated rapidly on IBM cards.

The study was limited to news content and confined to text statements alone. There was no appraisal of the effect of headlines or position. The bureau did not undertake to ascertain the effect of morning or afternoon publication which might have influenced the recency of the studied statement.

Building-Code Revisions

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, February 14, 1949

Mr. WILEY. Mr. President, there are few more important problems today in the Nation than that of straightening out the housing mess in which we find ourselves. A key element in our effort must be the revision of the obsolete building codes which plague us throughout the Nation and which prevent use of new materials, new methods, in order to cut costs and do the job.

I have spoken, Mr. President, on the floor of the Senate previously on many occasions on this same theme. Revision of building codes is still indispensable if we are to meet the problems of the overwhelming mass of our people who cannot afford custom-built housing, but who can use mass-built homes.

Recently there appeared in the able newspaper, the Commonwealth Reporter of Fond du Lac in my State, an editorial describing grass-roots action in Fond du Lac for a revision of the building code there. I ask unanimous consent that the text of this forthright editorial be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUILDING CODE REVISIONS

Recently members of the Fond du Lac Associated Builders sent a letter to the city council asking for a general revision in the municipality's building code. The association, made up of contractors, in its letter to the city officials, said:

"Our organization is of the opinion that since the present codes were adopted many years ago there are many revisions that should be made in order to bring them up to date. We stand in readiness to assist the council in any way we can to revise the present codes."

Weeks ago the Fond du Lac mayor took a leading part in a meeting of chief executives of municipalities in the Fox River Valley section of Wisconsin and urged that demands be pressed for revisions of building codes in all communities. We presume at that meeting there was talk about so-called model codes which could be applied to all communities of comparable size.

Nationally there is a campaign to provide model building codes and several of them have been prepared for cities in various population classifications. Little has been done actually to write them into the ordinance books of the hundreds of American communities which are sadly in need of revised building codes.

Fond du Lac's building code is pretty close to a quarter of a century old. It is true there have been some changes and amendments, but these have not kept pace with the improvements and advances made in the construction industry.

Building codes are about as inconsistent as any of the laws on municipal ordinance books. One type of construction is legal in Fond du Lac and illegal in Sheboygan. Hundreds of such inconsistencies can be discovered if one cares to compare all of the building codes in existence in Wisconsin cities.

Chicago, which of course cannot be compared to Fond du Lac or any other Wisconsin community, is making a serious effort to rewrite its building code. There is strong opposition and little chance for success in view of the power exercised by big city politics.

The trouble with building codes is that we are trying to build modern homes and other structures by following horse and buggy day methods. The reason can be traced. Workers are reluctant to permit the introduction of new methods because they fear it will result in a loss of work.

But who pays for new buildings? Isn't it the man who pays the bill? Why should he be forced to subsidize certain groups for types

of labor and material which were obsolete a quarter of a century ago?

The failure of public officials to keep building codes up to date is one of the reasons contributing to the high cost of construction. It is one of the reasons for the housing shortage.

The Fond du Lac building code should be revised; in fact, the building code in every community in Wisconsin probably should be revised. When that revision is made the recommendations should be presented by a committee which includes representatives of the contractors' association, the building trades union, and, more important than anything else, by representatives of the public which foots the bill.

GOP Liberals in the Senate

EXTENSION OF REMARKS
OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, February 14, 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article written by the Senator from Oregon [Mr. MORSE], which appeared yesterday in Parade magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GOP LIBERALS—IN THE SENATE THEY HAVE A PROGRAM FOR ACTION

(By WAYNE L. MORSE, United States Senator from Oregon)

The great American classic—the quadrennial race for the Presidency—has been concluded. President Truman, fighting against odds that all but he and a few others considered hopeless, won a victory last November which restored the Democratic Party to the complete control of the Government. But now that the race has been run and the victory gained, the President and his party have the job of delivering on their platform promises and campaign pledges.

What role should liberal Republicans—and there are many of them—play in the Congress now settling down to the serious business of considering vital legislation on domestic and international affairs?

Some of the advice coming to me through the mail suggests that we join the Democrats because on some basic issues we have no significant differences with the Truman administration. Others blame us for losing the election because of this so-called "me too" attitude, and urge us to fall in line with the ultra-conservative elements in the Republican Party.

Either course would spell ruin to the two-party system as we know it today, and would certainly relegate the Republican Party—whose first great standard-bearer was Abraham Lincoln—to oblivion.

The task of modern, liberal Republicans in the present Congress is two-fold: to revitalize the party and to mobilize its forces behind a forward-looking program; secondly, to guard against unsound legislative proposals of existing devices endangering the rights of free Americans and our free enterprise system. Let me explain why I feel that this is so.

Republicans need to remember that competition is the dynamic force of a free-enterprise system. Dynamic competitive principles must also be applied by the two major political parties in the contest for votes. The criticism directed at those of us who are fighting for a more modern, forward-looking Republican Party, to the effect that we are proposing a "me too" political course of action, overlooks some basic principles of competition.

In the economic life of our free-enterprise system, a successful businessman is always alert to the public's interest in and approval of the merchandise of his competitor. He does not refuse to stock more up-to-date goods when he discovers such goods are filling his competitor's store with purchasers. Rather, he tries to secure better quality goods that will fill more economically the needs of the buying public.

The analogy has its limitations, but does help to focus attention on the fact that the supporters of reaction in the Republican Party need to learn much from business if they hope to satisfy the voters' wants. Their "me too" charge against liberal Republicans is but an alibi for their own lack of appreciation of the needs of our people.

Significant steps have already been taken by a group of forward-looking Republicans in the Senate to modernize the party.

One of their first moves was the attempt to revamp the party leadership in the Senate so that it would no longer stand as a symbol of reaction and defeatism. In that fight I was happy to join with Senators AIKEN, TOBEY, IVES, LODGE, SALTONSTALL, KNOWLAND, FLANDERS, SMITH of New Jersey, BALDWIN, YOUNG, GURNEY, and THYE in the effort to inject new blood into the party organization.

CANDIDATE LOSES, BUT LIBERALS GAIN

While Senator LODGE, our candidate for the position of chairman of the Republican policy committee in the Senate, was beaten 2 to 1, two encouraging facts should be noted: the composition of the policy committee was revised to give representation to the more modern point of view, and clear notice was served that the liberals would stand united as a general policy in the effort to shake off the cloak of reaction in which the Old Guard would garb the Republican Party.

We gained our point that contests for party office in the Senate should be decided by secret written ballot. We agreed that for the next 2 years the Republicans in the Senate should devote their major effort to making a record which will permit them to go to the people in 1950 without apology.

We recognize that the greatest organizational need of the party is to change the trend of registration among young people from the Democratic to the Republican Party. This means that the liberal forces shall insist that the national and State party organizations alike give increased opportunities for party positions and public office to young Republicans.

LIBERAL WING UPHOLDS BASIC FREEDOMS

On the broader front, the role of the Republican liberals is also beginning to take definite shape. Let us list some of the measures already dropped into the legislative hopper by Senate members of this group, bearing in mind that the following catalog is made well in advance of its publication.

A glance at the CONGRESSIONAL RECORD for the first few days of the present session of Congress makes it clear that the liberal wing of the Republican Party is actively sponsoring bills which make more secure the basic rights and freedoms of the American people.

Four members of this group joined with other Senators in proposing that the Congress prohibit discrimination because of race, color, faith, national origin, or ancestry—a measure that has had the overwhelming approval of Members of Congress but has failed of passage because of a Democratic minority.

Three of them sponsored a bill to raise the minimum wage to 75 cents an hour. Others again introduced the Federal Aid to Education Bill. No less than four of them are active in backing the bipartisan effort to amend the Constitution so that the voters of this country may have a more direct voice in the election of President and Vice President.

Several of us, in keeping with our pledge to reform the rules of the Senate so that majority rule may prevail, introduced resolutions calling for amendments which would eliminate the filibuster; and we have continued to press for the earliest possible consideration of these proposals.

Among other measures that might be mentioned as part of the liberal program are bills to expand the coverage and benefits of the Social Security Act, to liberalize the admission of displaced persons, and to provide facilities for a labor extension service.

Labor legislation that is fair to both employers and unions, and in the public interest, will be supported by the liberal Republicans. As this is written, it is encouraging to read that the administration appears to agree with those of us who urged the repeal of the Taft-Hartley Act and the simultaneous enactment of a revised Wagner Act.

In these early days of the Eighty-first Congress it is no visionary prediction to assert that Republican liberals will be found initiating and supporting additional legislation that will, in the best Lincoln tradition, place human rights above property rights. As constitutional liberals, they will fight against reactionaries on the one hand and leftists on the other.

They will support Government aid for improved health facilities and medical services, without adopting the socialistic principle of making the doctors employees of the state. Better housing legislation will be high on their list. Aid to scientific research is another objective liberal Republicans will sponsor.

Inflation controls, a tightening of the laws regulating monopolies, a more equitable Federal tax policy, a far-sighted program of development and conservation of our natural resources, a long-range program of farm-price supports which will remove the causes of consumer criticism but at the same time protect farmers from violent price fluctuations—all are matters which Republican liberals will work for.

Many Republicans—but not enough to outvote the reactionaries in their own and the Democratic Party—have sponsored these reforms in the past. More of them will be found on the liberal, the human, side of these issues in the days ahead.

In the field of international relations every effort will be made to maintain a strong bipartisan foreign policy, so ably fostered by Senator VANDENBERG, for the past 2 years the Republican chairman of the Senate Foreign Relations Committee. The United Nations must be strengthened, for without a strong world organization the armament race will mushroom to such proportions that essential domestic legislation will have little chance of being realized.

The Senate Republican liberals are receiving increasing support. More and more registered Republicans and independent voters are appreciating that the way to make progress on domestic issues and on the international front is to make our capitalist economy and political democracy work through the safeguards of our constitutional form of government.

Business Leaders of the South

EXTENSION OF REMARKS
OF

HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. DAVIS of Georgia. Mr. Speaker, under leave previously granted, I insert an article from the winter issue of the Dixie Business, entitled "South's 50 Foremost Business Leaders To Be Selected," written by Col. Hubert F. Lee, of Covington Road, Stone Mountain, Ga., who is editor of Dixie Business:

SOUTH'S 50 FOREMOST BUSINESS LEADERS TO BE SELECTED

(By Col. Hubert F. Lee, editor of Dixie Business)

There have been many distinguished leaders over the South nominated for our annual selection of the South's man of the year.

We have read in letters so many glowing tributes paid to their leadership, their business abilities, their fine characters, their untold achievements and contributions to the development and building of the South, that we have felt keen personal disappointment that only one could be selected.

The letters have come from leaders in the South, from southerners on leave in other parts of the country, from college presidents, heads of giant and small concerns, from employees, from church leaders, from old school business friends and—yes, from some of their competitors.

As we started Dixie Business in 1929, our twentieth anniversary in 1949 gives us an opportunity to honor a greater number of men who have done so much for the South.

The editors of Dixie Business will next year select the South's 50 foremost business leaders. And among them will be the 1949 South's man of the year.

Readers of Dixie Business particularly are invited to send in nominations. Editors, publishers, business and industrial leaders, also are invited to enter nominations.

The list of nominees will be printed in Dixie Business and our readers will be privileged to vote for 47 of the nominees. The remaining three will be the notable men who have been selected as South's man of the year—Thomas W. Martin in 1946; Donald Comer in 1947; and C. Hamilton Moses in 1948.

Those who receive a ballot may also vote for 47 on the list.

Those who are unable to get ballots may write letters on behalf of any of the nominees and the letters will count the same as ballots. This will give the entire South an opportunity to have a voice in the selections.

Already a number of able leaders over the South, from Texas eastward, have been nominated. As nominees will run the gantlet of a mail election it will be a waste of time to nominate anyone not among the South's top-drawer notables. The men who are selected will have achieved so much that there will be no question as to their right to the honors.

We have asked counsel of some of America's notable leaders who are friends of the South, have had a part in the South's development or who, by their own achievements, have added to the South's fame.

It is well that we have the privilege of looking at the South through so many eyes over the Nation. Their views and advice—plus the years since 1921 when we edited the general trade section of the Atlanta Constitution, worked on many newspapers from Virginia to Florida, night-managed the United Press in 1924–25, founded Dixie Business in 1929—will serve to assure what we do in 1949 will be something the South and the Nation can be proud of.

The Honorable Bernard M. Baruch, who was made an honorary member of the United Daughters of the Confederacy and who is an honorary member of the Chamber of Commerce of the South, was consulted and invited to enter a nomination. Mr. Baruch replied:

"Unfortunately I really do not know enough about the young men of the South, but I certainly feel that it is a good idea to build up the country's knowledge of them who are certainly as fine as you can find in any part of the country."

The great publisher, B. C. Forbes, whose Forbes Magazine in 1947 included Thomas W. Martin, our 1946 South's man of the year, among America's 50 foremost business leaders selected through a poll, was asked for advice and if he would object to our doing in the South what he did for America's top leaders. Mr. Forbes replied:

"Be assured that I have not the slightest objection to what you propose doing in the way of selecting the South's 50 foremost business leaders.

"I have felt deeply for at least a third of a century that our most outstanding meritorious, worthy business leaders, usually very large employers, are entitled to due commendation from the rest of us.

"I ardently hope your activity will be crowned with a bumper measure of success.

"My bestest."

E. K. Gaylord, president and general manager of the Daily Oklahoman and Oklahoma City Times, who was nominated for the 1948 South's Man of the Year, wrote:

"* * * You ask for suggestions as to names of 50 outstanding leaders of the South and immediately there came to my mind the name of E. L. Kurth, president of the Southland Paper Mills, Inc., Lufkin, Tex. I think he surely should be among any list of 50 southern leaders. * * *"

John D. Ewing, editor and publisher of the Shreveport Times, nominated Mr. Kurth for 1948 South's Man of the Year but the nomination came after most of the ballots had gone out. Mr. Ewing wrote in part: "Mr. Kurth has been the guiding spirit of this all-important first mill manufacturing newsprint in the South. * * * His strong leadership at the mill has continued through the years. * * * I truly believe that the Lufkin mill opened the way for a vast southland newsprint industry. * * *"

I quote these letters as Mr. Kurth will be among the South's 50 foremost business leaders—as will Reuben B. Robertson, president, Champion Paper & Fibre Co., Canton, N. C. The editor of Dixie Business in 1923 tried to promote a newsprint mill to use southern pine. Both belong in any selection of the South's 50 foremost business leaders. Our own knowledge of them, plus the letters that have already come in urging their selection, makes it a foregone conclusion these two—as well as others already nominated—will be selected. Selection of Mr. Robertson will be made not only for his years of leadership but will be in tribute, too, to A. D. Wood, who on September 15, 1923, wrote this editor: "* * * It seems to me that, from a scientific standpoint, it is entirely feasible to make pulp from the pine wood to which you refer, and make from this pulp almost any grade of paper desired. The big problem, in my opinion, would be the commercial one, of keeping manufacturing costs low enough to compete with other manufacturers of news and the cheaper grades of paper."

Mr. Wood in 1923 was sulfite superintendent of the Champion Fibre Co., now Champion Paper & Fibre Co., and Reuben B. Robertson was then vice president and general manager.

The editor of Dixie Business would like to nominate our good friend for many years, C. N. Martin, editor and publisher of the Atlanta's Suburban Reporter, and president of the Martin-Johnson Printing Co., East Point, Ga., where Dixie Business has been printed since 2 years after it was founded.

Had it not been for Mr. Martin's faith in Dixie Business, and his willingness to let us spend some of the money due him during the depression years, while he patiently waited, there might be no Dixie Business today to select the South's 50 foremost business leaders.

His community leadership is typical of the fine men who edit and publish weekly newspapers over the South and Nation and we nominate him in their name as well as in our own. These weekly newspaper publishers have done much to build up their towns and help attract new industries and make newcomers welcome.

EARLY NOMINEES

A number of leaders over the South have been nominated and many more will be during the coming months before the poll is conducted. The list so far follows:

Robert M. Hanes, president, Wachovia Bank & Trust Co., Winston-Salem, N. C.

Frank H. Neely, chairman, Federal Reserve Bank of Atlanta and president of Rich's, Inc., Atlanta, Ga.

William L. Clayton, board chairman, Anderson, Clayton & Co., Houston, Tex.

Hal. S. Dumas, president, Southern Bell T. & T. Co., Atlanta, Ga.

I. B. Tigrett, president, Gulf, Mobile & Ohio Railroad Co., Jackson, Tenn., and Mobile, Ala.

Col. T. H. Barton, board chairman, Lion Oil Co., El Dorado, Ark.

Brownlee O. Currey, president, Equitable Securities Corp., Nashville, Tenn.

Caffey Robertson, cotton merchant, Memphis, Tenn.

Frank P. Samford, president, Liberty National Life Insurance Co., and president Alabama State Chamber of Commerce, director, Institute of Life Insurance, Birmingham, Ala.

James H. Allen, president, Florida Pulp & Paper Co. and Alabama Pulp & Paper Co., Pensacola, Fla.

William Murphey, board chairman, Citizens & Southern National Bank, Savannah, Ga.

Robert W. Groves, president, Strachan Shipping Co., Savannah, Ga.

E. L. Norton, president, Coosa River Newsprint Co., Birmingham, Ala.

Thomas M. Johnson, president, Johnson-Lane-Space & Co., Savannah, Ga.

Harry H. Straus, president, Ecusta Paper Corp., who created a new industry by making cigarette paper from flax straw, Pisgah Forest, N. C.

R. Kirby Longino, president, Longino & Collins, Inc., New Orleans, La.

Frank Gould, editor and publisher, the Manufacturers Record, Baltimore, Md.

John A. Sibley, board chairman, Trust Co. of Georgia, and vice chairman, board of trustees, Southern Research Institute, Atlanta, Ga.

Robert W. Woodruff, chairman, the Coca-Cola Co., Atlanta, Ga.

A. L. M. Wiggins, board chairman, Atlantic Coast Line Railway, and president, Bank of Hartsville, Hartsville, S. C.

R. S. Reynolds, board chairman, Reynolds Metals Co., Richmond, Va.

Cason Callaway, founder, Georgia Better Farms, known as Callaway plan, former head of Callaway Mills Co., and now operator of giant farm at Hamilton, Ga., and director of United States Steel Corp.

C. E. Woolman, president, Delta Air Lines, Inc., Atlanta, Ga.

Gen. John C. Persons, president, the First National Bank of Birmingham, Birmingham, Ala.

Jesse H. Jones, publisher, the Houston Chronicle, and former Chairman, Reconstruction Finance Corporation, Houston, Tex.

E. L. Kurth, president, Southland Paper Mills, Inc. (South's first great newsprint mill), Lufkin, Tex. (See November 15, 1948, issue of the Gulf Coast Lumberman, Houston, Tex.)

C. N. Martin, editor and publisher, the Atlanta's Suburban Reporter, and president, Martin-Johnson Printing Co., East Point, Ga.

A letter from Francis G. Hickman, editor and publisher of the Cotton Trade Journal, Memphis, Tenn., with editorial from the December 17 issue of his world recognized publication, assures Will Clayton's selection as one of the South's 50 foremost business leaders by the editors of Dixie Business. Mr. Hickman, an honorary member of the Chamber of Commerce of the South, writes:

"You may recall that one of our suggestions for the South's man of the year for 1948 was Mr. William Clayton, although we strongly approve the selection of Mr. Moses.

"I take this opportunity to express my pleasure that Mr. Clayton is one of the outstanding nominees for one of the 50 foremost business leaders, as evidenced by the editorial enclosed.

"We compliment you on this enterprising endeavor of Dixie Business, and send best wishes for the holiday season."

The enclosed editorial follows:

"PROPOSING WILL CLAYTON

"Dixie Business each year conducts a poll to select the South's man of the year and to name the South's 50 foremost business leaders. High on the list of nominees for 1949 is the name of William L. Clayton. In our opinion Mr. Clayton stands head and shoulders above all other nominees in both categories.

"There are many reasons that could be given for our choice—but chief of them and embracing the significance of all other reasons is that Mr. Clayton's career is a splendid illustration of what the American way of life has to offer. And this is of paramount importance these days when our heritage of private enterprise is menaced by insidious propaganda for socialism.

"Mr. Clayton's career reads like the Horatio Alger books that used to captivate our imagination in our youth. Most people are familiar with his career as Under Secretary of State for Foreign Affairs and his later role as special adviser to the State Department in conferences leading to formulation of the International Trade Organization. All our readers are no doubt familiar with his success in private enterprise as chairman of the board of Anderson, Clayton & Co. But fewer are aware that this outstanding career was carved out by Mr. Clayton from absolute scratch.

"When he was 13 years old, Mr. Clayton's parents, Mississippi cotton planters, lost their savings in the depression of 1893, and young Will quit school and went to work to drive a laundry truck. At night he studied typing and shorthand, paid for with his own earnings, and at 15 he was so proficient he became a court reporter. A year later he went to New York as private secretary to a cotton merchant—and 30 years later he was head of Anderson, Clayton & Co.

"In 1940, Will Clayton was called to Washington by the President and entered Government service in the Office of the Coordinator of Inter-American Affairs. He then was named Deputy Federal Loan Administrator, Assistant Secretary of Commerce, Vice President and Trustee of the Export-Import Bank of Washington, Surplus War Property Administrator, Assistant Secretary of State, Under Secretary of State for Economic Affairs.

"There is the sparse outline of the career of William Lockhart Clayton, successful businessman, brilliant diplomat, a man whose life illustrates the truth of the equation that hard work plus intelligence plus service equals success.

"Will Clayton, in short, is an object lesson in Americanism. He is undoubtedly the South's man of the year for 1949 and heads the South's growing roster of business leaders."

As we plan it, the poll will be advisory. The selections will be made in the name of the editors of Dixie Business.

Should the readers of Dixie Business feel we should make the selections through appointing a committee rather than by the editors, we would appreciate their views.

The poll will have more to do with the ultimate selection of the 1949 South's man of the year than the 50 leaders selected. The 1949 South's man of the year will come from the 50 group. The final decision, as presently planned, will be that of the editor and founder of the magazine. If enough of our readers think this plan should be changed, we will listen open-mindedly.

New National Capital Proposal Arouses Unusual Interest—No Space Available in Washington Area for New Government Project

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. PATMAN. Mr. Speaker, a few days ago, the following news item appeared in the Washington Post:

HILL GETS REQUEST FOR $11,500,000 CENSUS BUILDING

Congress yesterday received a proposal for a new $11,500,000 Government building at Suitland, Md., in which to process the seventeenth decennial census being taken in 1950.

The proposal was submitted by Maj. Gen. Philip B. Fleming, Federal Works Administrator. He said the building would be needed for about 3½ years for the Census work starting June 1949. No space is now available in the Washington area for the project, he said.

It will be noticed that General Fleming says that no space is now available in the Washington area for the project.

The Federal Government is encountering more and more troublesome problems in the Nation's Capital all the time. It is possible that the time will come when it will be necessary in the public interest that the Congress seek another location for the National Capital rather than try to solve all of the problems that will arise by reason of the congested area, insecurity, and other factors. We may properly commence the study now.

The West will have a 14,000,000 population increase in the next quarter century, we are told. The following Associated Press article on this subject and the need for reclamation in the West is self-explanatory:

WASHINGTON.—The West, facing a 14,000,000 population increase in the next quarter century, must think of reclamation in terms of basin-wide development of huge multiple-purpose projects, Reclamation Commissioner Michael Straus said today.

He told the Senate Interior Affairs Committee in a prepared statement that this is essential "If the West is to be given full access to the potential benefits locked up in its limited water resources."

"And we know that the day is not far distant when it will require full access to those resources if its economy is to be kept thriving," he said.

Straus, one of the top Interior Department officials, called before the committee to explain their programs, said the 14,000,000 increase in population for the 17 Western States included in the reclamation program has been forecast by the Census Bureau.

"If all known land and water resources of these States could be developed by that time, it could not produce enough agricultural products to fully supply the needs of these new inhabitants," he stated.

As an indication of the trend in reclamation-thinking, Straus said it is expected legislation will be before Congress to permit the integration and operation of authorized or completed projects on the same river.

Since I inserted in the CONGRESSIONAL RECORD a few weeks ago a letter concerning a change of the Capital, I have received letters and telegrams from the Middle West, and especially Colorado, urging its consideration.

1950 CENSUS

The 1950 census will doubtless disclose that the center of population will be much farther west and southwest than indicated by the last census.

Big Steel Fights Little Industry in East Texas

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. PATMAN. Mr. Speaker, the building of a blast furnace in East Texas has had the roughest and rockiest road to travel of any proposal that I have ever known to be initiated by any group of public-spirited citizens. After years of effort, the Lone Star Steel Co. finally completed its blast furnace, which is now producing from 1,000 to 1,200 tons of the very best pig iron every day. This concern has enough iron ore within a radius of less than 10 miles of the plant to keep it in production for a hundred years at the present rate. Efforts are now being made to carry out the original plan of building a completely integrated steel industry. As Big Steel fought this effort all during the war, it continues to fight and oppose in every possible way the development of iron ores in East Texas by the use of steel-making facilities.

In the Steel magazine, January 24, 1949, the following editorial appeared:

PORK BARREL STEEL

In his state of the Union message on January 5, President Truman asked Congress "to authorize an immediate study of the adequacy of production facilities for materials in critically short supply, such as steel; and if found necessary, to authorize Government loans for the expansion of production facilities to relieve such shortages, and

to authorize the construction of such facilities directly if action by private industry fails to meet our needs."

This proposal startled the Nation because it went farther than any previous President had gone in openly advocating the entrance of the Government into the steel industry. However, persons familiar with the actual situation in steel supply and demand were not too much concerned because they were confident that an honest study would result in findings favorable to a continuation of steel expansion under private auspices. Also it was felt that Congress would be very cautious about committing the Nation to the nationalization of steel.

That such complacency may be unwise is indicated by current developments. Representative WRIGHT PATMAN, of Texas, has used the President's proposal as a basis for suggesting a full employment bill of 1950, which would provide for $15,000,000,000 to be lent by Reconstruction Finance Corporation to public or private agencies for industrial expansion. Almost simultaneously came an application from Lone Star Steel Co. for $65,000,000 from RFC to finance projected steel works and tubular goods mills at Lone Star, Tex. Representative PATMAN says the Lone Star project is only one of six needed in the Texas area.

Thus in two short weeks, and before any study has been made, President Truman's proposal has been expanded into a full-fledged campaign having sinister pork-barrel implications.

As long ago as last September, former President Hoover told the National Press Club that while "we have not socialized industry, we have come close to socializing savings into the Government." The savings of the people are drawn in increasing volume into the Federal Treasury through taxes. If this continues, he warned, "we will come to the point where the only source of capital will be the Government."

To make RFC money readily available for pork-barrel industrial expansion is tantamount to openly inviting the socialization of steel.

On the 31st of January, a week following, the same magazine carried an article by E. C. Kreutzberg about the Lone Star plant. It is as follows:

TEXAS WANTS PLANTS

However, this outlook may be considerably shortened as a result of the application of the Lone Star Steel Co. for a Government loan to finance construction of open-hearth furnaces and a pipe mill alongside its blast furnace at Lone Star, Tex. This application is backed up by the most effective influences imaginable—the Texas delegation in Congress and elsewhere in the Government. Representative PATMAN, who is 100 percent back of the project, told Steel that there is no doubt about the need for more tubular goods in Texas. As a matter of fact, Mr. PATMAN said, northeastern Texas needs the output of six, not one, new steel plants. The expectation seems warranted that the Lone Star application is but the first of a number to be put in shortly to the Government for loans to build steel plants, not only in Texas but in other Western States.

Under existing law the Reconstruction Finance Corporation is fully clothed with authority to make loans on projects of this kind. There was some doubt among RFC directors as to how far they might go in insisting on using their own judgment in making such loans. But that was resolved when, under strong administration pressure, they approved substantial loans to a prefabricated housing manufacturer.

ANTIMONOPOLY MOVE?

It would be interesting to see what would happen should one of the existing big steel companies apply for a Government loan to build a new steel plant. Every one of the supporters of the Government steelworks proposal is an archantimonopolist, and a fundamental plank in their platform is that the Government must do something about steel because "steel is a monopolistic industry." It will be recalled that President Truman attacked the steel industry during his campaign talks last year as monopolistic. Only last week Representative PATMAN made another speech accusing a steel company of acquiring a steel fabricator and putting it into competition with a former customer to which it no longer was shipping steel.

So Washington is asking questions such as this: Is it the real purpose of the Government steel plant proposal to break down so-called monopoly in the steel industry? Common opinion is that such a move actually has been launched, and only time will reveal the full program and its effects.

NO LOAN NEEDED BY BIG STEEL

It is ridiculous to suggest what would happen if a big steel company applied for a loan. All big steel companies have retained enormous profits which they can use any way they please and would not consider a request for a loan.

Normally the large corporations pay to their stockholders 65 to 75 percent of their earnings. Now, and for the past few years, they are paying out only 25 to 35 percent and retaining the balance which they use to buy, in many cases, nonrelated and competing concerns. This is costless capital acquired from a helpless public in a seller's market.

The following article recently appeared in Labor, a national weekly:

HOW BOOKS ARE JUGGLED BY BIG CORPORATIONS TO HIDE PROFITS

That the profits of America's big corporations are much greater than the figures they put out for public consumption was demonstrated anew in an analysis of the steel industry's earnings, published this week by the United Steelworkers' Union.

In the third quarter of 1948, the union said, steel firms reported profits, after taxes, which were 54.6 percent higher than in the same period of 1947. That gain is staggering enough, but it tells only half the story.

Actually, the steel corporations covered up additional profits by juggling their books, the union said. For example, United States Steel gave its net earnings for the quarter as $34,599,132. But it also had an item of $13,500,000 under the heading of extra depreciation, over and above normal reserves set aside for plant depreciation.

Thus, United States Steel's real profits for the quarter, the union said, were really over $48,000,000, or at the rate of almost $200,000,000 a year. Other steel companies doctored their books in the same manner, the union declared.

The stockholder is becoming the forgotten man. It results in a slow stock market and dries up the source of credit for small business.

Mr. E. B. Germany, president of the Lone Star Steel Co., and who put the plant into operation and has successfully operated it for more than a year, in a letter of February 1, 1949, answered these articles, as follows:

LONE STAR STEEL CO.,
Dallas, Tex., February 1, 1949.

Mr. E. L. SHANER,
Editor in Chief, Steel Magazine,
Cleveland, Ohio.

DEAR MR. SHANER: In your editorial dated January 24, entitled "Pork Barrel Steel," you made references to the Lone Star Steel Co. I am not accustomed to writing letters to the editor, but, in all fairness to our company, I feel impelled to give you a few facts which, it is apparent, you did not have at the time you prepared your editorial. Knowing your reputation as an editor and the respect the industry has for your publication, I believe you will accept these remarks in good faith.

Let me put your mind at rest regarding your statement that Lone Star Steel is a part of a so-called full-fledged campaign having sinister pork-barrel implications.

This company was organized and incorporated in 1942. As agent for the Defense Plant Corporation, the company built the facilities it now owns and operates. Our present expansion program is nothing new. I have been a director since formation of the company and I know that the original intent and purpose was to build a completely integrated steel industry in east Texas. Therefore, our application for a loan from the Reconstruction Finance Corporation cannot be a part of any "full-fledged campaign having sinister pork-barrel implications."

Your implication that our application to RFC is pork barrel steel appears to be somewhat impulsive or else an indictment of practically every private business enterprise in America.

From 1932 until 1947, RFC made loan commitments amounting to $1,509,831,349.58 not including funds loaned for national defense. Of this amount $1,048,816,086.95 was committed to 82 of the Nation's railroads. In fact, RFC now has outstanding loans to railroads of $143,852,206.68.

This agency had made 158 loans for mining, milling, and smelting of ores not including 121 such loans made in the national defense program. Funds provided by RFC built the great highway and railroad bridge over the Mississippi River at New Orleans and the San Francisco-Oakland Bay Bridge. It goes without saying that the steel industry must have welcomed the business resulting from these projects.

Did you or your publication or the steel industry cry "Pork barrel," when these loans were made? Were the 82 railroad companies which applied for and received hundreds of millions of dollars to buy steel products accused of being a part of a sinister pork-barrel campaign designed to lead them into nationalization?

Lone Star Steel's program to develop this region's natural resources was first approved by Mr. Jesse Jones, Chairman of the Reconstruction Finance Corporation. At that time Mr. Truman was a Member of the United States Senate.

The iron ores of east Texas, Mr. Shaner, have been there a long time, in fact, as long as those of the Birmingham and Great Lakes regions. Eastern capital and industry have not only ignored the possibility of the development of these resources but have actually attempted to discourage local, independent efforts to develop them.

Texans believe in freedom of opportunity of enterprise, Mr. Shaner. We have fought for it since 1836, and it is this same spirit which has prompted our leaders here to prove that a steel industry in east Texas is good for us as well as the rest of the country. More than 3,000 Texans own our company. They believe in the industrial possibilities we have here.

These Texans have no socialistic tendencies. In fact, our people here in the Southwest would be the last to be so accused.

The recent war forced eastern capital and industry to recognize the possibilities here. You will find on investigation that more industries have moved to this area during the past few years than any area in the world.

Now, Mr. Shaner, we welcome outside capital. We want outside industry. We have tried to provide the proper atmosphere which would attract outside industry such as reasonable tax laws (we have no sales tax or personal income tax).

But, in spite of everything we have had to take it upon ourselves to build a steel industry in east Texas. We have succeeded so far without encouragement from the steel industry.

Our facilities are located in the district of Congressman WRIGHT PATMAN, whom you mentioned. To him, more than any other one man, is due much of the credit for our success, and Texas as well as the Southwest is in his debt for helping to make possible an entirely new industry here.

Because of your reference to the need for an honest study you will be interested to know that our present expansion program is the result of years of planning and not something hurriedly put together in two short weeks. In fact, we engaged the services of a nationally known engineering-research organization to make the study on which our plans are based. This firm is also engaged and consulted by many of the Nation's larger steel companies and other industries.

Your concluding paragraph seems to be particularly impulsive and your fears unfounded. You say: "To make RFC money readily available for 'pork barrel' industrial expansion is tantamount to openly inviting the socialization of steel." We believe the exact opposite is true.

Did the billion dollars loaned to our railroads lead to socialization of railroads? Did the billion and a half dollars loaned to private business enterprises lead to socialization of business? Did the billions of dollars loaned to our insurance companies and banks lead to socialization?

Consider where your steel industry would be today had such loans not been made to build railroad rolling stock, Diesel engines, bridges, factories, pipe lines, refineries, etc. The steel industry benefited to such extent that, when the war came, it was in a position, with the help of additional Government funds, to meet the emergency and avoid any grounds for nationalization.

On the other hand, if the industry refuses to encourage the efforts of local, independent initiative to develop regional resources with which to provide badly needed goods demanded by the regions' markets, the industry will not fare so well in the court of public opinion, where matters such as nationalization are finally decided.

You have our support in any campaign to prevent nationalization of this or any other American industry. At the same time we feel entitled to yours in our efforts to remove any cause for such an attempt.

We extend to you a cordial invitation to visit us here in the Southwest, to inspect our facilities and, at first-hand, America's greatest industrial potential. For, we are certain that if you become better acquainted with our resources and possibilities, our markets and our people, we will have the benefit of your support and encouragement. You will be most welcome to Texas and Lone Star Steel.

Cordially yours,

E. B. GERMANY,
President.

GOVERNMENT AID NECESSARY

It is absolutely necessary that the Government do something to help industry get started in monopolistic lines, such as steel. The big steel companies want a scarcity of steel and they will never properly expand their facilities because it is against their selfish interests to do so. Our country needs 10,000,000 tons of steel this year more than the present steel capacity will permit.

RFC HELP FOR RAILROADS, BANKS, AND INSURANCE COMPANIES

I well remember in 1932, when the Reconstruction Finance Corporation was created and when every effort to permit the RFC to help the plain people generally was successfully killed in the consideration of the bill in Congress. When finally passed, it only helped the railroads, the insurance companies, and the banks. It was long after the Democrats came into power, March 4, 1933, that the power was extended by Congress to RFC to help others. When the banks, railroads, and insurance companies were bailed out, a lot of the people wanted the Government to stop right there.

SIX NEW MILLS NEEDED IN EAST TEXAS

New steel-making facilities in every section of our country are badly needed. We have enough iron ore in east Texas to take care of six steel mills with the same capacity as Lone Star for more than 75 years. If this steel is used to make oil-field pipe, there will be a big market for it very close to the plant. Most of the steel pipe used in oil fields is shipped from Birmingham or Pittsburgh. There is no reason why a large part of it should not be made right there in the middle of the oil-field area.

SELFISHNESS PART OF PRIVATE-ENTERPRISE SYSTEM

Selfishness to a certain extent is a part of the private-enterprise system. It is a desire to get ahead, make money, accumulate property that has made the private-enterprise system successful in our great country. We want it to continue. However, greed is not a part of the private-enterprise system, so when the leaders of any monopolistic industry curtail production for the purpose of serving their greedy interest, the Government should step in. It is not contemplated that the Government will own the plants, but it is contemplated that the Government will furnish money to help build the plants because they are needed to produce a very essential product in the interest of the general welfare of the people. It is no more socialistic than bailing out the banks, railroads, and insurance companies when they were in distress and ran screaming to the Government for help. Some of the biggest bankers of New York were the first to knock on the door of the RFC with hat in hand when it opened in 1932. Since they were saved with Government aid they seem to oppose others getting similar aid from the same source.

WHO ARE REAL SOCIALISTS?

The real Socialists in this country are not the little fellows having nothing but a loud voice to disseminate their views on soap boxes on street corners or in public parks; but whether they realize it or not, the real Socialists--that is, the ones who are doing the things that will bring our country to socialism quicker than anything else—are the big-business executives of the Nation, who are trying to get all of the units of an industry in one package so they can own it. It is a very short step from monopoly to government socialism.

SOCIALISM

When the number of companies producing steel in England was reduced to six, the industry was so concentrated that the Government took it over. Dr. Steinmetz, the most outstanding scientist and engineer of his time, was chief consultant for the General Electric Co., one of the largest concerns in the United States. He was a Socialist and often made speeches for socialism. When asked how he considered himself consistent being a Socialist and working for a company that was almost a monopoly in electrical equipment and appliances, he replied:

Every Socialist should be in favor of monopoly, since it is such a short step from monopoly to Government ownership and socialism.

Every platform of the major parties the last 50 years has contained a statement to the effect that private monopoly is indefensible and intolerable. The Socialist platform always contains the statement that the Government should own a monopoly, or, in other words, the Government should take over the trusts.

So the big-business men in this country, who are building up monster businesses by destroying competitors and getting all of the units of an industry in the hands of a few people in one company, are the ones who are doing the most in the direction of forcing or causing socialism in our country.

The Trial and Imprisonment of Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. HENRY D. LARCADE, JR.
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. LARCADE. Mr. Speaker, the world has breathlessly followed the prosecution and trial and verdict in Hungary of Josef Cardinal Mindszenty, and under authority to extend my remarks in the RECORD, I wish to submit an article by the International News Service, dated Vatican City, February 14, 1949, published in the Washington Times-Herald of even date, giving the consistory address of Pope Pius XII, and also a copy of the official English text of apostolic exhortation issued by Pope Pius XII, as published in the Washington Post of Sunday, February 13, 1949, to wit:

[From the Washington Times-Herald of February 14, 1949]

SIXTEEN CARDINALS HEAR CONSISTORY ADDRESS

VATICAN CITY, February 14.—Pope Pius XII branded the imprisonment of Josef Cardinal Mindszenty today "a miserable offense against * * * all believers in human dignity and freedom," and reportedly planned a united front of all Christianity against communism.

The supreme pontiff, speaking before an extraordinary consistory of 16 cardinals, warned that "if religion is swept away and divinity is banished, no civil society can ever subsist." He demanded full freedom for the church everywhere.

UNITY PLANS REPORTED

After hearing the pope the consistory reportedly mapped plans to unite all Christian denominations in the fight against Communist expansion. Such action would be an

historic step for the Roman Catholic Church, which has hitherto insisted on standing alone.

His Holiness, addressing the first meeting of its kind in nearly half a century, bitterly condemned the trial of the primate of Hungary. He declared that Hungary's Communist-controlled government based its case against Cardinal Mindszenty on statements completely alien to the truth.

A high Vatican source said the plans for unity of all Christianity in the war against communism were laid in discussion by the cardinals after the pope's speech.

VOICES PROFOUND GRIEF

The Holy Father said he was "saddened with profound grief * * * by the gravest event"—the trial and sentence to life imprisonment of the primate by the Hungarian Communist-controlled regime.

Above all, about the excessive and suspect rapidity of the procedure, the artificial and captious construction of the accusations, the physical condition of the cardinal—which is inexplainable without unspeakable influences—the condition which suddenly made of a man, who until then was exceptionally energetic by nature and by conduct of life, a being that was weak of action, appeared to be an accusation not against the accused but against those who accused and condemned him.

CHURCH REAL TARGET

"In particular we believe it is our duty to declare that that which was stated during the trial is absolutely without truth."

Then the Pope added bluntly:

"In all this, one thing alone emerges clearly: That the principal purpose of the entire judgment was to disrupt the Catholic Church of Hungary in the hope of obtaining persecution of the pastors and dispersion of the faithful.

"Therefore, in reproving this event and putting it before the judgment of public opinion and the tribunal of history we are not only doing what the violation of the sacred rights of the church require but what the dignity of the human individual demands."

After the address by the spiritual leader of Roman Catholicism, the princes of the church reportedly planned the unity of all Christian sects in the war against Soviet-led atheism.

BID TO OTHER FAITHS

Papal officials recalled that recent letters and statements of the Pope spoke of Christianity rather than Catholicism alone.

This, said Vatican sources, can be construed as an open invitation to leaders of other faiths to form a common religious defense front in the manner that the western democracies are welding a common defense on the political front.

Only at one point in his allocution did the Pontiff suggest that there might still be grounds for a compromise between the church and Communist states. He said:

"(The church) is not moved in its action by temporal motives and the church admits any form of government provided it is not in contrast with Divine human rights."

But a high prelate said:

"The Pope stated the church's stand. Any reconciliation would necessitate a change in tactics by the Communist regimes. This doesn't seem likely, does it?"

Elsewhere in his address, the Holy Father, relentlessly pursued his theme that the lines have been drawn for the decisive battle between Christianity and communism.

The Pope rejected Communist allegations that the church seeks to influence the course of purely political matters, adding:

"In particular we must declare that what has been affirmed during the trial is completely alien to the truth * * * namely, that the entire matter depended on the fact that the Holy See must explain its political domination over people who are supposed to have issued orders and instructions directed at opposing the Hungarian Republic and those presently at its head."

FOR WORLD-WIDE PRAYERS

The pontiff, despite his bitter assault on the political sponsor of atheism, called for world-wide prayers not only for victims of persecution but that "all those to whom public government is entrusted will finally understand this truth—that if religion is swept away and divinity is banished, no civil society can ever subsist."

The Holy Father concluded with the plea: "Let the freedom due the church be everywhere given back to her so that, unhampered by impediments, she can illuminate * * * the minds of men. From this action human civilization has nothing to fear but will have great advantage."

[From the Washington Post of February 13, 1949]

OFFICIAL ENGLISH TEXT OF APOSTOLIC EXHORTATION ISSUED BY POPE PIUS XII

VATICAN CITY, February 12.—The official English text of Pope Pius' apostolic exhortation:

"The conflict between the good and the wicked, in whose ever-tangled strands of human actions and motives history is woven, has seldom, if ever, been so acute as it is today.

"While, on the one hand, no matter where we look out upon the world from this Vatican citadel, we are filled with admiration and joy at the sight of the good people resplendent with those virtues, which, particularly in the glorious fortitude of martyrs, recall the early ages of Christianity: Yet, on the other, we are overcome by grief and anguish as we perceive the iniquity of the unrighteous reach a degree of impiety that is incredible and without parallel. Venerable brethren, we shudder at the mere mention of this wickedness, but the duty of the apostolic office compels us to speak.

"That proud neglect and disdain of divine things which was man's original crime when he ignored God's command is the most pernicious source of all evils, and at the present time is insidiously spreading its ravages almost all over the world like a virulent disease; it is producing evils without number, especially in those countries where a conspiracy has been formed 'against the Lord and against his Christ' (Ps. ii: 2). It deprives man of God and thereby robs him of his spiritual dignity, makes him the ignoble tool of materialism and utterly destroys all traces of virtue, love, hope, and beauty of soul within him. We speak of atheism or, rather, hatred of God.

"With supreme insolence, the enemies of the name of God avail themselves of every kind of help and advantage, books, periodicals, the press, the radio, organizations, public meetings, and private interviews, education, and culture, all are at their service to spread ridicule of sacred things. 'The smoke of the pit arose as the smoke of a great furnace; and the sun and the air were darkened with the smoke of the pit' (Apoc. ix: 2).

"Let nothing give more concern to you, to the priests and people committed to your care, than battling to defend the name of God, which the angels revere trembling with awe, raise aloft the standard of St. Michael Archangel and renewing the cry 'who is like to God?' Oppose to the blasphemers of the divine majesty your energetic purpose to proclaim, to love, and to preach His name.

"Those who cast scorn on the name of God not only are guilty of a heinous crime, since 'hatred of God is especially a sin against the holy spirit' (S. Thomas, summa theol. 2–2 Q. xxxiv, art. 2 A. D. 1) and brings down upon them the severest punishments, but obviously prove themselves utterly ungrateful. For what is more necessary and salutary than to adore and worship God? From Him we receive both our soul and body, our strength and gifts of mind; the light of the sun, the air, the produce of the earth, our food, the joys of life, and, what is more important, divine grace, spiritual helps, truth, and salvation are from Him. Everything good we have is His gift.

"'O how good and sweet is Thy spirit, O Lord, in all things' (Sap. xxi: 1). But Thou our God, art gracious and true, patient not far from each of us: 'For in Him we live and move and are' (Acta. ap. xvii: 28). He is most wise and merciful, at one time delighting us with His consolations, at another correcting us by His punishments. But we are treated justly when He punishes us, for 'we receive the due reward of our deeds' (Luke xxiii: 41); and even suffering through God's providence becomes a training school of virtue and yields a harvest of eternal happiness. Prosperity or adversity mean little to him who has God as his inheritance and possession; and nothing is to be considered lost if God is not lost.

"There is, moreover, another benefit which love of God brings to men, while, on the other hand, rejection of God brings about disaster. Who does not fear and abhor strifes and civil discords, and wars which in the future with new weapons will cause immense destruction? That such disaster be warded off we welcome with approval the steps that have been taken to unite states together in ever closer alliances.

"But this will be a faltering attempt founded on quicksand, unless there prevails everywhere a strong sense of the brotherhood of men, which renders mutual contracts sacred and secure, strengthens pacts and welds communities together. Experience clearly teaches that men do not look upon one another as brothers unless they recognize that they are all sons of the same father. Without reverence for the Supreme Lawgiver and Divine Judge, right and wrong are mere words; the moral law collapses; if there is no sanction to be feared, inequity in its greed goes to all extremes in deeds of daring and arrogance; men, like wild beasts, engage in mutual slaughter and their one joy is the base pleasure they take in practicing in these cruelties. Now it is to our advantage to serve God. Let us worship with the greatest earnestness and care God's loving presence in the sanctuary of a pure conscience; for the way to grow in virtue and perfection is to withdraw ourselves from exterior things and turn to things interior and thence raise our minds to dwell on heavenly truths.

"Let the memory be filled with His most sweet presence; let the intellect be enlightened, the soul rejoiced, and the will strengthened to act with purity, energy, and piety: 'For to know Thee (i. e., God) is perfect justice' (Sap. xv: 3). All who have erred from the path of justice are to be aroused by prayers, by word and deed, but especially by the example of a life in which the reflection of the fatherly goodness of God shines forth, that they may expiate and atone for their faults. Let sinners turn their thoughts back to the most merciful father 'who calls home his prodigal son and gladly welcomes him when through want he is brought to repentance, sacrifices the fatted calf, and crowns his joy with feasting. Why not? He has found the son he had lost; the son he has regained he esteems all the more. Whom are we to understand by that father? God, of course: none so fatherly, none so loyal as He' (Tertullianus, De Poenit, 8, M. L. 1, 1353). Who-

ever is strong in faith and rich in the treasures of a religious life should share these goods, as far as possible, with others.

"If we wish to promote still further this religious fervor and prepare protection and a remedy for the criminal impiety that contaminates our times on the part of those who revile God, we have most efficacious means at our disposal.

"Is there anything that prayer cannot accomplish? What cannot the confident prayer of an innocent or repentant soul obtain when it is said in the name of Christ and is accompanied with good works?

" 'Prayer is the wall of faith, our shield and weapon against the enemy who studies us from all sides' (Tertullianus, De Oratione xxix, M. L. 1, 1304), but all religious worship and cult yields pride of place to the eucharistic sacrifice, which continues in an unbloody manner the immolation of Christ in a bloody manner on the gibbet of the cross and applies its abundant saving fruits to men.

"The heavenly and eternal Father is honored, is rendered propitious, is appeased by the precious blood on the spotless lamb, whose voice is more efficacious than the voice of the innocent blood of Abel, and of all the just because it has infinite dignity and value; this blood he assumed from one of us, it is offered for us by the Son of God himself, the author of our peace and reconciliation, the ever, ever tireless giver of every heavenly gift.

" 'When through sin we provoke the vengeance of the judge, may we be protected by the presence of the blood speaking for us; then let the host of oncoming evil retreat.' (Hymnus in primis vesperis festipretiosissimi sanguinid. D. N. I. C.) The same sacrifice which is 'truly propitious' (Conc. Trid. Sess. xxii, Cap. 2) is offered efficaciously 'for sin, atonement, satisfaction, and other necessities' (Conc. Trid. Sess. xxii, Cap. 3).

"If atheism and hatred of God, which contaminates our times and merits a truly fearful punishment, is a grievous sin, we can, in the fount of Christ's blood, which the chalice of the New Testament contains, wash away the abominable crime, efface its consequences, implore pardon for guilty and furthermore provide a splendid triumph for the church.

"After mature thought and deliberation we have decided to permit and exhort you and all priests to celebrate for our intention on Passion Sunday of this year a second mass which will be the votive mass for the remission of sins, unless this mass must be said for the intention of the bishop or the people.

"Those who for any reason do not use this privilege shall say the mass of the Sunday and at least earnestly commend our intention to God during the eucharistic sacrifice.

"Since the faithful, in keeping with their reciprocal ties as members of the mystical body of Christ, should always share the sorrows and joys of the church, let them be invited by you to the altars on that Sunday in as great number as possible, and as they ponder over the gravity and the importance of the hour let them pray and beseech God with greater fervor, and let them all receive Holy Communion.

"We have no doubt that you will all comply with our wishes the greatest zeal and devotion imploring God with united prayers that evils may be removed, and that the breath of divine charity may renew all things in Christ and thus happily realize the universal desire for peace. Finally, filled with confidence that our desires will be fully realized, to you and to the beloved priests and faithful confided to your vigilant care who in keeping with the duty we have explained will prove their love for their brethren, we impart the apostolic benediction as a pledge of divine grace."

The Atomic Bomb and the Panama Canal

EXTENSION OF REMARKS

OF

HON. THOMAS E. MARTIN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 25, 1949

Mr. MARTIN of Iowa. Mr. Speaker, one of the most important matters the Eighty-first Congress will have to consider is that of increased facilities of the Panama Canal, or an alternative or supplemental Isthmian waterway; or all these. The entire subject is one that should receive the most earnest and comprehensive thought of our membership. A solemn duty is thus imposed, and the Congress should be accordingly governed. Speaking for myself I have read and studied, with much interest, various writings and documents on the subject; and, as a result, I must say that I have been unable to reach the judgment that the so-called sea-level project at Panama is the solution of the pending problems. Unless that type of construction will, indeed, assure protection against atomic bomb attack, it seems to me that, with the largely increased cost occasioned thereby, together with treaty angles which seem never to have been considered in the formal recommendations on the subject, it will be an utter waste of money to construct such a canal; and even with the added cost disregarded, there must be serious doubt as to whether this type would serve navigational needs as well as the present lake-lock system—especially so if the Pacific locks are all united at Miraflores.

Much has been recently published in technical magazines and other publications to the effect that the vulnerability of the Panama Canal to atomic-bomb attack demands a new canal at sea level. None of these articles which I have read have sufficiently dealt with the question from the viewpoint of strategic planning. A most informative discussion of this feature, by Maj. Gen. C. F. Robinson, United States Army engineers, was published in the January–February 1949 edition of the Military Engineer, an authoritative technical periodical.

In this article General Robinson does not deal specifically with the Panama Canal or other Isthmian water route, but he does develop the subject of atomic destructiveness in enough detail to lead to the inevitable conclusion that an atomic attack would be catastrophic to any type of canal which could be constructed at Panama, or elsewhere. He emphasizes that because of the scarcity of basic material for the manufacture of these bombs, strategic planners cannot afford to waste such bombs on targets whose destruction would not have far-reaching consequences in a war. He also points out that the basis for the military strength of the United States is industrial production, the destruction of which would be the first objective of an atomic attack on our Nation.

I would urge that all Members of Congress—and our citizens, generally—read and consider this timely and informative contribution on the subject, and to weigh what is thus stated by one so well qualified to speak on the subject of the atomic bomb.

In this connection reference is made to the discussion of the like subject by Gen. Leslie R. Groves—see CONGRESSIONAL RECORD Appendix, page A169.

INDUSTRIAL VULNERABILITY TO BOMBING

(By C. F. Robinson, major general, U. S. Army)

World War II made it obvious to all that the basis of military operations in modern war is industrial. Armed forces are no stronger than the production which supports them. On the other hand, air power in that conflict, culminating in the atomic bomb, made it possible for the first time in the history of warfare, to attack directly on a substantially destructive scale the factories which are the source of military power. The manufacturing system of a nation has become the primary military target. New and improved weapons, developed since the war, and the potential weapons of the future, serve only to emphasize these lessons. They introduce a new factor into the national security of the United States—the problem of industrial vulnerability to enemy bombing.[1]

This problem is both serious and complex. Its solution may well have a major bearing on our survival in any future war. It concerns the great majority of the industrial plants in the country. It has profound economic and social implications. However, the atomic bomb is still a finite weapon and the problem is not hopeless. While no complete solution is probable, a practical approach which would do much to produce industrial security can be evolved.

The problem of industrial vulnerability to bombing is receiving attention in the appropriate agencies of the Federal Government, in the National Military Establishment, and the National Security Resources Board which is charged with the responsibility of strategic relocation by the National Security Act of 1947. The latter has recently issued a pamphlet on the subject.[2] Regardless of any governmental steps, the problem is primarily one which requires for its solution the full appreciation of its importance by and the cooperative action of, private business. It is high time that the industrial corporations of the United States give this factor in our national security, which may well have a direct bearing on their own future, the attention which it deserves.

In assaying our industrial vulnerability there are four major factors: (1) The likelihood of war, (2) the characteristics of bombs, (3) the means of delivering bombs to their targets, and (4) the capabilities of any potential enemy. Much information with respect to these factors is secret. However, a full technical knowledge of them is not essential to the development of a practical industrial approach to the problem. This paper is not the proper place for a discussion of the first factor, other than to note that the possibilities of war are such as to prevent any dismissal of the problem. With respect to weapons, only the atomic bomb need be considered, because any protective

[1] This paper deals only with industrial vulnerability. Equally important problems are presented in the protection of urban concentrations, civilian populations, and public utilities.

[2] National Security Factors in Industrial Location, issued by the National Security Resources Board, Washington, D. C., September 1948.

measures adaptable to it will undoubtedly meet the requirements of less powerful bombs.

CHARACTERISTICS OF THE ATOMIC BOMB

For the purposes of this paper, the two major characteristics of the atomic bomb are its destructive power and the complexities of its manufacture.

The important destructive effects of the atomic explosions that have occurred to date, as publicly released, are given in the following table:

Destructive effect	*Approximate area or radius*
Severe structural damage:	
Reinforced concrete buildings [1] ---feet--	2,000
Heavy steel-frame buildings [1] ---sq. miles--	1.8
One-story light-steel buildings [1] ---sq. miles--	3.4
Nine-inch brick walls [1] -ft--	5,000
One-story brick buildings [1] ---feet--	7,700
Multi-story brick buildings [1] ---feet--	5,700
Wood residential buildings [1] ---sq. miles--	6.0
Wood-frame industrial or commercial buildings [1] sq. miles--	10.0
Plaster [2] ---feet--	9,000
Windows ---do---	12,000
Roofs [2] ---miles--	2
Fires started ---feet--	10,000
Human casualties: [3]	
100 percent---feet--	Up to 3,000
50 percent---do---	3,000 to 4,500
15 percent---do---	4,500 to 7,500
1 to 2 percent---do---	7,500 to 9,000
Few, if any---do---	Over 9,000

[1] United States Strategic Bombing Survey.
[2] United States Senate hearings before Special Committee on Atomic Energy.
[3] Report on Civil Defense, Office of Secretary of Defense.

In attempting to judge the destructive effects of any possible future atomic bombing there are a number of uncertain factors. The height above the ground at which the bomb is exploded probably has a direct bearing on the area or radius of damage, particularly with reference to destruction resulting from penetrating radiation and radiant heat in comparison with blast. Likewise, explosions under the ground or under water would have divergent results. As in all new weapons, there are, of course, important possibilities of improved bombs of larger size and greater power than those exploded at Hiroshima and Nagasaki. It should be remembered, however, that blast decreases in proportion to the cube of the distance from the source, and radiant energy in proportion to the square of the distance.

It seems reasonably safe to conclude that the maximum radius of severe destruction from one atomic bomb may well be limited to approximately 3 miles and will not exceed 5 miles, with the possible exception of radioactive particles carried to a greater distance by air currents. This gives a clue to a practical course of action to reduce vulnerability.

Substantial production of atomic bombs requires huge quantities of electrical power and large industrial plants with a multiplicity of highly technical equipment. It puts a severe drain on the scientific and technological skill, strategic and critical materials, and highly specialized manufacturing of any country. The major and unique raw material in the manufacture of atomic bombs, uranium, so far has not been found in abundance. In any future war the supply of atomic bombs will not be unlimited. This means that the results to be expected from their use must be commensurate with their availability and cost in national resources. Strategic planners must follow this general criteria in the selection of targets for atomic bombing and cannot afford to waste bombs on targets whose destruction will not have an extremely important and far-reaching effect on the course of the war.

CARRIERS

To date atomic bombs have been delivered to their targets by aircraft of the heavy bomber type. The effective operational range of such aircraft is still limited and presently not such as to permit wide scale intercontinental bombing. Bases relatively near the target areas are still a necessity for launching sustained bombing attacks. But little comfort can be drawn from this fact, because the range of conventional aircraft is continually on the increase. Other means of delivering atomic bombs, such as rockets and guided missiles, with inherently greater potentialities, can be expected in the future.

CAPABILITIES OF THE ENEMY

The best intelligence indicates that our major potential enemy does not now have an atomic bomb or means of delivering such a bomb any better, if as good as, our own. The best estimates indicate that it will be several years before that nation can produce them in quantity and develop the carriers to launch them from great distances. Any war in the immediate future will probably not entail sustained bombing attacks, atomic or otherwise, on the continental United States. There may well be sporadic raids. But we cannot afford to rely on this temporary situation. There are no inherent factors to prevent an unfriendly power from developing to the full atomic weapons and their most effective carriers. It would be the height of folly not to assume that it is vigorously attempting to do so. The time required to complete any effective measures to reduce our industrial vulnerability is so long that we cannot start too soon. The potential risks are great. The respite of the next few years should be used to full advantage in meeting them.

METHODS OF REDUCING VULNERABILITY

There are four major methods of reducing industrial vulnerability to bombing: (1) Military operations, (2) underground facilities, (3) structural protection, and (4) dispersion.

Military operations against bombing involve the interception of bomb carriers in flight before reaching the target areas; action against the bases from which the carriers are launched; and destruction of logistic and industrial facilities supporting the enemy's bombing offense. This is a problem for the armed forces. However, it must be noted that full reliance cannot be placed on military operations alone to protect us from possible bombing. In spite of the best efforts of the armed forces the tactics and techniques so far developed or foreseeable cannot be expected to prevent all carriers from getting through to the targets. The development of carriers other than piloted aircraft will make interception even more difficult.

UNDERGROUND FACILITIES

In considering the possibilities of underground industrial facilities as a protection against bombing, the German experience of World War II is an available guide.[3]

Allied strategic bombing was so disrupting to German industrial production in the last year of the war that it caused the Germans to embark, in the summer of 1944, upon a broad program of placing important war industries underground. The Germans did not succeed, however, in getting substantial production from underground plants before the war ended.

The original mistake was overestimating the effectiveness of air defense and underestimating the power of allied air attack. New plants cannot be constructed and production transferred to new sites overnight. The Germans should have started moving underground at least 3 years earlier. By the time the Germans started to dig on a broad basis, it was too late. The time to prepare underground sites is before, not during, a war.

The Germans had proceeded to the point where they believed that it was practical to place almost any type of industry underground. The greatest difficulties in doing so were in chemicals and power. The major German underground effort was in synthetic oil, aircraft, ammunition, and V-bombs. Production underground could generally be maintained at the same standards and costs as above ground. There were no outstanding adverse effects on workers. The initial cost of underground plants were, except in rare cases, in excess, and often greatly in excess, of such costs for comparable plants on the surface. On the other hand, maintenance and operating costs were not unfavorable and sometimes less than such costs for above-ground installations.

The great majority of the German underground plants were in existing mines, caves, cellars, and tunnels. These generally were hasty, crude improvisations. They went to show, however, that the highly complex equipment of modern war can, when necessary, be produced under conditions which are almost primitive.

From their study of the problem of underground facilities the Germans concluded that it was better to build a few large centralized underground factories, especially designed for the specific products in question, and as self-contained as possible, than to scatter production in a number of small, dispersed, underground units. To do so minimized maintenance and production costs, permitted better supervision, and tended to overcome transportation difficulties. The fact that the German practice in those plants which got into operations was generally the opposite was because the Germans started too late and had to improvise in hastily remodeled existing sites.

But finally, and most important, the German experience indicated that underground plants were not a complete answer to maintaining war production under heavy air attack. While the underground plants themselves were not effectively damaged by bombing, the lines of communications leading to and from the plants were disrupted and in many cases knocked out by persistent and repeated attack thus slowing down or completely stopping production. The minister of armament and war production, Albert Speer, questioned the desirability of the entire underground program and thought it was a waste of materials and manpower for this reason. The vulnerability of the transportation facilities was so great that many responsible Germans admitted that persistent bombing of the railroads could have paralyzed industry even if the dispersal and underground program had been completed.

Applying this German experience to our larger and more complex industrial system, the conclusion is that going underground does not offer a general solution to the problem of reducing industrial vulnerability in the United States. Even if underground facilities were a completely effective protection against atomic bombing (which it is not—because of the problems of ingress and egress, of protection of workers outside working hours, and of protection of transportation to and from underground factories, and even if the problems of maintaining comparable production volume, standards, and operating costs could be satisfactorily solved, going underground would still not be a practical solution on a broad scale. The time, money, labor, materials, and equipment required for placing any substantial proportion of our industrial capacity underground would be enormous. It could not possibly be fi-

[3] See German Underground Installations by Maj. Gen. C. F. Robinson in the Military Engineer for November 1947.

nanced privately but would necessitate large governmental subsidies. The diversion of such large quantities of labor and materials from normal demand to a broad industrial rebuilding program would undoubtedly necessitate governmental allocations and controls. Such a program would have a far-reaching disruptive effect on our entire economy.

This does not mean, however, that there is no place for underground facilities in a general program for the reduction of industrial vulnerability. The extra protection which underground facilities would offer under special conditions, probably would warrant the effort and cost of placing underground certain highly important military and other governmental installations, such as those used for the manufacture or storage of atomic bombs themselves. Likewise, plants of certain highly sensitive industries, such as optics, precision instruments, aircraft engines, may well warrant underground consideration. In some cases it might be economical to go underground for normal peacetime operations, because of possible savings in maintenance and operating costs, particularly in manufacturing processes that require controlled air conditions of cleanliness, temperature, and humidity. In other cases Government assistance in connection with costs over and above normal surface facilities would be in order.

The underground phase of industrial protection against bombing is, therefore, highly selective, based on military importance, economic factors, and the solution of the engineering problems inherent in such facilities.

STRUCTURAL PROTECTION

The experiences at Nagasaki and Hiroshima indicate possibilities of importance in the development of structural characteristics that will tend to minimize the destructive effect of atomic bombs. Reinforced concrete buildings, as could be expected, withstood the blast effect much better than brick or wood frame buildings. Many materials served as a protection from the radiant heat generated by the explosions. While no feasible structural designs of surface facilities probably will be of much protective value near the center of an atomic explosion, it does appear that a great deal may be done structurally to reduce the destructive effect at greater distances. Here is a new field for engineering experimentation and design. Any additional costs resulting from the introduction of this new factor into the design of structures probably should not be so great as to be prohibitive. The adoption of properly developed minimum structural standards based on the characteristics of the atomic bomb, in the design of future industrial facilities should be one phase of a well-rounded program to reduce vulnerability. In special cases of highly important plants and industries which are likely to be bottlenecks in any future war production, standards higher than the minimum probably would be warranted.

DISPERSION

The finite characteristics of the atomic bomb with respect to its destructive power and limitations on its manufacture, coupled with the strategic necessity of selecting targets for its use, whose destruction will give results commensurate with the cost and availability of the bomb, gives the main clue to a practical, general solution to the problem of reducing industrial vulnerability. In any strategic objective, the advantage sought must be weighed against the cost of attaining it in men, equipment, and energy.

Dispersion, therefore, appears to be the best answer. While it is a negative and not an absolute protection, it would seem the most feasible course to pursue here in the United States. Furthermore, this approach takes advantage of a trend already under way to decentralize many industrial operations for economic and social reasons.

The major value of atomic weapons in any future war will be that of destroying or crippling the industrial production vital to the support of a war effort. A high concentration of essential war industry in a relatively small area will constitute the best target for atomic attack. Single plants in an area of approximately 5 square miles probably will not be militarily or economically feasible targets unless they are of decisive importance to the Nation's capacity to wage war. Geographic locations within the United States because of its remoteness from bases, from which a potential enemy can launch atomic weapons, is not the important factor. While there are, of course, degrees of vulnerability from this standpoint, the continued and anticipated development of increased range of carriers of the atomic bomb make geographic location of slight reliance for the future. The important factor from the standpoint of any single industrial plant is the number of other essential facilities within a radius of 3 to 5 miles of the plant. If they are numerous, the plant is located in a highly vulnerable area which constitutes a potential target. If there are none, there is a very low degree of vulnerability for the plant in question, unless, as mentioned above, it is one of decisive importance to a war effort.

In applying the principle of dispersion as described above, there are, of course, practical limitations.

It is manifestly impossible to embark on a wholesale program of relocating all the plants in the United States which are now situated in potential target areas, just as it is impractical to put them underground. One has only to consider the men, money, materials, and disruption of production that would be involved in attempting to remove the concentration of steel production in Pittsburgh or automotive manufacture in Detroit.

In the general case, the principle of dispersion as a practical matter is applicable to new plants, replacements, and expansions. New plants and equipment in the United States are amounting annually to from $12,000,000,000 to $14,000,000,000. Much of it is being located in highly concentrated industrial areas of high vulnerability to bombing and constituting important potential targets. Approached from a sound economic and engineering standpoint, these new installations could and should be located in areas of little vulnerability.

There are certain high concentrations of vital war industries which should be treated as special cases. These involve a high percentage of total United States productive capacity of an essential commodity located in one vulnerable area. They should receive special study and, if warranted, existing capacity should be dispersed to other less vulnerable locations. In many of these cases Government subsidy would be required.

In locating new, replacement, or expansion facilities, the usual factors of economic feasibility, such as sources of labor, materials, water, fuel and power, transportation, markets, and distribution facilities, must be considered. To these, now, must be added the strategic factor. The introduction of this new factor does not in any way lessen the importance of economic advantages in plant location. Generally, the economic and strategic will not be found incompatible and it will be possible to accomplish both ends. When a comprehensive survey of prospective locations is made, several economically feasible sites will be found and the factor of relative vulnerability among them should be decisive in the final selection.

Through a gradual process of the proper location of new facilities a considerable degree of industrial security can be obtained in the United States. The great bulk of it should and can be financed by private enterprise. Any additional costs (which should be slight) resulting from the introduction of the strategic factor in industrial location should be considered as another form of insurance.

SUMMARY

In spite of its enormous destructive power, the atomic bomb is still a finite weapon. The scarcity of its basic material and the complexities of its manufacture limit its availability in any war in the foreseeable future, thus imposing on the strategic planner the necessity of using it only where the anticipated results will be the greatest and in proportion to its cost. This establishes a pattern for reducing industrial vulnerability to its possible use against the United States.

While there is no positive or absolute protection, (short of the establishment of an international situation that will forever outlaw war) an effective and practical program for reducing industrial vulnerability can be developed. Such a program should center around the dispersion of new and replacement plants and expansions, coupled with the adoption of general minimum structural standards and designs to alleviate the destructive effects of the bomb; and, in special cases where the critical importance to a possible future war effort warrants, supplemented by going underground, relocation of highly concentrated and potential bottleneck industries, and use of maximum protective structural designs.

While governmental assistance will be required in many specific cases, such a program is primarily one for private industry. The manufacturing companies of the country should take the initiative, at least in the dispersion of new plants and protective structural design. In so doing they should enlist the assistance of the best engineering talent available in the field. Every large corporation should make a survey of the location of its existing and proposed plants from the strategic standpoint and on the basis of it evolve and initiate a plan for reducing their vulnerability to bombing. The possible dangers to the very existence of such corporations as well as the security of the Nation as a whole demands such a course of action.

Way of the AMA

EXTENSION OF REMARKS

OF

HON. ARTHUR G. KLEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. KLEIN. Mr. Speaker, under leave I am inserting in the CONGRESSIONAL RECORD a recent column by the widely known writer on health subjects, Mr. Albert Deutsch, as published in the February 3 issue of the New York Post.

As you know, Mr. Speaker, the American Medical Association is presently having some difficulty in persuading its members to contribute $25 a head to an educational fund of the AMA. Dr. Fishbein is one of those who literally takes the lobbyists' registration title of the Reorganization Act as a license for unrestrained lobbying; but some doctors do not feel that their licenses extend so far.

In this column, Mr. Deutsch, in his usual penetrating style, points out some of the AMA inconsistencies which have instigated that rebellion against the Fishbein authority.

WAY OF THE AMA

(By Albert Deutsch)

Dr. Morris Fishbein, factotum of the American Medical Association, has not only decried national health insurance as a Red conspiracy, he has denounced old age and unemployment insurance as a definite step toward either communism or totalitarianism. When United States Senator ROBERT F. WAGNER in 1939 introduced a bill authorizing Federal aid for hospital construction—a principle adopted 5 years later when Congress passed the Hill-Burton Act with AMA approval—Dr. Fishbein applied a thick coat of red paint to it.

In an address delivered to a conference of State medical society officials on behalf of the AMA board of trustees, Dr. Fishbein warned:

"The introduction into this Nation of a Federal security plan whereby the Nation itself, as a Federal agency, will step intimately into the sickness and life of every person in the country will be the first step in the break-down of American democracy. Indeed, all forms of compulsory security, even against old age and unemployment, represent a beginning invasion by the State into the personal life of the individual, a weakening of national caliber, a definite step toward either communism or totalitarianism."

Both Dr. Fishbein and the AMA would now be enjoying a far more respectful lay audience if they hadn't cried wolf at virtually every progressive step in the organization and distribution of medical services during the past generation.

Organized medicine opposed workmen's compensation laws as inroads on medical freedom when they were first introduced in State legislatures. Now the medical societies not only accept workmen's compensation; they control the medical end in most States.

In 1932, when the committee on the costs of medical care—headed by Dr. Ray Lyman Wilbur, a former president of the AMA and Secretary of the Interior in Herbert Hoover's administration—released a report favoring voluntary (private, nonprofit) health insurance for the American people, Dr. Fishbein printed an editorial in the AMA Journal denouncing the report as representing socialism and communism—inciting to revolution. When the same distinguished committee advocated group medical practice—where general physicians and specialists pool their skills and equipment under one roof, as at the Mayo Clinic—the AMA charged it with trying to set up medical soviets.

Now, of course, the AMA hierarchy not only enthusiastically advocates voluntary health insurance but it talks as if it fathered the idea. Group practice, too, has become quite acceptable to the hierarchs.

And so it goes. Rarely has a progressive step in medical economics been proposed without the AMA attacking it as certain to deteriorate the quality of medical care, enslave the American physician and dupe the American public. Time after time, following the adoption of a plan thus opposed, the AMA has embraced it as its own and proudly proclaimed that "American medical care is the finest in the world."

The test of a truly scientific attitude is its power of predictability. When the AMA and its state and local satellites have been proven so wrong so often in the past, they lose claim to scientific objectivity in the field of medical economics. Their present attacks on President Truman's health insurance program can be understood properly only in the light of their past mistakes. The medical bourbons never learn and they never forget.

New York Medicine, official organ of the AMA's biggest local affiliate, the New York County Medical Society, broke out in a rash of unaccustomed editorial candor in its January 5 issue when it confessed:

"Ten years ago there was in the medical profession an indiscriminate condemnation of any participation in non-profit, voluntary prepayment medical care insurance plans.

"Twenty years ago, the same standard attitude was taken when Governor Smith advocated the medical provisions of the workmen's compensation law. In both instances, the medical profession, as is to be expected, incurred public suspicion of self-interest. Allowing for a reasonable number of exceptions, this generalization is a safe one."

Substitute for "medical profession" the more accurate term "organized medicine"—and there you have it.

Rebellion to Tyrants Is Obedience to God

EXTENSION OF REMARKS

OF

HON. WALTER A. LYNCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. LYNCH. Mr. Speaker, on Sunday, February 6, 1949, designated as "Cardinal Mindszenty Prayer and Protest Day" His Eminence, Francis Cardinal Spellman delivered a sermon not only to those who reverently sat before him in Saint Patrick's Cathedral in New York City, but to a country, and indeed a world, that were horrified at the persecution of Josef Cardinal Mindszenty, by the Communists in Hungary. Perhaps no words uttered in recent times have so unified Americans, whatever their religious beliefs as have the ringing words of this beloved prelate of the Roman Catholic Church and distinguished American patriot, Cardinal Spellman.

Under leave granted me by unanimous consent, I include herein the sermon of Cardinal Spellman:

REBELLION TO TYRANTS IS OBEDIENCE TO GOD

"A new god has come to you, my people. His fiery eyes do not flash through clouds of incense or from altar candles. They do not gleam from gold-framed darkened pictures of saints. This new god is not a stone statue worn smooth by the kisses of the faithful—he was not born in heaven. He is not far away, nor is he hidden from us. The new god is born from earth and blood—he strides ahead and under the thunder of his steps the globe trembles from east to west—this is the Red god. The Seine shudders at his impact and tries to break its banks. Westminster trembles before him like Jericho, and across the green ocean his red shadow falls on the walls of the White House. Hosanna! New god."

My dear friends, you know these words are not mine. They are the words of an Hungarian Communist, words that echo the thoughts of men depraved and deranged—men who do not know truth, love, justice, or faith—men, who as their gods know only Satan and Stalin. Yes, these lines come from the pen of a Satan-bred man and are taught to the youth of Red-enshackled lands—lands where everybody is afraid of everybody else, where even a son fears his father and fathers fear their own blood-sons, as all become serfs and victims of the relentless god of Baal.

Yes, the blasphemous lines I have just quoted to you are wild words, but they are wild words of warning and, unless we listen well and realize that we must counteract them by concerted, constant prayer and action—then these words but foretell America's and the whole world's doom.

May 8, 1945—VE-day. On that day I delivered from this pulpit my prayer of thanksgiving for the victory of the hour, begging peace with justice, beseeching that as victors we do not offend God by sinning against His mercy. The peace that came was not God's peace, and because in the ensuing postwar years men's hearts have not been won back to God, I must this day as a protest against the crucifixion of humanity entreat your prayers for persecuted, tortured, victimized Cardinal Mindszenty.

This is Cardinal Mindszenty day—a day of prayer and of protest. Prayer for what? Protest against what? There is no use to try to save Cardinal Mindszenty's life, for from the very hour he was taken away in the black of night from his home, his flock, his aged mother, Cardinal Mindszenty became the victim of torturings and druggings that put him beyond the reach or realm of human help. It was he himself who said to me when he was my honored guest less than 2 years ago: "My enemies can take from me no more than my life and that has already been given to God." No, the physical Cardinal Mindszenty can no longer be saved. It is the spiritual Cardinal Mindszenty in his martyrdom of mind and body that we can fortify by our prayers, that in his soul he may know that in another part of the world other men are holding high God's torch of justice for Hungary's anguished peoples and the enslaved peoples of every land. And in our own dear land each free man and woman must protect and fight to keep his own integrity of conscience, his own God-given freedoms, and exert every effort to save America and the rest of the democratic, God-loving world from trickery, torturings, disaster, and defeat. For if we fail to learn a lesson from Cardinal Mindszenty's martyrdom, we shall fail ourselves and ourselves face Communist conquest and annihilation.

When first Cardinal Mindszenty answered the call of Christ, "Come, follow me," to that day when only 2 years ago with 30 other priests and myself, he was received into the Sacred College of Cardinals, he has lived a life full and priestly. Then we rededicated our hearts, our souls, our lives to God, the propagation of our faith, and the perpetuation of Christ's church. And only 3 days ago Cardinal Mindszenty—priest of a people who love, honor, trust, and revere him, was brought to mock trial for his life, even though his life had already been signed away by the lords of communism, men among whom there is no honor, love, or trust, either for one another, for their neighbor, or their God. Thus has the symbolic red of his cardinal's robes literally become the blood red of martyrdom.

Had I a hundred tongues, a hundred mouths, a voice of iron, I could not compass all the crimes of the men of sin as they wage war against the Man of Sorrows; neither can I recount the miseries perpetrated by these slave-men, crimes which it is neither in my personal power to relieve or prevent. Nevertheless so long as my heart beats and breath lingers in my body, I shall never cease to pray and labor to protect America, and warn and work against communism and all the evils growing from out its rotted roots, for I believe that rebellion to tryants is obedience to God.

While a whole world waged war and tragically talked of peace, I witnessed the sufferings of men in a world trapped by fear, famine, and madness called communism. It was then that I resolved to try to pour into the minds of every American a sense of great gratitude to God for our freedom, our liberties, our opportunities, and instill within those minds the realization of the imminent dangers of atheistic communism to America. And I avow that unless the whole American people, without further ostrich-like actions and pretenses unite to stop the Communist floodings of our own land, our sons, for the third and last time, shall be summoned from the comforts, tranquillity, and love of their own homes and families to bear arms against

those who would desecrate and destroy them. Yea, it is full time that a strong and vigilant America unite in prayer and protest against wasting the youth of her own Nation, and try to help save civilization from the world's most fiendish, ghoulish men of slaughter, lest the anguished spending of a million lives will end again in war's beginning.

Therefore, I beg you, my beloved people, let us not confuse prudence with lack of vision, unity, courage, and strength as we watch nation after nation fall victim to communism, for prudence is often but an excuse for silence, procrastination, and compromise. Even today as we read newspaper releases from the Communist-controlled press of Budapest that tell us contradictory stories about a cardinal-priest who, so little time ago, we took unto our own hearts and homes, millions of Americans refuse to recognize that we ourselves are faced with these same merciless dangers.

You have all seen pictures of Cardinal Mindszenty in the newspapers at his mock trial in his own country. And all of you saw pictures of Cardinal Mindszenty when, a free man, he sat kindly, willingly, for his picture in America. Can you fail to see here a man tortured and drugged—even though the Communist press dares to print that he denies duress? The Communists believe the American public is still easy to fool, willing to be drugged into believing whatever leaves them their own comforts, their own freedoms.

But are we, the American people, the tools and the fools for which the Communists take us? Are we always to endure the insults and wounds they inflict upon our American honor and decency as they enslave countries and persecute peoples, as they inflict wounds and beatings upon decent, God-loving men and patriots like Cardinal Mindszenty; for when the cardinal confessed to treason against the present Communist government in Hungary he but professed his loyalty to his country. If this be treason—to deny allegiance to an atheistic Communist government—then thank God Cardinal Mindszenty confessed to treason—as would I—if this free land of America were ever conquered by the demoniac people now using every foul means to overthrow our Republic.

How long are we free-minded, fair-minded, freedom-loving Americans going to allow these same fiendish Communists to drug us with their propaganda and our own apathy? When will the American Government, the American public, the leaders in all phases of American life, religious, educational, political, labor, industrial, communications, yes, and in entertainment, when will all free men raise their voices as one and cry out against and work against Satan-inspired Communist crimes? How long—O my God—shall we stand by and see Thy peoples who love Thee reviled, persecuted, and murdered by atheistic Communists who deny Thee and hate Thee even as again and again they crucify Thee upon Thy Cross? Cardinal Mindszenty's jailers gave him drugs—perhaps without his knowledge. They did not want another hero like Archbishop Stepinac. No, not another martyr would they have in Cardinal Mindszenty. They would break his will and show him to his people broken, weak, and faithless. That is why they took Cardinal Mindszenty away in the night because the first time he was arrested by the Nazis, he walked through the streets with his captors, daring to bless his people with the Sign of the Cross as they lined the streets to pray for him and beg his prayers for themselves who would, they knew, also be persecuted, abused, and slain.

Yet we should not grieve at the death of Cardinal Mindszenty, for man is not completely born until he dies to live in God. No, let us not be sorrowful nor tearful for him—but rather for one whom I pray God to take unto Himself 'ere her heart be more deeply pierced by anguish for her saintly son. I speak of Cardinal Mindszenty's 85-year-old mother. Like unto Mary, our own Blessed Mother, who was witness to the passion of her only Son, this mother's cross is far heavier than her son's. I pray that God shall raise this gentle mother into the arms of His own Mother Mary, there to be pressed close to the Sacred Heart of Christ, her Son—there, at least, to find peace.

In closing my plea for your prayers and protests on behalf of Cardinal Mindszenty, let me tell you a story that will, I believe, touch your hearts just as it touched a spark within my own when first I heard it. It is a story that I heard told by an American of another faith, a Jewish gentleman whose parents emigrated from a country which was then, as now it is again, held in bondage.

"My parents came to these shores about 70 years ago," this gentleman said. "They left behind them an old world filled with bitter hatreds and ruled by despotism. Here they found a new world filled with wondrous things—freedom, justice, opportunity, kindliness. Not things you could touch or eat but—when you've never had them before—things that are more real than a pair of shoes or even a loaf of bread. As long as they lived they never stopped wondering at the glory of America. They were two of the best Americans I've ever known.

"Seventy years ago, they came here with nothing but the clothes on their backs and great courage. Today their boy," this gentleman continued, "is speaking before a gathering of the leaders of America. In one generation our family moved from steerage to distinction. That is not one man's story," he added, "it is the American story. Multiply it a million times or more for every race, creed, and color, and you begin to sense the miracle of America."

And this, my friends, is the America I beg Americans to save.

President Truman's Problems—Radio Address by Hon. James W. Gerard, Our Wartime Ambassador to Germany

EXTENSION OF REMARKS
OF
HON. COMPTON I. WHITE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 3, 1949

Mr. WHITE of Idaho. Mr. Speaker, in the turmoil of our country's international relations and the uncertainty of our Nation's future, it is reassuring to have the advice and caution of one of our business leaders and experienced diplomats, an upstanding American who faced the German Kaiser and the German militarist in the tragic days that preceded the First World War.

I esteem it a privilege to present for the consideration of my colleagues and the American people a penetrating analysis of present trends in our national affairs by a great American citizen, Hon. James W. Gerard, of New York:

PRESIDENT TRUMAN'S PROBLEMS

(Text of broadcast by the Honorable James W. Gerard)

Last Thursday was a day of triumph in Washington. It was also a significant day for all who ponder America's future.

President Truman, returned by a victorious vote, amused the Washingtonians by spectacles of a magnificence hitherto unknown even in that luxurious city. All the elements of a Roman triumph were present except that the Republican leaders and the beautiful female orators in golden chains did not walk behind the President's car.

Missing, too, was the impudent slave who used to kneel in the triumphal car and whose duty it was to address to the hero of the day remarks calculated to tone down his mental attitude of pride and success.

America's future salutes President Truman and congratulates him on his bold, clear, and splendid inaugural speech. He faces the troubled world with the same courage which won him his election. He deserves the help of every right-thinking American in solving the problems which face his administration. More power to him.

But as the President entered the doors of Blair House, problems awaited him as grave as any that have confronted any ruler in all the march of history. They should be the problems of every citizen who can think constructively about his own future and the future of his country.

PREDICTED BY BALZAC

One hundred years ago the great French writer, Balzac, made one of his characters predict the future as follows:

"If the people triumph," said Balzac's prophet, "they will have a St. Bartholomew of their own. When religion and royalty are crushed, the people will turn upon the great; after the great, they will strike at the rich. Finally, when Europe is no longer aught but a flock of men without cohesion, because it is without leaders, it will be consumed by vulgar conquerors. Twenty times already the world has presented that spectacle, and Europe is preparing to present it once more. Ideas devour epochs as men are devoured by their passions."

Is not all this which Balzac foresaw 100 years ago happening in our time? The weak Czar of Russia and his obstinate wife, their lovely daughters and little son were bayonetted and shot in a cellar; the Kings of Spain and Italy, Bulgaria, Albania, Portugal, Roumania, Yugoslavia, and the Emperors of Germany and Austria have lived or died in exile.

RELIGION IS DESTROYED

Religion behind the iron curtain has been practically destroyed, and the imprisonment of the Hungarian cardinal shows what religion has to expect from the satellite states of the Soviet. As for the great whose doom Balzac forecast, there are no great today. Envious, smearing publicity destroys everyone whose head appears above the mass.

In our country, as yet, the menace of communism is not feared enough. As yet there is no open revolt, but communism is advancing in many disguises. How soon will our Nation wake to find private business enterprise abolished? How soon will the American farmer, if not on a collective farm, be ruled in all his actions as he is ruled today in England? How soon will the American workers in the cities be told where and how they shall live and perform their daily tasks set by the State? How soon will the savings of the thrifty Americans be seized—savings they had hoped to enjoy in old age—and they become, as it were, mere inmates of a Nation-wide poorhouse.

Communism, which seeks to tear down everything, is born of the bitter envy stirring in the blood of the weak and unsuccessful. They seek to establish a "new order" in which all shall be slaves to the state and in which they themselves hope to be the fuehrers, the duces, the commissars or the leaders. Then they can lord it over those they formerly envied, because they will hold in their own hands not only all economic power but the power of torture and death.

In our own time, two of the vulgar conquerors foreseen by Balzac succeeded to a period of confusion in Germany and Italy.

After a brief period of vainglory and success, Hitler died with his mistress, in a double suicide, in a bombproof shelter in Berlin. And Mussolini, with his little mistress, was shot and hung up by the heels by the very populace who a few short months before had painted his name on every blank wall in Italy.

BLOOD BATH FOR POWER

In the pages of history, Communism seems always to follow war, but only in Russia has it managed to survive, and in Russia, communism has held its power only by the ruthless killing of two million intellectuals and white collar people.

In France, after the disastrous war of 1870, the Communists seized and held Paris for several months. Before their fall, they shot their so-called hostages, among them the archbishop of Paris, and sought, as troops entered Paris, to burn that beautiful city.

Still farther back, in the great French Revolution of 1793, the rich and the nobles were guillotined. In the ancient Church of Notre Dame a half-clad harlot was enthroned as the Goddess of Reason and the statue of the Virgin was thrown to the earth. Before that revolution many nobles, who had owned most of France, incurred the aversion of the people. There were good and bad nobles, but the good nobles did not organize to restrain the bad. And so, when the carts rolled up to the prisons to carry the nobles to the guillotine, the good were thrown in with the bad as food for the scaffold.

From this historical background let us examine one of President Truman's problems—a Fair Deal for capital.

With the rise of the great corporations 50 years ago no one foresaw the extent of their power or great size. Banker control was in some cases abused. There have been too many acts that can be criticized.

FACE ECONOMIC EXECUTION

Small-business men and small stockholders feared to fight banker rule as some of them now fear to fight Government rule. But all businessmen should remember that, if American industry, as a result of public resentment, is ever nationalized as in England, the good people of business will be dragged along to economic execution in the same way that the good nobles during the French Revolution were classed with the bad.

This problem which faces the President—how to assure a Fair Deal for capitalistic private enterprise—can never be resolved in the unreason of political partisanship. Communism is out to destroy private capitalism and substitute state capitalism. And communism's weapon for destroying private capitalism is destructive taxation.

The President, and the people's elected representatives in Congress, and every group that is asking something for itself, should remember that "the power to tax involves the power to destroy," and that many of the tax proposals pressed upon Congress, allegedly in the public interest, are designed to cripple and destroy the private enterprise system which has made America great and strong.

And we all should remember that courage is required, especially to fight evil disguised as good. It takes courage to fight entrenched power, whether the power of business monopoly or any other monopoly. On this subject of fear the far-seeing Woodrow Wilson wrote in his book, the New Freedom:

"Some of the biggest men in the United States in the field of commerce and manufacturing are afraid of somebody, are afraid of something. They know that there is a power somewhere so organized, so subtle, so watchful, so interlocked, so complete, so pervasive, that they had better not speak above their breath when they speak in condemnation of it."

In dealing with this problem of business monopolies, the President would do well to remember that the good large corporations are most useful in three particulars. First, in time of war their product can be easily turned from civilian to warlike production. Today, when wars can come overnight, when the world has become such a small one, this ability to convert to war production is a great benefit.

Secondly, it is only the great corporations that can spend the large sums necessary for research, for improvements, for the finding of new methods and new materials.

DEPENDENT ON CAPITAL

Thirdly, the great corporations can function in the field of foreign expansion. It is impossible for a government to drill for oil, for instance, in a foreign country. That would indeed lead to complications. It is only the great corporations with huge resources that can peacefully and legally invade the countries of the world. And that again should remind us that only the capital and the know-how of America can develop this one world so that the menace of starvation can be removed and the people of the world enjoy a decent standard of living. But foreign countries must offer and assure that capital will be treated fairly and not be taxed to death, before ou corporations and businessmen can afford to undertake this peaceful and beneficial invasion. There have been too many occasions when American capital, seeking to develop mines or oil or manufacturers in a foreign country, after the work has been once established, has been met by confiscatory taxes, if not outright expropriation.

Another great problem facing our President is that of our attitude in China. Unfortunately, our friend and ally Chiang Kai-shek has been thrown to the wolves of communism. He has been deserted by us in his moment of crisis. He is now threatened by trial by the Communists as a war criminal with all the implications contained in that threat.

DIFFICULTY IN CHINA

We have already lost face in the East. Already, by our conduct in China our hold on Korea is threatened. The least we can do is to threaten, even with the atomic bomb, the Communists of China if they should dare to harm our ally Chiang Kai-shek.

It is difficult to unify China. Many dialects and the lack of roads keep the people of scattered communities apart, but unification by the Russian-ruled Communists is now to be feared. It is a threat to the West, a danger that the almost untold millions of Chinese, disciplined and armed, might, like the armies of Genghis Khan, swarm into Europe and Germany—the point of high tide reached by the invading Mongols of centuries ago.

Those who refused to help Chiang Kai-shek when the helping could have been effective will have bitter thoughts as they sit by the fire in their old age.

I wish that I had time to discuss with you the burning problems of Germany, where I was your ambassador and gained, I believe, some knowledge of the problems we face there today. Enough heavy industry must be restored and given to the Germans to enable the population to live on their own resources. There, on the other hand, is the problem of keeping the Germans from regaining the power to wage another war of hate and conquest.

The President has a new Secretary of State, a good American, well versed in the intricacies of diplomacy and what remains of international law. May Lady Luck and Fortune, the twin goddesses of success, smile upon his administration.

I wish again to thank America's Future, Inc., for inviting me, and the American Broadcasting Co. for giving me this opportunity to address you. In England, the Government controls the radio. Its expense is paid by the tax on receiving sets and nothing goes on the air which is not approved by the Government of the day. It is fortunate that in this country the radio, the greatest power in our political and economic life, is in the hands of upright people and is free.

Waterway Improvements

EXTENSION OF REMARKS
OF
HON. THOMAS E. MARTIN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. MARTIN of Iowa. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the magazine Marine Progress for January 1949:

PANAMA VIEWPOINT

The current studies of the Panama Canal which are being made to determine which of the active plans will result in the best waterway has excited the interest of many engineers, ship operators, legislators, and military men. One plan calls for the construction of a sea-level canal, not necessarily along the same route as the present canal, and the other principal plan is for the elimination of Pedro Miguel locks, the creation of a terminal lake on the Pacific side, somewhat the same as Gatun Lake on the Atlantic side, and the rebuilding of the Miraflores locks into a three-flight structure capable of lowering and raising vessels 85 feet to the level of the lakes and the connecting channel.

Marine Progress has received a letter from Harry O. Cole, of Morgantown, W. Va., giving his views on this subject. Mr. Cole was the engineer in charge of construction of the Pacific side locks at Miraflores and Pedro Miguel. His letter follows:

"EDITOR, MARINE PROGRESS.

"DEAR SIR: I congratulate you for the splendid article entitled 'Isthmian Plan.' I consider your article one of the most accurate, fairest, and unbiased analyzations of this vital Canal problem of any short papers I have read in recent months.

"President Truman, in transmitting to the Congress on December 1, 1947, Governor Mehaffey's report recommending the conversion of the present lock canal to sea level, at an estimated cost of $2,483,000,000, has taken the problem of redesigning of the present Canal out of the realm of engineering speculation and placed it squarely before the American people.

"My first article, dated December 18, 1947, entitled 'What Should be Done to Improve the Panama Canal?' was necessarily based on my personal knowledge gained in the construction of the present Canal and a study of the reports of the marine hazards, accidents, and difficulties encountered by ships in transiting the Canal during the past 25 years. My second article, or sequel, dated January 26, 1948, was written after I had studied the symposium papers on the sea-level project as presented to the American Society of Civil Engineers at New York City in January 1948. Of course, the symposium papers, by those who were responsible for the preparation of the governor's sea-level report, utilized all of the 3 days' time allotted to the Panama Canal at the American Society of Civil Engineers annual meeting and allowed no time for preparation or presentation of rebuttal arguments by those in opposition.

"(NOTE.—The articles referred to above were written for publications other than Marine Progress.—Editor.)

"As a consequence, at least for a few months, the public had only one side of the argument. Thanks to the press, the American people are now rapidly being shown the fallacy of undertaking to convert the present Canal to sea level.

"Up to the time I delivered my commemoration address in honor of the late Col. Sydney B. Williamson before the Panama Canal Societies at Washington on May 8, 1948, I had examined only the official report of Governor Mehaffey of December 1, 1947.

"Since my first study of the symposium papers and comparing them with statements made in my articles of December 18, 1947, and January 26, 1948, I have had opportunities to make study of some of the essential parts of the official report of the governor. These studies of additional information have not only confirmed but also have materially strengthened my first views.

"I can quote to you, here and now, with even greater degree of conviction, that which I stated in the last paragraph of my May 8 address, 'I feel it my duty to warn you and the American people that, if this so-called sea-level-conversion project is undertaken, it may prove to be the practical destruction of the Panama Canal and disruption of the world's maritime shipping, for an indefinite period of time, to say nothing of the futile and wasteful expenditure of billions of dollars and the blot on the reputation of the American engineering profession that could never be erased'."

COSTS

"For all practical purposes, it may be said, up to now, the present lake-type canal has made during the past 30 years a net profit equal to the cost of building it. It is true that there is charged against the cost of building of the canal 3 percent interest, that would, when or if paid, just about wipe out that profit and leave us where we started. Shipping interests are now clamoring for a reduction in toll charges.

"To convert the canal to sea level Governor Mehaffey's engineer consultants estimate the cost to be $2,500,000,000, and 10 years to complete. I estimate the lake-type canal cost at $1,500,000,000 and 6 years to complete; $2,500,000,000 at 3 percent interest alone equals $75,000,000—$500,000,0 at 3 percent interest equals $15,000,000—showing an annual net saving in interest alone of $60,000,000.

"This 3 percent interest saving, per annum would pay for the proposed lake-type canal improvement in about 8 years' time.

"Will shipping stand additional toll charges, to pay not the debt but 3 percent interest on $2,500,000,000? If not who would pay? Answer: The American taxpayer, of course.

A-BOMB

"You have in your article in Marine Progress, very ably shown that the recent tests at Einewetok have indicated that improvements in the atom bomb are such that no canal structure can withstand the forces of its explosion * * * as a result, any calculations that entertain the idea that the Panama Canal can be built to withstand an atom-bomb attack are at variance with the known facts and this major premise of the sea-level advocates must be abandoned.

"That statement (with which the leading atomic authorities agree) removes from further consideration practically the sole justification for building a sea-level canal. It completely nullifies the arguments by the sea-level advocates that a sea-level canal cannot be destroyed * * * even after the explosion of an atomic bomb dropped directly into the canal, traffic could be restored within a few weeks' time, provided necessary personnel and equipment were available. Imagine a statement like that being made by engineers to the American people and to the Congress."

CANAL TYPE

"Furthermore, in their endeavor to make the sea-level plan appear to be the only alternative, they submit a monstrosity of a proposal to improve the lock canal, at an estimated cost of $2,308,000,000. In that figure they have apparently included over a billion dollars for security armor. Then, finally, admit in the report, it will still not be effective for security.

"Before closing may I briefly make one further observation: I have analyzed the design for the tidal lock control works as proposed in the so-called sea-level plan. Space here will permit only the briefest outline of one phase of this fantastic layout.

"Separated from and parallel to the huge tidal control lock, 200 feet wide by 1,500 feet long, the plan calls for the construction of an open sea lane for use of shipping during quiet stages of the tide. This sea lane is to be 750 feet wide and about 80 feet deep and is to be controlled and regulated during the rapid flow of high and low tides by a huge chain gate system. The chain gate is composed of six links, each link 84 feet wide at the bottom, 132 feet long and 72 (82 feet?) high and weighs about 1,000 tons, or a total of 6,000 tons of steel. This gate is to be operated as required by tidal conditions every day in the year on steel tracks, they show, 60 feet (should be 70) below mean tide, etc.

"Now please note: There has existed in this Pacific section of sea-level canal channel ever since it was placed in operation, a constant heavy drifting silt, requiring regular dredging in order to maintain proper depth of channel for shipping. Any dredging man familiar with this silt problem in this vicinity should know how difficult or impossible it would be to keep the above-mentioned gate tracks from becoming submerged and fouled up so that these huge gates would become inoperative and useless in a short period of time because the gates are to remain open during part of each day, leaving the tracks unprotected from silt deposit.

"HARRY D. COLE."

The Hall Survey Shows About 2 to 1 in Favor of Keeping the Taft-Hartley Act on the Books

EXTENSION OF REMARKS
OF

HON. EDWIN ARTHUR HALL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. EDWIN ARTHUR HALL. Mr. Speaker, of all the great questions now before the American people, the Taft-Hartley Act still occupies first importance.

The enemies of this measure, passed by the Eightieth Congress, have branded it with every vile name they can coin. They call it the slave law of the American worker. The organized propaganda, the attempts on the part of its opponents to discredit Taft-Hartley have succeeded in drowning out most of the public praise which it has received.

Because this legislation has met with such loud lambasting from those on whose toes it stepped, I was anxious to find out, more than any other subject, just how the folks back home feel about this so-called slave bill.

While there are probably as many nonunion workers as union members in the three up-State New York Counties I represent, I would certainly not call our section antilabor. There are thousands of A. F. of L., CIO., and Railroad Brotherhood people living there, who are patriotic Americans and who voice strong sentiments for organized labor. They are vigorous, militant, and determined to oppose any and all provisions that even suggest Taft-Hartley.

Considering this complexion of my own area, you can well imagine the curiosity which prompted me to ask point blank my very first question on the Hall survey, "Do you want me to vote for or against the Taft-Hartley Act?"

An unadulterated question such as this commands a direct answer and that is what I have been getting. I have received a marvelous response, moreover, to the entire poll. I am satisfied that it is accurate by the very hugeness of its size, and no one is going to push me around or kid me that I failed to carry out the wishes of the majority when I voted for Taft-Hartley.

As loud as have come the protests from the few who claim they have been injured by this law, I have yet to have anybody point to a single specific part of Taft-Hartley and show me where it has increased labor strife, hurt the rank and file of the workers, lowered standards of work, or caused working people generally to be laid off or have their wages cut.

There is no more representative group to contact for their opinions than the enrollment and registration list of voters of my district and that is what I did. I sent ballots to everybody, regardless of party. They all had the same chance to express themselves if they were voters. And if they were not voters, what good could their opinions do anyway?

You will see by the following figures how these folks I represent feel about Taft-Hartley and what they think of my vote, which was for it. You will also observe that, while percentages of answers to some questions I asked were not clear-cut as to a decisive preponderance one way or the other, there is absolutely no question on this one. The majority obviously want the Taft-Hartley Act kept on the books and the majority is about 2 to 1. If that is not a mandate, I do not know what is.

If the Hall survey proved nothing else to me, it pointed out that people are not always swayed by the shouts and alarms that a handful of out-of-town agitators have raised against your own Congressman and his attitude toward this matter.

The story of the Taft-Hartley Act and the general opinion of the Thirty-seventh Congressional District can be found in the percentages I am here submitting:

Do you want me to vote for or against the Taft-Hartley Act?

	For	Against
Triple Cities area	63.9	36.1
Rural	64.9	35.1
Broome	64.1	35.9
City, Norwich	45.9	54.1
Rural	67.2	32.8
Chenango	58.3	41.7
Cities, Oneida and Canastota	85.6	14.4
Rural	75.0	25.0
Madison	79.6	20.4
Over-all district	63.9	36.1

In submitting this poll on the Taft-Hartley question, I repeat, everybody had the same chance to express how everybody feels about it. It is not my fault if a few were too sophisticated or afraid to let me know.

I repeat, they stand to lose as much as I do by not giving me the benefit of their views.

I repeat, nobody is pressuring me into voting one way or the other on this vital subject.

Probably some will yell to high heaven that employers put the heat on me to vote to keep Taft-Hartley. My answer to that one is that most employers have shunned this poll. Mighty few have sent in their ballots.

The same goes for labor leaders. They do not seem to want anything to do with it either and it is O. K. by me.

Perhaps with both the employers and the labor leaders generally refraining, I will get an even more accurate picture from the rank and file. That is as it should be because the rank and file are the ones I depend on for votes anyway.

Frankly, I would not know how a lot of employers stand on this matter. Nor have I gone out of my way to ask them except through the survey. If the act has benefited their status as representatives of our free enterprise system, you could not prove it by me. They have just stayed mum on the subject and certainly have not tried to sell those who are working for them on the Taft-Hartley Act.

One notable exception would be the management of Oneida, Ltd., makers of Oneida Community Plate at Oneida, N. Y.

These people have spared no time, effort, or money in painting a true picture of the provisions of the Taft-Hartley bill to their employees. Full-page ads and frank public relations have been featured in Oneida, Ltd.'s campaign to present the facts about the Labor-Management Relations Act of 1947.

I have had little ostensible support from many larger employers since I have been in Congress, and that makes it all the more apparent that I never would vote for Taft-Hartley to curry favor with them. I have accepted them as everybody in America accepts them, believing they are far preferable to the commissar who might sometime take their place and really crack the whip over our working people, if free enterprise is weakened.

Certainly the labor leader has as much to fear as the worker when the commissar throws out the employer and ruins all industry just as he has behind the iron curtain.

Some have said to me, "Aren't you afraid of the attacks the left-wing out-of-town labor agitators will level at you if you dare to defend the stand you took on Taft-Hartley?"

My answer again: The Hall survey is good enough for me and it shows that I was right in my stand on five out of the six questions I asked.

The home folks backed me up on the bonus, on price controls, on oleomargarine, on the sales tax, and finally on Taft-Hartley.

All in all, I have been exonerated from far-flung newspaper attacks, from stooges who were given the public spotlight to challenge every position I took during the Eightieth Congress.

The people have spoken. They passed judgment on me personally last November in the face of these unprecedented, unbridled character defamers.

What is more important, they approved substantially nearly every public question I am fighting for and tell me they think as I do on them.

In view of Hall survey results, I see no reason why I should yield to the threats, the innuendos, the baiting of a few who have an ax to grind. I see no reason why I should surrender 1 inch of the ground I took, supported overwhelmingly by those who have time and again voted for me.

The condemnation is coming, as it always has, from the enemies of the people, from the same, irreconcilables who never have and never will back me up in any election back home even if I should survive till doomsday.

In concluding my observations, I am indebted to the excellent coverage and reporting given to the Hall survey by the daily newspapers in Binghamton.

St. Lawrence Seaway

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. BIEMILLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Sheboygan Press of February 9, 1949:

LET US ALL JOIN FOR THE SEAWAY

The Milwaukee Common Council, in adopting a resolution recommending the approval of the St. Lawrence waterway, sets the pace for other cities. Wisconsin, Minnesota, and Michigan are doomed to continue as landlocked regions until we get this waterway.

The resolution referred to was adopted on January 17 by the Milwaukee Common Council, and it is in line with the thought of practically all of the people of Wisconsin, at least those who believe in a deep waterway which will open the doors of commerce and provide for the day of ocean-bound vessels to carry the surplus of our markets to the world.

President Truman in his state of the Union message delivered on January 5, recommended that action be taken by the Congress to approve the St. Lawrence seaway and power project. This was the occasion of five recommendations that have been made by him. In his budget message President Truman included a $20,000,000 item allocated to the Corps of Engineers for St. Lawrence seaway development. In his budget message he said:

"I again urge the Congress to give early approval to the St. Lawrence waterway and power project. The navigational aspects of this project have recently assumed an increased importance as a result of the prospects for developing high-grade iron-ore deposits in Labrador. As our domestic deposits become depleted the proposed seaway will become an important link between our steel industry and this new potential source of ore. Furthermore, this dual-purpose project is needed as a source of low-cost power."

The opposition that existed heretofore on the part of Chicago, the railroads, and other interests has broken down and the recent announcement of George M. Humphrey, president of M. A. Hanna Co., was to the effect that his company had reversed its former opposition to the seaway project, which was illuminating news. Here he cited the decline of high-grade ore reserves in the Lake Superior district and the discovery of rich ore bodies in Labrador. Senators TAFT and BRICKER, of Ohio, were urged by him to give the subject a thorough review. In Mr. Hanna's statement he said:

"We now find that new facts have developed which entirely change the situation. Explorations in the last few years now definitely prove that large tonnages of high-grade iron ore exist in Quebec and Labrador which will be most beneficial for use in the steel plants of our Midwest if access is provided to them by direct cheap water transportation."

This newspaper has been committed to the deep waterway back for 25 years and we are especially pleased to announce the brighter prospects of ratification of a treaty between Canada and the United States which will make possible the building of the St. Lawrence waterway. There is another point to be made. Recently President Truman appointed Dean Acheson as Secretary of State, and Mr. Acheson is an avowed friend of the St. Lawrence Waterway and its early completion. We could quote at length from speeches he has made favorable to the landlocked regions bordering on the Great Lakes.

The resolution adopted by the Milwaukee common council or a similar one should be adopted by every common council in the state of Wisconsin; by every village and town board to the end that it will show a united front from a state that is vitally concerned with world markets. The resolution adopted in Milwaukee is so significant, so in line with the thought of the people of these regions that we reproduce it in its entirety:

"Whereas President Truman, in his State of the Union message and in his annual economic report to the Congress, strongly urged upon the Congress immediate development of the St. Lawrence seaway and power project, to alleviate power shortages and to furnish necessary expansion of our national transportation facilities; and

"Whereas the development of the St. Lawrence seaway project will extend the benefits of direct ocean transportation to the city of Milwaukee, the State of Wisconsin, and the entire Great Lakes area; will permit Milwaukee industries to import essential raw materials at low cost and, through the advantage of direct ocean service, to reach new foreign markets and to expand greatly the foreign trade of this area; and

"Whereas the development of the St. Lawrence River will provide vast quantities of low cost hydroelectric energy now running wastefully into the sea, and, in general, will enhance the economic prosperity, the industrial strength and the well-being of the entire Nation and our friendly neighbor, Canada; and

"Whereas the events of World War II demonstrated the absolute necessity of the St. Lawrence seaway for the national defense and the military security of this Nation by providing a safe interior location for national defense industries, for storage of strategic materials, and for construction of naval and merchant vessels—considerations which have been certified to the Congress by our most eminent military authorities; and

"Whereas the constant growth of population and industry necessitates intelligent utilization of all of our national resources and reasonable expansion of our national transportation plant; and our new international responsibilities require this Nation to rise above sectional considerations

and to develop its full potential strength in the interest of national security and world peace, which national objectives can be appreciably enhanced by the added industrial and military potential of the St. Lawrence seaway project: Now, therefore, be it

"*Resolved by the Common Council of the City of Milwaukee,* That we hereby reaffirm the unalterable belief of the city of Milwaukee and its citizens in the merits of this great project which holds such vast potentialities for the future welfare, prosperity, and security of this Nation and the entire world; and be it further

"*Resolved,* That we urge his honor, the mayor and the Board of Harbor Commissioners to continue the official effort of the city of Milwaukee to bring this great project to realization; that we urge all civic groups, labor organizations, and industrial enterprises to lend their full support to this great cause; and that we urge all Senators and Representatives from Wisconsin to exert their best efforts in the Congress to assure authorization of the seaway project at the earliest possible date; and be it further

"*Resolved,* That copies of this resolution be transmitted to the President of the United States and the Governor of the State of Wisconsin, and to Senators and Representatives in Congress from the State of Wisconsin."

The railroads have commenced to realize that they too will profit by opening the harbors on the Great Lakes to ocean-going steamers. They realize that what is stored in elevators will be moved to the markets of the world and in turn we will be able to absorb the things that we do not produce which are vital to our economy. The engineering portion of this seaway is already in process and with Congress approving we could build the seaway within a couple of years. This will bring a new day and increase not only navigation on the Great Lakes, but boost railway transportation from the point of shipment to the waterfronts.

The Public Welfare Act of 1949

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. FORAND. Mr. Speaker, I have today introduced the Public Welfare Act of 1949, which is like similar bills I introduced in the Seventy-ninth and Eightieth Congresses. Under leave already granted me, I want to briefly explain the provisions of the bill and my reasons for sponsoring it. I am also including the text of the bill at the end of my remarks.

This bill provides the means to reach the welfare objectives outlined again and again by President Truman in his messages to Congress and most specifically in his message of May 24, 1948, on social security submitted in vain to the Eightieth Congress. This bill provides the means to carry out the clear mandate of the electorate on the Congress to make freedom from want a reality for all our people. This bill, moreover, incorporates the thinking of those who administer these functions at all levels of government and in all sections of the country, developed through their own organization, the American Public Welfare Association, as to how these objectives may best be achieved within the total social-security framework and within the American tradition.

It is not in our American tradition for people to want to seek out public aid. But it is very much in the American tradition for our people, normally self-reliant and self-supporting, to want to know that such aid is available when economic calamity, personal or social, strikes and that it is available on a decent, dignified, and adequate basis regardless of where they live, how they normally make a living, their age and family situation, their color, race or religion, or, in fact, any consideration other than the compelling fact of need itself. This is the purpose of my bill.

The contributory social insurances, dealt with in other measures, are properly the cornerstone of our social-security system. A worker can rightly take pride that he is insured against his retirement, unemployment, or premature death by reason of his own and his employer's contributions into a fund for this purpose. We urgently need to take action at once to extend this system to all working people, bring its benefit level into a reasonable relationship with the price level, and extend protection against loss of earnings due to disability and illness. I am sure the Ways and Means Committee and this Congress will wish to move quickly to fulfill the promises which have been made to the American people in this regard and to answer their hopes, too long deferred, for a real social insurance system.

But even when this is accomplished security from want will not be achieved for all people in all circumstances. A social-insurance system operates on an impersonal basis which cannot, by its very nature, provide benefits adapted to all possible situations or all individual circumstances. Moreover, no matter how far we go in extending coverage and liberalizing conditions of qualification for benefits—and I hope we will go as far in this direction as the insurance principle permits—there will still be some people outside the system: those who have already retired without acquiring insurance rights, those too ill or handicapped to work, children not dependent on a wage earner and others. These people too are demanding, and rightfully so, a form of social security which is immediate, adequate, and adapted to their needs.

This is the job of assistance. Assistance is the ultimate guaranty, government's assurance to people that when all else fails: when insurance benefits are exhausted, inadequate, or unavailable; when work is impossible and savings gone; when veterans' benefits, and union health and welfare fund provisions, and company pensions, and help from church or philanthropic agencies, and all the other ways we seek to aid each other do not meet the need, the Government will stand behind its people to keep the still-remembered specter of want and privation from the door.

Under our American system the job of administering assistance, as well as the other welfare services covered by this bill and, in fact, all public services involving a high degree of individual judgment and adaptation to individual needs, are administered by the State and local governments. But it is proper that the Federal Government should use its resources and its rightful concern with the well-being of all the people in the Nation to assist the States in this task and to extend the leadership of a Nation-wide program. We are one Nation, one economy, and one people. We must find, through measures like this one, the means to meet the needs of all our people without loss of the values of our Federal-State system.

Up to this time we have approached the problem of need on a piecemeal basis. We have provided social insurance only to persons in certain occupations and against only part of the basic economic hazards that beset them. We have extended Federal aid for assistance only to the aged, blind, and dependent children and that on a very limited basis which tends to put the least in Federal money in the areas where the need is greatest. We have provided Federal funds for child-welfare services only in rural areas and areas of special needs and that solely on a demonstration basis. It is time we recognized that need is indivisible. A man who is bed-ridden at 64 is no less needy than his able-bodied neighbor who has reached 65. A child who has been placed under the care of the welfare department by a court is no less in need than one who is still living with his own mother. The elderly woman who enters a public institution for the chronically ill is no less needy than she would have been had she been able to find a place in the all-too few private homes. The family which has fallen into destitution in a place where they lack legal residence is no less needy than the old resident. The people of the States in this country which lack large industries and other rich tax sources are no less needy than those whose accident of birth placed them in the higher-income States. It is the contention of this bill that the American people are entitled to be treated as Americans wherever they may live and that it is the right of Americans to have confidence that they will be free from the terror of hunger and the shame of degrading poverty.

Specifically this bill provides a system of comprehensive Federal aid to the States in meeting welfare needs, such aid to be proportionate to the relative fiscal capacity of the States. The welfare needs defined in the bill involve no new concepts but are simply those which are now within the area of responsibility of public-welfare agencies: cash assistance and those medical services not otherwise available to the needy, child-welfare services, and preventive-welfare services. In return for comprehensive Federal aid the States would be required in turn to take certain steps to assure a program which is available on an equitable basis to all those within their borders who need its services: the elimination of any residence, settlement, or citizenship eligibility requirements, such distribution of funds within the State as to assure equitable treatment to persons in similar circumstances, administration through a single agency at each level of government, no discrimination because of race, creed, or color, and certain other provisions to assure a fair and comprehensive program.

This bill recognizes that the need for assistance should decline as insurance

protection, full employment, health insurance and other programs for medical care serve to reduce dependency to a minimum. The role of public welfare should itself be increasingly preventive and most of its present difficulties spring from the fact that it is having to pay the price in staggering assistance loads for our failure to enact other measures to prevent dependency and give it the resources to stress this part of its function. Public welfare should be the means through which an increasingly complex and frequently impersonal government approaches the special needs of particular adults, families, and children on an individual basis. Assistance places a floor under need, and welfare services help to prevent need, assist people to meet their own problems, and extend protection and aid to children.

In presenting this bill I would like to stress the fact that I do not claim that each of its specific provisions is the only possible way of gaining these objectives. On the contrary I am hopeful that in hearings and in discussion generally these proposals will stimulate a full and free exploration of all the problems involved so that Congress may finally enact legislation which incorporates the best thinking on the subject from all sources. I am well aware, for example, that the problem of equalizing Federal aid among the States is a complex one and that the formula incorporated in this bill is not the only possible way, or even necessarily the best way, to achieve this objective. I am well aware likewise that it may not be practical to extend Federal aid without some limiting maximum provisions. These and other practical problems are questions to be worked out in committee in the light of the total range of social security amendments and the total fiscal picture. I have endeavored in this bill to spell out objectives and certain ways to reach those objectives. Specifically this bill proposes a new title XIV to the Social Security Act which would replace the present assistance and child welfare provisions with the following:

First. Federal financial aid would be available not only for the needy aged, blind, and dependent children as at present but for all needy persons.

Second. Welfare services for adults, families, and children could be included in the public welfare program, and child welfare services could include foster care, temporary institutional care, and services needed to supplement home care.

Third. Federal financial aid would be extended to the States on a basis ranging from 50 to 75 percent of total expenditures, depending on the relative per capita income of the States.

Fourth. Standards of assistance would be determined by the States on a basis of individual need and resources but in such a way as to assure equitable treatment to persons in similar circumstances throughout the State. Standards of assistance would be left to the States without maximum limitations specified in the Federal act.

Fifth. Needy persons requiring medical care would be able voluntarily to enter public medical institutions, other than those for tuberculosis or mental illness, without loss of assistance as at present if the institutions met standards established by the State.

Sixth. Welfare agencies would be authorized to make payment for medical and hospital services furnished assistance recipients directly to the individual or an institution furnishing such care rather exclusively through a cash payment to the recipient as at present.

Seventh. Residence requirements and required transfer of property to the State during the lifetime of the recipient would be prohibited.

Eighth. Administration through a single agency at each level of government would be required.

Ninth. This program is extended to Puerto Rico and the Virgin Islands.

The bill follows:

A bill to amend the Social Security Act to enable States to establish more adequate public-welfare programs, and for other purposes

Be it enacted, etc., That this act may be cited as the "Public Welfare Act of 1949."

SEC. 2. Effective July 1, 1949, the Social Security Act, as amended, is amended by adding at the end thereof the following new title:

"TITLE XIV—COMPREHENSIVE PUBLIC WELFARE PROGRAM

"PURPOSE

"SEC. 1401. (a) The Congress finds and declares that a public-welfare program is an essential part of the social-security system in promoting the security and welfare of the people of the United States.

"(b) The purpose of this title is to enable each State, as far as practicable under the conditions in such State, to develop a comprehensive public-welfare program of assistance and welfare services for families, adults, and children; to make assistance available to all needy individuals in the State whose resources are not sufficient to enable them to maintain a minimum standard of economic security, with due recognition given to the special needs of the aged, the blind, the children, and handicapped individuals; and to make welfare services available in order to promote personal well-being and a maximum degree of self-help.

"APPROPRIATION

"SEC. 1402. There is hereby authorized to be appropriated for the fiscal year ending June 30, 1950, and for each fiscal year thereafter, sums sufficient (a) for making payments to each State which has submitted a State public-welfare plan and had it approved by the Federal Security Agency, hereinafter referred to as the Agency; and (b) for expenditure directly by the Agency for the training of personnel for public welfare work and for demonstration projects in cooperation with State agencies administering approved public-welfare plans.

"DEFINITIONS

"SEC. 1403. As used in this title—

"(a) The term 'public welfare' means assistance and, where the State plan so provides, welfare services.

"(b) The term 'assistance' means—

"(1) money payments to needy individuals who have attained the age of 18 years and are not living in a public institution except as patients in a medical institution, and, with respect to needy individuals under the age of 18 years, money payments to parents, or to relatives or other individuals assuming responsibility for parental care and support of such children, who maintain a family home for them: *Provided*, That such needy individuals are not patients in an institution for tuberculosis or mental diseases, or in any medical institution following diagnosis of tuberculosis or psychosis; and

"(2) where the State plan so provides and where not otherwise available, medical services for needy individuals, provided through payments to persons, agencies, or institutions furnishing or procuring such services, but does not include medical services for individuals living in a public institution except as patients in a medical institution, or for patients in an institution for tuberculosis or mental diseases, or in a medical institution following a diagnosis of tuberculosis or pyschosis.

"(c) The term 'welfare services' means family- and adult-welfare services and child-welfare services, including (1), with respect to family- and adult-welfare services, social services designed to help families and individuals to become self-supporting, to meet individual or family social problems, and to make use of community resources and to contribute to community life; and (2) with respect to child-welfare services, social services designed to assure the welfare of children and to help them overcome problems resulting from parental neglect or other circumstances likely to result in dependency, neglect, or juvenile delinquency, and care necessary to provide for children without parental care and supervision and children requiring temporary care outside their own homes, such care to be given in foster family homes, temporary homes, or other facilities needed to supplement home care.

"STATE PUBLIC WELFARE PLANS

"SEC. 1404. (a) A State public-welfare plan must—

"(1) provide for the establishment or designation of (A) a single State agency to administer or to supervise the administration of the plan, and (B) not more than one agency of a local subdivision of the State to administer the plan within such subdivision;

"(2) provide (A), with respect to assistance, that the plan shall be in effect in all political subdivisions of the State, and if administered by them, be mandatory on them, and (B) with respect to welfare services, for the progress development of a Statewide program as rapidly as trained personnel can be secured to administer it;

"(3) provide for financial participation by the State in all parts of the State plan, and for such distribution of funds for assistance and its administration as to assure equitable treatment of needy individuals in similar circumstances, wherever they may live in the State;

"(4) provide for the establishment and application throughout the State of standards necessary to the operation of the plan, including standards directed toward enabling each recipient to secure the essentials of living including necessary expense for seeking and maintaining employment through assistance and his other income and resources, which standards shall include provision that the State agency shall, in determining need, take into consideration any income and resources of an individual claiming assistance;

"(5) if assistance is administered by categories, provide for a reasonable basis for establishing such categories, such as age or blindness;

"(6) provide that all individuals wishing to make application for assistance shall have opportunity to do so, and that assistance shall be furnished promptly to all eligible individuals;

"(7) provide for granting an opportunity for a fair hearing before the State agency to any individual, whose claim for assistance or welfare services included in the State plan is denied or is not acted upon;

"(8) provide that the assistance and welfare services included in the State plan shall be available without discrimination because of race, creed, or color;

"(9) provide such methods of administration as are found by the agency to be necessary for the proper and efficient operation of the plan, including (A) methods relating to the establishment and maintenance of personal standards on a merit basis, except that the Agency shall exercise no authority with respect to the selection, tenure of office, and compensation of any individual employed in

accordance with such methods; and (B) a training program for the personnel necessary to the administration of the plan;

"(10) provide safeguards which restrict the use or disclosure of information concerning applicants and recipients to purposes directly connected with the administration of the plan;

"(11) provide, after July 1, 1953, if the plan includes assistance to individuals in private or public institutions, for the establishment or designation of a State authority or authorities which shall be responsible for establishing and maintaining standards for such types of institutions; and

"(12) provide that the State agency shall make such reports, in such form and containing such information, as the agency may from time to time require, and comply with such provisions as the agency may from time to time find necessary to assure the correctness and verification of such reports.

"(b) The Federal Security Administrator or head of the appropriate constituent unit or units of the Agency, duly authorized by him to do so, shall approve any public-welfare plan which fulfills the conditions specified in subsection (a), except that he shall not approve any plan which imposes as a condition of eligibility for assistance or welfare services (1) any citizenship or residence requirement, (2) any requirement that individuals must accept any other assistance or welfare services under the plan, or (3) any requirement that an applicant or recipient must, during his lifetime, transfer to the State title or control to any property which such individual may own: *Provided*, That the State may require that a lien or other notice of a claim enforceable only at death of the recipient or his surviving spouse may be filed against such property for purposes of recovering for assistance paid.

"PAYMENTS TO STATES

"SEC. 1405. (a) From the sums appropriated therefor, the Secretary of the Treasury shall pay to each State which has an approved public-welfare plan, for each period after June 30, 1949, an amount, which shall be used exclusively for carrying out the State plan, equal to the Federal percentage for such State, as determined in accordance with section 1406, of the total of the sums expended during such period under the State plan, not counting so much of such total expenditures by the State as are included in any other State plan aided by Federal funds.

"(b) The method of computing and paying such amounts shall be as follows:

"(1) The Agency shall, prior to the beginning of each period for which a payment is to be made to the State under subsection (a), estimate the amount to be paid to such State for such period under the provisions of subsection (a), such estimate to be based on (A) a report filed by the State containing its estimate of the total sum to be expended in such period in accordance with the provisions of such subsection, and stating the amount appropriated or made available by the State and its political subdivisions for such expenditures in such period, and if the sum or such amount and the estimated Federal grant to be paid the State under subsection (a) is less than the total sum of such estimated expenditures, the source from which the difference is expected to be derived, and (B) such other data as to such estimated expenditures and such other investigation as the Agency may find necessary.

"(2) The Agency shall then certify to the Secretary of the Treasury the amount so estimated by the Agency, (A) reduced or increased, as the case may be, by any sum by which it finds that its estimate for any prior period was greater or less than the amount which should have been paid to the State under subsection (a) for such period; and (B) reduced by a sum equivalent to the pro rata share to which the United States is equitably entitled, as determined by the Agency, of the net amount recovered during any prior period by the State or any political subdivision thereof under the State plan; except that such increases or reductions shall not be made to the extent that such sums have been applied to make the amount certified for any prior period greater or less than the amount estimated by the Agency for such prior period: *Provided*, That any part of the amount recovered from the estate of a deceased recipient which is not in excess of the amount expended by the State or any political subdivision thereof for the funeral expenses of the deceased shall not be considered as a basis for reduction under clause (B) of this paragraph.

"(3) The Secretary of the Treasury shall, prior to audit or settlement by the General Accounting Office, pay to the State, at the time or times fixed by the Agency, the amount so certified.

"(4) The period for which estimates and certifications are made under this section shall be a calendar quarter, except that, upon application by a State, the agency may extend the period for such State to not more than four calendar quarters.

"FEDERAL GRANT PERCENTAGES

"SEC. 1406. (a) The Federal percentage for any State shall not be less than 50 per centum and not more than 75 per centum. The Federal percentage for the District of Columbia, Alaska, and Hawaii, and for each State whose per capita income is greater than or equal to the per capita income of the continental United States, shall be 50 per centum. The Federal percentage for each State, whose per capita income is less than the per capita income of the continental United States, shall be 50 per centum plus one-half of the percentage by which the per capita income of the State is below the per capita income of the continental United States, except that such percentage for each such State shall not exceed 75 per centum and shall be rounded to the nearest whole per centum: *Provided*, That the Federal percentage for Puerto Rico and the Virgin Islands shall be 75 per centum.

"(b) The Federal percentage for each State shall be promulgated by the Agency between July 1 and August 31 of each even-numbered year, on the basis of the average per capita income of each State and of the continental United States for the three most recent consecutive years for which satisfactory data are available from the Department of Commerce. Such promulgation shall for purposes of this section be conclusive for each of the eight quarters in the period beginning July 1 next succeeding such promulgation: *Provided*, That the Agency shall promulgate such percentages as soon as possible after the enactment of this act, which promulgation shall be conclusive for the purposes of this section for each of the eight quarters in the period beginning July 1, 1949, and ending June 30, 1951.

"OPERATION OF STATE PLANS

"SEC. 1407. In the case of any State public-welfare plan which has been approved by the Agency, if the Agency, after reasonable notice and opportunity for hearing to the State agency administering or supervising the administration of such plan, finds—

"(a) that the plan has been so changed as to impose any requirement prohibited by section 1404 (b), or that in the administration of the plan any such prohibited requirement is imposed, with the knowledge of such State agency, in a substantial number of cases; or

"(b) that in the administration of the plan there is a failure to comply substantially with any provision required by section 1404 (a) to be included in the plan;

the Agency shall notify such State agency that further payments will not be made to the State under such plan or, in its discretion, that further payments will not be made to the State for activities in which there is such failure, until the Agency is satisfied that such prohibited requirement is no longer imposed or that there is no longer any such failure to comply. Until it is so satisfied, it shall make no further certification to the Secretary of the Treasury with respect to such State, or shall limit payment to activities in which there is no such failure."

SEC. 3. Section 1101 (a) (1) of the Social Security Act is amended to read as follows:

"(1) The term 'State' includes Alaska, Hawaii, and the District of Columbia, and when used in titles V and XIV of such act, includes Puerto Rico and the Virgin Islands."

SEC. 4. No payment shall be made to a State under titles I, IV, or X of the Social Security Act for any period for which funds are made available to such State under title XIV of such act and for any period thereafter, or under part 3 of title V of such act, for any period for which funds for child-welfare services are made available to such State under title XIV of such act; and in any event, for any period after June 30, 1951.

SEC. 5. In the case of a State which has a plan approved under title XIV of the Social Security Act, adjustments, which have not previously been made with respect to overpayments or underpayments under titles I, IV, or X, or under part 3 of title V of such act, shall be made in connection with payments to such State under title XIV of such act.

Education in the Atomic Age

EXTENSION OF REMARKS
OF
HON. ANDREW J. BIEMILLER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. BIEMILLER. Mr. Speaker, there is a statement in the education program adopted at the last convention of the American Federation of Labor in Cincinnati, Ohio, in November 1948, which expresses succinctly the heart and core of the UNESCO philosophy of international relations upon which the hope of the world for permanent peace and international friendship must be based. I request, therefore, that this significant statement, which represents the thinking of so large a section of the population of the United States, be made part of the CONGRESSIONAL RECORD:

EDUCATION IN THE ATOMIC AGE

The American Federation of Labor recognizes as never before that education is the keystone which must support the structure of a new and better world. It is an American principle that men are born free and equal and with certain inalienable rights. Men are not born apostles of freedom; apostles of communism; apostles of totalitarianism or apostles of conquest in war. Only through education and environment are men guided into these several ways of thinking.

Education today is faced with its greatest challenge. If world peace through international friendship is ever to be attained, there must be a reorientation of our educational system in terms of teaching human values. The great wars among the nations, which have now gained such proportions as to threaten the very existence of mankind on the earth, have resulted directly or indirectly from struggles for industrial wealth or political power. Today man's commercial prowess and his scientific knowledge have so outstripped his sense of human values that, ironically, the greatest era of civilization in the history of mankind stands on the verge of medieval barbarism. The

development of atomic power, the greatest scientific discovery of the ages, threatens to hurl mankind back to the stone age—if not to utter destruction.

The only power which is still greater than the atomic power, the only power which can stem the tide toward suicide of the human race, is educating men throughout the world in the spirit of brotherly love which, if undefiled by perverse education, is a natural characteristic of men of all nations. A great prophet once said, "Now abideth faith, hope, and brotherly love but the greatest of these is brotherly love." If the world is to survive the dangers of the scientific creations of mankind, this must be the goal of education in the atomic age. If peace on earth is ever to be attained, men must be taught to send ships to sea, to build great factories, and to enter into commercial projects not merely to build fortunes in gold, but to create happier lives for their employees. This is the challenge to education today. The American Federation of Labor, in the future, as in the past, must devote itself with unfailing zeal to meeting that profound challenge.

Thaddeus Kosciusko

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. CHESNEY. Mr. Speaker, on February 12, 1949, I delivered a commemoration address at the Gen. Thaddeus Kosciusko Monument in Lafayette Park, Washington, D. C.

Under leave to extend my remarks, I include it in the RECORD, as follows:

Long ago when our Nation was struggling for her independence there came to our shores a vigorous young Polish officer named Thaddeus Kosciusko, who, in every sense as a man represented Poland's immortal struggle for justice. Humbly he volunteered his sword to the United States in the cause of freedom.

The records of our American history immortalize the triumphs which this gallant general so brilliantly gained in those early days of our fight for American freedom. He indeed served this Nation gloriously, and did so because be believed that the cause of independence was just and right.

In the service of his mother country, Poland, he led its armies to many victories. Wars to him were sacred crusades to free the Polish nation from the shackles of the oppressors. Even in defeat his indomitable spirit renewed courage in moments of despair.

The general, in his last-known message to his armies in Warsaw, said:

"Freedom, that gift beyond estimate for man on earth, is given by God only to those nations which by their perseverance, courage, and constancy in all untoward events, are worthy of its possession. This truth is taught us by free nations which after long struggle full of labors, after protracted sufferings manfully borne, now enjoy the happy fruits of their courage and perseverance."

And he further stated:

"I conjure you not to grow cold, not to slacken in your ardor and in your constancy."

How truly can we see the words of this great patriot reflected in the constant struggle of the Polish people throughout the many years of wars, partitions, and human suffering. Never in their history is it recorded that they have grown cold or slackened in their ardor to fight in the cause of freedom. And, with the passing of time, many enemies of Poland have found out that their resistance to the undemocratic philosophies has been fought with undying nationalistic fervor. Oppressors may liquidate political organizations, but they never will win the hearts and souls of the Polish people.

Poland today is in the grip of a political philosophy unlike any experienced in the history of our world. Locked behind the iron curtain, the Communist-controlled regime has imposed an economy of collectivism and Marxist teachings with no concept of providing autonomy, self-determination, and democracy. It has made elections in Poland a travesty. It has exploited the Polish workers for the economic development of Russia, not for the betterment of their own country. It has made government in Poland Russian, and not Polish.

Poland's internal catastrophe parallels an incident in early Polish history, when Kosciusko began the Act of Rising with these words: "The present condition of unhappy Poland is known to the world." How similar is this cry of anguish in our modern day. The tragedy of Poland is the tragedy of the world. Poland of today is an ocean of human misery, floundering in a system of totalitarianism. Poland is a living monument to the loss of man's most sacred possession—freedom.

On this day of commemoration of the great hero of Poland, Thaddeus Kosciusko, it is a consolation that the freedom-loving people of the world have not cast aside the plight of the Polish nation. Men and women who know the tribulations of modern wars also know that there is a hidden strength and energy in the long, doubtful, dark days which suddenly uncover themselves into a bright new day. Let us remember that this hero who so generously came to the aid of our own great country in time of stress will always be a symbol of a courageous and brave Polish nation.

When all the world yearns for peace as never before, the time has come for us to reaffirm our determination to maintain peace for the preservation of freedom and the growth of the human values of our civilization.

Address of Hon. Hugh D. Scott, Jr., of Pennsylvania

EXTENSION OF REMARKS
OF
HON. JOHN M. VORYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. VORYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. HUGH D. SCOTT, JR., of Pennsylvania, chairman, Republican National Committee, before the Buckeye Republican Club, Columbus, Ohio, Thursday, February 10, 1949:

As we gather here tonight in this Capital of a traditionally Republican State it is well for us to ponder the sage advice given by the founder of our party. It was our first Republican President, Abraham Lincoln, whose memory we honor at this season of the year and whose advice we should seek every day of the year, who said: "We must think anew and act anew."

Throughout the history of our party so long as we have remained true to the principles of freedom, of justice, of progress enunciated and expounded by Lincoln, we have been almost uniformly successful and the Nation has grown and prospered under Republican administrations. This is no time to forget those principles. More than ever before, the Nation and the world need a vigorous and forthright presentation and demonstration of Republican principles. That we must provide. Our party demands it; our Nation needs it. Let me say it plainly: for the causes in which we believe, we are going to fight all the way.

In the interval since our unexpected defeat at the polls last November certain long-existing tensions within our party increased until finally the breaking point was reached. It may be unfortunate that there were such tensions but, recognizing the obvious fact of their existence, I am convinced that it was a good thing for the party that the inevitable eruption occurred and that it happened at this particular time. Now, I believe, we have closed ranks again and are in a position to present an undivided front to our common adversary. I am proceeding on that belief.

I am convinced, absolutely, that the Republican Party has been saved for the people and now we will take it to the people—to all the people, because it belongs to all the people.

We are now going into the third round of a no-limit fight to the finish. It is a bare-knuckle fight because the opposition has so decreed and we accept the challenge. On that point, as a matter of fact, we have no choice.

We won the first round in this fight in 1946 when we elected a Republican Congress. That Congress, incidentally, was one of the best Congresses in the entire history of the United States. It kept every major promise which its Members made to the people during the 1946 campaign—tax reduction, curtailment of Government costs, the enactment of a just and reasonable labor-relations law, a start toward the delousing of our vast and Communist-contaminated Federal bureaucracy, legislation to increase benefits for veterans, and many others. It accomplished those results despite the unrelenting, die-hard opposition of the Trumar administration, which chose to ignore and repudiate Mr. Truman's personal and public promise in November 1946 to cooperate with the Eightieth Congress in its plans to translate its campaign promises into actualities.

We won the first round, but we lost the second, when our candidates for President and Vice President were defeated in November 1948, and our majorities in the Senate and House were wiped out.

The third round is coming up. We are fighting it now and we will keep on slugging until the bell rings in November 1950. Winning the third round in 1950 is essential to set the stage for a knock-out victory in 1952, when we can install a Republican President in the White House. But remember that our chances to score a knock-out in 1952 will be very slim unless we win in 1950. Let us not—and personally, I assure you that I will not—be diverted from our primary objective in 1950 by any premature or ill-advised maneuverings looking toward 1952.

I said a moment ago that we are now fighting the third round. Let me tell you a few of the things which the national committee has done within the past few weeks.

It has approved the appointment of a policy committee to be composed of representatives of the national committee itself, of representatives of our Republican Members of the Senate and House, and of Republican State chairmen and State finance chairmen. This committee will be called into session just as soon as the selection of its personnel can be completed. The national committee representatives have been appointed already, but the selection of the other members will require a little time. By the action of the national committee, I was made chairman, ex officio, of the policy com-

mittee and I can assure you that so far as I am concerned, no time will be lost in putting the committee to work. In addition to its authorization to study and make recommendations on party policy, this committee has power to convene a national party policy conference at a later date, to select the time and place for that conference and to prescribe the qualifications for participation. I have said heretofore that I favor the convening of such a conference; I hope that the policy committee, which must decide the matter, will come to the same conclusion.

The national committee has also taken steps to bring about increased coordination of effort between national headquarters and State and local organizations through the use of field representatives of the national committee and by frequent interchanges of information and regional conferences. I believe this procedure will do much to increase the effectiveness of the intensified and expanded campaign which we will inaugurate soon to carry the message of the Republican party to the people through every conceivable channel of publicity.

In addition, right now, a subcommittee of the national committee is studying methods for improving cooperation between national headquarters and the Republican leadership in Congress. Such cooperation and coordination of effort is, in my opinion, essential to party welfare and success. I shall do everything within my power to make it a reality.

As a means for enlisting and utilizing the energies and talents of all members of the national committee I have appointed 10 subcommittees to study and make recommendations with respect to such national problems as those which confront us in the fields of agriculture, labor, civil rights, conservation of natural resources, veterans, industry and other fields.

These are some of the things which have been accomplished within the past few weeks. There will be many more. We Republicans are bound to convince the people that we are acting for their benefit. They want action. It is up to us to give it to them.

We must recognize the disagreeable fact that we now have an administration in Washington which has proved by its record that it is incapable of being honest with the American people. Its reckless profusion of unfulfillable promises during the 1948 campaign was one illustration of that characteristic. Most of the proposals which Mr. Truman embodied in his recent state of the Union message—in accordance with his 1948 campaign promises—were identical with recommendations which he made to the Seventy-ninth Congress as long ago as September 1945. Remember he had substantial Democrat majorities in both the Senate and House in the Seventy-ninth Congress and that Congress enthusiastically ignored about 95 percent of his recommendations. So did the Republican Eightieth Congress—for the very good reason that most of the recommendations didn't make sense, or worse. Thus Mr. Truman has an unblemished record of being unable to get along with a Congress of either party. Everybody is out of step but him.

But let us take one specific and current illustration of the administration's incurable addiction to double-dealing with the people. You will recall that one of the most vociferous and oft-repeated promises made by Mr. Truman during the 1948 campaign was that if he were elected the Taft-Hartley Act would be repealed. He said repealed, not amended or modified, but repealed. Mr. Truman's promise was repeated and emphasized by Senator McGRATH, of Rhode Island, the chairman of the Democratic National Committee, and other presumably responsible spokesmen of the Democratic Party. That was during the campaign.

But within less than a week after the election Vice President BARKLEY and other Democratic spokesmen were talking about amending the Taft-Hartley law and finally the administration came forward with its face-saving attempt to deceive the people as illustrated by the bill now before the Senate Labor Committee. While we are on this subject I want to venture the prediction that the ultimate result will be the repeal of the name of the law and the retention of the greater part of its substance. The Taft-Hartley law contains too many guaranties of the essential rights of working men and women for any Congress to dare to vote for its outright repeal.

Loss of Senator ROBERT A. TAFT in 1950 is an inconceivable thing which must not happen. It would be a tragedy to the Nation. We will work together to prevent it.

The hearings now in progress before the Senate Labor Committee have served to reveal and high light the administration's standard procedure of trying to kid the people—trying to deceive them, to put it bluntly.

One of the provisions of the Taft-Hartley Act authorizes the President to resort to injunctions to halt strikes which imperil or threaten to imperil the national health and welfare. During the less than 2 years since the law was enacted over his hysterical veto—with the aid of a majority of Democratic Members of the Senate and House—Mr. Truman has utilized that provision of the act about half a dozen times. He utilized that power—and specified that he was so doing—to halt strikes in mining, shipping, and other industries.

Now, speaking through the complaisant sophistries of Attorney General Clark, head of the Department of Justice, Limited, or Department of Judicial Miscarriage, Mr. Truman tells the Senate Committee that he does not need this provision of the Taft-Hartley Act. He says he has the inherent authority to seek such injunctions without any specific authorization by law. Inherent authority is akin to the divine right of kings and Harry Truman would look odd indeed wearing that type of crown.

Let us see how that contention stands up. If Mr. Truman has such inherent authority today he certainly had at least the same authority back in 1946, when many of the extraordinary wartime powers of the Presidency were still in effect. But on May 25, 1946, when confronted with a Nation-wide railroad strike, Mr. Truman personally went before a joint session of Congress and asked for emergency and temporary authority to draft into the armed forces the railroad workers of the Nation. Fortunately he was stopped in his headlong folly by Senator TAFT. Why didn't he offer to use his inherent authority then? The answer is that he didn't have it then and he doesn't have it now. It is a myth created in an attempt to legitimatize a proposed pay-off for votes.

Moreover, you will recall, I am sure, that back in 1945 and 1946 there was a serious epidemic of strikes in basic industries which retarded change-over to a peacetime economy, aggravated shortages in many commodities, and really started the spiral of inflation which continues to plague the Nation today. That was before the Taft-Hartley law was enacted. Where was Mr. Truman's "inherent" authority, and why didn't he use it? You know the answer as well as I do. I repeat, he didn't have such authority, and he does not have it today except as provided in the Taft-Hartley Act.

Is simple honesty too much to expect from the Truman misdeal? Is equal and fair treatment of all the people too much to expect from these Washington merrymakers?

We think it is. Let us go to the people, then, with reasonable, moderate, and understandable alternatives to misdeal, with a program which has nothing whatever in it of "me-too-ism." We have 22 months to prepare for the end of privilege on the Potomac.

It's not a private fight. It's yours; it's mine; it's John and Mary Doe's; it's a public duty and a civic challenge. Let us get on with the people's business. They will support us, as they come to realize it's their fight too. Let's put the American house in order, that we may live as brothers, in peace, in tolerance, and in prosperity.

Mr. Lincoln would want it that way. Remember what he said? "Have faith that right makes might, and in that faith let us to the end dare to do our duty as we understand it."

Italy Climbs to Place Among the Victors

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Anne O'Hare McCormick from today's New York Times:

ITALY CLIMBS TO PLACE AMONG THE VICTORS

(By Anne O'Hare McCormick)

ROME, February 13.—Italy's postwar successes in the field of foreign policy almost justify the statement that she has regained by diplomacy what she lost in battle. This statement is subject to many obvious qualifications, but it is substantiated by a comparison of the Italian position today and the below-zero status at the end of the war. Italy is hamstrung and shorn of power and possessions by the terms of the peace treaty. Because of Soviet opposition, she is not accepted as a member of the United Nations. Nevertheless this defeated country has taken its place among the victors and become a recognized and valued factor in the reorganization of Europe.

Tomorrow Foreign Minister Count Carlo Sforza goes to Paris to attend the meeting of the Organization for European Economic Cooperation. Yesterday Palmiro Togliatti departed for Prague to take part with other Communist leaders in a secret session of the Cominform. These meetings bring together at the same time the representatives of two Europes—the beneficiaries and opponents of the Marshall plan. They illustrate, moreover, the influential role Italy plays in both camps—through its Government on the one side and its large Communist Party on the other. Both Europes are bidding for its favor, and this rivalry underlines the importance of this country and explains in part why the views of its Government are sought and listened to in international councils.

But this is only a partial explanation of Italy's diplomatic come-back. Harold Nicholson once remarked that Italian victories were always won by diplomacy and not by force—a fact the Fascists forgot when they tried to attain their ends by military means. The present Government has neither illusion on that nor the arms that made Mussolini's illusions dangerous. Aided by events, of course, De Gasperi and Sforza have played a poor hand with a quiet skill that has won Italy a place in the big game.

PLACE ON THE GROUND FLOOR

Sforza's trip to Paris illustrates this point. In conversation a couple of days ago on the objectives and limitations of Italian policy the Foreign Minister pointed out that the OEEC is the body that must take over the functions of ERP when Marshall aid stops in 1952. By that time a pattern of cooperation will be established that must be carried

on. To that end, in his opinion, it is essential to reorganize the OEEC now and make it ready for its future task. Count Sforza believes that the economic cooperation forced on the states of western Europe by the Marshall plan is far more important in the long run than temporary financial aid. Like most statesmen working for European union, he wishes the United States would use its unique influence to push its clients toward greater cooperation.

But uppermost in Italy's mind is to be in on the ground floor of this reorganization to insure that this country will be fully incorporated into the new structure of western Europe. The nation was isolated by Mussolini's policy of autarchia and cut off from its natural allies by the Fascist partnership with Germany. Step by step since the war the Government has pursued a policy of making friends of war enemies, difficult in circumstances because of strong anti-Italian feeling, and also because in her ruin and weakness Italy had little to offer as inducement to friendly relations.

That this policy has succeeded is more than a minor triumph of diplomacy. Except for Yugoslavia, Italy is on better terms with her neighbors than she has been for 20 years. Her progress toward recovery against enormous handicaps is so conspicuous that representatives of other governments come here to study her methods. The Italians have seized every chance to maintain official observers at the United Nations sessions and take part in international meetings because they are determined to help shape world policy.

ATMOSPHERE CLEARS

In their own interests they desire to maintain Marshall plan cooperation. This is why Count Sforza goes to Paris. He will not serve permanently on the directorate of the body that will succeed ECA, but he wants to do everything in his power to make sure ECA has a successor and that the transition will be made smoothly and without question.

The plan for economic union with France is another illustration of the Italian method. When the war ended, French sentiment was so bitter against Italy that the chance of political rapprochement was practically nil. In the eyes of Italian diplomats the only hope of resuming speaking terms with France was to start discussions on economic questions. Beginning with technical details of export and import duties, they introduced proposals for a customs union, and as the representatives of the two Governments explored possibilities along this line they began to talk seriously of the prospect of economic union. Agreement on this has been reached, but announcement is withheld pending settlement of the status of Italian workers in France. A great many of the 200,000 now employed desire to return to Italy, mostly because their families cannot join them, and the snag in currency exchange—the greatest single obstacle to normal life in Europe—makes it difficult to send their earnings home.

By using her wits in foreign policy Italy is working her way back in the international field as successfully as she is employing her energies and the industry of her people in domestic reconstruction.

Address by Hon. James A. Farley

EXTENSION OF REMARKS

OF

HON. SOL BLOOM

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 9, 1949

Mr. BLOOM. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert the following address made by the Honorable James A. Farley, before the Inter-American meeting sponsored by the International Trade-Mark Committee of the United States Trade-Mark Association held in New York City on February 2, 1949:

AMERICAN ECONOMIC OUTLOOK IN SOUTH AMERICA

In addressing this gathering of experienced foreign-trade specialists and trade-mark and patent experts, I would not presume to deal with the intricate problems which are their chosen field. Since this luncheon is given in honor of Dr. Clovis Rodrigues, the Director General of the Brazilian National Department of Industrial Property, I might only express some homespun observations on the great country from which he comes, and my personal thoughts on the development of relations between our two peoples.

I had the privilege of visiting Brazil twice within recent years, and have also been able to see the practical workings of business relations between our two countries through my experience with my company in the last 8 years.

Brazil is certainly a unique country, in many respects, among our sister American republics. We all know that it is the second largest nation in the Western Hemisphere and the most populous Latin country in the world. Brazil's area is second only to that of Canada in the Western Hemisphere, 3 times the size of Argentina and 65 times the size of England. Its population, constantly growing, is now 48,000,000 people, most of whom live along the sea coast. Were the entire Republic as thickly populated as the city of Rio de Janeiro, the total population of Brazil would exceed 400,000,000.

Perhaps there is no country on the American Continent, outside Canada, the people of which are so traditionally and consistently friendly to the American people as the people of Brazil. This friendship and confidence are so fundamental and thoroughgoing that, if Brazil were geographically adjacent to the United States, we would have had an unguarded frontier with it, as we have with Canada. This factor of friendship, sympathy, and confidence between our two peoples must never be forgotten when considering the development of our mutual business relations.

During the recent war, the Brazilian Government and people stood by the United States from the beginning to the end. Their resources were placed fully and freely at our disposal. The Brazilian people have been in all respects a gallant partner during the war. And, when the end came and the world embarked upon the task of binding up its wounds and securing peace, Brazil has again, and always has been, an eager and sturdy friend and coworker for peace.

Indeed, this spirit of trust, confidence, and cooperation with Brazil, as well as with the other American republics, so happily inspiring the relations of all peoples in the Western Hemisphere, has been the most hopeful factor of unity and harmony in an otherwise disgruntled and unpeaceful world.

For us tradesmen the fundamental force that can knit together the peoples of the world in general, and the American and Brazilian peoples in particular, is the establishment and development of intimate and mutually satisfactory trade relationships. In that respect, the picture of our relationship with Brazil is an especially bright one.

We are customers of Brazil for many of its most important products, particularly coffee, cocoa, hides and skins, iron ore and manganese, and other minerals. And the Brazilian people are customers of ours for all branches of our industry. Our trade, therefore, is on a two-way basis. In recent years Brazil has had a large unfavorable balance in its trade with the United States, due to long-accumulated needs, but this trend is, in the last few months, being corrected with an increase of exports to this country.

With the assurance of a continuing and resolute foreign policy of the United States and in view of the program announced by the President of the United States of making available our scientific and technical knowledge and our capital resources to economically undeveloped countries, I look forward to a great future of economic relations between our people and the people of Brazil.

Great strides have been made in recent years to correct one of the pressing problems of Brazil, the improvement of health conditions. The Rockefeller Foundation and other institutions in the United States have been helping to organize efficient health services. This work must continue.

The second big problem of Brazil is transportation. The development of the interior of Brazil and of its great riches waits upon means of transportation. This will require large outlays of capital, and, as in this country, it will have to be undertaken by capital that will also have an interest in the development of the mineral and other resources of the land beyond the coast.

Brazil cannot exploit and develop its rich natural resources without foreign capital. It is my personal opinion that possibly no other country affords to American capital more promising vistas and possibilities than Brazil. My opinion is founded on the following observations.

First. The basic trust and friendship between our two peoples, which gives an unusual assurance to investments in Brazil.

Second. The essential democracy of the people and the government of Brazil. Indeed, this is a country of law and order and not of arbitrary administrative action. While the legal institutions and agencies of Brazil may be different from ours, Brazil has consciously followed our experience, as expressed in legislation, in many fields. It has, through the years, developed capable administrative agencies, and its administrators in key positions are men of character and integrity.

Third. The Brazilian people have shown a capacity for economic and industrial development. Cities such as Rio de Janeiro, São Paulo, Belém, Porto Alegre, and others, are thriving cities. Indeed, some of these, such as São Paulo, have grown industrially so fast that they present a spectacular phenomenon. The comparison made of São Paulo to Chicago is entirely true in many respects. There is no reason to doubt that the country is capable of speedy development. It is estimated, for instance, that about 900,000 square miles of Brazilian territory, a little less than one-third of the total, is potentially oil-producing. Of this area only 190,000 square miles have been commercially explored, and there are only 43 producing wells as yet. One-half of the area of Brazil is forest and from this, as yet scarcely tapped, treasurehouse comes a relatively small income up to now, particularly in pine lumber.

Fourth. The Brazilian regulations provide for the export of profits at an adequate rate and the repatriation of capital within a reasonable time. There is no reason to think that Brazil will disturb this position in the future. It is true that dollar exchange is not available at present in adequate quantities to effect payment in dollars without delays, but that problem will be solved when the vicious circle is broken. The dollars must come back to us in the shape of raw materials and other products of Brazil.

I wish to add two more observations concerning our trade with Brazil. We now occupy an enviable position in the trade of that country. This position we will maintain if we guard those standards which are ours, no matter what competition we may meet. Of first importance is the export and sale to Brazil of salable, quality goods. We

must not destroy the confidence and trust of our Brazilian customers by attempting to export and sell products of inferior quality and standard. Secondly, in our business relations with Brazilian customers we must always be guided by fair dealings and the highest requirements of trade ethics. This has been the foundation of our domestic trade and must always remain that of our foreign trade.

While I recognize that in these difficult times Government assistance is necessary behind the problems of international trade, I strongly believe that only free private enterprise is best calculated to release the greatest energy of persons and the highest possible development of world markets. As the United States developed its resources and grew great through the efforts of imaginative and industrious people, so the development of undeveloped areas of the world and of the great resources of Brazil requires primarily the joint efforts and partnership of American and Brazilian individual traders.

Lady From Ohio

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD an editorial which appeared in the Washington Post of February 13, 1949.

We are all proud that our colleague, Representative FRANCES BOLTON, of Ohio, has received this just recognition for her many valuable services to humanity. For hard work, expert knowledge, and first-hand experience, she has no peer. In the fields of domestic and foreign policy she is indeed outstanding—and outstanding in her own right.

LADY FROM OHIO

Proof that a woman legislator may have something special to contribute to Congress is afforded in the career of Representative FRANCES BOLTON, who last week received from the American Social Hygiene Society the Snow Memorial Medal for "distinguished service to humanity." Besides being an able Representative of her district for 8 years, Mrs. BOLTON has made an effective "women's contribution" to social legislation, particularly nursing education and public health. She brought to Congress an expert knowledge and first-hand experience in those fields, which, despite her wealth and social position, had not been gained merely as a lady bountiful on boards. For early in life she began to look into social problems first-hand. "I have been a teacher, a nurse, a waitress," she insists.

Carrying out this same method of on-the-spot study, Representative BOLTON, as a member of the House Foreign Affairs Committee, flew to battle fronts to observe the care of the wounded, and later went to critical postwar areas to look into conditions which she felt would come before Congress. Always forehanded in her health ideas, she saw the need of nurses before this country entered the war and pushed measures for nursing education. She worked for control of venereal disease when mention of it was socially taboo. Now one of the most industrious workers in Congress, often putting in a 14-hour day, Mrs. BOLTON most likely would have found it easier to be a philanthropist and patron of the arts. But her conviction that, as she has expressed it, "the more opportunity, the more responsibility" led her into a vigorous political and legislative career. In that, too, she is a symbol of how women who can afford the role of "great lady" are tending more and more to give of themselves as well as their substance.

Calumet-Sag Plan Vital for Chicago

EXTENSION OF REMARKS
OF
HON. CHESTER A. CHESNEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. CHESNEY. Mr. Speaker, the city of Chicago, the great metropolis of the Midwest, in its determination to build a greater Chicago has repeatedly presented to Congress the necessity of improving and widening the Calumet-Sag Channel, an artificial channel which traverses the industrial section of the Calumet area.

Some effort had been directed toward this project when in 1931 the Corps of Engineers made a study of the Calumet River, Little Calumet River, Lake Calumet, and the Sag Channel with a view toward providing a connection with and terminal transfer harbors for the waterway from Chicago to the Mississippi River. This study concluded that the Calumet route, following the Calumet-Sag Channel, Little Calumet and Calumet Rivers, should be developed as the principal connection between the Illinois waterway and Lake Michigan since this route avoided the congested urban area of Chicago and would serve the large industrial region south and east of the city.

The Rivers and Harbors Act, approved July 24, 1946, authorized the construction of the Calumet-Sag navigation project, which project is designed to provide an adequate barge navigation channel between the Illinois waterway and Lake Michigan. No funds have as yet been appropriated by Congress to initiate the construction of this project, but allotments have been made to the Chicago engineer district for advanced planning and for the preparation of contract plans and specifications.

Under leave to extend my remarks in the RECORD, I include the following article taken from the Chicago Daily Tribune of February 7, 1949, which very clearly explains the project:

CALUMET-SAG PLAN VITAL FOR CHICAGO—OPEN MISSISSIPPI VALLEY MEETING

(By Philip Hampson)

ST. LOUIS, February 7.—"Development of the Calumet-Sag Channel is of major importance to Chicago and the country and will make of the city's vast Calumet region a manufacturer's paradise," Lachlan MacLeay, president of the Mississippi Valley Association, said here. He pledged the association's fullest support for the project.

The association, which describes itself as the spokesman for the midcontinent region extending from the Rockies to the Appalachians, opened its thirtieth annual convention today. More than 800 persons are attending.

PROJECT HELD PRIME

MacLeay described the Calumet-Sag program as probably the most important industrial project before the American people. Its completion will assure unlimited supplies of raw materials for the great Chicago workshop, so important to the country in times of emergency.

Though primarily a waterway enterprise, MacLeay asserted it actually will stimulate business for the railroads. He estimated that for every carload of raw materials brought in by barge or ship the railroads will transport out of the region two carloads of finished products.

Approved by Congress in 1946 cost is estimated at about $80,000,000. Details as to cooperation among various local governments are being worked out. Congress is expected to make an appropriation at this session to enable work to get started. Completion will take 4 to 6 years.

WIDENING IS FIRST STEP

The first step in the project is the widening to 225 feet of the present Sag Channel at its connection with the Illinois waterway from Sag Junction to Blue Island. The second step contemplates the elimination of a lock at Blue Island and certain channel adjustments. The third and final step proposes the improvement of the Grand Calumet River, from a point near Calumet Lake, to make a connection with the Indiana Harbor Canal and Gary. Depth of the Calumet-Sag Channel is to be continued at 9 feet under the program.

Improvement of Calumet Lake docking and transit facilities is included in the program.

Following are some of the advantages the Chicago region may expect through completion of the project; break a severe transportation bottleneck; provide new employment for thousands of workers; reduce transportation costs; provide adequate facilities for the interchange of cargoes among railroads, steamship and barge lines, and motor carriers; established a badly needed rail-lake-barge terminal area, and enable vessels from the Great Lakes to reach other parts of the country in times of emergency.

SUGGESTS DUAL LOCKS

MacLeay urged that coincident with the Calumet-Sag development, a dual set of locks should be built in the Illinois waterway to handle the growing river traffic and to provide relief in case of damage to existing locks. He said the Illinois waterway carried about 1,500,000 tons of freight in 1948. When it was completed in 1935 engineers estimated it would be 1953 before a 10,000,000-ton total would be reached.

Oleomargarine Tax

EXTENSION OF REMARKS
OF
HON. HENRY M. JACKSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. JACKSON of Washington. Mr. Speaker, I am introducing a bill today in the House of Representatives which requires the elimination of all taxes and license fees on oleomargarine while, at the same time, it bans coloration of butter substitutes in the factory or in public eating places.

My bill is based on what I have termed the "Washington plan." I have given it this designation because the legislature of my home State, namely, Washington,

has recently passed a bill which embodies on the State level the national policies of leading dairy and farm organizations.

I think the action of the Washington State Legislature in this connection is particularly significant inasmuch as the overwhelming vote by which this measure was passed demonstrates beyond question that unrestricted sale of yellow oleo is not acceptable to informed lawmakers. The vote for a bill prohibiting oleo manufacturers to imitate butter's naturally yellow color was unanimous in the Washington State Senate. In the house of representatives of my home State it received 95 votes, with only 2 legislators opposed. This bill now goes to the Governor of the State of Washington for signature.

Under the Washington plan housewives will be able to buy all the oleo they want in its most economical, uncolored form without the payment of any taxes whatever. Oleo distributors will be relieved of reports and certificate requirements. At the same time consumers will be protected against fraud and deception and vital butter outlets for the dairy farmer's surplus milk will be maintained.

This marks the first time that the new policy of the Nation's dairy farmers toward oleo has faced a clear-cut test in any State legislature. The triumph of that policy in the progressive State of Washington clearly proves that city as well as rural legislators are now keenly aware of the need for safeguarding both housewives and dairy farmers.

About 40 percent of our beef and veal must come from dairy herds, as well as all of our milk. The Washington plan protects the dairy herds of my State while eliminating all taxes on oleomargarine—but oleo must be sold for what it is, and not as an imitation of butter.

Communism Seeks To Destroy All Christian Religions

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. KEATING. Mr. Speaker, Communism seeks to destroy all Christian religions.

Occasionally, one hears it said that the only target of Communist attack is the Roman Catholic Church. Certainly, the recent outrages perpetrated upon Cardinal Mindszenty, and a year ago on Archbishop Stepinac, as well as the consistent course followed by the Communists in all countries, clearly indicates that no stone will be left unturned, no device unused, no diabolical strategy untried, to vilify and persecute those who profess the Catholic faith.

If there were ever any suspicion, however, that the sole object of attack is the Catholic Church, recent events in Bulgaria would serve to resolve any doubts on that score. Here, 15 clergymen of the Protestant faith are now charged with so-called crimes in almost the exact language alleged in Hungary against Cardinal Mindszenty.

It is all a part of one cloth. The pattern is clear and simple. A Communist must not believe in God. He must not worship God in any form of ceremony. For him the State alone can be supreme. Not until we thoroughly understand this fundamental principle of communism can we, as a united Christian people, completely realize the significance of the challenge we face today, not alone in Yugoslavia, in Hungary, and in Bulgaria, behind the Iron Curtain, but equally in Italy, in France, and in our own United States of America.

Last week we adopted a resolution designed to summon to the bar of world opinion those responsible for the outrages in Hungary and Yugoslavia. I now propose that we take similar action regarding the recent shocking episode in Bulgaria. I shall prepare and offer legislation to that effect.

Now is the time for men and women who believe in God to stand up and be counted. Our doctrine, our church dogma, our form of worship may differ. But in our fundamental belief in God, we are one. Communism is our common enemy. With it and its godless doctrine, a true Christian cannot temporize or compromise.

In the accompanying editorial from the Washington Post we have a penetrating analysis of the situation facing all Christendom.

NOW IN BULGARIA

The accusations brought against the 15 Protestant clergymen by the Communist government of Bulgaria follow so closely the pattern pursued in the prosecution of Joseph Cardinal Mindszenty by the Communist government of Bulgaria that it is hardly possible to suppose that a single directing intelligence has not been at work in both cases. One difference, however, between the two cases may be remarked. Cardinal Mindszenty is the representative of the religion which is followed by the majority of the Hungarian people. In Bulgaria the Protestants are a small minority, the bulk of the population being of the Orthodox faith. But if we remember that in Hungary, the arrest and prosecution of the Lutheran Bishop, Lajos Ordass, also the representative of a religious minority, preceded the Mindszenty case, we may have an important key to the tactics of the Communist campaign against the Christian churches of the satellite countries. Communist propaganda has been insistent that this campaign is not being directed against religion as such, but involves matters having nothing to do with religion, such as punishment of active treason, the suppression of black marketing operations, the redistribution of land, government control of schools, and so on.

Beneath this cynical sophism may lie a certain stratum of fact. That eradication of all religion, except the gospel of Marx, Lenin, and Stalin, is one of the ultimate aims of revolutionary communism, no reader of the party scriptures can doubt. During the period of the class struggle, however—and particularly during the period of military conflict with the capitalist world, which the party theologians insist is an inevitable phase of historical evolution—an organized church, if it commands a large popular respect and obedience and if it can be made wholly subservient to the dictatorship, becomes a useful instrument of Communist aims and propaganda. This has been demonstrated in the revival of the Russian Orthodoxy under Stalin's patronage and protection. It may be recalled that in the early phase of the Bolshevist revolution, when the Soviet government undertook to destroy the power and influence of the Orthodox Church in Russia, it organized and supported a schismatic body known as the Living Church.

To achieve the servile relationship of church to state in the satellite countries the destruction of all church leaders who remain obdurate and the intimidation of the rest are, of course, necessary. Thus the fact that in Hungary and Bulgaria the first moves of the Communist regimes have been against religious minorities may be explained as part of the process of intimidating the religious majorities. Doubtless the Catholic prelates and clergy of Hungary were expected to take warning from the fate of Bishop Ordass; the Orthodox bishops and clergy of Bulgaria from the example of the Evangelical ministers.

The next logical step would be the separation of the Latin churches of Hungary, Poland, and Czechoslovakia from communion with the churches of the west, and the separation of Orthodox churches behind the Iron Curtain from those which are outside, such as the churches in Greece and the Near East. The separation of a national church from the Roman communion was actually achieved in the case of the Uniate Church of the Ukraine, which, under Communist pressures, transferred its allegiance to the puppet Patriarchate of Moscow, but not, apparently, until most of the Uniate bishops had been sent to prison camps.

If this interpretation of the campaign is correct, it follows that the work is much too important to be left to the plug-uglies and crude careerists who constitute the Communist regimes of the satellite countries. As we say, the campaign against the churches begins to show evidences of expert direction. And we suspect it was by something more than coincidence that Comrade Vishinsky, celebrated impresario of propaganda trials, turned up recently in Prague, a point of easy access to both Budapest and Sofia.

Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the East St. Louis Journal on Thursday, February 10, 1949, with reference to Josef Cardinal Mindszenty.

LIFE TERM FOR MINDSZENTY

As had been expected, Josef Cardinal Mindszenty, primate of the Roman Catholic Church in Hungary, was found guilty of treason by a Communist-dominated people's court and was sentenced to life imprisonment. The Communist puppet government in Hungary did not dare condemn the outspoken churchman to death.

The 3-day trial of Cardinal Mindszenty and his six associates was conducted in the usual Communist-purge pattern. The defendant didn't have a chance and there is no way, yet, of knowing what mistreatment he endured before he finally was brought to trial on charges of plotting to overthrow

the government, of favoring a royal restoration, and of speculating illegally in American dollars.

The Hungarian Communist regime, acting under orders from the Kremlin, did not dare make a martyr of the prelate whose trial had been publicized around the world and whose resistance to the traitorous Hungarian government had won the sympathy of peoples of all religious faiths. In prison he will be a reproach to his persecutors and cause them to dread an uprising which might oust them in the manner in which they seized power.

In the meantime, for Cardinal Mindszenty "while there's life there's hope."

May he live to see the trial of the Communist rulers of Hungary on charges of treason before a real people's court.

Historic Sugar Pines

EXTENSION OF REMARKS

OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. DOYLE. Mr. Speaker, I have received from the California War Memorial Park Association, of which a lifelong and distinguished Democrat, John B. Elliott, is chairman, a statement showing that the State American Federation of Labor, together with the Gold Star Mothers of America, are added to the two important groups who have joined in a deserving effort to save the historical sugar pine trees in Tuolumne County in my native State of California from the ax and saw of those who would cut them for lumbering purposes.

As the national president of the Gold Star Mothers of America, Mrs. Eleanor Boyd is a resident of my home city of Long Beach, Calif., and, as she and her husband, Dr. Truman Boyd, a celebrated physician of Long Beach, are the parents of two of the American lads who gave their lives for democracy, I take particular pleasure in calling to the attention of the Congress the desirability of immediate action by President Truman, Secretary of Agriculture Brannan, and the California delegation in Congress to collaborate that these historic sugar pines may be saved and integrated into a war memorial park. I submit the text of the statement from Mr. Elliott and also a significant and pertinent editorial on this same subject which appeared in the Los Angeles Examiner under date of February 5, 1949, which states clearly and emphatically the feeling of millions of us from that great State. Furthermore, those trees are not merely the property of California, but have already been and will give knowledge and inspiration to millions upon millions. The statement of Mr. Elliott and the newspaper editorial are, as follows:

STATE A. F. OF L. AND GOLD STAR MOTHERS URGE SAVING OF HISTORIC SUGAR PINES

Immediate and decisive action by President Truman, Secretary of Agriculture Brannan, and the California delegation in Congress to save the historic sugar pine trees of Tuolumne County was urged today by C. J. Haggerty, secretary of the California State Federation of Labor, representing more than a million members.

At Long Beach Mrs. Eleanor Boyd, national president of the Gold Star Mothers of America, of whom there are 37,000, announced that she, too, had addressed telegrams to both President Truman and Secretary of Agriculture Brannan asking that these great trees be integrated into a war memorial park "which would keep the memory of our sons as green as the forest giants which distinguish this outstanding area."

Secretary Haggerty's telegram followed action at Washington in which California Representatives went unanimously on record to save the sugar pines and Sequoias in the Big Tree and Beaver Creek areas.

It was disclosed at a caucus of the California Congressmen that under a Federal statute of 1909 the Secretary of Agriculture is empowered to take over the area where the big trees grow. By a premonitory coincidence the area covered by the 40-year-old statute covers almost the identical ground which Dr. Frederick Law Olmsted, in a 1945 report to the State, specifically urged saving.

Haggerty's telegram, which was in support of invoking the 1909 law, said: "As secretary of the California State Federation of Labor representing more than 1,000,000 members I respectfully urge immediate decisive action on Federal statute 494 to save from imminent destruction the great sugar pine and sequoia forests of Tuolumne County. For us to permit the wanton destruction of these rare and beautiful trees, hundreds of years old, would be inexcusable and earn for us the condemnation of future generations."

In addition to the gold star mothers, John B. Elliott, chairman of the California War Memorial Park Association, announces that some fourteen nationally chartered veterans' organizations have passed resolutions asking the big trees be saved.

In her telegram to President Truman, Mrs. Boyd, national president of the Gold Star Mothers, said, in part: "The Gold Star Mothers have been thrilled and heartened by the efforts of the California War Memorial Park Association to have the Secretary of Agriculture acquire the great sugar pines and sequoias of Tuolumne County, one of the few remaining primeval forests in the land, so that it may be dedicated to the memory of those who gave their lives for us in the World Wars."

Additional support for the State-wide movement was reported from San Francisco today where the northern city's board of supervisors urged United States Senators SHERIDAN DOWNEY and WILLIAM F. KNOWLAND and San Francisco's congressional delegation to take immediate steps toward acquiring the Tuolumne area for a national park.

[From the Los Angeles Examiner of February 5, 1949]

MORTAL PERIL OF CALIFORNIA GLORY

It was the beauty and grandeur of California that first attracted the seekers of El Dorado.

It was the majesty of its mountains, streams, and forests, revealed magnificently in an atmosphere of dazzling clarity, that decided men to live and work here, and create today's industrial civilization in California.

So rich were the Golden State's resources, so impatient were men to exploit them, that at one time they were in peril of extinction unless wiser and farther-seeing spirits restrained the profitable pillage.

Now one of the rarest, utterly irreplacable and invaluable of these assets—the stand of giant sugar pines in Tuolumne County's Beaver Creek—will soon become a pile of lumber unless the National or State Government steps in and prevents the catastrophe.

The giant sugar pines have grown to more than 250 feet high in some 600 or 700 years. They are absolutely unique, "the largest and loveliest in the world," as America's foremost park authority, Dr. Frederick Law Olmstead, has described them.

At present, this stately grove belongs to a lumber company, which refuses to sell, and intends to begin felling next March.

If it is to be saved from the ax and the saw, the California Legislature or the Federal Agriculture Department must step in and legally acquire it for posterity in the people's name.

Thousands of public-spirited citizens and numerous civic organizations recommend that the Beaver Creek sugar pines be made public property and consecrated as a living memorial for America's war dead.

To this purpose, the California War Memorial Park Association has been formed.

The forest giants may be reprieved by a bill introduced but not yet voted upon in the legislature. But whether this measure can pass both assembly and senate before cutting of the pines begins in March is a matter of grave doubt. The legislature will not even reconvene until March 7.

Hence the efforts of California Congressmen to get help from Washington, on the solid ground that this forest is as much a national as a State resource.

And hence the unselfish zeal of thousands of California's men and women, individually and in groups, who are energetically fighting to save one of California's greatest glories.

It is not only a matter of sentiment to prevent this ruin, but a matter of common sense.

Of sugar pine good enough for lumber, there is plenty in the West.

The owners of the Beaver Creek trees could be granted the equivalent in board feet of other sugar pines.

These are all things that can be done right away, things that apply to an emergency, and which are equitable both to lumberman and public.

But if they are not done or delayed until done too late, there is no human power that can replace these marvelous, ancient trees.

There is no profit that can compensate for their loss, nor any excuse that can condone the slaughter of a singular and living evidence of God's grace and kindliness.

These trees must be saved and kept as the most fitting of all monuments to our glorious dead, and noble symbols of life and hope to the generations who come after us.

The Freedom Train

EXTENSION OF REMARKS

OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. McCARTHY. Mr. Speaker, this is an age of artificiality, of facsimiles and reasonable facsimiles, of photostats and lithographs, and all manner of duplications and multiplications. It is therefore all important that people be called back to a sense of reality—be reminded that there are origins and originals. This can best be achieved by the passage of the legislation continuing the freedom train. Let us remember that the source and origin of these rights and freedoms documented in the papers on this train do not arise from these papers but have their origin in the natural law ordered in man by his Creator as sacred and inalienable.

Ozark National Forest

EXTENSION OF REMARKS
OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. TRIMBLE. Mr. Speaker, at my request, Paul H. Gerrard, forest supervisor of the Ozark National Forest at Russellville, Ark., has compiled the following information which I think is very pertinent to the development of our forests, and under leave to extend my remarks in the RECORD, I insert the statement:

THE OZARK NATIONAL FOREST AND ITS SOCIAL AND ECONOMIC CONTRIBUTIONS TO THE IMMEDIATE AREA

GENERAL

The area within the Ozark National Forest and in general throughout northwest Arkansas, consists primarily of marginal farm and timber-growing lands with spots of highly productive land here and there. The southern edge of the forest consists of pine and pine hardwood type with the main portion straight hardwoods. The soil, to begin with, was rather shallow and years of woods burning and continual squeezing of farm land to produce income has resulted in a very deteriorated soil condition. Comparatively low incomes, as compared with the rest of the United States, prevail throughout the area which as yet has not been extensively industrialized. The advent of electric power in connection with the flood-control program, the availability of a good class of labor, including quite a number of skilled laborers, should eventually result in considerable industrial developments.

At the present time, the processing of forest products has not proceeded very far locally outside of the furniture and wagon stock centers at Fort Smith and Fayetteville and the flooring plant at Clarksville. Outside of these there are only a few small handle and other wood processing plants in the vicinity of the forest.

It appears that the most practical long-time land use in northwest Arkansas would be primarily that of growing timber. Even the agriculturists are beginning to think along this line. Studies indicate that much of the timberland outside the forest is noncommercial in nature so far as private capital is concerned. This will probably mean some form of public ownership if the land is to be protected, water and flood-control objectives accomplished, and an attempt made to obtain some return from each acre of land. This would mean a long-time acquisition and conversion program since it would take many years to build up a productive forest from the poor stands and poor soils.

TIMBER MANAGEMENT

About 25 percent of the forest consists of pine and pine hardwood type and the balance pure hardwood. About 15 percent of the forest area probably can be classified as nonproductive or producing only low quality forest products. The remaining 85 percent can and should be used for the production of high-quality timber. Growth is slow, but the quality of the future crop should be excellent. Currently, the harvesting of timber from the forest is producing man-years of work, direct returns to the communities through 25 percent refund of timber receipts and profits through the expenditure of wages received from forest work.

Between July 1, 1947, and June 30, 1948, a cut of 28,500,000 feet of timber from the national forest produced, conservatively, over 709 man-years of work for those engaged in harvesting and in the manufacture of lumber and wood products. An outstanding example is the Ozark Hardwood Co., which employs some 350 men year-long and distributes nearly $1,000,000 locally for wages, supplies, etc. Another example is the handle plant at Lurton which is the primary support of this small community. The total income of this group has not been estimated, but it is known that it is an important factor in sustaining communities both in, and adjacent to the forest. In addition to these contributions, the counties will receive about $83,500 for roads and school purposes. This contribution directly affects the welfare of many small school districts. It is impossible to determine the gross effect of the timber business on the social and economic welfare of the communities, as the gas and oil stations, grocery stores, and all other forms of business are materially benefited by the income from the harvesting of the timber.

For the past few years, over-all growth has been nearly static with mortality practically offsetting growth. Under more intensive forms of management as now being practiced, the future growth can be increased from the present 33 board feet per acre to 75 or 100 board feet. This growth will more than support the present industries and should invite new industries which will help bolster the economy of the communities in, and adjacent to, the forest. As a forecast of the future, we should eventually be able to cut some 75,000,000 board feet of timber annually. The average stumpage price would be about $12 per thousand or a total of $900,000 receipts per year.

WATER MANAGEMENT

A flood control program is in the process of being initiated on the White and Arkansas Rivers. The forest, through proper management, can, and will, play a major role in the protection of the headwaters of a number of streams of these drainages. Continued fire protection and increasingly intensive timber management practices, along with some erosion control measures along roads and in logging operations, will maintain the optimum watershed condition which appears to be desirable. One area on the forest, the Frog Bayou watershed, deserves mention because of its importance for water supply. The city of Fort Smith is dependent upon the water from this watershed for its water supply, totaling nearly 2,000,000,000 gallons of water a year. Under proper management, the watershed can produce two to three times this amount if and when needed. Using a figure of only 1 cent per thousand gallons, as an estimated value for the water used, it would mean a total value to Fort Smith of $20,000 per year, or about 40 cents per acre per year for the watershed. There is also the Illinois Bayou Watershed from which Russellville obtains its water supply, using some 264,000,000 gallons per year. Since this is a large drainage, there is an ample water supply without giving any special attention to timber-cutting practices other than to avoid contamination.

RECREATION

The Ozark Forest is a mountainous and very attractive scenic area but it is handicapped by the lack of paved or dustless roads to reach the most scenic areas within the forest. The public recreational areas which have been developed, however, do have a relatively heavy use by the people of the communities in the surrounding territory. There were 345,000 local and out-of-State visitors this last year (includes hunters, fishermen, etc.) With the advent of paved roads, some of which are now under construction, this use will undoubtedly expand and the local towns and merchants will reap additional benefits in the way of income from tourist travel. The dollar value of forest recreation is difficult to evaluate. However, the forest is considered as one of the attractions which results in the reported $150,000,000 yearly tourist business of the State.

From a regional standpoint, the recreational use is still largely potential but is growing each year. Numerous flood-control lakes in the vicinity of the forest will help attract tourists to the State and many of them are enjoying the recreational facilities of the forest. As the potential use develops, the towns and villages surrounding the forest will be increasingly benefited through sale of goods and services. It is believed that we should eventually be able to build recreation usage to a point where we would have more than 1,000,000 visitors annually. Since many of the people who use these areas are local people, the average expenditure per individual would be low. Hence, if we figure that each user would spend $2.50 to $5 per visit, it would mean that $2,500,000 to $5,000,000 annually would be spent in the immediate areas.

WILDLIFE

The Ozark National Forest is at present the main big game hunting area in the State. In the fall of 1948, it is estimated that there were over 14,000 deer hunters using the national forest. There were 8,900 small-game hunters and trappers, as well as 7,500 fishermen during the same period. Game management, as such, on the forest is still in its infancy. The deer herd of some 10,000 animals can undoubtedly be tripled if properly managed and handled. We also have about 200 head of elk and 120 wild turkeys besides many of the smaller game animals such as possums, coons, etc. This number of deer (30,000) should eventually provide reasonably good hunting for some 60,000 to 70,000 hunters annually. Towns adjacent to the forest, notably Mountain View, Calico Rock, and Ozark, are already depending on increased business during the hunting season. Potentially, all of the other towns and some of the communities within the forest are future headquarters for numerous big-game hunters with additional funds to spend. Average expenditure by hunters will probably vary between $10 to $20, hence, if we use $15 as the average expenditure, 60,000 hunters would result in $900,000 being distributed locally in the communities and areas adjacent to the forest each year if the game resources are fully developed and intensively managed.

Small-game hunters and fishermen amounted to approximately 8,900 and 7,500 respectively, during 1948. Small game, as well as turkey and quail, are on the increase. The local communities are aware of this and also of the fact that without fire protection, this increase would not be possible. Socially and economically, the game increase is of considerable value for recreation as well as the food it produces and the business which it increases.

GRAZING

The grazing of nearly 12,000 head of cattle and horses, 1,200 head of sheep and goats, and 6,700 head of swine is another minor use of the forest. It is important enough to be under regulation only on the Magazine Mountain District. As a commercial enterprise, grazing will probably be only a transition use within the forest except on area suitable for improved pastures. On the other hand, it is now, and probably will continue to be, important from a subsistence standpoint, since practically all the residents within the forest boundaries now make use of the old fields and will continue to do so for what might be called subsistence grazing for cattle, hogs, and horses. The open range will continue to support a limited amount of livestock in natural open areas, but the range will be restricted more and more as the forest takes over and crowds out the grasses. Good forest management will point out the advantage of improved pastures where economically possible, helping to improve the quality of

the livestock on one hand and risking the damage to the forest on the other. This should result in better living conditions through a more stable income and reduce the isolated developments which are socially undesirable.

FOREST IMPROVEMENTS

The 1,200 miles of forest road and trucktrail system has enabled community travel and communication to reach a standard heretofore unobtainable. It has made possible the consolidation of schools and churches in communities where better facilities were available. It has also helped to reduce the number of isolated and submarginal farms because of the people's desire to live near communities and have the advantages of better roads. The construction and maintenance of these roads has also provided work for a number of residents of the forest who depend on part-time labor to help out their income derived from subsistence farming. As a further point, much of the income now derived from the forest through the harvesting of timber, and the sale of commodities and other products from the forest area, would not be possible without the maintenance of this road system.

Highway No. 7, when constructed and black-topped, is expected to result in a large increase of tourist and commercial travel through the forest and adjacent communities. Even now, large tourist courts are under development, with swimming and other recreational features being planned in towns adjacent to the forest as a result of the reconstruction of this road.

SPECIAL USES

This is still another minor use. It involves 200 permittees of which about 100 are for pasture, cultivation, hay, etc. These either fully, or partially, supplement the livelihood of the 100 users. Likewise, the four concession permits contribute part-time earnings to permittees. Receipts from this source amount to $5,250 per year.

About one-half of the agricultural permits are temporary in nature. All, however, contribute to the social and economic well-being of the users. Such uses help to relieve the counties and the State of problems resulting from the land acquisition program.

FINANCIAL RETURNS TO THE COUNTIES

The 25 percent of receipts amounted to 7½ cents per acre last year and will be about 8 cents this year. Since county taxes vary from 3½ cents to possibly 5½ cents per acre, it means that the national forest is returning about double that received from similar private land. Total receipts for the fiscal year 1948 were $340,269.

Schools receive 75 percent of the money, and roads 25 percent. Hence, the school districts gain considerably as a result of these payments. Other returns to the counties have been included in above topics, such as work opportunities and increase in business, as well as partially relieving counties of constructing and maintaining roads within the forest area.

SUMMARY

To sum up the contributions of the Ozark National Forest to the communities within and adjacent to the area, it may be stated that:

1. The forest produces income both in dollars and cents and in man-years of labor from the harvest of forest products.

2. It provides an unestimable value in control of floodwaters in two large river drainages.

3. It provides recreation, and through recreation usage it produces economic returns to the local area.

4. The wildlife of the forest is of value both from the recreational standpoint and from an economic standpoint.

5. The grazing within the forest provides additional income to subsistence of farmers.

6. The road-and-trail system provides communications between communities which aids in their social development and welfare, as well as in their economic stability.

7. Special uses provides a means of livelihood and assists in absorbing the shock of adjustments resulting from acquisition of land.

8. Direct financial returns are about twice that received from private land.

This is a limited discussion of some of the features of the Ozark National Forest which I feel justify its existence through its contribution to the social and economic welfare of northwest Arkansas.

Taxes and Waste

EXTENSION OF REMARKS
OF
HON. CECIL F. WHITE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. WHITE of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following open letter to me which appeared recently in the Fresno Guide, of Fresno, Calif.:

ONE MAN'S OPINION

(By W. F. E.)

An open letter to Congressman CECIL F. WHITE, of the Ninth District, House Office Building, Washington, D. C.:

"DEAR CECIL: Everybody around here is pleased at your success in getting on the House Agricultural Committee, and also at your appointment to the subcommittee on cotton quotas. It will amuse you, I am sure, to learn also that some of the people who were saying, prior to November 2, 1948, that it would take you at least 4 years to get anywhere in Washington, now are letting it be known that they were sure all the time that you could do it. No doubt some of these same people already have been in communication with you on other matters of more direct interest to themselves.

"However, I have taken it for granted all along that you will do a job for the ninth district, and I also take it for granted that if you do that you will continue for a long time to get mail at your present address. So for a few minutes I'm going to talk about a long-range national problem, one that is beginning to bother many millions of people including thousands in this district. Right now it is a very hot topic of conversation. It has been heated up, of course, by the President's budget message and the Hoover Commission's promised report on economy in government. Let me approach it from the personal side.

"A few minutes spent in making estimates and adding them up have convinced me that I pay out in taxes of one kind or another about a quarter of my annual income. This is a pretty rough guess, and I am afraid to go into the matter more thoroughly because if I did so the figure might look worse. Moreover, there are a great many hidden taxes that really are so well concealed that it is hardly worth while to search for them.

"Well, a quarter of one's income out in taxes means that for about 75 days of each year one is working for government, local, State and national. It also means in many cases—for I am sure mine is neither unique nor unusual—the difference between just getting by and getting by with a few dollars left over at the end of the year.

"Now higher State and Federal taxes are clearly foreseeable in the immediate future, and I must confess that I am beginning to wonder how much more blood the ordinary salaried or wage-earning American can part with and still go on living.

"It isn't that many of the schemes this money will be used to support are not worthy or that some are not vitally necessary; it is simply a question whether or not we can afford them while paying for one war, preparing for another, trying to keep Western Europe out of Soviet clutches, and so forth and so on. The stuff you read about how rich the American people are at present sounds fine, but it won't stand analysis. A man isn't rich if his obligations exceed his income; neither is a country.

"Moreover, there are millions of people in the United States who pay no taxes at all except various sales and excise levies, since they own no property, are exempt from withholding taxes and simply do not choose to pay income taxes on or before March 15. The rest of us carry their share of the burden and doubtless will continue to do so for a long time, as it is not expedient, either politically or otherwise, to make them carry it themselves.

"On top of this, all government is wasteful and extravagant, and nowadays it has altogether too many beneficiaries of one kind or another. Millions of people live on the government today—which means on you and me—and some make an adequate return, some make an inadequate one, and some make no return at all.

"It always has been established rule, with only few and sporadic exceptions, that taxes remain stationary or increase; they do not decrease. It is an equally well established custom that taxpayers beef, but never really do anything effective about what (and whom) is biting them. So I'm afraid I know where we go from here.

"However, if a majority of the Nation's taxpayers were to rise up in wrath and refuse to pay any taxes until governmental costs were actually cut one-third at all levels, then we would be getting somewhere. And I wish I had enough faith in human nature to be able to predict that such an action someday will be taken—even if long after I have departed for that region where everybody lives on a Government pension.

"But failing a taxpayers' revolt, it seems to me that Congress can and should do something definite and drastic about waste, and also about the present unfair incidence of income taxation. And your friends would like to see you take a leading part in such a constructive undertaking.

"Sincerely yours,

"BILL ELLIOT,
"Editor, Fresno Guide."

Home Furnishing Under Consumer Credit Control Act

EXTENSION OF REMARKS
OF
HON. JOHN E. LYLE, JR.
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. LYLE. Mr. Speaker, many, too many, of the problems of our constituents result from the administration of acts of the Congress. Latitude upon the part of administrators is of course necessary; however, careful attention upon their part to legislation intent is absolutely essential.

The power voted by Congress to permit credit restrictions was cautionary—not mandatory—and should be invoked

only so far as is necessary. The severeness of the credit restrictions now imposed on consumer goods are working hardships. The letter that follows emphasizes the reflection of the average citizen on this important matter.

The restrictions should be relaxed.

CORPUS CHRISTI, TEX.,
January 21, 1949.

Hon. JOHN E. LYLE,
Capitol Building, Washington, D. C.

DEAR SIR: Amid the pressure of your many official duties, I implore you to give some thought to the immediate repeal of, or a drastic reduction of the provisions of the Consumer Credit Control Act. I am certain that the many thousands of veterans over the Nation like myself, who are daily becoming home owners, are finding it next to impossible to acquire the necessary cash to properly furnish their new homes, or to acquire automobiles badly needed in their work, or in order to obtain work.

To properly furnish a home, so that one would not be ashamed to ask even his closest friends or relatives to visit him, a person needs between four and five hundred dollars in cash. This would not be a household of elaborate furnishings, but only the bare necessities to keep the house from looking bare. Even if one were able to raise the necessary amount of cash for the down payment, the monthly payments under the present law would be prohibitive. For instance, I cannot agree with any line of reasoning that will allow a person to purchase a $300 ring or watch for as little as $10 down, and yet requires that same person to deposit from $50 to $90 in order to acquire proper sanitary refrigeration for his food. It stands to reason that a family's health is of much more importance to the welfare of the city, county, State, and Nation, than is the ostentatious display of rings, watches, necklaces, and such trivia. Along the same line, the help-wanted ads in the dailies contain the phrase "car necessary," or "car essential." Even if one were fortunate enough to obtain an automobile and one of these jobs, his monthly salary must reach between four and five hundred dollars in order for him to meet his payments on said automobile and also meet his necessary living expenses.

I feel sure that the above facts, and many more of such, are very well known to you, and that they are already causing you some concern. Your efforts toward relaxing the present law, in order for the new home owners and the average American buying public to purchase the commodities necessary to maintain our present standard of living, will earn you the undying gratitude of the many thousands of such people affected.

Sincerely yours,

C. AUBREY SMITH.

Diplomatic Warfare

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of February 14, 1949:

DIPLOMATIC WARFARE

Hungary's request for the recall of the United States Minister in Budapest is probably a direct result of unrest over the railroading of Cardinal Mindszenty to conviction for alleged activities against the state. Having embarked upon the perilous course of condemning the Primate of Hungary for what is apparently nothing more than exercising the guaranteed right of freedom of religion, the Budapest regime is trying to give a semblance of reality to the "plot" it alleges, by ousting the American Minister. The idea that Minister Chapin was in any way involved in the case is fantastic. We may assume that he was filled with disgust by the farcical nature of the trial, as virtually all other Americans were. It may be that in part he is being punished for the candid reactions of President Truman and the State Department to the trial; but we strongly suspect that the chief motive is closely related to internal propaganda.

If Mr. Chapin had been interfering in the internal affairs of Hungary in any manner not warranted by the peace treaty with that country, Budapest would have ample cause to ask for his recall. On several occasions the United States has acted against representatives of other countries who butted into our domestic affairs. Only last summer the State Department asked Moscow to recall Jacob Lomakin after his outrageous challenge to American sovereignty in the Kasenkina case. The trouble is that the Kremlin-dominated governments cannot be trusted to apply a similar test to the representatives of other countries. For they have no regard for facts, truth, justice, or freedom. Their policy is to strike at any individual who may cause them embarrassment, even if he is the representative of a foreign government. In pursuit of their terroristic policy the ruthless men in control at Budapest have asked for the recall of four American diplomats in 2 weeks.

Under these conditions any well reasoned and tolerant policy of diplomatic representation is likely to be turned against us. This newspaper suggested last August that the State Department would have to insist on reciprocity in the number of representatives exchanged between this country and the Soviet. It may be necessary to apply that rule to specific diplomatic positions and to make it operative against all Communist-dominated governments. Where reason and justice have no standing, even the principle of an eye for an eye and a tooth for a tooth is better than one-sided, arbitrary action taken by the Communists to suit their own purposes.

A Great American

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. ADDONIZIO. Mr. Speaker, last Friday, February 11, marked the one hundred and second anniversary of the birth of a great American, Thomas A. Edison. It is fitting that recognition be given the anniversary of this benefactor of mankind whose numerous inventions have contributed so greatly to our well-being and comfort. I should like to include at this point the following editorial that appeared in the East Orange (N. J.) Record on Thursday, February 10, 1949:

A GREAT AMERICAN

Tomorrow marks the one hundred and second anniversary of the birth of one of the world's greatest Americans, Thomas Alva Edison. The late inventor was probably the one man who, more than anyone else, gave us the abundant life which we have enjoyed in the United States.

Thomas A. Edison was born in Milan, Ohio, on February 11, 1847. He passed away on October 18, 1931. In his life span of 84 years he did more than any other American to make this Nation the great country it is today. His entire life was one of devotion to the comfort and convenience of human existence. He gave us electric light, he gave us motion pictures, and he gave us the electronic tube which later proved to be the basis of radio and our vast electronic industry. He gave us the phonograph and simple things, such as waxed paper and gummed paper. Whether we are in our homes, offices, factories, or are traveling by land, sea, or air, we find numerous instances of convenience and comfort that originated in Edison's mind. There are also the necessary machines or devices which were the products of his inventions, machines and devices without which we would be handicapped today.

Thomas A. Edison left more when he died than the vast benefits derived from his 1,150 patents. By his character and devotion to work for the benefit of his fellow men, by the simplicity and honesty of his life, by his modesty he showed that the simple virtues of our ancestors are still the basic qualities necessary for success in the United States.

Through his own greatness he showed us the greatness of our Nation. When he was 12 years of age he was selling newspapers and confectionery on trains; at the age of 23 he received $40,000 for an invention. Where else but in this country could that happen?

Edison was always quick to point that he did not consider himself a genius. His definition of a genius was "1 percent inspiration and 99 percent perspiration." When asked about his methods of work he would mention only three things, "imagination, ambition, and a will to work."

Those are the simple precepts of a great man and a guide which we would do well to follow. They describe the American way to achieve a useful and successful life.

Steam Plant for Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a timely editorial from the Omaha (Nebr.) World-Herald of January 27 of this year. On this week this House will consider and vote upon the proposal to construct a much needed steam plant at New Johnsonville, Tenn., to enable the Tennessee Valley Authority to maintain a steady flow of necessary power in the 80,000 square mile area served by that agency.

The editorial follows:

THE PLACE TO START

We are in receipt of a long telegram from the power lobby in Washington explaining how the cost of government can be cut.

The meat of the telegram is this: (1) Cost-cutting has to start somewhere. (2) Let it start with rejection of the TVA proposal to build a steam-generating plant.

The proposed TVA steam plant appropriation would be about $4,000,000—or something less than one ten-thousandth of the $42,000,000,000 budget Mr. Truman has proposed. Four million dollars would finance the Marshall plan for about 8 hours or run

America's Military Establishment for about 2 hours. Four million dollars would pay the interest on the national debt for something less than half a day.

Unlike the Marshall plan, the military program and interest payments, however, the TVA steam plant would not be a drain on the national resources. It would be a wealth-producer. It would firm up TVA's hydropower, make the TVA system more efficient, make electricity cheaper. Along with flood control, reclamation and a few other wealth-creating enterprises in which the Government engages, power development can make a case for its economic soundness.

The power lobby's telegram is timely, however. It reminds us to congratulate Senator WHERRY once more on the stanch but losing fight he put up in the Senate last year to help save the TVA steam plant appropriation. It moves us to hope that when the same bill comes up in this session he will be joined by Senator BUTLER and the four Nebraska Congressmen.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 8, 1949

Mr. BROOKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Brodie Pugh, from the February issue of Soil Conservation:

ALL FORCES PULL TOGETHER

(By Brodie Pugh, district conservationist, Soil Conservation Service, Shreveport, La.)

A master soil conservation program carried out last fall on the John S. Welsh, Jr., farm near Shreveport showed what can be accomplished through cooperation. It demonstrated how easily the soil-erosion problem of this Nation could be whipped if all who are able to contribute to its solution were to get together like friendly neighbors—a trend much in evidence in recent years.

The big program of soil conservation on the Welsh farm was sponsored by the Shreveport Chamber of Commerce and the upper West Red River, the Dorcheat, and the upper Sabine soil conservation districts. But in the weeks of planning and on the day of execution, the sponsors had generous help from numerous sources, all working closely together. Business firms furnished seed, lime, and fertilizer. Implement dealers furnished operators and automotive equipment worth half a million dollars. Paper and lumber bills supplied modern equipment and mechanics. Newspapers and radio stations publicized the event and interpreted its meaning for the benefit of their audiences of tens of thousands of persons. Soil Conservation Service technicians and employees of other agencies worked together on the technical phases. The general members of the chamber of commerce, especially the agricultural committees, gave a lot of time over a period of weeks. Soil conservation district supervisors and cooperators carried out important tasks. The United States Air Force, the National Guard, and the State government sent several officials with words of encouragement and the promise of official backing for soil conservation in all parts of Louisiana.

It would indeed take considerable space to enumerate all who worked on this project. The point to be emphasized is that, as was the case on this particular occasion, the conservation of soil and water resources is not a job for the Federal or the State Government alone, or for the owners and operators of the farm land alone. Rather, it is a job for everyone, and a task that needs the help of everyone, if the erosion of the Nation's soil is to be stopped before it is too late and if American agricultural land is to be brought into maximum, permanent production in time to maintain the present standard of living.

An estimated 10,000 persons saw the various dovetailing measures of soil conservation applied to the Welsh farm. They heard soil conservation talks. Many other thousands got an insight into the work through radio broadcasts from the scene and through newspaper stories and pictures.

The idea, of course, was not simply to concentrate thought on the need for concerted action. The immediate task was to convert an eroded and depleted 320-acre piece of land into a productive conservation farm in 1 day. That achievement in itself showed what makes up a coordinated soil-conservation program, how it is applied, and what it does for a farm. It was a dramatic way of calling attention to the entire conservation task—a task that embodies a large number of related practices. Of course, as was pointed out by J. C. Dykes, assistant chief of the Soil Conservation Service, an entire program of soil and water conservation cannot be applied in 1 day, as many practices are seasonal and must be installed at the proper time. For example, certain pasture crops cannot be planted until spring, and pine trees can be planted successfully only in January and February in this part of the country. But many major practices were applied in the 1 day; others were carried out to show how they are done, such as the planting of pine seedlings with a machine; all the others will be applied at the proper time, so that within a year young Welsh will have a farm on which an entire soil-conservation program has been applied.

Nor, as Dykes also noted, can a conservation farmer be made in a day. But those of us who worked out the plan with Welsh agreed with Dykes when he added, "I believe that John Welsh will become a conservation farmer, a conservation farmer being one who farms the conservation way because it is part of him, because he understands that it is good for the land."

In helping to make a conservation farmer out of 31-year-old John S. Welsh, Jr., the sponsors of the master soil conservation program can also feel that they have been well repaid.

False Case Against the TVA

EXTENSION OF REMARKS
OF
HON. JOHN JENNINGS, JR.
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. JENNINGS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an editorial from the St. Louis Post-Dispatch of February 10, 1949, entitled "A False Case Against the TVA."

There came to me on February 9 of this year from Purcell L. Smith, the $65,000,-per-year-plus-an-unlimited-expense-account lobbyist for the private power interests, a letter seeking to retard and stifle the production of much-needed electric current to the farmers and all other residents of the Second Congressional District of Tennessee and to all of the 5,000,000 persons who reside in the 80,000-square-mile area served by the TVA.

Accompanying this letter is a pamphlet which is full of false and misleading statements. The TVA is self-sustaining and self-liquidating. It is the only source of electric energy for the farmers, dairymen, working people, manufacturing plants, mines, veterans, and business concerns, and other people in the area served by it.

The 375,000 kilowatts of power which will be made possible by the proposed steam plant at New Johnsonville, Tenn., is absolutely necessary in order to enable TVA to furnish its customers sufficient power at all seasons of the year. The production of aluminum for defense purposes at the great aluminum plant in Blount County, Tenn., and the production of atomic bombs at Oak Ridge, Tenn., depends upon and is calling for a greater output of electric current by the TVA. This proposed steam plant is the answer to all these urgent needs. It insures the prosperity of the people of this region and the adequate defense of this Nation in the event of a threatened war.

The editorial referred to follows:

A FALSE CASE AGAINST TVA

TVA's urgent need for a new steam-electric generating plant, and the fallacy of the private power lobby's arguments against it, are now amply shown.

An initial appropriation of $2,500,000 was recommended early this month by a House appropriations subcommittee.

The need itself, which the anti-TVA lobbyists have never denied, is documented in impressive detail in a statement reprinted under the cartoon today. In addition, the statement is a fine showing of the leadership which TVA is giving the country in making electricity the servant of the people. It is a notable accomplishment that the percentage of electrified farms in the Tennessee Valley has increased from 30 percent 4 years ago to nearly 60 percent today and is increasing at the rate of 1 percent a month.

Alternatives to a new steam plant which the power lobby has suggested are that TVA buy power from private companies outside its area or that municipalities and industries build their own power plants.

These are not fair, sensible alternatives. Neighboring power companies are hard pressed to supply their present demands, and even if they had a surplus the cost of transmitting it the long distances between their plants and TVA's customers would be prohibitive.

Municipalities might lack sites favorable to low production costs and industries in the Tennessee Valley would be unfairly penalized by not having the choice, enjoyed by industries elsewhere, of purchasing instead of producing their own power. In either case, the private power lobby's proposal would violate the contract which binds TVA to supply these customers.

Altogether, it is a false argument which the power lobby, spearheaded by the National Association of Electric Companies, advances. In the telegram which that association's chief lobbyist, P. L. Smith, recently sent to the Post-Dispatch and other newspapers throughout the country, perhaps the trickiest assertion was that the New Johnsonville, Tenn., project "would be the first steam plant constructed by the Federal Government any time, any place, for commercial purposes."

TVA's statement pointed out that the Federal Government authorized TVA to buy all the steam plants of the Tennessee Electric Power Co. and to build a new steam plant of its own at Watts Bar, so that if there is a grain of truth in the statement that New Johnsonville "would be the first" it is based on a tricky use of words and not on the facts.

We think this misleading propaganda by the National Association of Electric Companies will react against it and to the advantage of TVA wherever it is met by a plain statement of the facts. Mr. Smith's telegram and TVA's answer which were printed on this page February 5, and the TVA statement printed today, give all the pros and cons. We do not have any doubt of the conclusion of any reasonable person who reads them with an open mind.

Tax Saturation Point

EXTENSION OF REMARKS
OF
HON. GERALD R. FORD, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Grand Rapids Herald of February 8, 1949:

TAX SATURATION POINT

An idea of what Herbert Hoover is talking about when he warns that taxes have reached the saturation point may be had from the annual report of the Michigan department of revenue.

Thirty cents out of every dollar of Michigan income go for taxes, Federal, State, and local.

In some years during and after World War II, the take was higher.

What this means is that Michigan residents must earn $1 in order to have 70 cents to spend on themselves. A $50 weekly wage is worth only $35.

In the year which ended June 30, 1948, tax collections in Michigan amounted to $2,842,700,000. Of this, $2,252,300,000 was in Federal taxes, $343,200,000 in State taxes, and $247,200,000 in local taxes.

Total Michigan income last year is not yet known, but for the fiscal year ending June 30, 1948, according to United States Department of Commerce figures, it was $8,641,000,000, and for 1948 it was probably in the neighborhood of $9,000,000,000.

The percentage of taxes as related to income is far higher than it was a decade ago.

The Department of Revenue notes that in 1940 taxes amounted to 17.38 percent of the income of Michigan residents. In 1941 it rose to 19.42 percent; in 1942 it was 20.67 percent; in 1943 it was 22.48 percent; in 1944 it was 38.17 percent; in 1945 it reached a peak of 43.51 percent. Then in 1946 it declined to 32.25 percent and in 1947 to 26.57 percent.

It is perhaps significant that this rise in taxes in proportion to income has accompanied a great shift in the tax burden. The shift has been from local to Federal taxation.

In 1930, the report shows, local taxes amounted to 49.26 percent of the total, Federal taxes 28.72 percent, and State 22.02 percent.

By 1940, Federal taxes took the greater share, 48.25 percent. Local taxes were down to 28.1 percent of the total, and State taxes accounted for 23.65 percent.

By 1948, Federal taxes amounted to 79.23 percent of the total paid by Michigan residents. State taxes accounted for 12.07 percent, and local taxes only 8.7 percent.

Of course these figures reflect only the collection of taxes. Much of the Federal and State taxes are still spent at the local level, having been returned in various forms of Federal and State aid. At the same time, local Government has transferred or surrendered many of its functions to the State and, in some cases, to the Federal Government.

Almost always, however, there are State and Federal strings attached to funds that pass through their treasuries on the way to local units.

In part, the growing burden of Federal taxes is attributable to the war and to expenditures growing out of the war.

But another part is attributable to inefficiency of a growing bureaucracy.

Local government generally is more efficient than either State or Federal Government, simply because it is directly under the eyes of the taxpayers. Yet today, with 30 cents out of the income dollar going for taxes of all kinds, 24 cents of it is being collected and disbursed by the Government farthest from the people, the Federal Government.

Local units, in many cases receiving more than half of their revenues from higher levels of government, have a spending power that is divorced from the responsibility for keeping taxes down.

When taxes take 30 percent of income, that is perilously close to the saturation point. But under a system in which taxes are collected at a higher level of government, even though spent at a lower level, supersaturation is in sight.

Marshall Plan

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Milwaukee Journal of February 8, 1949, entitled "Continue the Marshall Plan":

CONTINUE THE MARSHALL PLAN

The administration has asked for $5,500,000,000 to continue the Marshall plan until June 1950.

There may be some debate in Congress about the exact appropriation that is necessary, but there should be no substantial disagreement about the wisdom of continuing the program.

Seldom has any American effort in foreign affairs been more quickly successful. Seldom has the American taxpayer gotten more for his money. This was part of the cold war—and it paid off handsomely.

The Marshall plan was conceived when the wave of Soviet-Communist imperialism seemed ready to engulf all of Europe—including the west. The European peoples were war weary, impoverished, desperate, and almost without hope of recovery. All this has changed in scarcely more than a year.

The very promise of Marshall-plan aid reawakened hope in western Europe—even before the aid was forthcoming. Psychologically, the knowledge that the United States would stand behind them was as important to the faltering western European nations as was the aid itself.

Today the tide has turned. Western Europe is recovering. Communist influence is waning. Western Europe is not only rebuilding its own economies but is preparing to defend itself against any Soviet-Communist threat.

The United States undertook a big program when it embarked on the Marshall plan. So far the plan has been outstandingly successful. Of course, this Nation will see it through. All but a few isolationist diehards in Congress seem to understand the need for continuing the plan—for the next year, or until the job is done.

Indictment of Protestant Clergymen in Bulgaria

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith the following editorial which appeared in the Washington News on Saturday, February 12, 1949:

WAR ON CHRISTIANITY

The indictment of 15 Protestant clergymen in Bulgaria is correctly interpreted by the State Department and the British Foreign Office as part of a concerted assault on all Christian churches by the Communist governments of eastern Europe. It can be nothing else.

The "lynch court" treatment of Cardinal Mindszenty in Hungary obviously was more than an isolated attack upon either an individual or a single institution. It followed earlier action against Bishop Lajos Ordass, of the Hungarian Lutheran Church.

Just as obviously, these persecutions have the approval of Moscow.

The drive is not confined to eastern Europe. It is world-wide. Witness the fact that Paul Yu-pin, noted archbishop of China, heads the latest list of "war criminals" published by the Chinese Communists.

Churchmen indicted in Bulgaria as "foreign agents" include leaders of the Methodist, Baptist, Pentecost, and Congregational denominations. The usual statement that all of the accused had fully confessed to spy charges accompanied announcement of the indictments. That has been the window dressing for Red purges since Andrei Vishinsky set the precedent in Russia in 1937.

The victims of the Bulgarian dragnet have known the hell of the police state torture chamber more than a month—long enough to be persuaded to sign anything the prosecution submits.

In Bulgaria the attack on the churches has been broadened by naming as alleged accomplices of the accused a list of distinguished foreign clergymen and educators. Included are such notables as Bishop Paul Garber, Methodist bishop of 11 European nations and former dean of divinity at Duke University; Dr. J. Hutchinson Cockburn, former moderator of the Church of Scotland; Cyril Black, professor of Russian history at Princeton; and Robert Tobias, of the World Council of Churches at Geneva.

This must be accepted as a warning that henceforth Christian churchmen will visit Bulgaria at their peril. More than that, however, it is a confession of weakness. The last church census in Bulgaria, in 1934, listed only 8,371 Protestants compared to 5,000,000 members of the Greek Orthodox Church.

A strong state would have no fear of such a small minority, particularly a minority known to be law-abiding. But the petty

regime at Sofia is not strong but weak, and its puppet tyrants are afraid. Because of that fear they seek to crush all independent thought, and all outside contact with enlightenment and truth.

Dictatorships supported by fear and terrorism are built on sand. Given time, such regimes collapse of their own rottenness. The tragedy is that, in that slow process, the innocent must suffer.

Proposal of TVA for Steam Plant at New Johnsonville, Tenn.

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. TABER. Mr. Speaker, the Federal Government is relying on public ignorance to secure funds to expand its operations into the electric-power business.

The proposal of the Tennessee Valley Authority to build a new steam plant at New Johnsonville, Tenn., is just another flagrant case of robbing Peter to pay Paul. Taxpayers all over the United States are digging down into their pockets to make up the Government's losses from selling electricity under the cost of production to giant chemical and metal industries.

I want to make it clear right now that I am not speaking out against the TVA. It was created for the purpose of harnessing the Tennessee River and its main tributaries to promote navigation and flood control. It was authorized by Congress to construct dams and reservoirs, and, insofar as it was consistent with its primary purpose, to provide and operate facilities for the generation of electric energy.

TVA serves approximately 144 municipalities and rural electric cooperatives that buy the power thus developed and resell it to the areas they serve. It was never contemplated that TVA would become the means by which the Federal Government would embark into the business of producing electric power in competition with industry.

Three million dollars are now being asked for the construction of a steam plant. Ultimately this plant will consist of three units capable of producing a total of 375,000 kilowatts. The estimated cost of the first unit of this plant is $54,000,000 plus $30,000,000 for transmission lines and generating facilities—a total of $84,000,000.

In these days such a cost is incidental when compared with the over-all expenditure of the Federal Government. But the principle involved in the granting of this appropriation and in the Government's operation of such a plant is highly significant and far-reaching.

For the sake of simplicity, let us grant that the TVA area is in need of additional power. This contention has not been proven to my satisfaction but let us assume the need to be a fact. We have been assured that such additional facilities can be secured through private capital. The huge industries operating in the TVA area, and the municipalities served, are well able to install their own steam plants just as they do elsewhere in the country. There is no reason why TVA cannot secure steam power from neighboring utilities with which it already exchanges power. The capacity to produce is there. Obviously, private capital, though abundantly available for such construction, is not forthcoming when, year after year, the Federal Government, through TVA, holds over its head the threat of building the world's largest steam plant and selling power below cost of production.

There are many American ways of working out the problem of securing more power for the TVA area without resorting to decadent socialism or taking these steps toward the nationalization of the power industry in the United States. If, by this appropriation, Congress authorizes the Government to establish itself in the power business, just what barrier is there to prevent it going into the steel business, coal, oil, or railroading?

My desk is piled high with pounds of releases, folders, reports, and so forth, advising me that the people of the Tennessee Valley are proud of the TVA and what it has done to bring prosperity and well-being to that area. Farms have been electrified, farm production has increased, homes have sewing and washing machines and all sorts and kinds of electric gadgets. Rates are cheap, and everyone wants electric fixtures and appliances.

Approximately one-third of TVA's electric power is allocated to the large industries which have moved into that area for the purpose of operating on cheap electricity.

In 1945, the peak years of the war, the residential consumers of the TVA area used 836,000,000 kilowatt-hours, and by 1948 this consumption had risen to nearly 2,000,000,000 kilowatt-hours.

TVA estimates that its residential consumers will, in 1952, use 3,750,000,000 kilowatt-hours—or about 3,000,000,000 more than in 1945.

The amount of electricity used on the farms in 1945 was about 85,000,000 kilowatt-hours, and in 1948 the amount used on the farms reached 360,000,000 kilowatt-hours. It is estimated that in 1952 this consumption will rise to 875,000,000 kilowatt-hours.

There are now 250,000 farms electrified in the TVA area and it is planned to extend some 40,000 miles of lines into the rural areas and service another 200,000 farms.

Now these figures are quite impressive, but what is more impressive is an understanding of how TVA finances this widespread, cheap, electric energy.

The overall investment in TVA is $780,000,000, a breakdown of which indicates $480,000,000 for power, $153,000,000 for flood control, and about $149,000,000 for navigation.

In the course of 14 years, TVA has paid back to the Federal Government, on account of principal, a total of something less than $31,000,000, and they have never paid any interest to the United States except on about $54,000,000 at 1 percent. The rates charged the consumers of TVA power are not even sufficient to meet the $15,000,000 interest charges which should be paid, nor are they sufficient to pay off the $12,500,000 depreciation on plants and equipment.

An interesting comparison is available; a corporation which supplies electricity in neighboring territory has about the same capacity as TVA. It does less wholesaling than TVA. In most cases, it sells direct to the consumer. This corporation shows revenues of $125,000,000, taxes of nearly $23,000,000, and a capital investment of $492,000,000 as against TVA's $480,000,000. TVA sets up taxes of $2,000,000 and revenues of $48,000,000.

It is apparent that the competing concern makes 20 percent of its charge against the consumer for taxes it has to pay while TVA makes 4 percent of its charge against the consumer for taxes. The difference is the evasion in taxes and interest charges which enables TVA to give its customers a rate lower than those outside its orbit can receive.

This means that the taxpayers all over the Nation are digging down into their pockets to pay the power bills for privileged corporations and municipalities in the TVA area. High among the beneficiaries of this public largess are such giant industries as the Aluminum Co. of America, the Monsanto Chemical Co., Victor Chemical Works, the Reynolds Metals Co., and a dozen others smart enough to have moved their plants to an area where electricity is being sold to them under the cost of production.

This is a flagrant case of robbing Peter to pay Paul. How can we explain this type of discriminatory financing to the farmers, miners, housewives, and workers of New York, Pennsylvania, Ohio, Kansas, California, and any other State you wish to mention. The Federal Government is relying on public ignorance of the true facts to continue this farce of cheap electricity. It is relying on public ignorance to secure this appropriation for the building of the steam plant at New Johnsonville, which will further enable large commercial interests to mooch on the taxpayer.

If the facts were known and understood this legalized fraud would be dealt with in short order. The public expects the Congress to protect its interests. Bestowing privileges to one area to the detriment and expense of another is not my understanding of that trust.

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution pertaining to the Taft-Hartley Act

adopted by the Common Council of the city of Milwaukee:

Whereas in 1935 the Congress of the United States enacted the Wagner Act which gave the workingman the right to organize into labor unions and to collectively bargain with his employer; and

Whereas this law based upon the American principle of equality of opportunity was thereafter hailed as the magna carta of labor; and

Whereas the enactment by the Eightieth Congress of the Taft-Hartley Act because of its inequities and inequalities tended to disturb if not actually destroy the fundamental gains made by workingmen in their quest for economic justice: Now, therefore, be it

Resolved by the mayor and Common Council of the City of Milwaukee, That we call upon the Congress of the United States now in session to repeal the Taft-Hartley Act, and in its place reenact the Wagner Act as originally enacted; and be it further

Resolved, That copies of this resolution be forwarded to the two United States Senators representing the State of Wisconsin, and the Congressmen from the Fourth and Fifth Wisconsin District, and to the clerks of the Senate and the House of Representatives.

The Flight of Capital

EXTENSION OF REMARKS
OF
HON. GEORGE J. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. BATES of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in Human Events, issue of January 12, 1949, entitled "The Flight of Capital."

The need of continuing the encouragement of venture capital is so important to the future economy of our country that this article is worth reading in the light of that need.

The article follows:

THE FLIGHT OF CAPITAL

I

If the owners of capital had the sense they were born with, they would pick up their pennies and silently steal away. They would accept the verdict of the times, that they are pariahs, exploiters who deserve to be exploited, possessors of ill-gotten wealth who must be relieved of it. Since the verdict is confirmed by President Truman's current budget message, the logical thing to do in the circumstances is gracefully to retire from the black-balling society.

That is to say, anyone who is in possession of a competence sufficient for the balance of his expected days ought to allocate it accordingly and live out his life, as far as can be, outside the active market place. This would not constitute the ordinary retirement of a good and faithful servant, but the wise enjoyment of one's property before it is confiscated.

There is, of course, no longer much doubt about ultimate confiscation. The self-haloed planner has cased the job thoroughly and avidly awaits the propitious moment for its execution. Hence, the flight of capital at this time would simply be intelligently anticipatory individual action.

Taxation has already made the employment of capital a fatuous undertaking. If there is a return, the state cuts itself in liberally; if there is a loss the capitalist must absorb it all. That's a heads-I-win-tails-you-lose game which guarantees bankruptcy because of the inclination and the power of the state progressively to increase its "take."

That's the direct discouragement of capital. In an indirect way—and much more viciously—taxation spells the doom of capital production. The only function of capital is to facilitate the making of goods that people want and are capable of buying. The capacity to buy is simply the capacity of delivering other production in exchange.

II

However, one is unable to take to the market place what has been previously purloined by the highwayman. The fact that the highwayman labels his extortion with a pretty name like social legislation does not alter the economic fact of depleted purchasing power. The more social legislation, the less effective demand for the goods capital can produce. Hence, the outlook for capital is—uselessness.

When you examine the use to which much of American capital is being put now you see that it is already a useless commodity. What would happen to our capital structure today if it were not being fed with orders for things people do not want, things they would not buy if they had the choice? Like atom bombs, battleships, and swivel chairs for bureaucrats. The goods produced serve only the whims and comforts of the tax-collector, who pays for them with the taxes he collects from the capitalist. What the tax-collector taxes out of the market place is not replaced with goods wanted. Hence the capital is employed in decreasing abundance. And the profits of the capitalist are purely of the paper variety, as he learns when he seeks to replace the capital used in making the unwanted things.

Thus, capital is now largely engaged in a treadmill economy. The point of exhaustion cannot be far away. Would it not be wiser to get out while the getting is good?

As a matter of fact, capital goes on strike automatically when the returns fall below the replacement point. Plants prefer idleness to producing what nobody wants; machinery would rather rust than wear out in aimless revolutions. Nobody plans it so; the absence of effective buyers in the market place automatically communciates itself to the engines of production and they slow down accordingly. This is a natural process that is far beyond the powers of the planner to avert.

But, why wait for this deterioration to set in? It has already begun, as you see when you try to turn profits into goods. But your accumulation of wealth still has something more than a fictitious value. Smart trading at this time can still turn your factory, your railroad, your desk and tool chest into claims on things you can eat, wear, or read. Let somebody else chase the will-o'-the-wisp of profits in a tax-ridden economy. You know that political intervention in the market place means eventual strangulation, or what will your capital be worth then?

So, sell out. Consult the actuarial tables for an estimate of your life expectancy, and your accountant for a reasonable figure on what your capital will realize. Simple division will then set the standard of your living for the rest of your days. Even if the standard is below what you are accustomed to, remember that the inconvenience is only mental, and that the pain is far less than you would experience from watching your capital wither away. And, if you put a worth on it, there is the gain in self-esteem; your dignity will rise when you no longer have to endure what Hamlet called the "insolence of office and the spurns that patient merit of the unworthy takes."

III

You will get along. You might put your capital into Government bonds. Thus, you join forces with the tax collector, and in these times that kind of alliance is profitable, even though immoral. The tax collector has gratuitously stamped you a parasite, a nonproducer, and there is nothing for you to do but accept the designation by becoming his partner. So long as there is any production which he can tax, you will have something to eat.

You need not worry about repudiation of the bonds—at least, not in your lifetime. The state does not go in for that sort of thing—for fear that its borrowing capacity may be undermined—until the entire economy collapses; until there is not enough production to support the political parasites, the populace, and the funded debt. It is only then that repudiation—the act of national bankruptcy—takes place, and it has been resorted to in the past only by nations subjugated by an invader. There is little immediate likelihood of your Government bonds losing their income-producing quality.

Or, you can buy up some productive land and let it out to others to work. There will always be users, the irrepressible will to live will see to that. Land being the necessary complement of all production, you can be sure that somebody will pay you rent for the use of your site. Urban, rural, or mineral land—it makes no difference what you buy, provided it is desirable for production, it will yield you an income without labor. Under no circumstances, however, should you use it yourself, in any way, for that would put you again in the detested capitalist class. If you buy stocks or bonds issued by a landowning company, be sure the company is not engaged in production, has no capital at all, does nothing but collect rents and royalties.

If, as an extra precautionary measure, you care to earn some wages as your forefathers did, by way of digging in the soil, so much the better for your health as well as your income.

How will society get along? That's an interesting, though unimportant, speculation. Things being as they are, the wholesale flight of capital—or, what is the same thing, the discouragement of savings and investment—is inevitable and your individual strike can hardly retard or accelerate the process. It would be simply anticipatory.

But, let us suppose that a hundred billions of capital should quit simultaneously, and with that sum the entrepreneurial skill needed to put it to work. What would happen then? Most certainly, society would take on a different character; people will live, and if the accumulations of capital are no longer at work, the strong survivors will live by noncapitalistic production. What is known as primitive production, people lived that way for many thousands of years, will replace our highly specialized market place.

IV

For a while, of course, an effort will be made by newcomers to put new accumulations to work, and maybe the enraged planners will confiscate everything in sight in order to keep the tax-producing machinery in some sort of operation. But, the political intervention which put capital to flight will likewise shackle recovery. The only condition which could entice capital, new or old, into productive enterprise is the seemingly unthinkable condition of freedom; the state is not ready to grant that.

For the striking capitalists the scene would be highly interesting. They would actually see the indicated future of America during their lifetime. Maybe they would enjoy the vacuous thrill of saying "I told you so." From their vantage point of detachment they would see the mass of men, in their preoccupation with survival, giving up one spiritual and cultural value after another. The first call on human endeavor being the demands of the belly, there would be little to put into metaphysics, baseball, the latest fashions—or even God. Meanwhile, the self-anointed will be riding herd and belching forth imprecations and promissory speeches, and living in a glory the resigned capitalists never dreamed possible.

The sight would not be pretty, but the prospect is interesting. It is the panorama of the future. Probably, no one now living could witness the final denouement, unless hastened by an atomic war, but it is possible from the evidence to project in one's imagination the complete collapse of civilization. This clear anticipation, if there were no other reason, should induce the suggested strike.

The admonition is sensible. Capitalists have nothing to lose but their chains, and they may gain such pleasure as a dying civilization affords. But the guts that created capital will prevent this alluring flight. It is the alternative of flight which will be chosen.

Indians on Turtle Mountain Reservation

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. BURDICK. Mr. Speaker, at the risk of making myself a nuisance to this House I again call attention to the present situation of the Indians on the Turtle Mountain Reservation. I cautioned this House in a speech made here on January 17 that some money would have to be scraped up for the relief of these Indians without waiting for an appropriation committee to mull over the matter for weeks. The Commissioner of Indian Affairs did gather a little money and sent it out to relieve these Indians, but not enough. In order for you to get a first-hand picture of the situation there, I submit herewith a letter from an Indian on the Turtle Mountain Reservation. I do not print his name as some retaliation measures might be used against him. I assure you, however, that I have this signed letter for the perusal of the Bureau of Indian Affairs.

The letter follows:

FEBRUARY 7, 1949.

HON. USHER L. BURDICK,
House of Representatives,
Washington, D. C.

DEAR SIR: I read the speech that you made to the House January 17, 1949, and want to say, and this comes from all the Indians on our reservation, thank you for trying.

You also said $43,950 had been given for winter aid. I'd like to say here, nothing has been given the Indians on this reservation or off the reservation for nothing except each a sack of potatoes. And not all the families got those. Before an Indian can get any kind of relief he first has to work it out, at the rate of 75 cents an hour. Many of these Indians go to work without eating breakfast and a lot of them stay without dinner so as to save what little they have to eat at home for their children. The grownups can understand about cold and hunger, but try explaining to a 2-, 3-, or 4-year-old child, and, brother, you have a job on hand. Many of these small children die during the long, cold winters we have, but the doctors always find some other cause to sign on the death warrants, when it really should read starvation and exposure to cold.

Even our own agency doesn't really know how bad off the Indians are, because they never venture out to visit the homes. I wish I were to take an investigator around, I sure would be willing to walk through snow 2 and 3 feet deep, just so people would be able to understand our plight.

Did you or your friends ever see your child cry for eats and not being able to get anything, begin to dig all over to try to find even a hard crust of bread that even the dogs wouldn't eat, and finding it, begin to chew on it as if it were a piece of the finest bread ever made? Lots of our Indians see it today. Did you ever have to spank a 3-year-old child who cried because it was denied another slice of bread that really didn't exist, except in the child's hungry little mind? Lots of our Indians do just that, not because they want to, but because they have to.

Our agency is located 18 miles from Dunseith, and when our Indians from around here go to our Indian school to try getting help, they're told, come to Belcourt. If the Indians had money enough to hire cars and taxis I don't think they'd be asking for help. Last week is the first week that our so-called relief girls were over at our school. How many orders were issued I don't know, but it was very darn few—if any. A few men got work slips to go to work and earn their orders. Just those under the doctor's care, aren't. Because if they did go see our doctor he'd give them a bag of aspirins and tell them that's all they needed. Well, we usually do need them after standing around for hours trying to get help, that we usually don't get.

But again I'll say, "Thank you," and if this letter helps in any way at all I'll be grateful, not for my sake, but for the sake of the poor hungry children that are so very, very pitiful.

And I "double dare" any of you men in Washington to come to see for yourselves! But don't get the agency staff to take you around. Get an Indian who knows where these other poor Indians can be found, and it's nowhere where cars can get in or out, you'll have to walk it.

I remain,
Sincerely,

_____.

P. S.—If you are to use any part of this letter to get help for our friend the Indian, kindly do not use my name. Reason: I'm an Indian myself, and people may think I'm wanting something for myself. Thank you! But every word of this is true. If you don't believe it, come and see and I'll personally take you to these homes that I know about. But you'll have to walk it, as I said before, some are way off the car roads.

Your Congressman Reports

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, since more than 1 percent of the milk cows of the Nation are in the Seventh Congressional District of Wisconsin and since 50 percent of the farm income is from milk, and 85 percent of the farm income of our State is derived from livestock and livestock products, it is evident that the whole economic life of our district is based largely on the price of milk. What will be the price of milk tomorrow, next week, next month, and next year?

The price-support law guarantees for 1949 that the dairy farmer is entitled to 90 percent of parity for "milk and its products." What is the parity price of milk? During the last session of Congress a bill was introduced by me and three other Representatives in an effort to have the support price of milk announced. The bill was unanimously passed by the committee and the House of Representatives.

This session your Representative introduced H. R. 2200, which will compel the Department of Agriculture to announce the support price for milk for 1949. A number of similar bills were introduced by Members of the House as well as the Senate.

Yesterday hearings were held by the Committee on Agriculture on H. R. 2200 and similar bills.

The surprise of the hearing was when the Solicitor of the Department of Agriculture testified that the Department had the power and authority to announce the support price for milk. This was exactly opposite to the propaganda that has been circulated, stating that they did not have the authority.

The hearings were suspended until Tuesday, February 22, to give the Department of Agriculture time to announce a legal, lawful, and satisfactory support price. If the announcement is not made before February 22 further hearings have been promised on the bill H. R. 2200 and companion measures.

The 59-cent butterfat support price announced this week means a $2.06 per hundredweight support for milk, but this does not take into consideration the value of skim milk. In other words, this is not a support price in accordance with the law, which reads 90 percent of parity "for milk and its products."

Most businesses of our district have a direct interest in the announced support price for milk and I expect to continue my efforts to have a legal, satisfactory price announced in conformity with the law of the land.

Navy Department Falls Down

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including an article by Tex Reynolds, columnist of the Racine Journal-Times, Racine, Wis., who calls attention to an incident in which a young Navy enlisted man was denied permission to visit the grave of his brother in France while he was on duty in European waters. The excuse given by the Navy Department in denying the right of this young man to visit the grave of his brother is ridiculous and the Navy Department lacks a sense of reality so far as its public relations are concerned.

The United States Navy comes up with an extremely weak excuse for refusing to allow a Racine young man to visit the grave of his brother killed in action in France.

Readers may recall that I mentioned this case about 3 weeks ago. Lloyde, eldest son of Mr. and Mrs. W. Scheller, 1200 Wisconsin Avenue, lost his life in the Battle

of the Bulge on Christmas Day 1944. Another son, Edwin, who has been in the Marines for 4 years, was home on furlough last August, and informed his parents he has been assigned to a ship for a good-will tour to Europe, including France. When he left, it was with funds to visit and decorate the grave of his brother near Verdun. But when the ship docked in France, the commander of the Navy force refused to grant a leave. Since the ship was to be there for well over a week, and it would take only two days to make the trip, this was hard to understand.

The family that had sacrificed one son for this country, and has another in service, naturally felt it had some measure of courtesy coming. At least, as the mother said, they'd like to know if there had been a good reason for the refusal. So Representative LAWRENCE SMITH, of Racine, was asked to get in touch with the Navy and see what he could find out. The Navy said it would investigate. And here's the "explanation," from Acting Secretary of the Navy John Nicholas Brown:

"Corporal Scheller was on a ship under the command of the commander, Sixth Task Force. In accordance with the desires of the State Department, leave has been granted in foreign ports only to officers and enlisted men of these ships who have bona fide relatives living in the foreign country they desire to visit. The unsettled conditions which prevail in Europe, and which may make it necessary for our ships to sail on short notice, make this limitation of leave mandatory."

In reply to this, Congressman SMITH wrote to Acting Secretary Brown as follows: "The reason you set forth for not permitting Corporal Scheller to visit the grave of his brother is hardly tenable. It is one of those situations where the Navy has failed in its public relations. It would not have taken this boy more than 24 hours to get from a port of embarkation to the cemetery and return. If conditions are so unsettled in foreign countries, both the Army and Navy might curtail the joy riding that is now going on over there. I know, because I have seen it in operation. The refusal to grant this boy's request was, in my opinion, arbitrary and without justification."

One of the big holes in the "explanation" is this: If unsettled conditions make it unwise for one boy to leave his ship to visit his brother's grave, why isn't it equally unwise to allow others to leave for a visit with relatives? Besides, as Mrs. Scheller points out, groups from her son's ship were given leaves in Paris, while his request was refused. In other words, it was all right for some to go on a pleasure jaunt, but wrong for one to go on a serious mission. And on top of this is the fact that the ships of the Sixth Task Force are still in French ports—some 4 months after the request leave was turned down because of the "possibility" that one might leave.

If this isn't a good example of stupidity and lack of human understanding on the part of some "high brass," it will do until a better example turns up—the Navy's "explanation" notwithstanding.

Medical Care for the People of America

EXTENSION OF REMARKS

OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. BIEMILLER. Mr. Speaker, I should like to call to the attention of my colleagues an address by the Honorable Bernard Baruch entitled "Medical Care for the People of America." This address was delivered at the Biltmore Hotel in New York City on November 19, 1947, at a dinner sponsored by the Medical Society of the State of New York, the Coordinated Council of the Five Medical Societies of Greater New York, and the Greater New York Hospital Association. The address is as follows:

MEDICAL CARE FOR THE PEOPLE OF AMERICA

(By Bernard M. Baruch)

You do me honor to ask me to talk to you about health. I almost became a doctor myself.

When I was a boy, my mother took me to a phrenologist. His office was across the street from where Wanamakers now is. He felt the bumps on my head and asked my mother what she expected to do with me.

She replied, "I am thinking of making him a doctor."

"He will be a good doctor," said this phrenologist, "but my advice to you is to take him where they are doing things in finance and politics, he might even make good there, too."

It has been a long detour for the prodigal. He has returned.

In many ways I am sorry I did not become a member of this noblest of professions. For I believe we approach a great adventure in health. That is our goal. I think it obtainable. It would be gratifying to take a more active part in it.

All my thoughts on medicine are colored by memories of my father, Dr. Simon Baruch. He was the wisest man I ever knew. He pioneered in surgery, physical medicine, and incurable diseases. Often, I heard him tell prospective medical students:

"Do not enter the medical profession to make money. Study medicine only with the idea that your greatest compensation will be knowing that you help your fellow man. Do not expect gratitude and you will never be disappointed."

As Chairman of the War Industries Board in the First World War, I realized how important to defense was the health of our citizens. That awareness was reinforced manyfold during this past year.

In preparing a report for the late President Roosevelt on manpower, I was shocked to learn at least 4,000,000 men had been rejected as 4-F's—unfit to defend their country. Some, not all, of these defects were preventable.

How much more shocking would have been the record if everyone had received the same examination?

Since then, I have given the problems of medical care much thought. It deeply concerned me that we not fail the returning veteran, so I studied their medical needs. From that, it was only a step to related problems of general medical care for all.

Soon I was up to my neck in reports, statistics, speeches, congressional hearings. I conferred with many persons, doctors and nondoctors, experts and amateurs.

May I tell you some of my conclusions. They may not be particularly new to you, pioneering this field. They may be helpful, coming from a nonprofessional mind.

But before I list them, I would like to point out that the medical science and art have conferred a new and great benefit upon society in the last generation. The years of our lives have been heavily increased. This helps not merely the individual, who wants to go on living—and living in dignity and self-respect—but all the people to live more comfortably and freer from fear.

And now to go on with my exposition:

There is no question—the need for more medical care exists.

Also, there is no question this need will have to be met.

The problem is how?

All over the world, the masses are stirring for higher living standards. Improved medical care is a foundation of that better standard. Without good health, of what advantage are higher wages or shorter work hours, better education or greater leisure?

The families whose earnings disappear with serious illness, the many who suffer disease which your skillful diagnosis and treatment could have prevented or halted, or whose limited means bar them from the medical attention available to you and me, these people will not remain content.

This striving of the masses for better living is felt everywhere. In health, your profession must steer that surging tide into channels of improvement. Then, the surge does not overspill into the revolutionary flood, which washes away more than it brings.

One of the last things Woodrow Wilson wrote, called The Road Away From Revolution, was this:

"In these doubtful and anxious days when * * * the road ahead seems darkened by shadows which portend dangers of many kinds, it is only common prudence that we should look about us and attempt to assess the causes of distress and the most likely means of removing them."

That was Wilson's method, to assess portending dangers, and anticipate them by timely action. So, he proposed the realistic League of Nations, which men rejected as a dream, and got a nightmare. Wilson knew social change was inevitable. He worked to steer that change into orderly channels.

You should take that as your guiding star.

Society usually divides into three broad groups.

At one end, the left end, are those who burn with a passion to change everything as quickly as they can, if not quicker.

At the other, right end, are those who want things just as they are.

In the middle are people, like Woodrow Wilson, to whose school I belong, who believe in intelligent progress and seek to guide it.

What differentiates these three groups is their attitude toward that vital element of life—time.

The left-enders feel time panting hot on their necks.

The right-enders use time to fight rearguard actions, all the way.

The middlers—sometimes both left and right call us muddlers—seek to come to terms with time, preserving the best of the past, discarding the outworn and moving on to a better future.

In the matter of adequate medical care, too many doctors have been fighting a rearguard action for too long. I feel I must warn those doctors—time is running against them. The medical profession has justly earned great influence in the community. It can keep that hold only as it moves forward. It will lose that hold if it has nothing but objections to offer, if it has eyes only for what not to do.

We must look for what can be done and do it.

The great question is how? I do not want to seem to say I know the answers. We do know the public is demanding better and more medical service through some action, political or otherwise.

What is this adventure in health I see dawning, and toward which you all have been keeping the doctor's vigil through the night? This adventure, which you will have to lead—or it will fail—has many elements:

1. More and better doctors in more places.

2. An immediate, complete survey to modernize medical education, with greater emphasis on chronic and degenerative diseases, mental hygiene, and preventive medicine.

3. More hospitals more evenly spread through the country.

4. Less specialists, more general practitioners.

5. Reorganize medical practice, stressing group medicine where needed and voluntary health insurance.

6. For those who cannot afford voluntary insurance, some form of insurance, partly financed by the Government, covering people in by law. I would call this compulsory health insurance, if that term's proper meaning had not been lost.

7. Increased medical research.

8. Greatly expanded physical and mental rehabilitation.

9. Education to make health a national habit.

10. A vigorous, preventive medical program, reaching everyone, children above all.

11. A new Cabinet post for health, education, and social security.

12. Creation of a nonpolitical, watchdog committee to safeguard progress in medical care for veterans.

13. Increased numbers of well-trained nurses and technicians.

14. Adequate dental care.

15. A stabilizing economy—inflation will make worthless any health program or anything else.

Each of these would take a speech by itself. I can but sketch some of them.

Even the least ambitious schemes for improving the Nation's health require more doctors, all competently trained. Why aren't more doctors being educated? In studying that question, I was struck by how expensive training a doctor has become—in dollars and in time. In its fine report on "Medicine in the Changing Order," the New York Academy of Medicine states:

"There seems no alternative other than Government aid if educational standards are to be raised or even maintained. * * * If medical schools are to continue as centers of research * * * here also Government aid may be necessary."

If science and medicine ask the Government for aid—which even the conservative deems necessary—they must expect he who pays the fiddler will call the tune. This means the Government will rightly insist upon no discrimination in medical care because of race, color, or creed. It will rightly insist upon opportunity for all to enter the profession and advance on the sole basis of ability and character—without restrictions of race, color, creed—or sex. And, I hope, without fear of, or favor from, the State.

Minimum standards should be set for institutions getting financial aid.

How much more the Government is likely to insist upon will depend upon the more progressive leaders in your profession.

According to the Academy's report—I quote: "There has been no fundamental reorganization of American medical education since about 1910." That finding certainly calls for your profession undertaking—now—a most thorough, down-to-earth survey to modernize medical education, making recommendations so boldly inspiring the people will gratefully back them. No one can draw up a better program than doctors.

Chronic illness and preventive medicine deserve greater attention. In all fields—I hope in war as well—there is a new accent on prevention. From answering fire alarms, our thinking is progressing to fireproofing.

Preventive medical care should commence as close to the beginning as society can reach. I favor a major sickness-prevention drive at the public school level. This should include compulsory examination of all children at regular intervals. Means should be made available for correcting defects disclosed.

How wonderful, if children were taught how to properly eat, sleep, sit, stand, play, and take care of themselves, developing both the knack for getting along together, and self-discipline—physical and mental.

Even when medical care is available, many adults neglect or refuse to use it—often because of social taboos, as in venereal diseases, or psychological dreads, as in cancer and tuberculosis. These attitudes reflect our not having outgrown the awkward age in thinking about disease and health. We do not really have a grown-up national health habit—although we are getting there.

People need to be educated on the virtue of medical care; how to use it; how to prevent disease. The greatest asset of any nation is a healthy, educated citizenry.

And now to what is perhaps the toughest problem—how can better medical care be extended to those who cannot afford it?

Your organizations have been particularly active in pressing voluntary health insurance. You and others have proven group insurance to be a sound, practical way. That is a great achievement. You can be mighty proud of it.

But I would not be frank—nor friendly—if I did not add what you know. It is not good enough.

Rome was not doctored in one day. It may be, as some have told me, that the needs of the bulk of our people can be met, given time, through voluntary insurance. What troubles me most are the needs of that sizable segment of society, which does not earn enough to pay for voluntary insurance.

The American Medical Association—its Bureau of Medical Economics—estimated in 1939 that families earning $3,000 or less—two-thirds the population—cannot afford the cost of serious illness. Some of these can afford voluntary insurance, although inflation has reduced their number. But what of the little fellows who cannot?

I have asked that of nearly everyone with whom I has discussed medical care. Nothing has been suggested so far, which promises success, other than some form of insurance covering these people in by law and financed by the Government, at least in part—what some would call "compulsory health insurance."

Since doctors, nurses, technicians, and hospitals already are strained, such insurance probably would have to move in stages. That requires careful study. Any program should utilize existing medical facilities to the maximum—it must to get started—and be organized to the local level.

Nationally, the program might well be administered by a body of doctors and nondoctors to keep medical care as free from politics as possible.

As to financing, my own preference runs toward the Government meeting only part of the cost, with part coming from pay-roll deductions from employers and workers. In time, these deductions will become absorbed in general costs of production. I have the utmost confidence in the efficiency of American industry—both labor and management—and which good health will stimulate. We can absorb these medical costs better than other countries which must also meet these needs.

The detailed problems raised by so-called compulsory health insurance are too numerous to be discussed tonight. I have weighed them most carefully. Many doctors and many lay people have sought to paint this issue as a choice—all black or all white. I have found every aspect of medical care to be gray—the happy color sensible compromise wears. All law imposes compulsion. A form of compulsory health insurance for those who cannot pay for voluntary insurance can be devised, adequately safeguarded, without involving what has been termed "socialized medicine." The needs can be met—as in other fields—without the Government taking over medicine, or socializing it, something I would fiercely oppose.

Law protects society. It is the absence of law which destroys it.

I do not fear Government taking its legitimate part in medicine, any more than I fear it in education or housing. I do oppose socialization here. It leads ultimately to the police state, degradation of the individual, and lessened well-being. There should be just one Federal agency, with cabinet rank, for all health and human welfare problems. I do not like Government agencies to be like Mahomet's coffin, suspended between heaven and earth.

Some say many people do not know how to pick their doctors. So, with any human activity. The best insurance against poor choice is improving the general quality of all doctors. But good or poor, it must be the patient's choice. No one else's.

May I interject this about inflation. Should health schemes fail, be sure to ask—were they killed by the plan itself—by incompetent administration—or by an inflation which ruined the plan's financing?

In connection with this doctor-Government relationship, it is a pleasure to point to the excellent medical progress in the Veterans' Administration—thanks primarily to Gen. Omar Bradley and Gen. Paul Hawley. They would never have accomplished their good work, had they not refused to allow the politicos to move in on them.

I would like to see the President name a small committee of top-grade citizens—some doctors, some lay people—to act as a vigilant watchdog over the veterans' medical program, so the ground so arduously gained may not be lost when someone replaces General Bradley. He should be supported by the entire Nation—particularly by doctors. His is the kind of courage and vigilance which will assure good administration of any health program.

More doctors must be distributed to more places in the country, which requires, among other things, less stress on training specialists, more on general practitioners. A number of counties do not even have a doctor. This reflects, in part, a lack of facilities in which doctors can work. Happily, some of this will be corrected under the Hill-Burton Act for hospital construction, with Federal and State governments cooperating.

Orderly change is the American way of life. Remember the spirit of your Oath of Hippocrates. Use your own good judgment to move along with humanity's legitimate aspirations in its trek toward better living.

I would hate to see any medical-care program under guidance of others than those who have the know-how. So would the American people. That is why I urge the doctors to get in and pitch—not stand by on the side lines. You need fear politicians or bureaucrats only to the degree you fail yourselves. You must take the leadership—no—yours is now the leadership. Keep it.

This meeting is an outstanding example of your deep concern to meet the need for action.

I have met people in all fields of human endeavor. I respect no group more—for your unselfish zeal and devotion to the sick, for the jealousy with which you guard your professional virtue—placing beyond the pale the rare violator of your oath.

I envy you the thrill which comes from relieving a patient from pain, and, often, snatching one from death.

I still am sorry that phrenologist didn't let me become a doctor.

Your situation reminds me of something my father said back in 1873, while president of the South Carolina Medical Society:

"Let us not be silent, but offer our facts, and defend them while we may."

"As an Arabian sage has said, 'What good comes from Ali's sword, if it be sheathed?'

" 'What good from Sadi's tongue, if it be silent?' "

Academy of Arts and Sciences Reorganized December 1948

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 10, 1949

Mrs. DOUGLAS. Mr. Speaker, under permission to extend my remarks in the RECORD, I wish to include the following from the Academy of Arts and Sciences:

ACADEMY OF ARTS AND SCIENCES, AFFILIATED WITH THE ORDER OF DISTINGUISHED AMERICANS, NEW YORK CITY, LOS ANGELES, REORGANIZED DECEMBER 1948

Purpose. To establish an academy for the cultivation and promotion of all the arts and sciences, music, literature, etc.

Lending dignity to the Government, the arts and sciences are the foundation of all commerce, agriculture, and business, and are essential to the welfare of the people, their health, wealth, and happiness.

The academy, guided by learned and scholarly men and women, will provide a medium for the cultivation and diffusion of the arts and sciences.

By research and publication, the academy will encourage the promotion and diffusion of knowledge gleaned by discoveries, observations, and improvements in all fields of human endeavor.

Many worth-while experiments have been abandoned because of the lack of a little assistance at the proper time, the academy will sponsor research and all projects that may contribute to the advancement and welfare of knowledge and the human race.

When possible, the academy seeks to publish those scientific and scholarly works whose learned nature would tend to preclude general publication.

The academy desires to collect and serve as the custodian of works of all types.

The academy, at all times, desires to assist and take part in the war of intelligence versus stupidity.

The arts and sciences, the foundation of a free, honorable, dignified, and independent state, flourish best in that state whose ideals embrace the concepts of freedom and independence.

Membership: Membership is by election and consists of various groups and classifications: Member, associate fellow, etc., in the Academy College of Arts and Sciences, the Academy College of Physicians and Surgeons, the Academy College of Music, the Academy College of Dramatic Art, etc.

Certificates of award and/or of merit: These distinctions are conferred upon men and women for accomplishment and meritorious services. Attached to these dignities are honorary degrees of the order.

Public recognition is given by the conferring of honor upon notable men and women.

The academy is the highest cultural and learned tribunal and the highest order of merit in the world. The international register places the Academy of Arts and Sciences (international), affiliated with the Order of Distinguished Americans, above all groups as the highest ranking in the world, and considers its awards more distinguished than those offered by any other organization or group and their awards, medals, prizes, etc.

The academy award and membership is the highest and most coveted object of pride and display in the world. A legitimate pride arises from being sufficiently notable and distinguished to be elected to membership and receive the academy award for accomplishment.

The Order of Distinguished Americans, affiliated with the academy, confers, within the order itself, the honorary degrees and titles of the order.

Socialites may become associate members in the division, order of honor, by election to membership, and become ladies and knights of the order.

DR. MAXWELL HESS,
Supreme National President and Executive Director.

OFFICERS OF ACADEMY OF ARTS AND SCIENCES (INTERNATIONAL) AND THE ORDER OF DISTINGUISHED AMERICANS

Dr. Maxwell Hess, supreme president, Academy of Arts and Sciences, and supreme national president, Order of Distinguished Americans.

Dr. Walter W. S. Cook, national president, Order of Distingushed Americans, and chairman, board of directors of the academy and of the order (chairman, Institute of Fine Arts, New York University).

Dr. Bruno Walter, president, Academy of Arts and Sciences, and member, board of directors (conductor of the New York Philharmonic Symphony).

Reginald Stewart, vice president and member, board of directors of the academy and order (conductor, the Baltimore Symphony, and director, Peabody Conservatory).

Harrison Keller, vice president and member, board of directors of the academy and the order (director, New England Conservatory of Music).

Alice Healy Hess, secretary-treasurer of the academy and the order, member, board of directors.

Theodore Harrison, member, board of directors (associate director, American Conservatory of Music).

Frank La Forge, member, board of directors.

Members of the general committee of the academy and the order: Dr. George N. Shuster, president of Hunter College of the city of New York; De Witt Wallace, editor, the Reader's Digest; Lila Acheson Wallace, coeditor; Paul D. Bagwell, president, United States Junior Chamber of Commerce; Milton J. Cross, American Broadcasting Co.; Maxwell Anderson, playwright; Katharine Cornell.

Housing and the Family

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from today's New York Times:

HOUSING AND THE FAMILY

Only a glance at the latest Census Bureau figures on family incomes in the United States is needed to make plain that our housing programs, Federal, State, and local, must be directed with far greater singleness of purpose to production of a low-cost living unit. Almost half of the Nation's 37,000,000 families have an income less than $3,000 a year; 30,000,000 of the 37,000,000 have an income less than $5,000. These figures were for 1947, and it can be assumed that there was an upward movement last year, but the picture is not greatly changed.

The slow pace at which construction is meeting New York City's needs is shown by newly released figures. It is estimated officially that the city is short 260,000 or more apartments, exclusive of slum dwellings that should be replaced. But in 1948 only 20,150 new dwelling units were completed, while conversion of buildings provided another 1,307 units. From this total must be deducted 3,639 living units demolished and 1,093 altered to other uses, making a net gain of 16,725 units in a year. Of these almost half were public housing.

Census reports estimate more than 3,000,000 families in the Nation are living doubled up, most of these being in some way related to the head of the household. This fact points to one of the most serious aspects of the housing shortage; its effect on family life. The Family Service Association of America, which is composed of 135 family service agencies, recently made a survey of results of the housing shortage, and found it was causing acute break-downs in family life, creating tensions between husbands and wives, parents and children, and married couples and in-laws.

The difficulty of finding decent shelter is "resulting in the postponement of marriage and child bearing, as well as overtaxing family budgets to a point where families face real psychological dangers," says this survey report. Many husbands and wives are living apart because of lack of housing. There is extreme difficulty in finding homes for families with children, especially the larger families. Tension between husband and wife because of housing hardships was noted by 122 of 135 agencies cooperating in the survey.

These are the serious conditions, affecting not only the families of lowest income but also those of middle income, that convince us that no single question before our Congress and the State legislatures so vitally concerns the public welfare as the finding of an intelligent and effective solution of the housing shortage. It is not just a question of producing enough housing, but of producing housing units with space enough so that satisfactory family life is possible, and at a rental or purchase cost that encourages health and harmony in the home as well as normal growth of the family.

Farmers and the Labor Law

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article by Mark Sullivan which appeared in the Washington Post on February 12, 1949:

There is a view which, looking forward to the congressional elections next year, 21 months from now, holds that the Republicans may regain control of Congress. This is worth attention, for a reversal to the Republicans in 1950 would be as arresting and important as was the reversal to the Democrats last November.

For the view that the Republicans may regain control of Congress, a main political justification has to do with the farm vote. The Republican defeat last November was due, in a very special way, to defection of farmers. Return of the farmers, this view holds, is already in the making, and is due to developments in Congress since the Democrats took over, with emphasis on the administration's new labor bill.

The cause of the defection of farmers was so local and restricted that its decisiveness in a national election for President was almost sensational, and has importance in our political history. Its localness and temporariness make plausible the view that the

farmers may return to their traditional Republican affiliation.

The Republican Eightieth Congress had suspended the building by Government of grain bins for growers of corn and wheat. This President Truman exploited in his farm-belt speeches. And his exploitation coincided with weeks of the campaign during which farmers, harvesting bumper grain crops, felt need of more bins. Accompanying his stirring up of farm resentment against the Republicans, Mr. Truman promised that if he were elected the Government would build more bins.

Grain growers voted for more bins, and will get them. Mr. Truman included them in the program of legislation he laid before Congress in his state of the Union message. But farmers, and everybody else, will get also, if the administration's program is passed, some things which farmers as a class are as far as possible from wanting, and quite certainly did not have in mind when they voted for more grain bins.

Several of these are in the administration's new labor bill. That bill, as a whole avowedly and greatly increasing the power of labor unions and leaders, goes counter to a strongly held traditional point of view of farmers. Some provisions of the bill, while objectionable to much of the public generally, have for farmers, because of their habitual attitude, a special objectionableness. It is not, except in some instances, that these provisions bear more heavily on farmers than on others; it is enough that they go against principles which farmers as a class hold with a special intensity.

Many provisions of the administration bill, repealing restrictions on labor unions and leaders that are in the existing Taft-Hartley law, go counter to the view held by most farmers. Examples are the removal of restrictions against the closed shop and the union shop. Two provisions of the new bill are outstanding, in the sense that they suggest a pattern and a trend.

One is the provision in the new bill which repeals a Taft-Hartley law provision giving the President power to get court injunctions against strikes which have a paralyzing effect on the country; examples are the Nation-wide railroad strike in 1946 and strikes in coal mining conducted by Mr. John L. Lewis' United Mine Workers.

To ask repeal of this power presents an extraordinary picture, a picture of Government abdicating, surrendering a power it has, and doing so in the interest of a class, labor unions and leaders.

In the same spirit is another aspect of the new labor bill. It omits a provision which is in the existing Taft-Hartley law against strikes by employees of Government (though during hearings on the bill the administration seems to have receded on this point). This is a picture of Government unwilling, in deference to labor unions, to assert authority over its own employees.

This attitude of the administration and its proposed surrender of power to seek court injunctions, suggests a conception of Government reasonably describable as a labor Government. That would be as far as possible from what farmers want.

Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. YATES. Mr. Speaker, there has been so much publicity advanced to show the necessity of retaining the so-called union shop as it appears in the Taft-Hartley law that I find it particularly refreshing to see the viewpoint advanced in an editorial from the Chicago Sun-Times for February 8, 1949, which calls for the closed shop. Since the inception of the Taft-Hartley law the International Typographical Union and the Chicago Sun-Times have been unable to enter into a contract, and it must be pointed out that the ITU has always been considered a conservative, responsible union by labor and by management. Even prior to the passage of the original Wagner Act its contracts had provided for the closed shop and with this provision in its contract it enjoyed a very fine relationship with its employer. The enactment of the Taft-Hartley law, prohibiting the closed shop, resulted in a strike which has lasted for fully a year and one-half, a strike which was not desired by labor or management but which was made necessary by the very nature of the law itself.

The strike continues and will continue until the Taft-Hartley Act is repealed. We must press unceasingly for its early repeal.

The editorial is as follows:

WHAT'S UNFAIR IN LABOR?

As we pointed out the other day, the administration's labor bill offers a way of handling national emergency strikes which probably would be as effective as that contained in the Taft-Hartley Act. What about the other sections of the new bill?

Readers of this newspaper know that we welcome the section which repeals Taft-Hartley's ban on the closed shop. There are industries—newspaper publishing is one of them—where the closed shop among skilled craftsmen had worked well over a long period of years until Taft-Hartley came along.

Whatever the final form of this proviso, we think it ought to permit such employers and unions to continue the closed shop if they wish.

Apart from this, the principal effect of the new bill is to narrow down the list of unfair labor practices chargeable to unions. The bill permits employers to be charged with the same unfair practices listed by the Wagner Act, but penalizes unions only for certain types of secondary boycott and jurisdictional strike.

Under the new bill it would be O. K. for workers in one plant to refuse to handle goods produced in another plant, if they are seeking to promote legitimate union organization in the second plant. But this would not be O. K. if the object is to compel an employer to throw out one union and recognize another.

There is a good case for distinguishing between "justifiable" and "unjustifiable" boycotts and strikes. One can sympathize with the union man who doesn't want to work on goods produced by strikebreakers, but not with the member of union A, who refuses to handle goods produced by members of union B.

Best of all, the new bill sets up machinery for the settlement of jurisdictional disputes which lead to such boycotts and strikes. It empowers the NLRB to appoint an arbitrator whose findings shall be final. If a union defies the arbitrator's award, it can be punished for unfair practice.

The big question for Congress is whether unfair practices chargeable to unions shall be confined to those relating to certain types of boycott and strike. Taft-Hartley contained these additional practices for which unions could be brought to book:

(1) Restraining or coercing workers to join a union.

(2) Causing employers to discriminate against nonunion members.

(3) Refusing to bargain collectively.

(4) Charging excessive initiation fees.

(5) Featherbedding (i. e., demanding pay for work not performed).

Items 1 and 2 provided some employers with a handy weapon in efforts at union-busting. But we see no good reason for eliminating the other three, particularly the obligation to bargain. Bargaining in good faith should be a rule applying to both the employer and the union.

We see no strong reason, either, why the labor bill should not continue the requirement that unions reveal financial reports, and the guarantee of employers free speech in dealing with employees. William Green, A. F. of L. president, says his organization would not object to these provisions.

We like the bill's emphasis on the arbitration of jurisdictional disputes and its statement of public policy that disputes over contract interpretation should also be arbitrated. In general, labor has expressed satisfaction with the bill. That implies a readiness to try voluntary arbitration as a more orderly and more satisfactory way of settling differences than coercion by strikes or government.

Hearings before the Senate subcommittee indicate that the bill faces a controversial experience. Let's have every point debated fully, but let's have no unfair legislative obstructionism. There should be an early vote in each House.

Cardinal Mindszenty's Conviction a Blow at Freedom

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, the unfortunate conviction of Cardinal Mindszenty, of Hungary, has aroused the ire of all thinking people. I am inserting an editorial from the Tablet, which appeared a few weeks ago. It is a very pertinent contribution to the present controversy regarding his conviction:

Once again the clenched fist of Soviet tyranny has been raised to strike down a man who dared to stand up and speak his piece for freedom and the rights of man. Josef Cardinal Mindszenty, primate of Hungary, follows his brother prelate of Yugoslavia, Archbishop Stepinac, behind the bars of a Soviet prison because he would not submit meekly to the absolute rule of a totalitarian tyranny under which no man can call his soul his own. It would be a fatal error if Americans should regard the imprisonment of these heroic men as the unfortunate result of some complicated European political situation, or of some involved conflict between church and state, or even as sad evidence of religious persecution.

The arrest and imprisonment of these two heroic leaders of their people strikes a serious body blow at every reason, ideal and principle for which American men and women gave their blood and their lives in two World Wars. The imprisonment of Archbishop Stepinac, and now the arrest of Cardinal Mindszenty, makes a mockery of the sacrifices of those who gave their lives in the cause of human freedom. Our soldiers

fought and died that men might be free, that they might be able to worship God as they see fit, that fathers and mothers might exercise their God-given right to educate their children to be other than blind slaves of the bureaucrats in the Kremlin or of their stooges in Hungary, Yugoslavia and elsewhere.

If the American people really understood and appreciated just what is involved in the arrest of Cardinal Mindszenty, there would arise such a wave of moral indignation as would shake the very walls of the Kremlin in Moscow. If those entrusted with the protection of America understood and appreciated the meaning of the Communist action in Budapest they would jail every Communist in the United States as a traitor to our country.

Cardinal Mindszenty's arrest, as the imprisonment of Archbishop Stepinac, strikes at the very heart and soul of the freedom of the human individual, for which, presumably, every American suffered and sacrificed during the bitter years of the late World War. Let no American say to himself complacently: "What is happening in Hungary is none of my business." It is our business. Every courageous voice silenced by Red tyranny is one less voice that can be raised in defense of our freedom. Every success of aggressive Red atheism is one step closer to the end of our freedom, one threat more serious to our freedom, our life, our liberty, our pursuit of happiness. Every American should ask himself, now, just where he stands. Is he on the side of brutal tyranny and the denial of all human rights? Or does he stand with our Declaration of Independence in believing that all men are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness? There is no neutral ground in this conflict for the very souls of men, for the very idea of freedom as opposed to slavery.

Cardinal Mindszenty, as Archbishop Stepinac, stood on the very same battleground on which every American soldier, sailor, and marine stood on the far-flung fronts of the late war, fighting a courageous fight for the ideal of human freedom under God. These men fought our fight against tyranny. They fought the Red as they fought the Nazi because both alike represented tyranny over the mind and heart and soul of man. Their defeat is our defeat. The Red mockery of their heroism is the mockery of every American soldier's heroism. Let the millions of American veterans remember that. By as much as the voice of Cardinal Mindszenty and Archbishop Stepinac are suppressed and silenced, by just so much are the voices of our beloved and honored dead likewise suppressed and silenced as they cry out to us, the living, not to break faith with the ideal of freedom for which they shed their blood and gave their lives.

This tragic thing that has happened in Hungary is the business of every American. If true freedom is to remain in the world, if the rights of man as man are to be recognized and respected, then every free voice must be raised, every free voice must speak up, and latest Soviet outrage against the very heart and soul of freedom.

What can you do about it? You can get the facts straight and keep them straight. Soviet propagandists will raise a smoke screen of false and lying issues—currency frauds, black marketing, treason, collusion with the West, etc. See the issue clearly: freedom or slavery. Talk to your friends and neighbors about it. Do not let your moral indignation cool. Write to the President, the Secretary of State, your Congressman and Senator, urging that the full force of diplomatic pressure be used and that our influence in the United Nations be used to demand and obtain the immediate release of Cardinal Mindszenty and Archbishop Stepinac. Form local committees of protest and spread information about this situation, even among the pro-Communists in your neighborhood. Never give way to discouragement. Keep up the fight for the freedom of these two stalwart defenders of human freedom. Their fight is your fight. Their freedom may mean your freedom.

Thaddeus Kosciusko

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of the speech I made of Thaddeus Kosciusko at Lafayette Square, Kosciusko Monument, February 12, 1949:

THADDEUS KOSCIUSKO

I am grateful for the opportunity to participate in the memorial ceremony, here in Lafayette Square in the Capital of our beloved Nation, the citadel of the governments of the world, observing the two hundred and third anniversary of the birth of Thaddeus Kosciusko. We are gathered here today, as are countless others throughout the Nation, to pay homage to a soldier, statesman, and great apostle of human freedom and liberties.

Particularly in this age, amid so many unsettled crises, it is truly heart-warming and inspiring to be able to look back on the life and ideals of this son of Poland and adopted son of our beloved United States. We can be justly proud of his caliber, tireless energy, and thorough devotion to the causes of liberty and freedom.

It was in 1776, early in the Colonists' struggle for independence, that Kosciusko entered the Army of the United States as a volunteer, and brilliantly distinguished himself as a military strategist, especially at New York, West Point, and Yorktown. George Washington, who had the greatest admiration for Kosciusko, promoted him to the rank of colonel of artillery and made him his adjutant.

In 1783, by act of Congress, the Polish hero was rewarded for his services and his devotion to the cause of American independence, the privilege of American citizenship, a considerable annual pension, with landed estates, and the rank of brigadier general.

Upon Poland's proclamation of the constitution of May 3, 1791—Kosciusko returned to the land of his birth to wage war against the enemies of his country, determined to fight for the independence and territorial integrity of Poland.

Kosciusko, in all his military endeavors, never aided in wars of aggression—as he on various occasions asserted, "I have never fought except in the cause of human freedom, and I can never serve in any other cause." His efforts were always in the cause for rights of the oppressed.

Kosciusko was essentially a democrat of the school of Jefferson and Lafayette. He maintained that republics could only be regenerated on the basis of absolute liberty and equality; he believed in the guaranty of absolute freedom.

Thomas Jefferson has said of him, "He is as pure a son of liberty as I have ever known, and of that liberty which is to go to all, and not to the few or the rich alone."

But even as we recall the character and the achievements of the great Kosciusko—even as we realize his untiring efforts and the efforts of Polish-Americans through the years of our Nation's history, our thoughts turn naturally to the pathetic and distressful situation in which Poland finds itself today.

Oh, if we had today men of courage and deep determination for freedom that was characteristic of Kosciusko—men who would today in reciprocity give their ability to help free Poland—the land of his birth.

Justice demands that Poland be accorded true freedom, determined by her rights, primary among which is the right to a free and unfettered election by the Polish people themselves, to establish their own government on their own terms.

If we shall be determined to perpetuate Kosciusko's ideals of freedom and liberty, insuring them for ourselves and aiding others to attain them; then the spirit of Kosciusko has and will prevail.

Little Norway in Tough Spot

EXTENSION OF REMARKS
OF
HON. HAROLD O. LOVRE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. LOVRE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial written by Fred C. Christopherson, editor of one of the leading newspapers in my State, the Daily Argus-Leader, of Sioux Falls, S. Dak. In this enlightening editorial, I believe the editor has drawn a very apt picture of the position in which a little country finds herself when she is called upon to choose between the protection of two major world powers.

The editorial follows:

LITTLE NORWAY IN TOUGH SPOT

Norway is in a difficult spot. It is a small nation of great spirit but still quite unable to defend itself against a major aggressor. That was demonstrated in World War II when the Hitler forces invaded Norway and took possession.

Prior to that, Norway had been under the protecting wing of Britain. But in this instance, Britain couldn't help. The British navy tried to block the German invaders but it was repulsed.

Britain, of course, is no longer a potential defender of material substance.

So Norway must look elsewhere. If she is to resist Russia, who will help her?

Obviously the only nation qualified to do so is the United States.

But what assurance does Norway have that we will come to her rescue in event of a Russian expansion move?

Norway sees the situation that now exists in Germany where the United States is shipping goods to its sector of Berlin by air.

Norway may wonder why we haven't cracked through the Russian area by force. Is it because our force is insufficient? Is it because we don't want to risk the danger of war?

Studying these questions, Norway could very well apply them to her own situation.

It is easy on this side of the water to say that Norway should be bold and defy Moscow. But the guns of Moscow are close to Norway's throat.

The Norwegian resistance to Moscow without help would be futile. The Norwegians may be pardoned for considering the elements involved in a nonaggression pact. We aren't courageous enough—or seemingly aren't—to defy Moscow in the Berlin region. Can we blame Norway for the perplexity now evident in her deliberations?

A Modern Hoax

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, while nearly every thinking person believes in reciprocity and its possibilities for world peace and fair commercial approaches between nations, the New Deal brand of reciprocal trade treaties are entirely a different approach.

Listening to the debates on this issue Tuesday, I first noted the strong endorsement of the New Deal brand of reciprocal trade treaties by the chairman, the Honorable ROBERT L. DOUGHTON, of North Carolina. Then I thought of the tobacco situation. First, the Smoot-Hawley duties are pretty much intact, so far as tobacco imports are concerned, so the Smoot-Hawley Act appears satisfactory to North Carolina. Then I thought of the embargo on exports of tobacco seed, the most severe and vicious trade barrier ever erected in the history of our country. Then I thought of the millions upon millions of dollars worth of tobacco sent under the Marshall plan to feed the starving people of Europe. It then occurred to me that no New Deal reciprocity agreements had been made that would seriously affect our southern friends.

The remarks of the ranking member of this committee, the Honorable JERE COOPER, of Tennessee, with strong endorsement of the New Deal brand of reciprocity treaties, brought to mind that his district had not been subjected to any ill effects by the program. The tobacco and cotton of Tennessee had had additional protection by New Deal embargoes.

Then I listened to our colleague from Georgia, the Honorable A. SIDNEY CAMP, and I thought how well Georgia's tobacco is protected by the Smoot-Hawley Tariff Act and by the embargo on the exportation of tobacco seed. In addition, the Smoot-Hawley tariff rates still apply to peanuts, which is 7 cents per pound and a prewar 100 percent ad valorem duty. The Smoot-Hawley protection for these southern-grown crops appears to be not only acceptable, but also desirable. Then I thought about the near embargo on cotton, since only 135,000 bales can be imported each year. This is an additional barrier erected by the New Deal.

Then I listened to the gentleman from Arkansas, my good friend the Honorable WILBUR D. MILLS, and I thought about the legislation that put tobacco, cotton, and peanuts on the preferred list. It occurred to me then that rice is also enjoying the Smoot-Hawley protection and that this is duty bound. It again occured to me that it is not difficult to support a legislative program that gives one's own district preferential treatment. But, the question is, whether or not it is fair?

Then I listened to the Honorable HALE BOGGS, of Louisiana, and again thought about the Smoot-Hawley tariff on tobacco, rice, and the embargo on certain imports, and I wondered what all this debate was about.

Then I listened to my especially good friends, the Honorable J. M. COMBS, of Texas, and I not only thought about the Smoot-Hawley tariff on tobacco, but embargo on tobacco-seed exports, the embargo on cotton imports, but also the near embargo on wheat imports, since only a few thousand bushels can be imported. What price is Texas asked to pay? Very little indeed.

Then I listened to our colleague from Colorado, the Honorable JOHN A. CARROLL, and I thought of the fixed-support price for Colorado wool provided by the much-criticized Eightieth Congress. I thought of the Sugar Act of 1946 passed by the Democrat-criticized Eightieth Congress to protect the Colorado sugar-beet producers, and I also thought about the near embargo on wheat imports. But how about beef prices? How about the effect of beef imports.

Well, I have listened and I have read the propaganda about the New Deal brand of reciprocal trade treaties. Then I think of how the propaganda artists have deceived the people, the League of Women Voters, the American Association of University Women, and many other groups.

The undisputed facts are that if the New Deal brand of reciprocal trade treaties are so wonderful, why has not the administration tried them out south of the Mason and Dixon's line? Why continually talk about reciprocity, the good-neighbor policy and the Golden Rule, and then turn around and erect the most vicious trade barriers in the history of our country? Why continually lower the duty on livestock and livestock products and then invite additional imports of these commodities grown largely north of the Mason and Dixon's line, and keep the Smoot-Hawley duties and protective embargoes for the South?

While preaching reciprocity, good-neighbor policy and the Golden Rule philosophy, the New Deal has substituted embargoes for tariffs. They should first take a few spoons full of their own medicine before trying to tell others of the merits of their medicine.

Many thousands of American citizens are without jobs today as a result of the machinations of the Committee on Reciprocity. Millions more are evidently to be added to the growing list of unemployed. We should postpone any hearings, in order to invite greater imports, until we find out exactly how many millions are unemployed in the United States.

Our New York City friends appear to be in favor of the Smoot-Hawley duty of 50 percent ad valorem on fur coats or the manufactured product. We become provincial, however, when we protest the $238,000,000 worth of furs that were dumped into the United States in 1946 largely by a state-trading country like Russia. We are accused of being provincial when we take the position that the raw furs are entitled to protection comparable to the finished article. We have witnessed the near destruction of the fur-farming industry in the United States because of the ill-advised and unfair trade policy of the Administration. The Administration is responsible for nearly wrecking one phase of American agriculture and that is the fur-farming industry and no living person can deny this statement.

Since the New Deal and the "Fairy Deal" have given only lip service to reciprocity, good-neighbor policy, and the golden rule in their foreign agriculture approach, and since the New Deal and the "Fairy Deal" have erected the most severe and most vicious trade barriers in the history of our country, I maintain that their false propaganda is most assuredly a modern hoax.

David Marcus Memorial

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. CELLER. Mr. Speaker, I am pleased to submit an address by a distinguished soldier concerning a stalwart citizen of the United States, a gallant officer in our military forces, a hero who shall ever be revered and honored wherever free men dwell. Colonel Marcus was killed in fighting for the freedom of Israel. I commend General Klein's remarks concerning the martyr, Colonel Marcus, delivered at the memorial services held for Col. David (Mickey) Marcus, on Sunday, October 10, 1948, at the Jamaica Jewish Center, 150–91 Eighty-seventh Road, Jamaica, N. Y.

The memorial was conducted by the Queens County Council, Jewish War Veterans of the United States of America and the Zionists of the Long Island region:

INTRODUCTION BY MR. MURRAY APRIL

When Dr. Neuman spoke at the education conference this morning, he said that 1947 was the year of miracles. And I concur with him in that belief for we have had the opportunity to see many miracles happen. Those of us who have been associated with the Jewish War Veterans of the United States had the privilege of experiencing a miracle.

For it was in 1947 when a new leadership came into the organization. We have had many leaders in the Jewish War Veterans of great stature, of great ability, of great vision. But a new leadership was given to us in 1947, with a God-given ability to lead the people of Israel in a new direction. We were fortunate indeed in that to our leadership came our immediate past national commander, General Klein.

It was through his good office and the tremendous prestige that his office carried, and

his great ability to meet people, and to mix with people, and to reason with people, that a great contribution was made in behalf of the ultimate that we experienced from the United Nations.

We may all say thanks to our next speaker, General Klein, for the great leadership he made to our cause—for the great leadership that he reflected in the Jewish War Veterans of the United States, and it is my privilege to present to you my past national commander, General Klein.

ADDRESS BY GENERAL KLEIN

I am deeply touched by the gracious and undeserving introduction of my good colleague in this great fight, in which the Jewish War Veterans of the United States has had such a noble part.

Comrades, ladies and gentlemen: To me this service for my old comrade in arms, Mickey Marcus, is something more than just a memorial service.

Mickey and I served together. I first met him during the Louisiana maneuvers of 1941, when he was a judge advocate of the Twenty-seventh Division and I served with the Thirty-third Infantry Division. We became intimate friends and good comrades. We met again in the jungles of the Pacific, and our friendship continued when I was appointed assistant to the Secretary of War and he was one of the chief executives in the military government of the War Department, and the right hand to the very able and brilliant General Hildring, known as one of the greatest humanitarians to come out of this war.

I saw Mickey for the last time exactly 6 weeks before he was killed. He had flown to New York from Israel. I don't believe more than six or eight people in this country knew that he was back here. He calmly sat smiling—with his great sense of humor—and planned what should be and must be done. For two days we conferred on vital problems facing our heroic comrades in Israel, hoping that he and I would fight side by side in Israel, provided our Government would approve of such action. He assumed his responsibilities and discharged them as a soldier, as an American and as a Jew.

When I think of this great typical American hero, I wonder whether I am qualified—or whether any of you here with the exception of our rabbis—are qualified to speak not alone of his great deeds, but his readiness to sacrifice his life for the cause of freedom, and of what inspired Mickey Marcus to go to Israel.

I don't know whether many of you know that Mickey was readmitted to the Regular Army when I was assistant to the Secretary of War. He left the military profession 15 years ago, joined the National Guard and was reinstated, and made a distinguished record in the recent war. When the Regular Army opened its ranks, Mickey topped the list. He had his seniority back, he had his rank back, and could have gone far. He expected his promotion to a general officer in our Army. And those of us who have climbed the hard ladder of promotion in the service, and especially those of us of our faith who have traveled the path to achieve the distinction of a general officer will appreciate the great sacrifice Mickey made when he resigned from the Regular Army to return to his reserve status, and then finally go to Israel and lead our gallant comrades of the Hagannah as its inspiring behind-the-scene chief.

I saw Mickey before he went on his first mission. I never realized or knew that he was so indoctrinated with the ancient spirit that prompted him and all others to fight for the sacred soil of Israel. Future generations will realize that Mickey, enshrined in the history of all freedom-loving people, was one of the truly great soldiers of our time. Those who are students of history know of the contributions made by great military men throughout the ages. Many of them were not entirely military by nature—perhaps military by profession but not militaristic in character—and contributed to the battle for freedom of all people. We have such noble examples in our own history—men like Lafayette, Kosciuszko, Pulaski, and Steuben, who left their homeland to aid the struggle for liberty.

Theodore Herzl will be known as the father of the new Israel; Chaim Weitzman as its president. But the men who deserve the glory for having established the free and new state of Israel will not be the political leaders of yesterday and today, but the glorious fighters of Israel who astonished the world in stopping the invader and freeing their nation. A battle that began 2,000 years ago came to life again with Herzl and his loyal disciples, continued at the Warsaw ghetto and concluded in the Holy Land.

When heroes are honored, we will pay tribute to the sons and daughters of Israel. Someday, when the story of Israel is written, you will find Colonel Marcus, United States Army, occupying the same role in this story of Israel as Lafayette holds in America's history.

I would like to believe, and I think I am right when I say that Mickey did not die for Israel. Mickey died as an American soldier. Mickey died for America. Mickey gave his life because he felt it was his duty to carry on—on Israel's sacred soil, where freedom's fight left off at Guadalcanal, the "Bulge," the beaches of Okinawa. He carried on because he felt the job was not finished. Let us hope and pray that his sacrifice has not been in vain. Americans of Jewish faith will always honor the memory of this gallant son of our people. And now he has been brought back to America to sleep with his comrades of his alma mater at West Point Cemetery. He came back to an American grave, where his memory will always be honored.

I never knew that Mickey was a Zionist. I still don't know whether Mickey was a Zionist. I don't know whether I am a Zionist. I don't know whether any of us really understand the proper phraseology of Zionism. I listened with great interest today to our distinguished rabbis giving us the interpretation of modern Zionism and the Zionism of tomorrow. To Mickey and to me, and to all other soldiers who have served, bled, and died in Israel that is not Zionism alone, it is also Americanism. This is the way America was born. I believe Mickey would want me to say this to you today.

We can only show ourselves worthy of the sacrifice of Mickey Marcus if we carry on the fight until the democracy of Israel will become a symbol of freedom for the entire world.

I was able, as national commander of the Jewish War Veterans of the United States, to speak with some authority to President Truman and Secretary Marshall only 1 month ago and make known the hopes of the American soldiers of Jewish faith. And 3 weeks ago Governor Dewey, of this State, also heard our plea. We feel that Israel is an American problem. It ceased to be a problem of concern to only the Jews.

As one of the rabbis today explained to this audience, the people of Israel have fought on the side of the democracies in two wars, and God forbid, should there ever be another world conflict, they would again join the ranks of the freedom-loving people. What better base, what better security for an eventuality can we have than to continue to be loyal to our allies who, during the most treacherous days of Rommel in the recent war, made it possible for Montgomery and his great troops, and finally our troops, to be able to stop Rommel.

We were allies in World War I and World War II, and Mickey felt we had a job to do there. We owed something to those soldiers who made it possible to win the war in the Middle East. And to soldiers and students of strategy we realize what it means to have a friendly ally.

And so Mickey Marcus is the best answer to some of the bigots on the American scene, and also to some members of our faith representative of those groups who feel there is still a danger in fighting and supporting Israel. Some might challenge our Americanism. But I believe the Jewish war veteran of the United States, and every Jewish soldier who has fought in the ranks of our great Army since the days of the revolution, need not apologize for his Americanism. Our share in World War I and World War II, the Spanish-American War, the War Between the States, and the American Revolution is the best answer.

It can be said that no one ever challenged the loyalty of the Irish-American when he marched on St. Patrick's Day for a free Ireland. And no one challenged the loyalty of the Bohemian-American on his march for a free Bohemia or Czechoslovakia—or the Polish-American when he marched for a free Poland. And no one challenged the loyalty of the American when he joined the Lafayette Escadrille long before the United States entered World War I. And no one challenged the loyalty of those gallant Americans who joined the Canadian and British Air Forces. No one challenged the loyalty of General Chennault and the Flying Tigers when they joined the Chinese Air Force to stop the Japanese aggressors. That was all right for these gallant comrades of ours to do.

Mickey Marcus told those chauvinist Americans—who can still be found within our own groups, and who criticize American Jews fighting for Israel—"My Americanism is still as good as yours * * * don't you dare to challenge it." And that is what Mickey Marcus would tell you today. And that is what we Americans of Jewish faith proclaim today, tomorrow, and forever.

He leaves a heritage and a challenge to us soldiers to carry on. He has set a noble example. We have only one loyalty, one flag, and one nation—our blessed America. But we know that we went into this great struggle to help the oppressed and finally bring freedom to every part of the world. Israel is part of this world.

And to our people, the land of Israel is holy. It was made holier because a gallant son—my comrade and my friend—Mickey Marcus—paid the supreme sacrifice. As long as there will be soldiers, and as long as they will be marching—next year or 50 years from now—as long as there will be a Memorial Day parade, and as long as we soldiers and those who come after us will remember our comrades who gave their lives so that the next generation may live in peace, in decency, in honesty, and in freedom, our gallant Mickey Marcus will remain the supreme field marshal of our ranks.

I salute you, Mickey Marcus. I salute you and I assure you that we are proud that you have been one of our own. We are proud that you laid down your life as an American soldier in the battle that has lasted 2,000 years, and that finally, with God's help, will bring us to victory.

Can ERP Succeed?

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I

include an article by Allan C. Butler and Murray P. Yeager, which appeared in the Washington Post February 7, 1949, as follows:

On February 8 the administration will go before Congress to obtain European recovery program appropriations for the fiscal year 1950. It will then become more readily apparent than it is now that the prospects of success for the ERP by 1952 are indeed slim. The European Cooperation Administration will have to report in all truth that the long-range program considered by the organization of European Economic Cooperation in its recently published report offers little promise of being a real recovery program.

That report estimates that under the present program the participating countries will have a $3,000,000,000 deficit in 1952. This means that without drastic changes in the present plans, western Europe will have to take a cut in 1952 of one-fourth of the planned level of imports from all sources. The report states, "Such a reduction in western Europe's imports would be an intolerable solution for both Europe and the overseas suppliers. Western Europe with a population one-tenth higher than before the war and imports one-fourth lower, could hardly prosper. For some countries the reduction in imports proposed would be even greater; for some they would mean misery."

The complete reduction of balance-of-payments deficits within the 4-year framework would involve, on the part of some western States, the imposition of controls hitherto known only under totalitarian regimes. Moreover, from the United States point of view, such controls would mean the elimination of all luxury items from European trade and would permit only the purchase of selected raw materials and heavy industrial equipment from the North American continent. Since under the present program the United States faces a loss of a billion and a half dollars in her sales to Latin America and continued infringement by western Europe on her sales in other areas of the world, any further reduction of exports might occasion severe economic repercussions in the United States economy.

Any penetrating analysis on the part of the congressional committees concerned will involve the posing of questions which the officials of the ECA will find difficult to answer, to wit: assuming that the fiscal 1949 program did serve, and the fiscal 1950 program now under consideration will serve their functions as an integral part of a long-range program, is that program one which holds any promise of achieving a stable level of unsupported European economic activity?

If the answer to this question is negative, as it must be in view of the interim report of the OEEC, the committees should ask if there is any long-term program contemplated by the administration that will achieve within some limits a viable European economy.

This is the time to make known to the Congress and the American public the situation with which they are confronted. The Marshall plan as it now stands cannot be a European recovery program unless we are willing to accept the imposition of the most stringent economic controls in Europe, the reduction of European living standards, and serious dislocations in that part of the United States economy concerned with foreign markets.

ALLAN C. BUTLER.
MURRAY P. YEAGER.

WASHINGTON.

The Supreme Court Should Decide the Colorado River Dispute

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. PHILLIPS of California. Mr. Speaker, a few days ago, the gentleman from California [Mr. POULSON] placed in the Appendix of this RECORD a letter from the Bureau of the Budget which stated definitely that the central Arizona project was not in conformity with the President's program, and could not secure Bureau approval. Several bills had already been introduced in this Congress attempting to secure congressional action on that project. Undoubtedly, in the face of Presidential disapproval, these bills will be dropped. In spite of that, the Members of the Congress should keep in mind that this does not settle the water argument between California and Arizona. In the simplest language, it is this: California interprets the contracts and compacts entered into between Arizona, the Federal Government, and itself to establish the right to a certain amount of water for California. It feels that other interpretations than its own support this view. Arizona feels that the amount to which California is entitled is a less amount. Since California has already contracted to deliver this water to various communities, to the full amount to which the State believed itself entitled, and since the population of my State has increased 3,000,000 in the past 8 years, anyone can see this is a serious problem and one which should be settled.

California desires no water belonging to anyone else, nor to any other State. California does not care at all what Arizona does with the water to which she is entitled. All California asks is that the matter shall be decided, so my State will know whether she has the water for which she made a solemn compact with the Government of the United States, or whether she has it not, and has sold water to thirsty people which now, by some changed interpretation, she will not have to deliver. For that reason, California has proposed settlement by conference, or by arbitration, and now by taking the matter to the Supreme Court of the United States, which has always been considered the final authority, under the Constitution, particularly in matters involving legal interpretation. The letter from the Budget Bureau may end the efforts of our Arizona friends to get water by congressional action, before a decision can be secured on the amount to which both States are entitled legally under long-standing contracts, but it still does not settle the basic argument, over the interpretation of the contracts. An excellent editorial appeared recently in the Los Angeles Herald-Express, and I have asked consent today to extend my remarks in the Appendix and to include this editorial, under the caption "California will continue fight to settle water dispute."

The editorial follows:

CALIFORNIA WILL CONTINUE FIGHT TO SETTLE WATER DISPUTE

Even though President Truman opposes spending $738,000,000 in Federal funds to develop the central Arizona reclamation project—with Colorado River water diverted from Lake Mead—thus lessening an immediate danger to southern California's life line water supply, this State cannot afford to rest on its laurels, but must carry on its fight in Congress to compel the Supreme Court to establish, once and for all, the rights of California and Arizona to Colorado River water.

Southern California is dependent on Colorado River water to maintain the vast population which has settled in this area, because water from our own mountain streams and deep wells cannot begin to meet the needs of our domestic life, agriculture, and industry.

When the United States Government contemplated developing the central Arizona reclamation project, California became alarmed, for such a development called for the construction of a diversion dam above Hoover Dam for the purpose of diverting a large portion of the Colorado River water to arid lands in Arizona. It would necessarily cut sharply into the water supply which means life itself to southern California.

The President's action is encouraging, but it does not end California's fight to have the Colorado River dispute ended through action of the Supreme Court. The West must continue the fight. Measures still before Congress calling for the development of the costly Arizona project must be killed.

There can be no assurance that Southern California's water supply from the Colorado River will not be drastically cut until the Supreme Court sets up hard and fast laws establishing the rights of the several involved States to water.

That is the problem which California is asking Congress to solve through action which would authorize the Supreme Court to establish the rights of all States affected.

ERP Stopped Reds

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Post of February 10, 1949:

ERP STOPPED REDS

Secretary of State Acheson's assertion that the European recovery plan—perhaps better known as the Marshall plan—stopped the Reds in Europe last year may well be believed. When we look back to the situation a year ago when Senator VANDENBERG was so vigorously backing up President Truman in pushing this program through, when we recall how powerful then were the Red forces in the elections in France and in Italy, it certainly seems reasonable to assume that the aid we sent those countries in the past year enabled the democratic parties to overcome their Red enemies.

In the past year we have sent over, under this program, some $6,000,000,000 in money

and supplies. For the next 15 months the ERP is asking for $5,580,000,000 more, and intimates that even this may not be fully sufficient. These are large sums, even as we look upon Government spending today. But considering the purpose for which they are being spent they might well prove the more economical way out. The cost of another war would run into hundreds of billions and might end in the destruction of civilization as we know it.

It may be recalled that last year Senator VANDENBERG wisely suggested that, instead of appropriating the entire $15,000,000,000 to $16,000,000,000 in one lump sum to put through the 4-year program envisaged under the Marshall plan, it would be much better to divide this up into yearly allotments. First, he pointed out, it would be unconstitutional for any Congress to make appropriations for such a purpose for a period of time that would overlap into a succeeding Congress; and that, second, instead of giving Europe practically a blank check for a 4-year period, we might well get better results by telling them they would get further aid at the end of each year only if they were able to prove that they had spent the previous installment wisely and were really trying to help themselves.

W. Averell Harriman, special United States representative to the Marshall plan nations, said that "we are winning the struggle for peace and freedom," and he pointed out the breaking away from Moscow domination by Yugoslavia as indicating the possibilities of further such breaks. Instead of waiting for Russia to poke out at us at all vulnerable points, such as in Greece and Turkey, in Korea and China, it might be good policy for us to poke back by encouraging Yugoslavia, Poland, and Czechoslovakia to stir up trouble for Stalin. Such an offensive might be better than staying wholly on the defensive as we have been for the last 3 years.

Flood Control Is a Vital and Important Year-Round Function

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. McDONOUGH. Mr. Speaker, the subject of flood control is seldom discussed at length in the House except when there is a disaster in some part of the United States due to floods or at the time when an appropriation or authorization bill for flood control is before the House. Undoubtedly many Members of Congress do not know that flood control under the direction of the United States Army Corps of Engineers is a continuing function of the Government and has been of great value in the recovery and restoration of millions of valuable acreage that would otherwise be inundated and for the protection of millions of dollars' worth of real property, such as factories, homes, and public institutions, and for the lives of millions of citizens.

Flood control comes under the jurisdiction of the committee of which I am a member, the Public Works Committee of the House. I am also a member of the Subcommittee for Flood Control, and am, therefore, vitally interested in all phases of this important function of the United States Army engineers.

Flood control on a Nation-wide scale has only been a function of the Federal Government during the past 12 years although it was originally recognized as a Federal activity in 1879 when the Mississippi River Commission was created by Congress. However, since 1936, which is the year the original Flood Control Act was passed, providing for authorization of funds for the control of floods on a Nation-wide basis, much valuable progress has been made and a large and expansive program is planned for the future.

Since the original 1936 Flood Control Act, similar acts have been approved in 1937, 1938, 1939, 1941, 1944, 1946, and 1948. To date, Congress has provided in these acts a monetary authorization of $2,508,784,400 for flood-control work. Under these authorizations Congress has appropriated a total of $1,333,365,925 for the prosecution of the general flood-control program. These appropriations began with the fiscal year 1938, when they totaled $47,000,000. Flood-control appropriations were naturally reduced during the recent war years and reached a low of about $4,000,000 in 1944, largely for continuation and maintenance of projects essential to the war effort; but they rose to 339 million for the fiscal year 1949 to carry out the augmented postwar program. The budget estimate for fiscal year 1950 is $430,000,000.

Noteworthy progress has been made in execution of the general flood-control program. This is particularly true when it is realized that this work has been under way for only about 10 years, since the first flood-control appropriation was made in 1938; and that this decade includes the mobilization and war period of 5 years, extending from 1941 to 1945 inclusive, when Federal civil works were at a standstill.

In this brief period, however, up to June 30, 1948, we have completed 172 projects for local flood protection of cities, towns, and agricultural areas; and 56 reservoirs, some of which are for flood control only while others are for flood control in combination with related uses such as development of electric power, navigation, and water supply. The cost of all flood-control projects completed through June 1948 is $483,000,000.

The flood-control program has already proved itself to have been a sound investment from the standpoint of the Federal Government and of the national economy as a whole.

Benefits of flood-control works are returned to the people of the country and to the Federal Government in many ways. The first and most immediate return is in flood damages prevented. For example our estimates show that in the short period since 1938 the works which we have completed at a cost of $483,000,000 have prevented flood damages of over $500,000,000. Thus they have already paid for themselves; and during their useful lives we may anticipate that they will return their cost many times over by prevention of damage.

Wide publicity is naturally given to flood damages which still occur throughout the country. It is unfortunate however that so little is known of the flood damages which do not occur because of the Federal flood-control program. We estimate that the flood-control works which have thus far been completed, or which are effective, under the general flood-control program now prevent an average annual flood damage of over $130,000,000.

This average annual flood damage will of course vary widely from year to year. The past year 1948 experienced some notable floods. That in the Columbia River Basin in May and June 1948 was one of the most destructive, and caused the loss of some 50 lives and over $100,000,000 in flood damage. Some 582,000 acres of land was inundated in that basin. It is not generally known, however, that the relatively small amount of flood-control work which has been completed in the Columbia River Basin by the Corps of Engineers prevented damages estimated at over $40,000,000.

In late December 1948 and early January 1949 a major flood occurred on the Connecticut River and its tributaries in Massachusetts and Connecticut. Completed flood-control works which were in locations to operate effectively during this flood included the Knightville Reservoir and local protection works at Hartford, West Springfield, and six other cities along the Connecticut River. These works were highly effective and prevented damages of about $11,000,000, which would otherwise have occurred during a flood of this magnitude. The remaining flood damage which actually occurred in the basin was reduced to $1,100,000.

Flood-control works also produce a return to the United States and strengthen the national economy by reclaiming or improving vast areas of agricultural land. This land, being located in our river valleys, is the richest and most productive in the Nation. The project for flood control in the alluvial valley of the Mississippi River is, of course, the prime example of this benefit, as without flood control that entire fertile valley would be alluvial river swamp. The smaller and more widely distributed works of the general flood-control program are, however, accomplishing the same conservation of land in 37 States as follows: (a) Land protected wholly or in part by completed projects, 4,000,000 acres; (b) land that will be protected wholly or in part by projects started but not yet complete, 14,000,000 acres.

The flood-control program will permit increased use of these productive lands, with great benefit to farmers and property owners. The Federal Government has a direct stake in this phase of the accomplishment because of augmentation of the food supply of the Nation and because of increased tax returns from the protected lands.

In addition, Federal flood-control works produce a number of benefits which we may term intangible, but which are of very real importance. The removal of flood hazard from a river valley immediately produces a sense of security

and public confidence which is reflected in improvement of living conditions, establishment of new industries, and a general upward trend in the social and economic structure of the area. During the recent war, flood protection of important industrial areas and centers of transportation has been of vital importance. Floods in 1943 and 1944 caused serious disruption of transcontinental rail and highway traffic. The important rail center of east St. Louis, the gateway to the West, with its rail yards and transfer facilities, was seriously threatened, but the Federal levees held and a disaster was averted.

The Federal flood-control program also produces many collateral benefits which may be enumerated briefly, as follows:

(a) Development of hydroelectric power.

(b) Water supply for municipal, industrial, and agricultural use.

(c) Recreational values—particularly associated with reservoirs.

(d) Preservation of fish and wildlife.

(e) Abatement of pollution and improved sanitary facilities.

At its present stage of progress all of these types of benefits are being returned to the Nation.

Medaling

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Washington Post on February 12, 1949:

Maj. Gen. Harry H. Vaughan's gift for sticking his foot in it has got the country into an embarrassing fix with Argentina which, however, is putting on some ridiculous overtones. Added last week to the "fruit salad" on the chest of General Vaughan was the Order of Liberator San Martin which was bestowed by the Argentine Ambassador. The precise reason for this honor is not quite clear. General Vaughan has rendered no distinctive service to Argentina, so far as we know, and his military exploits scarcely rank as more distinguished than those of any number of persons in and out of the Pentagon. But the general happens to be the President's military aide, and this is doubtless the only reason for decorating him. What the ceremony has done, therefore, is to give an impression of cordial relations between this country and Argentina totally unwarranted by Argentine performance. It looks as if President Perón has decided to do some diplomatic fence mending without in the least altering his anti-American course and had chosen General Vaughan as the most promising dupe to fall into his trap.

Because of his association with the White House, the White House must bear part of the blame for permitting the investiture—the more so because this is only one of a number of blunders committed by the egregious General Vaughan. About a year ago, you may recall, he precipitated an absurd squabble when he announced publicly that he was to be made chief of the President's aides—an excursion properly squelched by the White House. Previously he had caused no end of consternation by referring to Winston Churchill as a garrulous old gentleman, in a speech which almost set a record for indiscretion. Altogether, General Vaughan's penchant for aggrandizement is reminiscent of the late unlamented Hermann Goering, who reportedly wore medals on his pajamas.

General Vaughan certainly loves his medals as much as Hermann did. But he may soon find himself in some predicament in accommodating them on his martial and ample breast. Several other Latin-American nations, irked by the protests of Columnist Drew Pearson over the presentation, are preparing to honor General Vaughan in like fashion. At this rate the general pretty soon will be plastered with fruit salad. (Mr. Pearson, by the way, has quite a bit of it himself.) The farce calls for action on the part of Congress before this depreciation of the currency by foreign governments makes every military breast look foolish.

The State Department has a rule that none of its officials abroad may accept any foreign decorations, and it is not too much to ask that other Americans whose position impinges upon foreign affairs be subjected to similar restraints. Newspapermen must be left with their sense of proportion in the matter. Article I of the Constitution specifically forbids any American officeholder from accepting any foreign present, emolument, office, or title of any kind without the consent of Congress. This excellent rule was suspended during the two world wars in deference to our Allies, though Congress since last summer has reasserted the congressional check. The debasement of medal-giving and the weakness of mortal man are reasons enough for putting a stop to a practice that is in danger of becoming a racket.

Cerebral Palsy

EXTENSION OF REMARKS
OF
HON. J. PERCY PRIEST
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. PRIEST. Mr. Speaker, under leave to extend my remarks, I desire to include a statement by Mr. Paul A. Strachan, president of the American Federation of the Physically Handicapped, Inc., and a copy of a bill I introduced recently.

This bill, Mr. Speaker, is H. R. 1729, and it would authorize research and investigation into the cause, prevention, and treatment of cerebral palsy.

The statement by Mr. Strachan and the bill follow:

STATEMENT OF PAUL A. STRACHAN, PRESIDENT, AMERICAN FEDERATION OF THE PHYSICALLY HANDICAPPED, INC.

Enactment by the Congress of H. R. 1729 should be a must on the legislative calendar because for many years we have seen the necessity for special treatment and training of those afflicted by cerebral palsy, who number from 500,000 to 700,000 of our citizens.

So far, no cure has been found for cerebral palsy, but, comparatively recently, medical science and methods of education have made some progress in developing latent powers of the individual so afflicted to the extent that much improvement has been noted in the cases of those who could afford such treatment and training. Unfortunately, for the most part, those who need such treatment and training most are denied it because of the high costs thereof. This cannot be construed as criticism of physicians and surgeons, but is the result of a combination of costs of drugs and the necessarily involved therapies that go to make up the whole course.

As I have many times stated, there are three primary phases of importance. Medical treatment, including therapy, education, and training of the individual, and education of the general public. Of equal importance is special training for parents of cerebral-palsied children. There are too many instances where the parents, following the false and often dangerous trail of carrying the child on a pillow, have completely ruined in that child the self-determination, reliance, and energy to carry out a program of attainment of physical and professional proficiency.

Another great draw-back is public discrimination against employment of the cerebral palsied. The average employer evidently feels that a cerebral-palsied person is, as a rule, both incapable and unreliable and, therefore, is a bad employment risk.

We have made and are making strenuous efforts to overcome this unfavorable condition, but we fully realize that until some universal standard of treatment and training is applied, the cerebral palsied will lack the means needed to benefit and fit themselves for any kind of work.

Therefore, in preparing this bill we were mindful of the necessity for adequate medical treatment as a prerequisite, and we consulted the most eminent specialists in the field of cerebral palsy to ascertain their views. We believe the bill represents a fair composite of their views. We also consulted the organizations of the cerebral palsied (spastics) because we are sure that no one can better understand the difficulties and problems attendant upon this affliction than those who suffer from it themselves.

We know enactment of this measure to be necessary to the welfare of hundreds of thousands of our citizens and we therefore urge early and favorable action by the Congress, and the support of all organizations, groups, and individuals at interest, to bring about speedy and effective operation thereof.

We may say that strong endorsements of this bill have been made to us by great national organizations of labor, veterans, educators, businessmen, fraternal, civic, farm, women, scientific, and professional, and other groups and individuals at interest, representing more than 35,000,000 citizens. Surely such powerful support will attest the need and soundness of this important bill.

H. R. 1729

A bill to amend the Public Health Service Act to provide for research and investigation with respect to the cause, prevention, and treatment of cerebral palsy, and for other purposes

Be it enacted, etc., That the Public Health Service Act, as amended, is hereby further amended by adding at the end thereof the following new title:

"TITLE VII—CEREBRAL PALSY

"SHORT TITLE

"SEC. 701. This title may be cited as the 'National Cerebral Palsy Act.'

"DECLARATION OF POLICY

"SEC. 702. The Congress hereby finds and declares (1) that the health of the Nation is seriously affected and threatened by cerebral palsy; (2) that approximately 500,000

people in the United States (commonly referred to as 'spastics') have been born with, or have acquired at a later time, damage to the brain which interferes with voluntary motion and coordination and requires special treatment and training; (3) that, until comparatively recently, victims of cerebral palsy were regarded as incurables, but new techniques employing new drugs, therapy, and training give evidence of much progress in the treatment of persons afflicted with cerebral palsy; and (4) that the Federal Government should provide for research and investigation with respect to diseases of and injuries to the brain in order to develop more effective means of prevention, diagnosis, and treatment of such diseases and injuries, and, if possible, to cure the victims thereof.

"NATIONAL CEREBRAL PALSY INSTITUTE

"SEC. 703. For the purpose of improving the health of the people of the United States through the conduct of researches, investigations, public education, and demonstrations relating to the cause, prevention, and methods of diagnosis, treatment, and restoration of those afflicted by cerebral palsy; assisting and fostering such researches and activities by public and private agencies, and promoting the coordination of all such researches and activities and the useful application of their results; training research workers, training undergraduate and postgraduate personnel in matters relating to cerebral palsy; training parents of cerebral palsied children; and developing and assisting States and other agencies in the use of the most effective methods of prevention, diagnosis, treatment, and restoration of those afflicted by cerebral palsy; including refresher courses for physicians; there is hereby established in the United States Public Health Service (hereafter referred to in this title as the 'Service') a National Cerebral Palsy Institute (hereafter referred to in this title as the 'Institute').

"DUTIES OF THE SURGEON GENERAL

"SEC. 704. In carrying out the purposes of this title, the Surgeon General is authorized and directed—

"(1) To conduct, assist, and foster researches, investigations, experiments, and demonstrations relating to the cause, prevention, and methods of diagnosis and treatment of cerebral palsy;

"(2) To promote the coordination of research, education, and control programs conducted by the Institute, and similar programs conducted by other agencies, organizations, and individuals;

"(3) To make available research facilities of the Service to appropriate public authorities and to health officials and scientists engaged in special studies related to the purposes of this title;

"(4) To make grants-in-aid to universities, hospitals, laboratories, and other public or private agencies and institutions, and to individuals, for research, education, and control (service programs for prevention, diagnosis, and treatment utilizing current or advanced medical methods), projects and programs, including grants to such agencies and institutions for the construction, acquisition, leasing, and equipment of hospital, clinic, laboratory, and related facilities necessary for such research, education, and control;

"(5) To establish an information center on research, prevention, diagnosis, and treatment of cerebral palsy, and collect and make available, through publications and other appropriate means, research, and other activities carried on pursuant to this title;

"(6) To secure, from time to time, and for such periods as he deems advisable, the assistance and advice of persons from the United States or abroad, who are experts in the field of cerebral palsy;

"(7) To establish and maintain, from funds appropriated or donated for the purpose, research fellowships in the Institute and elsewhere, with such stipends and allowances (including travel and subsistence expenses) as he may deem necessary to train research workers and procure the assistance of the most brilliant and promising research fellows from the United States and abroad, and, in addition, to provide such training and instruction, and demonstrations, through grants to public and other nonprofit institutions;

"(8) To establish and maintain, from funds appropriated or donated for the purpose of traineeships in the Institute and elsewhere in matters relating to the diagnosis, prevention, and treatment of cerebral palsy, with such stipends and allowances (including travel and subsistence expenses) as he may deem necessary to train persons found by him to have proper qualifications, and, in addition, to provide such training and instruction and demonstrations, through grants to public and other nonprofit institutions;

"(9) To admit and treat at the Institute, for purposes of study, voluntary patients suffering from cerebral palsy, whether or not otherwise eligible for such treatment by the Service; and

"(10) To adopt, upon recommendation of the National Cerebral Palsy Council, such additional means as he deems necessary or appropriate to carry out the purposes of this title.

"NATIONAL CEREBRAL PALSY COUNCIL

"SEC. 705. (a) There is hereby created a National Cerebral Palsy Council (hereafter referred to in this title as the 'Council'), to consist of the Surgeon General, or his representative, the chief medical officer of the Veterans' Administration, or his representative, the Surgeon General of the Army or his representative, the Surgeon General of the Navy or his representative, the Chief of the Children's Bureau or her representative, and 12 members appointed without regard to the civil-service laws, by the Surgeon General, with the approval of the Federal Security Administrator (hereafter referred to in this title as the 'Administrator'). The 12 persons appointed shall be leaders in the fields of medical science, who have qualified as specialists in cerebral palsy, the fundamental sciences, education, or public affairs, and one of these shall be an individual who, himself, or herself, although otherwise qualified, shall be cerebral palsied, and one shall be a registered nurse, qualified by experience with cerebral-palsied patients.

"(b) Each appointed member of the Council shall hold office for a term of 4 years, except that any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed, shall be appointed for the remainder of such term, and except that, of the members first appointed, three shall hold office for a term of 2 years, and three shall hold office for a term of 1 year, as designated by the Surgeon General. None of such 12 members shall be eligible for reappointment until a year has elapsed since the end of his preceding term. Every 2 years the Council shall elect one member to act as chairman for the succeeding 2-year period.

"(c) The Surgeon General is authorized to utilize the services of any member or members of the Council in connection with matters related to the work of the Service for such periods, in addition to conference periods, as he may determine to be necessary.

"(d) Each appointed member of the Council, while attending conferences or meetings of the Council or while otherwise serving at the request of the Surgeon General, shall be entitled to receive compensation at a rate to be fixed by the Administrator, but not exceeding $75 per day, and shall also be entitled to receive an allowance for actual and necessary traveling and subsistence expenses while so serving away from his place of residence.

"(e) The Council shall meet from time to time to advise the Surgeon General on the conduct of the program of the Institute, and to review and make recommendations regarding requests for grants-in-aid for research, education, and control.

"(f) The Council, with approval of the Surgeon General, shall establish and appoint subcommittees, to deal with various phases of diagnosis, treatment, and training of cases of cerebral palsy, as follows:

"(1) Subcommittee on Prevention, which shall be primarily concerned with obstetrics, shall be composed of specialists skilled in—

"(A) obstetrics;

"(B) pediatrics;

"(C) embroyology;

"(D) physiology (particularly convulsions and the relationship of cerebral palsy to convulsions or epilepsy suffered by children at an early age);

"(E) asphyxia;

"(F) blood—RH;

"(G) infections occurring early in life (particularly the relationship of whooping cough and other diseases of children to convulsions).

"(2) Subcommittee on Treatment, to be composed of specialists skilled in—

"(A) physical medicine;

"(B) neurology;

"(C) physiology (nerve contractions, and so forth);

"(D) orthopedics;

"(E) pediatrics;

"(F) pharmacology.

"(3) Subcommittee on Training of Professional Personnel, to be composed of the following:

"(A) The head of an accredited medical school.

"(B) The head of an accredited physiotherapy school or department.

"(C) Educators of cerebral-palsied persons.

"(D) Occupational therapists.

"(E) Speech therapists.

"(F) Physical-medicine specialists.

"(G) Psychologist (testing of the cerebral-palsied child).

"(4) Committee on Educational Research on the Cerebral Palsied Child, to be composed of the following:

"(A) Qualified educators.

"(B) Persons qualified to conduct clinics and educational forums, for parents of cerebral-palsied children, and other groups at interest.

"CONTROL GRANTS

"SEC. 706. (a) The Surgeon General is authorized and directed to make grants-in-aid, as provided in this section, to States, counties, health districts, and other political subdivisions of States, and to public and nonprofit institutions for the establishment and maintenance of programs for prevention, treatment, and control of cerebral palsy, including the provision of appropriate facilities for care and treatment and including the training of personnel.

"(b) For each fiscal year, the Surgeon General, with the approval of the Administrator, shall determine the total sum from the appropriation authorized under section 707 which shall be available for allotment among the several States and other institutions under this section.

"(c) The Surgeon General shall, from time to time, certify to the Secretary of the Treasury the amounts to be paid to each State from the allotments to such State, reduced or increased, as the case may be, by the amount which he finds that estimates of required expenditures with respect to any prior period were greater or less than the actual expenditures for such period. Upon receipt

of such certification, the Secretary of the Treasury shall, prior to audit or settlement by the General Accounting Office, pay in accordance with such certification.

"(d) The money so paid to any State shall be expended solely in carrying out the purposes for which the grant is made, and in accordance with plans presented by the health authority of such State and approved by the Surgeon General.

"(e) Requests for grants-in-aid for control, including education for projects and programs not in State agencies, shall be submitted, reviewed, and paid in manner similar to that established for research grants-in-aid.

"GIFTS AND AUTHORIZATIONS

"SEC. 707. (a) The Surgeon General shall recommend to the Administrator acceptance of conditional gifts, pursuant to section 501 of the Public Health Service Act, for study, investigation, or research into the cause, prevention, or methods of diagnosis or treatment of cerebral palsy, or the acquisition of grounds for the erection, equipment, or maintenance of premises, buildings, or equipment of the Institute. Donations of $50,000 or over for carrying out the purposes of this title may be acknowledged by the establishment within the Institute of suitable memorials to the donors.

"(b) There are hereby authorized to be appropriated for each fiscal year such sums as the Congress may determine to be necessary to carry out the provisions of this title.

"(c) Such appropriations as are hereafter made to carry out the purposes of this title may be expended in the District of Columbia for personal services, stenographic recording and translating service, by contract if deemed necessary, without regard to section 3709 of the Revised Statutes; traveling expenses (including the expenses of attendance at meetings when specifically authorized by the Surgeon General); rental, supplies, and equipment, purchase and exchange of medical books, books of reference, directories, periodicals, newspapers and press clippings; purchase, operation, and maintenance of motor-propelled passenger-carrying vehicles; printing and binding (in addition to that otherwise provided by law); and for all other necessary expenses in carrying out the provisions of this title.

"GENERAL PROVISIONS

"SEC. 708. (a) This title shall not be construed as superseding or limiting (1) the functions, under any other act, of the Surgeon General or the Service, or of any other officer or agency of the United States, relating to the study of the causes, prevention, or methods of diagnosis or treatment of cerebral palsy; or (2) the expenditure of money therefor.

"(b) The Surgeon General shall perform his functions under this title under the supervision and direction of the Administrator. The Surgeon General, with the approval of the Administrator, is authorized to make such rules and regulations as may be necessary to carry out the provisions of this title.

"(c) As used in this title, the term 'State' means a State or the District of Columbia, Hawaii, Alaska, Puerto Rico, or the Virgin Islands.

"(d) The Surgeon General shall include in the report for submission to the Congress at the beginning of each regular session a full report of the administration of this title, including a detailed statement of receipts and disbursements.

"(e) The Administrator is authorized to fix the compensation for the services of certain specially qualified scientific and professional personnel concerned with research activities of the National Institute of Health, and the National Cerebral Palsy Institute: *Provided*, That the rates of compensation for positions established pursuant to the provisions of this subsection shall not be less than $10,000 per annum nor more than $15,000 per annum."

SEC. 2. Title VII of the act entitled "An act to consolidate and revise the laws relating to the Public Health Service, and for other purposes," approved July 1, 1944, as amended, is hereby redesignated "title VIII"; sections 701 to 714, inclusive, of such title are hereby redesignated as sections 801 to 814, respectively.

SEC. 3. This act shall be effective 60 days from date of passage thereof.

Miners' Welfare and Retirement Fund

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the United Mine Workers Journal of January 15, 1949:

WELFARE FUND REPORTS HELPING 260,123 AT COST OF $68,000,000 IN 20 MONTHS

Rolls of the UMWA Bituminous Welfare and Retirement Fund at the close of 1948 recorded a grand total of 260,123 beneficiaries who in the 20 months since the fund became actually operative had received payments aggregating approximately $68,000,000, it was disclosed in a report by Josephine Roche, director, to President Lewis in his capacity as chairman of the fund's three-man board of trustees.

Coal miners and their dependents in every bituminous field in the Nation shared in these payments, which were disbursed in the form of disability grants, pensions, death benefits, and hospital and medical care. This was the first over-all report since the pension plan became effective last September and covers outlays under the three separate funds of 1946, 1947, and 1948, which have now been consolidated into one fund.

In the months intervening since the legal obstacles to operation of the 1947 fund were cleared away, executives of the fund have moved with such dispatch to establish a smoothly functioning administrative machine that the one-millionth benefit check was about ready for mailing as this issue of the Journal went to press. Fund officials advised President Lewis that its operations are now on a current basis. As a rule death benefit applications are cleared within 24 hours after being received, while disability and pension cases require but a few days, yet each is given the most careful scrutiny.

Examination of the year-end report discloses that the largest single phase of the program is listed under the heading of "Disability benefits," which entailed grants to 88,350 coal miners, miners' widows, orphans, or other dependents. These grants go to miners who are permanently or temporarily disabled by injuries or illness and are timed for periods ranging up to 1 year, depending on the applicant's physical condition. As the beneficiaries recover from temporary injuries or illness and return to work, they are removed from the rolls.

An applicant for disability benefits is examined in his local community by a physician who certifies his condition. The UMWA local to which the miner belongs certifies his membership and the UMWA district office certifies the local's status. Then the claim is sent to Washington, where it is carefully gone over by the staff of examiners who are especially trained for this work.

It is significant that the average age of miners receiving disability grants is 62 years, a time of life when it is not uncommon even for those in less strenuous occupations than coal mining to be laid up for varying periods. The schedule of disability benefits is $60 for a miner, $20 extra for his wife, and $10 for each child. UMWA field representatives have contributed many thousands of hours to servicing this phase of the welfare program.

Although the pension plan of the fund was the last to get started due to the long drawn-out legal battles initiated by the coal operators under the NAM-Taft-Hartley Act, it too is now functioning in high gear and has on its rolls 11,689 retired miners—most of whom are disabled—who are receiving the $100-a-month pension. To be eligible for a pension a miner must be 62 years of age, have 20 years of service in the mines, and have retired since May 29, 1946. The average age of miners receiving pensions is 64 years and they average about 35 years of service each.

Beginning with the families of the 111 victims of the Centralia, Ill., mine disaster, the fund has sent out $1,000 death benefit checks to 10,489 widows or other surviving dependents of miners killed in mine accidents or who have died from other causes. This, the first phase of the welfare program to be activated, has been of immeasurable help to thousands of widows, orphans, and dependent parents of deceased mine workers in the dark days immediately after the death of the family breadwinner. Since insurance rates are prohibitive for those employed in the hazardous mining industry, the welfare fund's death benefit has brought a degree of protection never before available to miners' families.

With the recent establishment of 10 regional offices at strategic points in the bituminous coal fields over the Nation; the Welfare Fund's hospital- and medical-care program is now in operating order and has on its rolls a total of 2,079 beneficiaries. Included in this number are 218 paraplegics, miners with broken backs who have received or are now undergoing special medical care and rehabilitation in medical institutions from New York to California. Already many of these miners with broken backs, formerly regarded in their own communities as virtually beyond help, have completed their hospital treatment and are back home applying themselves to useful tasks utilizing newly acquired skills. Many have been aided with artificial limbs and prosthetic devices to enable them to get about once more. Life has again been made worth while for these formerly neglected victims of mine accidents.

Physicians in charge of the area offices are now developing as expeditiously as possible a complete program of medical and hospital care for all UMWA members and their families in what is undoubtedly the most extensive health program ever undertaken for any industry. It is the intention of the fund's health service to utilize, wherever possible, existing hospital and medical facilities. As rapidly as plans can be perfected in the field costs of the health program will be borne by the Welfare Fund, thus relieving the miners of the monthly check-off for hospital and doctor care.

Administration of the Welfare and Retirement Fund is carried on in Washington under Director Roche by an efficient team of supervisors, as follows: Disability benefits, Paul M. Nothern; pensions, Val Mitch; death benefits, Tom Williams; hospital and medical care, Dr. Warren F. Draper; comptroller, Tom Ryan; research and statistics, Robert Kaplan; counsel, William L. P. Burke.

Lincoln Day Address of Hon. Joseph W. Martin, Jr., of Massachusetts

EXTENSION OF REMARKS

OF

HON. ROBERT F. RICH

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Hon. JOSEPH W. MARTIN, JR., of Massachusetts, Republican leader of the House of Representatives, at a Lincoln Day dinner at Lock Haven, Pa., Saturday, February 12, 1949:

Good evening, fellow Americans, we are assembled tonight as true Americans and loyal Republicans—to honor the memory of Abraham Lincoln, whose unflinching devotion to principle gave birth to a new political party—a great party which has served this Nation well through three generations of progress.

We Republicans are the party of freedom—dedicated to save this country from slavery to government.

When the noble aspirations of the Gettysburg address are at last realized for America—it will be under the leadership of the Republican Party.

Our American concept of constitutional freedom—and our glorious tradition of ordered liberty under law—are the most practical—and the most successful—principles of political organization ever devised for human progress and the welfare of all the people.

We intend to see that that system is faithfully protected and soundly maintained.

We do not intend to submit to the police state, or the total state. Our program is to improve and protect the state of the Union.

Abraham Lincoln saved the Republic by his towering spirit of conviction, patience, tolerance, and sincere good will toward men.

We can honor him best by bringing to today's problems and today's tasks the same qualities of mind and spirit which, in Lincoln's day, saved freedom for America—and thus for all mankind.

Lincoln's every thought in time of crisis was for the Nation as a whole.

The spirit of narrow partisanship was not in him.

He could not stomach the council of hate, revenge, or retaliation. He sought nothing for himself—but only to become the human instrument through which American destiny might move on to its brighter tomorrow.

It is fashionable in some quarters today to say that these are new times—that Lincoln's generation did not face the perplexing issues of human welfare and economic stability with which we must deal.

But the simple truth is that every generation of freedom faces the same issues between the powers of aggressive government and the rights and privileges of free men and women.

We Republicans stand on the side of freedom.

If we falter, the black night of tyranny falls on all mankind.

We must not fail. Our Republican Party is the only vehicle remaining today for the persistent, vigorous, Nation-wide defense of fundamental Americanism.

Our way of life is defined in the wisdom of the ages—in the Holy Scriptures—Magna Carta—the Declaration of Independence, the Constitution, the Bill of Rights, and in the inspired maxim of Abraham Lincoln, "With malice toward none, with charity for all."

In our time, all our Republican victories at the polls have been achieved by fighting valiantly, without compromise, for these deepest fundamentals of the American faith.

So long as we hold this high ground we shall be a strong party—a winning party.

But should we surrender to the glamorous lure of something-for-nothing, deficit spending, growing armies of bureaucrats, and never-ending Federal encroachment upon local home rule, then we shall have lost our greatest strength.

That strength is the deep longing of millions upon millions of Americans to see their beloved country moving forward once more by the true lights of its great heritage.

We can meet our social problems best by American methods. The Republican Party through the years has worked for sound progress in the field of social welfare. These efforts will be continued with American methods.

I need not tell the good people of Pennsylvania how to go about this great work of national redemption. For the most part Pennsylvania gave a very good account of itself last November.

Pennsylvania was established in the tradition of hard work, faithful service to God and mankind, honest bookkeeping, and robust thrift.

Those are the qualities which soon will be called forth, in every State, to save the Republic, grinding hard work, courage, and faith in the face of overwhelming Government propaganda, determination to fight for the right, and unflinching conviction.

Precinct organization is the first step—as your local returns throughout Pennsylvania demonstrated so conclusively last November.

Only through intensive local organization may we offset the tidal wave of Government propaganda which is poured upon our people daily by the Federal bureaucrats—at the expense of the taxpayers.

These bureaus are spending tens of millions of dollars a year in Government publicity and propaganda—seeking always to bend the thinking of the people to their own programs of national socialism. And this gigantic Federal bureaucracy is still expanding—more than 3 years after the end of the war.

A recent report from the Byrd committee reveals that 109,000 new pay-rollers were added to the Federal budget during the calendar year 1948.

That means an average increase of 297 Government workers every day in the year—including Saturdays, Sundays, and holidays. And this does not include any increase in our military personnel—just the civil rolls.

We now carry more than 2,100,000 civilian workers in the Federal agencies—more than twice as many as 1940—and almost four times as many as 1933.

This is spendthrift government—government which has closed its mind and heart to the real, practical needs of the people.

One school of political thought in America today is the advocate of managed economy and regimentation—a system in which government rules the daily lives of the people—by allocations, quotas, loans, subsidies, and executive orders.

The other school—by far the overwhelming majority of the American people in every State and every section of this mighty land—supports the system of freedom, private enterprise, and responsible constitutional government.

Through almost 100 years of our party history, Republicans have had but one master plan for government—the Constitution.

Our American system is based on the fundamental principle of local home rule—the principle that people for the most part can manage their own affairs better than government can manage for them—the principle so often written in the blood of freedom's martyrs—that government is the servant, never the master of the people.

That is the system, which—over the span of the years of our national life—carried America to the highest state of well-being for all the people ever achieved by any system of political organization anywhere—at any time—in all human history.

Yet that is the system which has been under persistent attack by leaders in our own Government for more than 16 years.

Socialism, as we have seen it develop among us in our generation, is a creeping paralysis—which ultimately will lay in the bitter dust of frustration and despair, all the bright promises of freedom and plenty which have flowered from the rich seeds of American liberty.

Let us heed, therefore, the wisdom of Abraham Lincoln, who said as long ago as 1858—

"Familiarize yourself with the chains of bondage, and you prepare your own limbs to wear them."

The budget now before Congress is the biggest peacetime spending program ever submitted to any legislative body, anywhere, in the history of the world.

It calls for $282 a year from every man, woman, and child in the United States—for Federal Government alone.

Before we approve any additional taxes, we should put forth a determined effort to cut down the tremendously swollen, wasteful, and overlapping bureaucracy.

It has been 3½ years since the end of the war—yet in many cases the people still are paying the full wartime tax rates.

There is a dangerous breaking point in this Federal tax equation—and we have been warned many times during the last few years that the prevailing spendthrift policies in Washington are carrying this Nation dangerously close to that breaking point.

No thinking person in America today can afford to ignore the tragic fact of our nearly 3,000,000 unemployed.

Extravagant Government spending already has given us the 60-cent dollar. We must stop this senseless retreat into fiscal chaos.

The Republican Eightieth Congress passed a tax-reduction bill which made a real beginning toward cutting back the cost of Government to levels the American people can afford to pay.

I predict tonight that, if the present administration is not checked in its run-away spending plans in Washington, that tax-reduction bill passed by your Republican Eightieth Congress will go down in history as the last tax-reduction bill ever passed by Congress in the twentieth century.

If the spenders have their way, no man, woman, or child among us today will live long enough to see another Federal tax-reduction bill passed by the Congress of the United States.

The record of the legislative accomplishments of the Eightieth Congress is a record of fundamental Americanism—a record of constructive purpose to restore orderly constitutional government at a cost the people can afford to pay.

By unrelenting pressure for economy and efficiency, your Republican Eightieth Congress gave this country its first balanced budget in 17 long years.

We built up in 1948 a Treasury surplus of more than eight billions with which to make a substantial reduction in the national debt.

In two short years the Eightieth Congress abruptly reversed America's 14-year drift toward national socialism and toward eventual national bankruptcy.

The Eightieth Congress gave America the most powerful national defense ever provided for any nation not actually at war.

And the Eightieth Congress perfected the most far-reaching and comprehensive system

of veterans' care and rehabilitation ever placed on the statute books of any nation.

We drove some of the Communist termites out of government and properly exposed many others to the broad daylight of public indignation and scorn.

Nor is this good work yet finished. The FBI reported only 2 weeks ago that its loyalty investigations revealed 7,992 people on the Federal pay rolls whose personal records called for a full-scale field investigation.

That's why I say that determined precinct organization is needed, if we are to expose the full scope and sway of Communists and fellow-travelers-traitors who bore at the very vitals of the Constitution from salaried places within the structure of the Federal Government.

A determined effort is being made today in the highest official quarters in Washington to snuff out the investigation by Congress which brought these shocking matters to public notice.

I hope the administration is not trying to put American communism back in the pumpkin shell and bury it under the haystack.

It can't be done.

The days of the red herring are gone forever.

The murderous creed of Kremlin communism is at war with every aspiration of American life.

The glowing promises of world communism—as we see them today in China, Hungary, Poland—make but a one-way street to slavery and black despair.

The biggest army of slave laborers in all history is found today in the 20,000,000 political prisoners who march to work every morning under the prodding bayonets of the secret police in the workers' fatherland in darkest Russia.

Communism despises our American system of justice and equal opportunity for all.

Communism mocks and jeers our aspirations for peace and order in the world.

All the world sees clearly today that communism can govern only with the bloody tools of tyranny.

No; communism is not for free America, and the logical place to uproot it first is in the Government bureaus in Washington.

And let us never forget—that it was your Eightieth, Republican, Congress which appropriated seventeen million for that loyalty investigation to uncover Communist infiltration in our Government—the only appropriation ever approved by an American Congress to drive subversives from the Federal agencies.

It was that investigation which made these Communist depredations at home matters of common knowledge to the American people.

Before the Eightieth Congress took hold, these things were official secrets, known only to those who were privileged to peek behind the iron curtain of official intrigue and palace politics in Washington.

What is the logic of spending billions and billions of the taxpayers' hard-earned dollars to check the spread of communism all over Europe and Asia, while encouraging it to gnaw at the very heart of American Government at home?

And let me make to you a promise—a solemn promise. This battle to drive the Communists out of our Government will be carried on by us Republicans until the last fellow traveler is separated from the pay rolls and his influence in shaping our policies eliminated.

But this is not all the Eightieth Congress accomplished for progressive Americanism.

Relations between management and labor were removed from the area of administrative discretion and reestablished on the basis of law.

In the field of foreign affairs, your Republican Eightieth Congress enacted legislation to repair and restore the shattered economic structure of war-torn Europe and Asia and to bring hope and faith once more to hundreds of millions of stricken people.

And during those 2 years of the Eightieth Congress this country enjoyed the highest level of prosperity and business activity—and the highest level of employment—ever experienced in our peacetime history.

In the light of that record, could the Eightieth Congress have been such a terrible thing—as some would have us believe—for their own selfish, political ends?

No; we who helped make that program in the Eightieth Congress have no apologies to make for our work. We rejoice in its consistent record of sound, solvent, forward-looking constitutional Government.

Every supporter of fundamental Americanism today should applaud the record of the Eightieth Congress.

As the strongest minority party in modern history, we Republicans face the future with confidence and firm conviction.

No matter how great our task, we can perform it only as Americans.

We can work only through American institutions—and by American methods.

America can develop her utmost power only as she is permitted to work in harmony with her free past, and in tune with her bright hopes for the future of human liberty.

That's why I say we must stand firm for the basic principles of our Constitution—and thus release the energies and ambitions of 145,000,000 Americans to achieve, to prosper, and be free.

With that program, with that vision, with a unity which must be measured by the high purposes of our great cause we shall yet light the lamps of freedom again all over the world.

It is a great challenge to Republicans, to independents, and those millions of Democrats who are devoted to the preservation of American institutions.

Let us turn to our work with a will which can know no defeat.

The sacred torch of freedom—America's future is in our hands.

Some Startling Facts About America's Enormous Drink Bill

EXTENSION OF REMARKS

OF

HON. JOSEPH R. BRYSON

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 14, 1949

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article by Tate T. Hackney, of Louisville, Ky., entitled "Some Startling Facts About America's Enormous Drink Bill," as published in the Civic Forum, official organ of the National Civic League, in the issue of October–December 1948:

SOME STARTLING FACTS ABOUT AMERICA'S ENORMOUS DRINK BILL

(By Tate T. Hackney)

Huge figures have always fascinated me and doubtless all who read this article were shocked and amazed at the size of America's drink bill for 1947. Here are the figures as released by the United States Department of Commerce in Washington, D. C., under date of June 10, 1948. Last year the people of the United States spent the stupendous sum of $9,640,000,000 for the several kinds of alcoholic beverages legally available.

Let us imagine having this huge pile of money in silver dollars. A silver dollar weighs 1 ounce, is 2½ inches in diameter and ⅛ inch thick. An ordinary railroad boxcar holds 30 tons or 60,000 pounds. This means that in order to transport our huge pile of liquor money in the form of silver dollars there would be needed just 10,041 boxcars and 201 locomotives, each pulling 50 boxcars. In other words, there would be a solid line of cars over 76 miles long. Assuming the rate of speed to be 30 miles an hour, more than 2½ hours would be required for this train to pass a given point.

Now, in our imagination let us lay these silver dollars flat on the ground, edge to edge. They would form a line 228,000 miles long, or more than 9 times around the earth. If laid flat, face to face on edge, more than 19,000 miles would be covered, or four-fifths of the distance around the globe.

There have been little more than one billion minutes since the birth of Christ, and think of it, the people of our so-called Christian nation during 1947 spent enough money for this accursed poison slop to equal $9.00 for every minute since the birth of Our Saviour. Incidentally, this is about three times the amount of money spent for all kinds of public and private education; over nine times the amount of money raised by all religious bodies for churches and their maintenance; over 10 times the cost and upkeep of all libraries; 17 times the outlay for all Federal security, old age, unemployment pensions, training of nurses, and vocational guidance; eight times as much money as required to pay the pensions of all veterans; 70 times as much money as the Red Cross raises and spends; over 100 times the amount of money used in fighting disease, infantile paralysis, cancer, tuberculosis, etc., and 23 times as much money as Congress appropriated for the aid of Greece and Turkey—all spent for booze in a single year.

A BILLION DOLLARS DEFIES COMPREHENSION

Ask the average person—as I did the young lady in my office—"Could you count a billion dollars if I gave it to you in $1 bills? Or carry that amount of money home in silver dollars?" She replied, "Oh, yes, I would get some wheelbarrows and bags and eventually lug it home." She could only carry about one carload of silver dollars home in a year's time. To finish the job of lugging home the 1947 drink bill in silver dollars would require 10,000 years.

Let us further imagine our huge liquor bill in the form of $1 bills. Let us suppose that a young man enters the employ of a bank as clerk and money counter, working 8 hours a day, 300 days a year, doing nothing but counting these $1 bills at the rate of 120 bills per minute. He starts work at 20 and retires at the age of 70. In 50 years of continuous service he will have counted only $864,000,000. In other words, it would take him just 555 years to complete the job. Put another way, the services of 555 expert counters counting money at that rapid rate would be required to complete the job in 1 year. Don't let anyone tell you he could count a billion in a lifetime. It simply can't be done.

Now, let us pave an imaginary road around the world with dollar bills and make it 8 feet wide. Yes, the 1947 drink bill in $1 bills laid end to end to a width of 8 feet would reach a total of 264,000,000 miles or gird the globe just 36 times.

WHAT THE 1947 DRINK BILL WOULD HAVE BOUGHT

It is interesting to note just a few of the many useful things which our colossal liquor bill would have purchased. With a world-wide housing shortage today, we could have bought, or built, 1,606,000 small-family cottages costing $6,000 each; 192,800 small-town schoolhouses costing $50,000 each; 96,400 churches at $100,000 each; 48,200 small hospitals at $200,000 each; 6,400,000 automobiles at $1,500 each; 385,600,000 suits of clothes for men or dresses for women at $25 each.

Money spent in quenching America's thirst for alcoholic beverages would have placed

4,800,000 missionaries all over the world, each to receive a salary of $2,000. A new copy of the Bible, God's holy word, costing $4.50 could have been placed in the hands of every man, woman, and child on earth, assuming the world's population to be slightly over 2,000,000,000 people. We could also have purchased 96,000,000,000 loaves of bread at 10 cents per loaf to feed the millions of starving people all over the world.

Yes, amazing as it may seem, we could actually have built 20 modern cities of 100,000 population each. These cities would have office buildings, apartment houses, homes, churches, schools, city halls, courthouses, post offices, hospitals, theaters, stores, parks, airport, hotels, police and fire departments. Naturally, there would be water, gas, and electric services, sewage disposal, railroads and terminal equipment, busses and streetcars. Yes, indeed, our 1947 drink bill was large enough to build a score of small cities or one large city with a population of 2,000,000 people.

Trial of Cardinal Mindszenty

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. ADDONIZIO. Mr. Speaker, the Communist rulers in the Kremlin must have been astounded at the tremendous shout of protest and horror that the trial of Cardinal Mindszenty evoked from the free people of the world. In its anxiety for peace the western world has too often condoned the continuing acts of violence and terrorism, the shocking offenses against decency and the free nations committed by the Communists in every country under their control. But the cardinal's trial brought into such sharp focus the cleavage between the two worlds of communistic totalitarianism and western democracy that the people were stirred to action. It was generally recognized that the cardinal was on trial for refusing to render unto Caesar the things that are God's, and that the conduct of his trial was an utter repudiation of our concepts of justice and of the dignity of man.

The following resolution of the city of Newark, N. J., adopted by the board of commissioners of the city on February 9, eloquently expresses the prevailing sentiments of the people in my area, and indeed in the whole United States, towards the persecution of the cardinal:

Whereas the entire world was shocked by the arraignment and trial of Josef Cardinal Mindszenty and the sentence of life imprisonment imposed upon him by the Hungarian Communist regime; and

Whereas the trial and imprisonment of this distinguished prelate constitute a perversion of justice, condemned by our Government and by all elements of our population who rightly deplore the inhuman treatment accorded the cardinal who opposed the dictatorship now in control of his country and who espoused liberty and humane treatment for his fellow countrymen: Now, therefore, be it

Resolved by the Board of Commissioners of the City of Newark at this regular meeting, February 9, 1949, That we do hereby register an emphatic protest on behalf of all the citizens of our city. We respectfully petition our Federal Government to use its good offices, through proper diplomatic channels, to have this flagrant violation of human rights speedily remedied to the end that the unjust punishment inflicted upon the cardinal shall be revoked. By so doing, we shall again affirm our American heritage of freedom for ourselves and for peoples of all races and creeds and everywhere, and also demonstrate our abhorrence of totalitarianism and the misfortune it inflicts upon the people whom it subjects; finally, be it

Resolved, That copies of this resolution be sent to the President of the United States, the Secretary of State, the United States Senators from New Jersey, and all New Jersey Members of the House of Representatives.

BOARD OF COMMISSIONERS OF THE CITY OF NEWARK, N. J.
VINCENT J. MURPHY.
JOHN B. KEENAN.
JOHN A. BRADY.
RALPH A. VILLANI.
M. ELLENSTEIN.

Loans to Farmers To Purchase Homes Through Farmers Home Administration Are Making a Substantial Contribution to the Welfare of the Entire Nation

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. PATMAN. Mr. Speaker, the Farmers Home Administration is making loans to farmers who want to become farm home owners. The applications are carefully screened by local committees for the purpose of making sure that only the deserving and well qualified are granted these loans. The losses to the Government will be practically nil. Through this vehicle, the people, who feed and clothe the United States and a large part of the world, are given the opportunity of borrowing and using the credit of our Government to this very limited extent. They pay interest on the loans and will repay the principal.

I do not know of a better way to have a happy and prosperous citizenship on the farm than permitting our farmers through their own efforts, including hard work, to own a farm home of their own.

The biggest interests in our Nation today are using the Government's credit at a very low rate of interest and in some instances without cost.

UNCLE SAM'S CREDIT

I do not know of a better way for Uncle Sam to help deserving people than step up and sign the notes of these farmers, who want to be farm home owners.

Through the parity provisions of the Commodity Credit Act, farm home ownership can be greatly encouraged. If the family-size farm is encouraged and preferred to some limited extent over the large farm or plantation operated for profit or speculation, the real people who work will be given a break. This favored position should extend only so far as necessary to give a farmer and his family a sufficient price to give the family a good standard of living if they work and earn it. Then the larger land owners can sell their land in family-size tracts, although they would not be required to do so, for a good price to people, who will be able to pay a good price; so it will not be confiscation but it will encourage the people, who actually do the work, and make home owners out of them. Support prices should be at least 100 percent of parity since parity is cost. No other group, business, or industry is asked to take 90 percent of what they are entitled to. Surely the family on a family-size farm should have 100 percent even if those who farm for speculation do not get that much.

AMERICAN LEGION SUPPORT

Recently, I received a letter from the commander of the American Legion at Belton, Tex., T. R. Matthews. It is about this program and reminds me that the American Legion has endorsed it. It is as follows:

BELTON POST, NO. 55,
AMERICAN LEGION,
Belton, Tex., February 4, 1949.

Hon. WRIGHT PATMAN,
United States Congressman,
Washington, D. C.

DEAR MR. PATMAN: I have read with interest a record of your statement concerning the Farmers Home Administration as inserted in the CONGRESSIONAL RECORD dated January 24, 1949. The American Legion National Convention in Miami, Fla., in 1948, passed a resolution urging that the Farmers Home Administration be given more funds to carry out their program. Let me urge you to do everything possible to get through an appropriation large enough for this Administration to take care of the deserving people. There are a number of veterans in this area that need the assistance of this Administration, yet they are denied this assistance due to the lack of money.

We hope you are able to go on through with your statement and get some action on this matter.

Sincerely yours,
T. R. MATTHEWS,
Commander.

LONG LIST OF DESERVING FARMERS BUT NO MONEY

I am also inserting two typical letters, which I have received from farmers, who are greatly interested in this program. They are as follows:

LUFKIN, TEX., *February 9, 1949.*

Hon. WRIGHT PATMAN,
United States Congressman,
House of Representatives,
Washington, D. C.

DEAR SIR: A few days ago the Farmers Home Administration Committee wired you asking you to support a bill to make larger appropriation for the FHA.

As a member of that committee, I am writing you to give this matter your sincere attention.

I notice you have spoken favorably on the measure in the House and feel you are our friend.

Our county supervisor has a long list of applicants on the waiting list to purchase FHA farms, but there are no funds. The insured mortgage plan does not seem to meet with favor among bankers. So there is nothing to do but tell folks to wait until July.

Then when funds are available it is only a few months and they are gone again.

FHA needs $50,000,000 to do a good job.

I don't think inflation need worry us along this line, for the officials from the top down to the county committee are seeing to it

that the farms being bought are worth the money. There are no more "gravy trains."

I recall one instance where a man wanted to sell a farm that was large enough for three family units. He asked $60 per acre. We waited 2 years and bought the place for $30 per acre for three Negro families. They are all making good. One of those Negroes is declared the outstanding farmer in the FHA.

I have served on the boards of all the various farm agencies and know they are sound.

Thanking you for the nice things you have said regarding the program and feeling you will continue the good work, I am,

Yours truly,

MALCHOM K. AMENT.

HAS SOMETHING TO WORK FOR

TROUP, TEX., *February 10, 1949.*

Hon. WRIGHT PATMAN,
Member of Congress,
Washington, D. C.

DEAR MR. PATMAN: Seeing your recommendation of the House of Representatives of January 24, 1949, in regard to more money being appropriated to purchase farms now and for the next year, I decided to write my own version of how much this program has helped our family.

Before we started in 1940 with the help of the Farm Security Administration we didn't have anything to farm with, we had to give the landlords half of what money we earned on the farm; we moved from place to place, striving to make even a living. We lived in houses that were uncomfortable and undecent for anyone to live in.

The FSA helped us get started right; our supervisors also helped tremendously in teaching us how to grow and maintain a better living system; how to conserve foods, to produce more milk and eggs to sell as well as for our family needs; and many more important things, for which we are very thankful.

In 1947 the Farm Home Administration made it possible for us to purchase a farm of our own and we appreciate it so very much. We have more energy to work harder than we ever have, because we have something to work for.

I would like so very much to see more money being appropriated to purchase farms for other families whom I know would work hard to pay for their farms.

It would take a great lot of space to write the many ways in which we have been helped by the FHA and we sincerely hope the House of Representatives will make it possible for more farm-loving families to purchase a farm of their own.

I can think of no better way for our Government to loan money.

Yours very truly,

Mr. and Mrs. EDGAR C. JENKINS.

SOIL CONSERVATION HELPED BY LAND OWNERSHIP

Soil conservation is vital in the interest of the future welfare of our country. Home owners take more interest in soil conservation than tenants. Therefore to encourage farm ownership is to encourage soil conservation.

Medical Care for Miners

EXTENSION OF REMARKS
OF
HON. CARL D. PERKINS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 14, 1949

Mr. PERKINS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by N. S. Haseltine, from the Washington Post of February 13, 1949:

The vast medical care program of the coal miners' welfare fund last week moved into Washington—and into high gear.

It rode into the city of its birth 2 days ago in a Pullman car carrying the hopes and crippled bodies of seven bituminous coal miners. All cruelly paralyzed from mining mishaps, they were entered in George Washington University Hospital.

At the same moment, another Pullman was rolling westward to Vallejo, Calif., with 14 other paraplegics. Snow clearance of Donner Pass permitting, they were to be bedded today in the Kabat-Kaiser Institute Hospital for Neuromuscular Rehabilitation.

The patients, all victims of spine-snapping accidents at work, are starting medical, surgical, psychiatric (if needed), and vocational care to help them get back to lives of usefulness. Strike-won royalties on each mined ton of coal are paying the way.

In prefund days, these victims were virtually doomed to waste out their lives in their own soiled beds and bedsores. Paralyzed legs which could be, and sometimes were, gnawed by rats or roasted by fire without feeling, do "burn," "stab," and "ache" from within, the afflicted complain.

The condition follows injury to the spine, whether the spinal cord be severed by falling slate, or crushed, torn or twisted by force of weight. The latter is more frequent in underground accidents where stooping miners are "jackknifed," shoulders to knees, by falling slabs of rock and slate.

RUNS TO $10,000 EACH

Medical science today has but little to offer, but to the victims that little means so much. It offers, with their help, a program that may give ability to move about, on braced legs or in wheel chairs, and the means to regulate bowel and bladder movements.

The program is expensive. Bills already paid for the more than 200 paraplegic miners now treated or under treatment range from $5,000 to $10,000 for each patient. Hospitalization has ranged from 6 to 8 months. Its dividends are restored lives.

Victims come from the mining camps, small settlements of weathered, unpainted "homes." They come from places like Honey Bottom, W. Va., whose score of shacks rest uneasily on level land at the base of stony cliffs. Cesspool cleaners once dumped their refuse there; the miners who came later shrugged off the town's history with the naming.

Or, like Harrison Stepp, 41, too ill to make the west coast trip, they come from hillside cabins. Investigators from the United Mine Workers Welfare and Retirement Fund drove their station wagon up the running bed of Bug Creek to reach him.

Last Tuesday, Stepp rode 110 miles in an ambulance to the railhead at Charleston, W. Va. Emaciated and ashen, he could not smile with the 14 other paraplegics ticketed to California, medical care and a new lien on life.

"He's in bad shape," said Dr. John T. Morrison. "He'll have to be built up some before he can go."

And the half-alive man was moved to a private room in the Charleston General Hospital.

Stepp, whose mailing address is Lovely, W. Va., was paralyzed from a rock fall in a mine in October, 1946. Other paralyzed miners under treatment lay helpless to their miseries for as long as 29 years until the fund began operating 20 months ago.

HAND OVER HAND

Rejection of the fevered victim was the only cloud in the entrainment proceedings at Charleston that day. The injured arrived in private cars and undertakers' and hospital ambulances. Relatives and union members and officials gathered around to see them off.

One patient stubbornly refused to be carried aboard, pulling himself painfully up the car steps and swinging from seatback to seatback until he reached his allotted Pullman berth. Some had to be swung on stretchers through open windows.

Although boarding was set to begin at 4 p. m., the injured arrived hours ahead of time. First aboard was Dorsey W. Workman, 28, of Bald Knob, 66 miles away. His spine was cracked in a slate fall in a soft coal mine at Wharton, W. Va., 20 months ago.

"It broke me in two," he said, summing up his injuries as a broken spine, crushed kidney and "bushed" pelvis.

A miner for 10 years, Workman said he doesn't live in any company house. He owns his own home, a one-story, two-room dwelling. After his accident, he said, he was in and out of several hospitals until State-administered compensation funds ran out.

"I hope to come back walking," said Workman, and the physician frowned.

Dr. Morrison, medical director of fund operations for the district, said the victims have been warned they are going without promise of cure, or any assurance they'd walk at the treatment's end. The best most can expect, he added, is that they'll get about either on crutches or in wheel chairs.

HOSPITAL BED CAMPAIGNER

Paraplegia to the uninformed is painless. It must be, because the lower body is paralyzed, they reason.

"It is like hell," declared Lewis Edwards, 29, of Taylorsville, W. Va. "It's just one deep, lasting ache."

"It isn't steady with me," said James McCoy, now a justice of the peace at Red Jacket, W. Va. "It hits me about three or four times a day, like someone jabbing a big electric rod through my legs."

Union and fund officials were glad McCoy was on hand to see the patients off. The 36-year-old former miner had just got back home in December after 8 months of the specialized care. Friends had nominated and elected him to his fees-paying post while he was in New York hospitals.

"I get on the bus by myself and ride 4 miles each day to my office," he told the patients. "It takes me 75 seconds to climb on and get seated; my wife has timed it."

McCoy admitted the treatment wasn't too successful in giving him control of elimination processes. He uses enemas regularly, and that helps some, he said.

Asked if his two boys would become miners, he said: "Not if I can live long enough."

"My father didn't want me to go into the mines," he declared, "but he died too soon. He died of miner's TB (silicosis from rock dust in the lungs) in 1927."

Several years later, at the ripe mining age of 16, McCoy himself entered the pits. On September 27, 1945, he was completely buried by falling coal in a "Bloody" Mingo County mine. He spent 7 months in the Williamson (W. Va.) general hospital until his compensation ran out.

RUNS A RADIO SHOP

Edwards, who monopolized McCoy during most of the entrainment proceedings, was in perhaps the best shape of the carload. He had staged his own comeback from a bedridden state to wheel-chair operation of a radio repair shop. The West Virginia State Division of Vocational Rehabilitation paved the way, he said.

Ernest Moore, 32, of Edwight, near Honey Bottom, Raleigh County, W. Va., boasted he has a head start on many of the others. Told that much of his treatment would be exercises to strengthen muscles that still can function, he said friends had rigged up a rope-in-pipe attachment above his bed so that he could swing himself into a wheel chair.

Moore's spinal cord was crushed and four ribs broken when a slab of falling slate hit him on the shoulders and "rode me down." That was last July. Since then he has spent 8 weeks in a hospital, the rest in his bed and wheel chair in his one-story home.

The men weren't complaining Tuesday during the Charleston entrainment. They were too happy and hopeful for that. But they freely discussed their conditions. And the chief expressed complaint was about their loss of bladder and bowel control. None mentioned that the accidents cost them their sex power, too.

Dr. Morrison, however, said that it is for this reason many will require psychiatric guidance. Sex is too powerful a force to be ignored, he said, and the sudden loss can be a great mental shock.

PLASTIC SURGERY HELPS

Those who boarded the train for Washington, and those headed for California, carried the scars and wounds of paraplegia, the pressure sores of long confinement. Loss of sensory power in the afflicted legs and hips causes the ulcerated conditions, said Dr. Morrison.

As he explained it: Bedridden paraplegics do not feel the normal warning pains that come with the loss of blood circulation when their body weight cramps blood flow. As a result the pressure spots "die" for lack of blood, and ulcerating sores are formed.

The ulcers are not caused by continual wetting or otherwise involuntary soiling by the patient, he explained, although such conditions may further aggravate the open sores.

Hospital treatment for the paraplegics necessarily includes plastic surgery. Strips of the patient's healthy flesh are folded into the eroded areas to encourage resumption of normal tissue growth.

Another follow-up ill of paraplegia is drop foot caused when the unused limbs relax too long, Dr. Morrison said. Many such cases require bone surgery, and braces to keep the feet level for getting about on crutches, he explained.

As to bladder- and bowel-control therapy, the paraplegics are given some medical and mechanical helps. Bladder and kidney stones, which form more readily in the bedridden, are surgically removed. In many cases, the patient's bladder must be treated to return it to normal capacity. Then soft-pressure clamps enable the men to control urination, while hand pressure over the bladder helps empty it at regulated intervals.

Bowel control, Dr. Morrison said, is largely regulated among the patients by special diets, and the use of enemas for elimination.

DOCTOR DIDN'T HELP

Among Tuesday's entrainees was one man who offered proof that even the best of family care does not prevent bedsores. He is James Lee, 23, another paralyzed miner of Edwight.

Son of a coal-mining physician, Lee spurned a medical career to go into the pits 2½ years ago. Last June 19, he became one of the year's 65,000 mining casualties. A slate fall caught him as he was loading underground cars in a mine near his home.

Lee told reporters he has two deep bedsores that must be patched up. They developed, he said, despite the constant attention of his wife and his doctor father. Like the others who complained of varying pains in affected limbs, Lee said his hurts seem "like a steady burn in my legs."

Across the pullman aisle from Lee was Hobart Dalton, 29, of Warfield, Ky., who suffered a fractured spine 3 months ago. He said he was unconscious for 6 days after an overhead slab of rock crushed down on him, jackknifing him by grinding his head between his outthrust legs. Married and the father of a 2-year-old girl, he wants to come back as a watch mechanic.

The West Virginia and Kentucky victims are tragedies of past years. With the 7 who later entrained for Washington, they brought to more than 200 the number of miner paraplegics now treated or under treatment by the $100,000,000 welfare fund. About 200 others, presumed in better general condition, are getting compensation and care in their own communities until they can be accommodated in the special treatment centers in California, New York, New Jersey, and now Washington, fund officials said.

PENSIONS FOR THE OLD

But medical care and rehabilitation is just one phase of the vast program financed by 20 cents a ton royalties paid by the coal operators, the official said.

The fund also provides $100 monthly pensions to aged miners, death benefits of $1,000, financial aid to miners' widows, children, and other dependents, and health and medical care to the men and their families.

The program for the paraplegics is just the most dramatic of over-all operations of the independently administered fund, officials said. But it does cover a field that only since the close of the past war has received much specialized attention.

Paraplegia is not confined to mining accidents, though a yearly average of 30 miners is afflicted. War casualties added to the ranks of paraplegics, and civilian accidents, such as the policeman's shot that cut the spinal cord of Washington's Dorothy Kilmer, must be considered.

The welfare fund was authorized, at a starting royalty rate of 5 cents a ton, by the famous Krug-Lewis agreement of May 29, 1946. The rate was doubled twice in succeeding agreements with the coal operators.

In January trustees of the fund reported that $68,000,000 had been paid out in various benefits to more than 260,000 beneficiaries in the 20-month period of its actual operation.

Public Library Service Demonstration Bill

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. PATMAN. Mr. Speaker, I am inserting herewith a statement containing an analysis of the public library service demonstration bill; also questions and answers concerning this bill.

They are as follows:

ANALYSIS OF PUBLIC LIBRARY SERVICE DEMONSTRATION BILL

PURPOSE

1. To provide demonstrations of adequate public library service to people now without it or inadequately served.

2. To provide means for studying various methods of providing public library service primarily in rural areas, and for studying the effect of planning on an area basis upon the development of library service.

PROVISIONS

1. State library agencies may submit plans for use of Federal funds in demonstrating public library service primarily in rural areas. These plans shall be drawn entirely by the State agencies and need not be uniform throughout the country.

2. Two types of plans may be submitted: one calling for a basic demonstration using $40,000 per year for 5 years in each State, financed entirely by Federal funds; or an expanded plan may be added to this which would allow States to match an additional $40,000 to $100,000 of Federal funds annually for 5 years.

3. The Commissioner of Education would be required to make annual reports to Congress on the operation of the demonstrations and would be required to make a final public report evaluating the demonstrations.

QUESTIONS AND ANSWERS ON THE PUBLIC LIBRARY SERVICE DEMONSTRATION BILL

1. What is the public library service demonstration bill?

The library demonstration bill is a measure designed to stimulate State and local interest in improving library service. It is an effort on the part of the Federal Government and the States to show how State-wide library service can be established.

2. Who is sponsoring the library demonstration bill?

The bill is sponsored in the Senate by Senators LISTER HILL, of Alabama; GEORGE D. AIKEN, of Vermont; and PAUL H. DOUGLAS, of Illinois. The Senate number is S. 130.

Two identical bills have been introduced into the House. One, H. R. 874, is sponsored by Representative RAY MADDEN, of Indiana; the other, H. R. 1411, was introduced by Representative WRIGHT PATMAN, of Texas.

The library demonstration bill was developed in cooperation with the American Library Association, which sponsors it. The ALA is the national, nonprofit, professional association of libraries and librarians which for the past 70 years has stood for progressive library service. For the past 20 years the organization has administered funds for the extension of libraries to areas without them.

The library demonstration bill is also supported by the National Farm Bureau, the Farmers' Union, the National Grange, the General Federation of Women's Clubs, the National Council of Women, the National Congress of Parents and Teachers, and many State and local organizations.

3. What is the main objective of the bill?

The main objective is to stimulate interest in State-wide library service and to encourage State and local interest in libraries. The bill will give librarians an opportunity to study the most effective means of providing library service to rural areas. The communities where demonstrations are set up will be expected to continue library service after the test period is over, thereby stimulating their neighbors who have no libraries to establish them. People do not miss things they have never known. After the community has had library service available through a demonstration, the citizens will vote to keep the service.

It is not the purpose of the library demonstration bill to provide universal library service, but merely to demonstrate what can be done.

4. Who will administer the bill?

The bill clearly provides for State supervision. The administration at the State level is in the hands of the State library agency. The Federal Government makes grants to assist the States in carrying out demonstrations, but there is no interference with State and local initiative and responsibility in conducting the demonstrations.

5. What is a library service demonstration?

A demonstration is a sample of good library service. It is provided a community for a period of time sufficient to show the citizens: (1) How books, magazines, films, and other library materials can be made available to the entire community at low cost; (2) why trained librarians are essential to good library service just as trained teachers are essential to good schools; (3) how public libraries are controlled by the citizens themselves through boards of trustees; (4) how public library service can be permanently theirs through tax support, spread over a large enough area to keep the cost reasonably low; and (5) to show taxpayers just what the cost of library service to the community will be.

6. How are demonstrations carried on?

Demonstrations are carried on in various ways, the most common being through the use of bookmobiles. A bookmobile is a library on wheels. The bookmobile makes regular trips to outlying districts, carrying books from a central library. Another type of demonstration is a model library set up in a certain region, usually for a year or more, to demonstrate to the people within that area the value of good public library service.

7. What is meant by good public library service?

A public library is a collection of books and other printed materials organized so that the user can find what he wants. Public library service is the work that goes into making the library useful to its public. Good public library service anticipates the demand of the users, selects materials that will best fill the demand, and encourages and develops reading interests in the community. Good public library service also provides individual consultation and guidance in special reading interests for those members of the community who desire it, and it devotes special attention to developing the inquiring minds of children through books.

8. Specifically how will the plan operate?

State library agencies—the supervising agents—will submit plans for the use of Federal funds in demonstrating library service, primarily in rural areas. These plans would be formulated entirely by the State agencies, so would not be uniform throughout the country, but would vary as State needs vary.

9. What must the States do to be eligible for the funds?

There are five general conditions which the States must meet to qualify for Federal grants for the library demonstrations. These conditions are:

(1) The States must submit for the approval of the United States Commissioner of Education a plan for use of such funds as they are available.

(2) The States must report to the Commissioner on the operation of the demonstrations.

(3) Library services made available under this act shall be free.

(4) No money provided under the act shall be used for purchase or erection of buildings or for purchase of land.

(5) A State may not use funds provided under the act for the purpose of reducing State appropriations to the State library agency.

States may submit either of two types of plans. One plan would call for a basic demonstration, using $40,000 a year for 5 years in each State, financed entirely by Federal funds; the other is an expanded plan under which the States would match an additional $40,000 to $100,000 of funds annually.

10. What happens after the act expires and the demonstrations are completed?

It is then up to the local people to see that the service is continued, preferably on a regional cooperative basis, supported by local taxation and State aid. The test areas will have served to point out to State legislators what can be done, with comparatively modest expenditures, to raise the State level of culture and education. Citizen groups, State library associations, and State library extension agencies will cooperate in planning the most effective means of continuing library service.

11. How will the general public know of the results of the demonstrations?

The United States Commissioner of Education is required under the bill to make annual reports to Congress on the administration of the demonstration program. A final report, outlining the results, will be prepared for public distribution.

12. Have library demonstrations been successful in the past?

Yes; when well organized and when staffed by efficient personnel, the value to the community has been so obvious that permanent tax support has been voted. The WPA carried on demonstrations. Many of them resulted in permanent library service in the areas where they operated.

Louisiana has carried on demonstrations with foundation and State funds for 20 years. Out of 24 demonstrations, 21 districts voted to pay taxes and keep the service. Illinois, Missouri, Tennessee, and Minnesota are among other States which have had successful demonstration programs.

13. Will the demonstrations be staffed by trained personnel?

Yes; the bill authorizes the Commissioner of Education to establish, in cooperation with State library administrative agencies, institutes, or short courses for training personnel for public library service demonstrations. This would insure effective direction of the demonstration programs.

14. Will my State, which has particular library needs, have to follow a national demonstration program?

No; there is no uniform plan for demonstrations. Each State agency will formulate a plan based on the library needs of that State. The plans are submitted to the United States Commissioner of Education for approval.

15. What part will local communities play in the demonstration program?

The State library agency will work with local authorities in setting up the demonstration program. The library demonstration bill will stimulate local initiative in establishing permanent libraries.

16. Some counties already have libraries. Will they benefit in any way?

Yes; they will. Counties which already have library service will benefit in the following ways:

(1) Local efficiency and service resulting from a national study of library methods will be improved.

(2) Functional illiteracy, uninformed mass voting, and factional misunderstanding will be decreased by expanded educational facilities.

(3) Democratic principle of equal opportunity for all will be supported.

(4) Counties which have inadequate library service can participate in the demonstration program.

17. Citizens of the United States have more and better cultural and educational facilities now than the people of any other countries in the world. Why should we worry about public libraries when we have so many other pressing problems?

In spite of our cultural facilities, 42 percent of our citizens over 20 years of age have not gone beyond the eighth grade in school. Huge areas of our country are without even passable educational facilities. Thirty-five million Americans living in rural areas have no form of library service, and another 35,000,000 have library service which is inadequate. Every problem we face must be faced and solved by all citizens together, including the near-illiterates, the uninformed, and the malcontents. During the war, the Army had to educate men before they were acceptable as soldiers. The Government had to train millions of war workers in vocational schools. It would have been absurd for them to say "we have to win the war before we bother with education and training," because without education and training they couldn't have won the war. We feel that without the extension of adult educational facilities now, we can't tackle the problems of peace efficiently.

18. One of the purposes of the bill is to develop means of providing library service to rural areas. Don't radios, newspapers, Grange forums, and the like take the place of libraries for rural people?

Studies have shown that where libraries are poor, other facilities are also lacking. In any case, these advantages only create new needs for libraries among rural people. They have opened many new avenues of thought, put rural dwellers in touch with the rest of the world. But they don't keep pace with the interests they arouse, because the intelligent person very often feels the need for more information than he gets in the brief treatment of a subject possible in a magazine or radio program or newspaper article. The better the article or program, the more likely it is that the desire for additional information on the subject will be stimulated. The greatest contribution of the newspaper, the radio, the discussion is the development of intelligent interest. Libraries can satisfy this interest.

19. If rural people need and want library service, why haven't they done something about it?

Rural people have done something about it. Within the last 20 years, 500 county and regional libraries have been established. Of the remaining counties in the United States, hundreds are actually too poor by themselves to support libraries, although they could contribute to a regional service if they were shown how it would work. Others lack socially minded officials, strong, organized citizens' movements without which good public services are not initiated, even in large cities.

20. Why cannot present State aid for libraries suffice?

Only 23 States have State aid for libraries, and that provided is not always sufficient to make good library service available to all of the citizens. Many of the State laws do not provide adequate aid, and the library demonstration bill will point up the weaknesses and the need for revision in the present State laws.

21. Doesn't this bill advocate Federal control of an activity that should be the sole responsibility of the States?

No, indeed. The library demonstration bill is different from straight Federal aid. Rather than giving control to the Federal Government, one of the principal objectives of the bill is to encourage State and local support and interest in libraries. The library demonstrations will be controlled by State agencies working with local authorities, thereby eliminating any possibility of Federal control.

22. Won't the Federal Government have control over the selection of State personnel?

No; it will not. No Federal agency has authority over selection, term of office, or salary of any individual employed in connection with the State operation of the demonstration programs. The State administering agency will outline personnel qualifications, and selection will be by the State agency or local library board.

23. Won't Federal funds for library demonstrations discourage permanent State aid?

On the contrary, it would act as an incentive to State aid. To receive the Federal grant the governor of the State must certify that the State will not reduce its own library support. It is expected that many States which do not now vote money for the extension of library service will do so as a result of the demonstrations.

24. Doesn't the bill propose a new type of Federal-State relationship?

No; it is comparable to the provisions for the Department of Agriculture and Bureau of Mines experiment stations, the chief difference being that in the public library service demonstration bill policies and administration are controlled locally, and there is a time limit on the extent of the library demonstrations.

25. You can't have Federal aid without violation of States' rights and without Federal control. We don't want that.

State agricultural and mechanical colleges have been receiving Federal aid for years in the form of annual grants of money. All colleges and educational institutions receive Federal aid in the form of tax exemption. The Smith-Hughes Act provided Federal aid for vocational and home-economics training. For many years, the blind have had books in

Braille and talking books paid for and distributed with Federal funds. This has not impinged upon their control by State and local governments. The library demonstration bill specifically prohibits Federal control. Responsibility for selection of books and personnel, for the nature of services to be rendered, and for all actual operations of the library are specifically reserved to State and local authorities.

TEXAS EDITORIAL

The following editorial appeared in the San Antonio Express, February 11, 1949, favorable to the pending bills:

HENSHAW'S APPEAL FOR TEXAS STATE LIBRARY EXTENSION

Though Texans like to brag about their State's bigness, supposed self-sufficiency, wealth of oil and cattle, growing industries and progress generally, they are silent concerning its public libraries.

Texas has nothing to boast of there. In his plea to the legislature, Francis H. Henshaw, State librarian, has shown how Texas stood thirty-sixth among the States in per capita expenditure on library service. What is worse, Texas is the first State in number of citizens who lack book-borrowing privileges. Some three and one-half millions, or half the State's population, are so situated.

Who will deny that a State which spends multiplied millions on its roads and other millions on its school can do better by its libraries—"the poor man's university"?

Mr. Henshaw has given that challenge to the lawmakers at Austin. He is seeking $200,000 to establish five regional libraries where the need is greatest during the fiscal year beginning September 1 next. Each unit would comprise 10 or 15 counties. The State would provide a bookmobile, well stocked; a librarian and a driver, and would split operating costs with the counties. That has proved the most economical means of taking books to the people.

Once the people get a taste of good books, Mr. Henshaw considers—and Texas' own experience with the pioneer county libraries bears him out—they would not let the service drop. Accordingly, after 1 year's operation he would turn the first five regional libraries over to the participating counties and establish five more in new bookless, or relatively bookless, territory. Thereby Mr. Henshaw hopes ultimately to extend library service to even the most isolated Texas communities.

Should Congress meanwhile pass the library demonstration bill—as appears likely at this writing—the Texas plan, if effectuated, would allow this State maximum Federal aid for library extension. Texas then would get an outright grant of $40,000 a year, plus $100,000 matched by State money.

Thus reinforced, Texas could establish 10 regional libraries at a time and cut in half the years required to provide all Texans with free library service. All over the State, friends to libraries have been urging the Texas Legislature to put in a word for the related bill before Congress. The lawmakers could do that most convincingly by approving the plan presented by the State librarian.

Labor Legislation

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. KELLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address of Hon. MARY T. NORTON, of New Jersey, made on February 5, 1949, over the American Broadcasting Co.:

I am deeply grateful for this opportunity to speak to the people of America about labor legislation now pending before the Congress. This legislation is of the utmost importance to the working men and women of the United States.

I am especially grateful for the opportunity, because for 22 years I was a member of the Committee on Labor in the House of Representatives. For 10 of those years I served as chairman of the committee.

It is a matter of record that I resigned in 1947 because it was apparent to me at that time that the Republicans did not intend and were incapable of legislating in the interest of the working people of America. I realized that I could do nothing to prevent the obvious determination of the Republicans to set aside those measures enacted by the Democrats to promote the welfare of all the people. My time would have been wasted.

What I feared and anticipated came to pass when the Republican Congress passed the Taft-Hartley Act and then overrode President Truman's wise and courageous veto of that repressive legislation.

During the debate on the Taft-Hartley Act I predicted that it would be repudiated by the people of America.

On November 2 the voters of the United States affirmed my prediction and rendered a mandate for the repeal of that antilabor act.

Now the Congress is engaged in writing and discussing new labor legislation that will restore the historic American concept of collective bargaining as the cornerstone of our free-enterprise system.

I did not like the Taft-Hartley Act. I saw it in its formative period and I know that it was born out of a desire for repression. It was a retreat—not just a step backward—but a wholesale retreat to the days when labor had no rights.

Even Senator TAFT himself has denied the act that bears his name when he stated on the floor of the Senate, "I wrote no part of the law—there is no particular part of the law that is my own creation."

I must point out, however, that Senator TAFT was not apologizing for the law. He was merely trying to explain how it was that he and then Congressman Hartley, his coauthor, had come to disagree. The disagreement was over an interpretation of the law as to whether the United Mine Workers' contract was collusion with the coal mine operators to violate the law. Hartley had said it was. TAFT disagreed.

I only mention this as an example of the confusion which the Taft-Hartley Act created. If its authors were incapable of agreement as to its meaning, it is little wonder that labor and industry could not bargain under its provisions.

Tremendous influences were brought to bear to insure passage of this law. For instance, the Committee for Constitutional Government, a notorious Tory lobby, reported officially that it had spent $460,000 for lobby activities, principally in favor of the Taft-Hartley Act, in 1947. This was the single largest official lobby expenditure reported to the Congress.

It has been freely stated that the National Association of Manufacturers, whose attorneys were busy helping write the law, raised the sum of $3,000,000 to propagandize in favor of the Taft-Hartley Act. You will remember the flood of full-page advertisements which the NAM used in newspapers around the country in support of the law their representatives were advocating.

Now the same forces are spending money and buying advertisements to retain that law in the face of the expressed desire of the Nation for a return to an enlightened and progressive labor policy.

Both Senator TAFT and Congressman Hartley recognized that the law which bears their name was a prime issue in the campaign. On November 1, the day before the election, then Congressman Hartley said "workers are just wasting their money if they think they can repeal it." He expressed confidence that the Republicans would win and said there would be sufficient Republicans reelected to preserve the integrity of the law for years to come.

Twenty-four hours later he knew better.

Senator TAFT said that labor leaders who opposed his law were idiotic. He also said that the law was a boon to labor and safeguarded the rights of union members. He too recognized the law as a prime issue in the election.

Other Republican leaders went up and down the land pleading with labor to accept the law as in their own interest.

The response from labor is a matter of record.

But now Senator TAFT and others would have us forget that record.

The Democratic Party, under the leadership of President Harry S. Truman, solidly opposed the Taft-Hartley Act. In the Democratic Party platform, adopted at the National Convention at Philadelphia, they pledged themselves to its repeal and to the passage of substitute legislation which would make both labor and management equal before the law, to build a lasting industrial peace.

The Nation voted for that platform and the pledges of the Democratic Party.

Now the Democratic Congress is moving to carry out these pledges with the active cooperation of the Democratic administration.

The Congress is now engaged in writing and discussing new labor legislation that will restore the traditional American concept of free collective bargaining.

We plan to lift the restrictive measures of the Taft-Hartley Act so as to carry out the pledges of the platform. Specifically the bill now being considered in the Congress would—

(1) repeal the Labor-Management Relations Act of 1947;

(2) reenact the National Labor Relations Act of 1935;

(3) amend that act to retain the present Board membership and structure;

(4) enable the National Labor Relations Board to deal with jurisdictional disputes and unjustifiable secondary boycotts;

(5) reestablish the Conciliation Service in the Department of Labor;

(6) provide means for the settlement of disputes arising out of the interpretation of existing contracts; and

(7) provide means for meeting national emergencies in vital industries which affect the public interest.

Thus the administration's labor bill calls for a return to the national policies first enunciated in the Wagner Act. It reverses the policy of governmental interference; it places reliance on processes of collective bargaining for the settlement of differences. The bill regulates collective bargaining only where restraints are needed and practicable. It seeks to develop a system of labor-management relations under which both labor and management, with the friendly assistance of Government, can live together and solve their own problems.

This is the democratic way of doing the job of achieving industrial peace.

It is the way which will bring the most benefit to the Nation as a whole.

For it will free the Government of the impediment of hundreds of cases in the Federal courts, which serve no purpose except to delay the settlement of disputes and overload the already crowded court calendar. It frees the Labor Department and the National Labor Relations Board of the stifling red tape brought about by complicated and unnecessary procedures.

The administration bill makes certain types of activities unfair labor practices if

engaged in by a labor organization. Conforming to the President's recommendation, these are limited to certain types of unjust secondary boycotts and jurisdictional disputes and failure to file 30 days' notice of proposed contract modification or termination. The latter is also made an unfair labor practice if engaged in by an employer.

The proposed act provides necessary limitations on jurisdictional disputes.

It would return to the Department of Labor, where it belongs, the Federal Mediation and Conciliation Service. And this, in addition to other proposals which time does not permit me to discuss, will restore the Labor Department to the importance it should enjoy.

The bill now being considered would end the regulation of labor unions by injunction.

I have never approved the role of the courts in this regard. I feel that it is an unsafe encroachment by the courts on the rights of labor to give them power to issue injunctions against unions, without hearing.

The proposed bill carefully avoids the twin evils of compulsory arbitration and rigidity of procedure. Its provisions are clear and simple.

It will cut down governmental interference.

It will foster free collective bargaining.

It will end the abuses of the Taft-Hartley Act.

It will substitute for a law drawn for the many by the few a statute that has as its concept the protection of the rights of all.

Above all I like the manner in which the Congress is going about the business of correcting these Taft-Hartley abuses, with hearings, open and above board. Witnesses, whether pro or con, are allowed to have their say.

A free democratic process.

A far cry from the conditions which caused my resignation from the House Labor Committee in 1947.

I am for the bill.

Labor is for it.

The people of the United States are for it and have said so where it counts—the polls.

For that reason I am calling upon the people to express themselves and not be misled by the campaign of confusion and double talk now being carried on by the last-ditch defenders of the Taft-Hartley Act.

Lincoln Day Address

EXTENSION OF REMARKS

OF

HON. GEORGE A. DONDERO

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. DONDERO. Mr. Speaker, under leave to extend my remarks, I include herein an address delivered by the Honorable JAMES E. VAN ZANDT, of Pennsylvania, at a recent banquet of the Oakland County Lincoln Republican Club held at Pontiac, Mich.

Our colleague from Pennsylvania is one of the great patriots of this country, an outstanding American, who has never hesitated to offer his all in defense of his country. His views are worth the consideration of all who have the best interest of our country at heart.

The address is as follows:

Mr. Toastmaster, distinguished guests, fellow Republicans, ladies and gentlemen, it is a distinct honor for a Pennsylvanian to be invited to come to the great State of Michigan and join such a representative group of Americans in honoring the memory of the immortal Lincoln.

It is also a pleasure to visit with the constituents of my good friend and colleague, the Honorable GEORGE A. DONDERO, who so ably represents this district in the Congress of the United States. You are to be complimented in sending such a high-type Representative to Washington. His warm personality, his integrity, his ability, and sincerity of effort establish him as not only an outstanding legislator but as one of the most likable and highly respected Members of the House of Representatives.

George, as you know him and we know him, was elected to the Seventy-third Congress and is serving his ninth consecutive term. During his congressional career, in addition to his ability as a legislator, he has found time to lecture the House of Representatives annually as to the code of ethics a Member must observe. He impresses upon each Member the great responsibility that rests upon his shoulders as a Member of Congress, and warns them that their conduct must be beyond reproach if Congress is to retain the respect of the American people.

Congressman DONDERO has a great love for history and has spent many hours in studying the stirring episodes in the development of this great Nation. This thirst for historical knowledge gave Congressman DONDERO a greater insight into the life of the Great Emancipator with the result that today George is recognized as a profound student of Lincoln.

I received my first impression in 1939 of your Congressman's knowledge of Lincoln. One morning in Washington, George called me on the telephone and invited me to accompany a group of historians on a tour of the Gettysburg battlefield. He pointed out that the delegation headed by him would have maps of the battlefield and that one spot to be visited would be the scene of Lincoln's Gettysburg Address. While it was impossible for me to accept the invitation I was favorably impressed with his enthusiasm for these periodic tours, and the manner in which he spoke of Abraham Lincoln.

When Congressman DONDERO returned from his tour, he told me of the great feeling he had, as he stood near the spot where Lincoln delivered his famous Gettysburg Address. The atmosphere gripped him, as his mind recalled the troubled conditions of the Nation when Lincoln uttered his immortal words.

When I accepted your kind invitation I immediately recognized that here was an opportunity to not only pay tribute to Lincoln but to remind all of you that the conditions prevailing when Lincoln delivered his Gettsyburg Address are somewhat comparable to the conditions we are faced with today.

For a moment let us refresh our memories on Abraham Lincoln. Born in the most humble walks of life, in the days when hardship was a common possession, Abraham Lincoln had the stamina and courage necessary in overcoming many obstacles.

An analysis of Lincoln's life reveals that his accomplishments became a reality only after a series of personal disappointments and political defeats. It was through these disappointments and defeats that Abraham Lincoln added to his mental stature, broadened his experiences and established a reputation for honesty and integrity that has become a symbol of mankind.

When I read of Lincoln's life I am reminded of his statement in speaking of his lack of formal education—when he said, "I didn't know much—my schooling was limited to readin', writin', and cipherin' to the rule of three." This statement reveals the humility and sincerity of Lincoln who was not ashamed of his early life and his humble surroundings.

This humility of Abraham Lincoln was reflected in his first campaign for a political office when he was a candidate for the State legislature in Illinois in 1832. At that time Lincoln said, "I presume you all know who I am. I am humble Abraham Lincoln. My politics are short and sweet, like the old woman's dance. I am in favor of a national bank. I am in favor of the internal-improvement system, and a high protective tariff. These are my sentiments and political principles."

Yes. On clearly defined political principles, Abraham Lincoln was content to place his future in the hands of the American people. Yes. It took courage on his part to stand on his principles and to by-pass the political magic of promising everybody everything in the hope of garnering a vote. Certainly Lincoln went down to defeat in 1832 as a candidate for the legislature.

He was defeated again in business in 1833 and lost everything of a material value. In 1838 as candidate for speaker he was again defeated.

In 1840 he lost as a candidate for elector. In 1843 he was defeated as a candidate for commissioner of the general land office, and also as a candidate for nomination to Congress.

In 1848 he lost in his campaign for reelection to Congress.

In 1855 he was the losing candidate for United States Senator.

In 1856 he was defeated as candidate for Vice President.

In 1858 he was defeated as candidate for United States Senator.

But—in 1860—he was elected as the sixteenth President of the United States. What a glowing tribute to Lincoln's perseverance and evidence of the truth of the old saying—"You can't defeat a man who will not quit."

When Abraham Lincoln assumed the Presidency of the United States he became the first Republican ever to hold that high office. He became the leader of a new political party born in 1856 in the midst of the turmoil and terrible disagreements which preceded the Civil War.

While Lincoln was President he gave to the American people a type of leadership that preserved the Union, and its cherished ideals handed to us by the founders of this great Republic. Last but not least, he gave all of us a symbol of hope by the manner in which he met challenges to American unity and emerged victorious under most trying conditions.

It was 140 years ago today that Abraham Lincoln was born, and each year we hear over and over again these words—"God grant that we had another Lincoln to lead us out of the present day wilderness of despair."

As I said a moment ago, Abraham Lincoln was the first Republican President of the United States and the standard bearer for the new political philosophy as exemplified by the Republican Party which came into being in 1856.

For nearly a century we Republicans have functioned as one of the several political parties. As you look back over the accomplishments of the Republican Party, our chests are swelled with pride, when we recall the part we played in the development of this great Nation.

Like Lincoln, as a party we have had our defeats but we have never lost the courage of our convictions. It is true that the party has made mistakes, and some members of our party at times have wavered in their support, but no one will deny that the indomitable spirit of Abraham Lincoln still leads the party as it strives to restore to America a sane, sensible, and sound form of government.

The mission of your party and my party is one that cannot be accomplished unless we stand united, meet the challenge of the opposition, and carry our case to the great masses of the American people. For 16 years our party has been in political obscurity, because the American people have been sold on a political philosophy that is gradually

centralizing Government in Washington, destroying States' rights, and leading us down the road to national socialism. We have had the New Deal and its offspring the raw deal, and now we have been introduced to the so-called fair deal.

During the period of these deals the American way of life has been tampered with to the extent that the founding fathers of our Nation have no doubt turned many somersaults in their graves. If Abraham Lincoln walked this earth today he would no doubt tell you that the Republican Party must be a militant and determined party in its mission to rescue the Nation from its present-day plight.

During the past 16 years in the Republican crusade for good government, we have taken five consecutive defeats in our campaigns to elect a Republican President. At times during these five presidential campaigns the enthusiasm of our party was at its lowest ebb. We heard the statement that the Republican Party was finished, and should give way to a new political party with an entirely different label. Such a defeatist attitude is an insult to the memory of Abraham Lincoln, our first Republican President.

During the 16-year reign of the Democratic Presidents, we as Republicans worked hard. We started from scratch in 1932 and it was not until the elections of 1946 that we were able to gain control of both Houses for the Eightieth Congress.

When the Republican-controlled Congress convened in January 1947 it inherited the colossal mess resulting from 14 years of New Deal blundering, boondoggling, and inefficiency in Government reflected in countless bureaus, and commissions whose overlapping functions and duplication of efforts saddled the American people with high taxes and 76,000 useless Government directives that controlled their daily lives.

The Eightieth Congress also found that Communists, fellow-travelers and parlor pinks were occupying high positions of Government and had a firm foot-hold in the State Department. This radical-minded mob on the Federal pay roll were writing directives designed to regiment the American people and destroy our form of government.

The Eightieth Congress with courage and foresight accepted the challenge to the American way of life and charted a course of action designed to correct the evils that 14 years of Democratic misrule had foisted upon us.

Immediately investigations began to give us the information necessary to restore government to a sound economic basis. But what happened? The Democratic administration threw an iron curtain around the affairs of the various departments of the Government, even going so far as to invoke the aid of the President of the United States in refusing requests for information on their activities. Congress was then faced with the necessity of hiring investigators at the expense of the taxpayers of the country and, arming them with congressional authority, sought to obtain information for various congressional committees as to how hard-earned tax money was being spent. In some cases, congressional authority was scoffed at, even by the President himself, who chafing under the knowledge that Reds were being ferreted out of the Government, made the sheepish remark that certain investigations were only a red herring. As a result of this remark, and of congressional investigations, the President has had to eat crow on several occasions.

While the Eightieth Congress was faced with opposition from the President and heads of governmental departments, it made headway, to such an extent, that when the American people fully realize its accomplishments it will be recognized as one of the outstanding Congresses in the history of our country.

Anyone who takes the time to carefully scrutinize the record of the Eightieth Congress, will find that the American people were freed from some 76,000 government rules, regulations, directives, and orders. The budget was balanced by the Eightieth Congress for the first time in 16 years. The fiscal year 1948 ended with a surplus of $8,500,000,000 which is the biggest Treasury surplus in the history of the Nation.

The Eightieth Congress reduced the public debt by $7,000,000,000, and then cut income taxes over several vetoes of the President. The farmers of the Nation were aided by the Eightieth Congress and increased benefits for the aged under social security were provided, despite a Presidential veto.

Cost-of-living increases were granted to postal and Federal employees and national heart and cancer institutes were established.

Small business was aided by the Eightieth Congress and export controls were extended. Government expenditures were reduced and appropriate funds provided for revitalizing our national defense.

The Eightieth Congress followed a bipartisan policy on foreign affairs and did its level best to provide an equitable labor-management relations program through passage of the Taft-Hartley Act. Not forgetting our debt to our veteran population, the Eightieth Congress approved 188 separate bills liberalizing existing and providing new benefits. These bills were passed after the President stated, "Except for minor adjustments I believe our program of benefits for the veterans is now complete."

These accomplishments of the Eightieth Congress may be an old story to many of you but I feel they are of such importance that they should be emphasized, in order that you may realize that their enactment was possible as the result of a coalition of the Republican and Democratic votes in the Senate and House. In other words, under Republican leadership the Eightieth Congress became a nonpartisan Congress.

While the Eightieth Congress was at work trying to get the ship of state on an even keel, the President of the United States who locked the files of the Government departments against Congress traveled from coast to coast telling the American people the Eightieth Congress was the second worst Congress in American history. He also ridiculed the Republican Party by calling it a refuge for the rich and accused it of turning a deaf ear to the needs of the great middle class.

While the President was chanting such a theme song many Republicans took it as a lullaby and fell into a deep sleep. Those who refused to listen or be lulled to sleep—went fishing.

When we awoke on the third day of November I was surprised, you were surprised, the Democrats were surprised—and so was Harry Truman.

For days after the election the question heard everywhere was, How did it happen?

My answer is that we Republicans went asleep at the switch. We kidded ourselves into believing the election was in the bag. We forgot that in the last 16 years, millions of new voters were created who were 5 and 6 years old in 1932, and were now exercising their right to vote. These new voters knew nothing of any other President but Roosevelt and Truman. They needed political education and we failed to provide it.

While we slept or fished the Democrats rang doorbells and promised the abundant life in exchange for votes.

Let us right now accept the blame for the farce we made of the November election. We are responsible and no one else. We failed to sell the accomplishments of the Eightieth Congress to the American people. While we talked of unity, home, and mother, Harry Truman and his cohorts talked of the price of pork chops, socialized medicine, Federal aid to education, and a bottle of milk on every doorstep in the world with Uncle Sam paying the milkman.

On January 20 Harry S. Truman entered upon a full 4-year term as President of the United States. As expected, he asked the Congress of the United States to approve a legislative program that has been termed by many as a step toward socializing America.

The President's budget, the largest peacetime budget in the history of the country, represents $42,000,000,000. Yet this huge sum of money is for operating the Government at the present and does not include $1 of the expense to be incurred in carrying out his recommendations in his state of the Union message. Nor does it contain $1 for his global program of aiding foreign nations which he proposes to add to the aid now being furnished through the European recovery program. If the President's entire program is enacted instead of a budget of forty-two billion it will probably be well in excess of $60,000,000,000 according to well-informed economists.

A moment ago I said the President's program was a step in the direction of national socialism. What is socialism? Webster defines it as "a political and economic theory of social reorganization, the essential feature of which is governmental control of economic activities to the end that competition shall give way to cooperation and the opportunities of life and the rewards of labor shall be equitably apportioned."

This is an excellent definition so let us compare it with the President's proposal when he asked Congress to grant him the power to set up its own steel mills if conditions in the steel industry continue to be unsatisfactory to him.

This is outright socialism. Even the President's warmest supporters agree, that if Uncle Sam goes directly into the steel business, private business is done, because no industry can compete with the Government of the United States who has back of it billions of tax monies and is always in a position to undersell its competitors and absorb its losses. In a few words, President Truman's proposal in point 8 of his program, is pure, unadulterated socialism and a shortcut to nationalizing basic industries in the United States.

There are other portions of the President's program equally as socialistic in character as point 8. On the other hand there are some good points, some of them advocated by the Republican Party and which we should support setting aside any prejudice we may have regarding pride of authorship.

I hope by this time that every one of you understands the problem the country is faced with and the direction in which we are going. We find ourselves in the same position as Lincoln did when after a series of disappointments and defeats he had the courage to carry on his relentless fight in defense of his principles until he finally triumphed over all obstacles.

In my opinion the time has arrived for all Republicans to stand up and be counted. Recently, at Omaha, Nebr., after what newspapers termed a "dog fight," a national party chairman was elected. I am not criticizing our national chairman who is a fellow Pennsylvanian, a colleague in Congress, and a good friend of mine. Instead I offer him my sympathy in the gigantic task he has in satisfying the various factions within our party.

Frankly, in my opinion, too many men high in the councils of the Republican Party appear to be blind to the real significance of the November election results and the recent upheavals of the party itself.

Too many view the party as a vehicle for personal political ambitions. They have forgotten the urgent need these days of an American political program, powerful, appealing, and individualistic.

They have permitted the Democrats to set the pace. They have drafted platform after platform that appears to many voters as an anemic New Deal program, lacking new and constructive thought.

Frankly, too many Republicans have become confused in their thinking and have attempted to keep pace with the liberalism that is nothing more than a carbon copy of the Democratic New Deal.

The National Republican Committee meeting I referred to at Omaha, Nebr., typified this futile thinking. There the battle was not over party principles but over control of the party. Our party leaders have failed to see that the big battle is over the two-party system. They have failed also to perceive their responsibility to maintain a party that is individualistic in nature, American in principle, and independent and courageous in its presentation of the tried, tested, and successful republic form of government.

What I have said in a few words is simply this, that we Republicans must bury our selfish desires, and instead of battling for control of the party let us conserve our strength and use it in making certain that we will have a party.

As I said, the time has arrived to stand up and be counted. We must erase from our minds any defeatist attitude and recall how Abraham Lincoln after suffering 10 crushing defeats from 1832 to 1858 finally emerged triumphant in 1860 by being elected the sixteenth President of the United States.

Let us at this time rededicate ourselves to the principles of Abraham Lincoln and to the Republican Party. In so doing you are simply rededicating yourself to the principles of Americanism as embodied in the republic form of government.

The American way of life is at stake and facing such a challenge, let us as Republicans leave this banquet room tonight with one determination and that is to remember the truth of the old saying about Abraham Lincoln, "You can't defeat a man who will not quit." To these words let us add, we Republicans have just begun to fight.

Congratulations

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. FORAND. Mr. Speaker, a few days ago the House of Representatives of the Rhode Island General Assembly publicly recognized the great feat accomplished last fall by President Truman.

It passed the following resolution, which, under leave already granted me, I include as a part of my remarks. The resolution reads:

Resolution extending congratulations and all good wishes to Hon. Harry S. Truman, President of the United States of America, and to the United States Senator from Rhode Island, Hon. J. HOWARD MCGRATH, chairman of the Democratic National Committee

Whereas the intensified campaign for reelection conducted last fall by President Truman against apparently insurmountable obstacles and apathy has aroused the American voters to a realization that this Nation is a land of opportunity in which man as an individual may win to victory in the good fight; and

Whereas the vigor and forthrightness with which the President reported from coast to coast his stewardship in the highest office in the Federal Government, presented his future program, and pronounced his credo had a rocklike tenacity which fired even the most indifferent; and

Whereas the United States Senator from Rhode Island, Hon. J. HOWARD MCGRATH, chairman of the Democratic National Committee, in his quiet and controlled method of solidifying an organization, helped to turn the wheels of party machinery to produce an unprecedented triumph for the Democratic Party at the November 1948 polls: Now, therefore, be it

Resolved, That the members of the General Assembly of the State of Rhode Island and Providence Plantations now express their admiration to the Honorable Harry S. Truman, President of the United States of America, for victory glorious in the annals of this country, wishing him every success in the fulfillment of pledges and program that the strength of the Nation shall continue to be used in the interest of all our people to maintain the peace of the world and to keep this Republic soundly prosperous and its people contented and happy; and be it further

Resolved, That this legislature, proud indeed that one of Rhode Island's native sons, United States Senator Hon. J. HOWARD MCGRATH, in the demanding office of chairman of the Democratic National Committee, has undertaken so important a task in the welding of component factors which inevitably has led to that amazing and historic November 1948 goal, now felicitates Senator MCGRATH, acknowledging the forcefulness of his campaign planning, his political astuteness, and skilled strategy; and be it further

Resolved, That the secretary of state is hereby authorized and directed to transmit to the President of the United States of America, Hon. Harry S. Truman, and to United States Senator J. HOWARD MCGRATH duly certified copies of this resolution.

Cardinal Mindszenty—Martyr for Freedom

REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. LANE. Mr. Speaker, the Communist terror is revealed in all its cynical brutality by the persecution of Cardinal Mindszenty.

Others have suffered his fate before, and others will still be tortured until the aroused conscience of mankind rises up to ostracize from the concourse of civilized nations and civilized people all those who follow the dictates of Red fascism.

Only then will there be a chance for peace and freedom in this world.

Already there are signs that communism has overreached itself.

Cardinal Mindszenty is not only a member of the Sacred College of Cardinals of the Roman Catholic Church whose faithful communicants are numbered in the hundreds of millions. He is a symbol of all religions, of all justice and decency, now under undisguised attack by the cruel forces of materialism.

The mask is off.

The world knows what it is up against. No longer confused by the contradictions, the brash lies of communism, and the middle-of-the-road neutrality of well-meaning liberals who have been misled by devious Communist techniques, it sees evil in action, stripped of its false face.

The storm of protest which has welled up from all quarters of the globe is testimony to the fact that men of good will everywhere are waking up to the danger which confronts them.

Communism can no longer hide behind its propaganda.

It stands, naked and unashamed, as a ruthless tyrant.

In Hungary they had all the outward trappings of justice: a court, witnesses, evidence, affidavits, cross-examination, even legalistic language purporting to be law; in fact, everything except truth, without which the stage setting and the words put into the mouth of the actors meant nothing.

Accustomed as they are to deceiving their own people—who never have access to the other side of any controversy—they fell into the error of believing that this mockery of justice would also fool freemen.

Now they know better, perhaps.

But it is too late.

The line has been drawn between human rights under God, and the devouring materialism of those who believe that man is but an animal to be enslaved by an all-powerful state.

There is no turning back.

The issue is now clearly defined. The pity is that the good cardinal should suffer so that we might learn. But his martyrdom does serve the purpose of uniting all elements among free peoples, fusing them in their opposition to all that is destructive, and giving to democracy that passionate belief in its civilized values which it has lacked for some time.

The ordeal of Josef Cardinal Mindszenty marks the end of appeasement. From now on, political, religious, and individual freedoms are on the march, affirming their faith in one another, and gathering together that moral strength which will turn the tide against this upsurge of despotism.

The proof of this developing unity is found in the official condemnations of this latest Communist outrage by the Governments of two large and powerful nations, the United States and Great Britain, the majority of whose people do not profess the Catholic faith.

The Cardinal Mindszenty tragedy points up this essential fact; that communism is against all regions, all individuals as such, and against every intellectual, scientific, cultural, and political freedom.

Where stands the United Nations on this violation of treaties and of basic human rights?

This is the next step in the chain reaction caused by world protest against Communist tyranny.

This is the last straw. We have had more than we can swallow. By every conceivable application of public opinion, finding full expression and moral force through the family of nations, may we right this wrong.

Together with our prayers, may this succeed, by the grace of God, in redeeming our imperiled freedoms and in liberating Cardinal Mindszenty and all other victims of the Red scourge.

Monster Business Jeopardizing Free Economy—Interesting Exposé by Former Big Business Executive Arouses Attention of Antimonopolist

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 15, 1949

Mr. PATMAN. Mr. Speaker, the National Federation of Small Business, Inc., San Mateo, Calif., C. Wilson Harder, president, has Edward Wimmer, of Cincinnati, as vice president and in charge of public relations.

Recently, Mr. Wimmer interviewed Theodore K. Quinn on a radio program about his new book entitled, "I Quit Monster Business." Incidentally, I have purchased a number of copies of this book and sent them to people that I believed would read and appreciate a book of this character.

There are a number of so-called small-business groups in this country that I do not trust because they are fronts for big business and are not genuine small-business groups, but I am sure that the National Federation of Small Business, Inc., is trying to work in the interest of small business.

I believe that all the people, who are interested in promoting small business and family-size farms, will be interested in the radio program conducted by Messrs. Wimmer and Quinn. It is as follows:

ED WIMMER. Thank you, and greetings, fellow Americans. This week, ladies and gentlemen, I have a pleasant surprise for you. Here in our recording studios we have as our guest Mr. Theodore K. Quinn, who is head of his own business-management company in New York City. Mr. Quinn was formerly an officer and director of one of America's giant corporations and its many subsidiary companies. He is the author of a new book entitled "I Quit Monster Business."

If you have been a weekly or regular listener to these broadcasts, you are aware that the paramount objective of our organization is to acquaint you with the intrinsic values to be found in our American system of free enterprise and free government. However, we go a little further—in fact, we go a lot further than most individuals or organizations are willing to go in a discussion of this subject—in that we try to get down to what really constitutes free enterprise and free government. In other words, we know that it takes a lot more than automobiles, gadgets, telephones, etc., to make a free-enterprise system work to the best advantage for the average individual. No system is worth talking about or saving unless it provides freedom, opportunity, and security for average individuals willing to earn freedom, opportunity, and security.

The officers, members, and field men of the National Federation of Small Business believe that free government and free enterprise are unobtainable in any nation other than that nation which creates an economy in which there are millions upon millions of people who own their own homes, run their own farms and businesses, and are not dependent upon any individual or group to make their own way.

Mr. Quinn, whom I am now going to introduce to you, believes as we do. He speaks as a man who has had experience in running both giant business and small business. I am sure that what he will have to say to you this week will be of vital interest to every person in this audience. Let me begin by asking you, Mr. Quinn, why you quit monster business.

T. K. QUINN. May I first thank you for your kind introduction. I quit monster business because of a growing conviction, based upon experience, that it is not efficient that much of it is big only for the sake of bigness, that through its tremendous size and monopolistic methods, it is leading us away from the democracy we cherish toward some kind of a collectivistic state and an eventual forfeiting of our freedom.

ED WIMMER. Well, Mr. Quinn, that begins our discussion. Now I wish you would elaborate a little more on that statement by telling our listeners what you mean when you call an enterprise a monster business.

T. K. QUINN. Well, Ed, a $1,000,000 business is a good-sized business, and a $10,000,000 business is a big business. When we come to one that is from a hundred to a thousand times bigger than either of these, with subsidiaries, divisions, factories, and offices covering the whole country, we have a sprawling monster. I know of no more descriptive word for it.

ED WIMMER. I think it makes a very good descriptive word as far as that goes, but I know that our audience wants us to carry this idea of monsterism as far as we can in this discussion. I think that you have answered that question to my own satisfaction, but I just wonder what our audience is thinking. The next question I would like you to answer is this: How many monsters of this character are there in the United States?

T. K. QUINN. Well, of course, "monster" must necessarily be a relative term, but I should say for the purpose of an answer to your question that there are 100 of them. The interesting and significant thing is that 48 of this 100 are billionaire corporations. That is one for every political State in the Union. Many of the monsters are much richer and actually have greater gross assets than a number of States, and they exercise a formidable degree of control over the economy.

ED WIMMER. I agree with you along that entire line of thought. Senator O'MAHONEY, whom I have interviewed over the air, talked along that same line, and he brought out very forcibly the fact that the power of some of these corporations is greater than those of a State. Next week I am going to interview Senator KEFAUVER and I am sure he will go into that a little bit. Now, Ted, since you know the business from the inside, suppose you tell us what the most dangerous factors in the growth and development of monster business are.

T. K. QUINN. Enormous size alone is dangerous. In form and organization and methods the monster usually has a self-perpetuating management and its officers are seldom elected. They are generally picked or favored for their jobs. The individual stockholders actually have no more influence or control over them than Russian peasants. The result is a huge impersonal corporate thing without essential social conscience, democratic ideals, or human attributes.

ED WIMMER. In other words, it is just a great big collectivistic state in a sort of economic state. One that is not political, but which could very easily be taken over by the political state. I think that is a point to which we should all give the utmost thought and consideration. All of my arguments during the past 16 years have been based on the proposition that widespread independent ownership of farms and homes and businesses wherever practical and possible, with local control over local affairs is the seedbed of Christianity and democracy. The two are inseparable.

I have always said, and I know you maintain the same thing, that legitimate big business is a natural development within our free enterprise system, that big business is here to stay, and we want it to stay. Like you, however, I have feared and fought the combining of these big businesses into the monsters that you have described, and their expansion into the buying up of their subsidiaries. One thing that has worried me in all of this expansion is the submerging of the individual. Individual human beings just seem to lose their importance in all this trend to giantism or monsterism. I think we should stick to that word "monsterism" in your particular case. Am I right in this assumption of the submerging of the individual?

T. K. QUINN. Entirely right, I should say, Ed. The bigger the corporation the less opportunity for the individual. He tends to become suffocated and lost. He gets to be a number rather than a name. No matter what his talents, it is almost impossible to find him down the long line. The whole opportunity for rising from the ranks and genuine democracy are necessarily thwarted. A youngster needs encouragement and training to develop his ability and there is much too little opportunity in the monster corporation.

ED WIMMER. I have a little paragraph here which I have taken from your book, I Quit Monster Business, in which you say, "Created by man himself, like Frankenstein's brute, economic monsters are essentially undemocratic and destructive by the very nature of their organizations and size, and are leading us unwittingly toward an inevitable collectivistic type of rulership. I happen to be able to write from experience as an insider as well as a competitor of the system." You know, Ted, this puts you in a most unusual position to speak on these things.

You also say that small independent decentralized business of the kind that built this country is disappearing or being made dependent upon the monsters. Now all we have to do is to walk down any Main Street in America and we can see that for ourselves. Suppose you comment a little on just this idea of decentralization.

T. K. QUINN. I am a firm believer in our constitutional government, in individual freedom, and in opportunity. Nothing should be permitted to stand in the way of the realization of these ideals. After all, these tremendous economic states are man-made, and just as they have been made, so can they be unmade or unmerged. I fear for our democracy today. Other democracies in history have perished, and usually from internal causes, not from outside attack. When wealth and power are diffused, they thrive and flourish, but when power becomes concentrated in a few hands, as in Russia today, they decay and die. It was so in ancient Athens and in modern Germany, in the Rome of Augustus, and in the Rome of Mussolini. That must not happen here.

ED WIMMER. One thing that stood out in my correspondence with you which led to this interview was your statement that you did not agree with everything that I was saying, but that you did agree with the major objectives of our federation, and the major things which I have taken up in my talks. You said that we have no time and that the slack in our line is running out on us. We must forget about our little differences and talk only about those things on which we all agree in the major over-all objectives. That statement of yours impressed me so much because I find in making my talks throughout the Nation, and in coming into contact with businessmen, professors, economists, and other people, that they will pick out some little thing about which I am talking, and will make a big argument out of it. If you and I and the other men who can see the need of restoring individual competitive enterprise in this country can just get to-

gether on that one thing, just imagine where we could go.

Now I know we ought to be talking about remedies to overcome this thing, but we cannot do it in one broadcast, and I believe the response to this talk is going to be great enough to warrant your return. I do think, however, that you should give us one last thought on that remedy.

T. K. QUINN. The economic question always comes first. All of our society revolves around our economics, and as we think in terms of our economic life we will find that some of the other problems will disappear * * * so I am very interested in concentrating on the main objective, which is the decentralization of these monsters.

ED WIMMER. Of course, that is the objective of the federation and our objective in carrying on these broadcasts.

In closing, ladies and gentlemen, I want to tell you that you have been listening to an interview with Mr. Theodore K. Quinn, author of I Quit Monster Business, and I am sure that I am going to bring Mr. Quinn back to this microphone again in the very near future.

After all, doesn't it all boil down to this in our thinking? It takes a lot of decent people to make a lot of decent homes. It takes a lot of decent homes to make a lot of decent communities, and it takes a lot of decent communities to make a decent nation. If we think along those lines, and think about the future of our children in the problems which we discuss, we canot go wrong.

Mr. Quinn, it has been a great pleasure to have you as a guest of the federation, and I am sure our audience has gotten a great deal from what you have said.

Thank you, ladies and gentlemen, for listening. Good luck and good thinking to you all.

Lincoln Day Address of Hon. Frank B. Keefe, of Wisconsin

EXTENSION OF REMARKS
OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 15, 1949

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following Lincoln Day address of Hon. FRANK B. KEEFE at Paterson, N. J., February 12, 1949:
